YES	N/A	**Suspected triggers:** Unknown **Medication:** Keppra 1000 2x/day (extended), Phenobarbital 64.8 mg, Midazolam, Diazepam. **Details:** None provided.	OWNER
29/09/2019	31/07/2026	**Floss**	N/A	00/316405	BC - ISDS	22-Jun-11	UK	Bitch	Cymro (ISDS 289467)	Roy (ISDS 235678)	Becks (ISDS 263288)	Tina (ISDS 294804)	Rock (ISDS 262481)	Floss (ISDS 276072)	6 years	NO	Just by question and answer session with vet	YES	N/A	**Suspected triggers:** No apparent triggers. **Medication:** No medication. **Details:** Had first fit about 2 yrs ago. 2 in one year. Started on CBD oil for hip problem. Only one fit since. Spayed at 12 months. Infrequent fits only a couple of mins each. **UPDATE ADDED 31/07/2026 -** Added (S) G.Sire, (S) G.Dam, (D) G.Sire, & (D) G.Dam.	OWNER Updated 31.07.26
30/04/2024	31/07/2026	**Georgestan Baffa**	AXO2274501	N/A	BC - UK KC Pedigree	26-Apr-20	UK	Dog	Turlowfields Just A Hunch AW01393603	Bannetstane Wind of Change	Floss of Turlowfields (ISDS 00/331499)	Turlowfields Sceptrum AU02243207	Langamay Tri Again	Gwynion Yemi	9 months	YES	Idiopathic Epilepsy	NO	Died from a seizure early morning on the 23rd of April 2024.	**Suspected triggers:** Unsure of triggers. Could happen anytime including in his sleep. He was a very anxious and reactive boy. Resource guarding was apparent from the first day we bought him home. If I hadn't been a trainer he would not have made it this far. **Medication:** Pexion 100mg was given twice a day. **Details:** Seizures were 3 months apart and under 3 minutes until the last 2 which were 8 weeks apart and resulted in my boys death. He was chemically castrated which helped his behaviour. He seeked comfort after his fits. **UPDATE ADDED 31/07/2026 -** Addition of KC No's to Sire and Dam.	OWNER Updated 31.07.26
31/10/2022	31/07/2026	**Georgestan Biron** **- Baloo**	AX02274504	N/A	BC - UK KC Pedigree	26-Apr-20	UK	Dog	Turlowfields Just a Hunch AW01393603	Bannetstane Wind of Change	Floss of Turlowfields (ISDS 00/331499)	Turlowfields Sceptrum AU02243207	Langamay Tri Again	Gwynion Yemi	2 years	YES	Idiopathic Epilepsy.	YES	N/A	**Suspected triggers:** Heat , Anxiety **Medication:** Soliphen 90mg 2x day (increased from 60 mg after last fit. Rectal Diazepam also prescribed if fit is bad. **Details:** He has been castrated and is fully vaccinated. The fits have occurred only 3 times, they are a series of 3-4 intensive fits lasting less than a minute each. He is otherwise affectionate. Afraid of cars. He was 18 months old when we took ownership (Feb 22). Previous owners had returned him to breeder. Breeder did not pass on their details to us. Breeder has been contacted since diagnosis and has refused to take him back. We will email you copy of Five generation KC certificate. **UPDATE ADDED 31/07/2026 -** Correction to misspelling of (S) G.Sire name.	OWNER Updated 31.07.26
30/06/2026	31/07/2026	**Shaken Not Stirred Vodka Martini - Blue**	N/A	N/A	Non UK Unregistered (Border Collie)	07-Apr-15	POLAND	Dog	Sky (ISDS 293305)	Astra Fox (ISDS 281571)	Astra Zena (ISDS 272572)	Luck Forever Able Nescuike Smile	Never Never Land Double O Seven	Luka Sfora Z Krasnego Boru	3 years	YES	By neurologist. 6 months prior, brother from litter was also diagnosed with epilepsy.	NO	10 years 6 months, complications after cluster seizures	**Suspected triggers:** Both lines, ancestors found who produced offspring with epilepsy. **Medication:** Phenobarbital, Libromide. 3.5 years seizure free. **Details:** Thyroid issues due to Phenobarbital which triggered seizures again after 3 year stop. **UPDATE 31/07/2026** - Grand Dams have been corrected, they were listed on wrong dogs.	OWNER Updated 31.07.26
29/11/2019		**Absolutely Dot (AG CH)**	Not known	239196	BC	10-Jul-98	UK	Bitch	Lethans Maximillion (ISDS 208556)	Roy (ISDS 161740)	Lethans Kip (ISDS 176421)	Pipped at the Post (ISDS Pip 225768)	Snip (ISDS 207611)	Tess (ISDS 196529)	5 years 6 months	NO	N/A	NO	Died of old age	**Suspected triggers:** None noted. **Medication:** None. **Details:** Dot only ever had ONE 'almost fit', that came on 60 minutes after whelping. Diagnosed as pre-eclampsia. Treated with s/c calcium and magnesium for 2-3 weeks. Never fitted previously, and no further fit-like episodes afterwards. At age 14-15, started having drop attacks, where she would lose consciousness after making strange howling noises. Diagnosed as secondary to poor cardiac function, and she stopped having them after starting digoxin. Spayed.	DATA TRANSFER FROM LYN NORTON Added 10.03.15
29/09/2019		**Adelph Bella**	N/A	00/336447	BC - ISDS	17-Dec-14	UK	Bitch	Shadwell Boss (ISDS 00/323981)	Chief (ISDS 306367)	Shadwell Kit (ISDS 300768)	Adelph Honey (ISDS 321989)	Shadwell Sunny (ISDS 309856)	Try (ISDS 302427)	1 year 2 months	YES	MRI of brain, cerebrospinal fluid from the cisterns cerebellomdeullaris. NH3. Neurological exam	YES	N/A	**Suspected triggers:** No suspected triggers. **Medication:** 90mg x 2 daily Epiphen, 325mg Libromide split into 2, 6ml MCT oil x 2 daily. Levetiracetam as cluster buster after seizure. **Details:** MCT oil reduced seizures significantly. We were part of RVC trial and continued with the oil afterwards.	OWNER
30/09/2022		**Akira**	N/A	N/A	Unregistered - UK	01-Nov-17	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	YES	By vet with diary kept by owner	YES	N/A	**Suspected triggers:** Not known as yet. **Medication:** She has tried Levetiracetam 500mg unfortunately didn't work we are now trying Pexion 400mg twice a day. Only been on one week so far. **Details:** Akira is spayed, a generally happy healthy girl. Her grand mal fits so far have hit nearly 4mins, really shaky, lots of saliva and loses bodily functions.	OWNER
28/01/2020		**Alaska**	N/A	N/A	Unregistered - UK	16-Jun-10	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 Years	YES	Vets have put it on record	YES	N/A	**Suspected triggers:** Food is a trigger. **Medication:** None. **Details:** Changed to grain free gluten free food and the fits reduced considerably. Very small fits no more than once a quarter. Last fit was 5 months ago.	OWNER
30/04/2026		**Alduin Leo's Legacy - Stanley**	KO274688	N/A	WSD - UK KC Activity Register	02-Mar-24	UK	Dog	Oakley	Bleu Perle Heart Red II	Bleu Perle Sapphire	Karieclipse Robrook Elune	Arthbear Catch A Fallin Star	Holmelyne Ultra Violet 19.5	1 year 7.5 months	YES	Neurology consultation at The Ralph, Marlow.	YES	N/A	**Suspected triggers:** No known triggers. **Medication:** Levetiracetam initially but Stanley had more seizures (5 in first two weeks of February) so Phenobarbital (Soliphen) added. Once checked therapeutic range reached we gradually weaned him off Levetiracetam. Two further seizures once solely on Soliphen so dose increased. None since. **Details:** First seizure in October 2025. One month later Stanley was taken ill on a walk and we rushed him straight to the vet. He was admitted and later transferred to The Ralph referral centre. He had focal seizures while hospitalised being treated for a gut issue. Diagnosed with PLE (protein losing enteropathy). They put him on Levetiracetam whilst we got the PLE under control. Originally thoughts were the two conditions could be connected but once the PLE was controlled, Stanley had further seizures so we went back to The Ralph for a neurology consultation. Various tests were performed to rule out other causes (no MRI or CSF test at this point as didn't want to put him through an anaesthetic). Idiopathic epilepsy was the resulting diagnosis.	OWNER
19/07/2019	31/03/2022	**Alfie**	N/A	N/A	Unregistered - UK	01-Apr-16	UK	Dog	Burndale Chief (ISDS 317549)	Spot of Roweburn (ISDS 262341)	Llangwam May (ISDS 300898)	Unknown	Unknown	Unknown	2 years 4 months	YES	Diagnosed by vet	YES	N/A	**Suspected triggers:** None noted. **Medication:** Epiphen, Libromide and Keppra. **Details:** Neutered. Changed on to gluten free food. **UPDATED ADDED 31/03/2022:** ISDS No's added to Sire, (S)G.Sire (also corrected name spelling) and (S)G.Dam (also corrected name spelling). How dog diagnosed added.	OWNER Updated 31.03.22
31/07/2020		**Alfie**	N/A	N/A	Unregistered - UK	05-Aug-18	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 11 months	YES	Video of dog fitting shown to vet	NO	1 year 11 months - epilepsy	**Suspected triggers:** None. **Medication:** No medication given. **Details:** Not neutered, fits lasted 3-4 minutes.	OWNER
29/02/2024		**Alfie**	N/A	N/A	Unregistered - UK	01-May-22	UK	Dog	Max	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 6 months	YES	Vet	YES	N/A	**Suspected triggers:** None noted. **Medication:** Keppra - under control and seizure free 3 weeks to date. **Details:** First fit's cluster of 6+ over 12 hours. Only been 3 weeks since first fit.	OWNER
29/11/2019		**Altricia Stay By Me - Jagger**	Not known	Not known	BC	28-Jul-12	UK	Dog	SH CH Altricia My Spot On	Altricia Red Return	Altricia Lady Margaret	SH CH Altricia Love A Lot	SH CH Miraje The Storm Lord JW	Altricia Wish For Gael	6 months	Not known	Not known	Not known	Not known	**Suspected triggers:** None stated. **Medication:** Pexion 200mg 2 x daily. **Details:** Fitting began aged 6 months with focal seizures. Had obvious focal seizures at 6 months, 9 months, 10 months and 14 months.May also have been having more subtle focal seizures that weren't spotted. Brain MRI in October 2013 ruled out brain tumour. Blood tests all normal. Bladder X-ray done as each episode dog has leaked urine, bladder normal. Initially fed on Arden Grange, now on Burns. No noticeable change in fits since onset. Entire. Statement from the breeder "if you feel the need to put this on the data base you must state that siblings, parents, grandparents, etc. have never had a problem."	DATA TRANSFER FROM LYN NORTON Added 18.02.14
31/12/2023		**Amazing Phoenix** **RKF 6661822**	N/A	N/A	Non UK Registered (Border Collie)	11-Sep-22	RUSSIA	Dog	Mawlch knox	Mawlch wisp	Mawlch awel	Betsy	Tender kiss	Magia	9 months 3 weeks	YES	He had 1 seizure and was in a coma for a while, his brain was swollen and overheated and his heart stopped during vet treatment. The vet said it was status epilepsy.	NO	9 months, 3 weeks. See Fitting Details for cause of death.	**Suspected triggers:** None. He was just outside planning with the other dogs. **Medication:** None, he died with his first seizure. **Details:** He had 1 seizure and was in a coma for a while, his brain was swollen and overheated and his heart stopped during vet treatment. The vet said it was status epilepsy. Three days after his death, a friend of the breeder told him that in November 2022 a bitch from the same lines had died with the same symptoms.	OWNER
30/11/2023		**Ana Macy**	N/A	N/A	Non UK	26-Jun-21	USA	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	Vet stated	YES	N/A	**Suspected triggers:** Unknown at this time. **Medication:** Levetiracetam 500 mg 1 every 12 hrs **Details:** Spayed, 3 to 4 weeks seizure frequency. 2 to 5 minutes length of fits. We recently had 2 fits within 24 hrs of each other this week. Possible low blood sugar. We met with vet 01/11/23 and discussed trying CBD, MCT, diet changes and supplements. Vet agreed not to increase meds and give us time to implement new protocol.	OWNER

Died after choking on his own vomit	**Suspected triggers:** None noted. **Medication:** None noted. **Details:** The fits started completely out of the blue just as he was approaching his 4th birthday. He had one fit in the early hours of the morning, checks were done at local vets and they couldn't agree what had caused it, a week later another fit followed by his body starting to shut down, laboured breathing and no energy. Taken to Potters Bar vets hospital, kept in for a week, one small fit whilst he was there, they said sudden onset epilepsy, bought him home as they said he might not fit again. He had been home from Potters Bar for 2 weeks with no fits, then had a major fit in his crate whilst we were out and died after choking on his own vomit. Roughly 8 weeks after his first fit. He was neutered at least two years before the fits started .	DATA TRANSFER FROM LYN NORTON Added 29.05.14

30/11/2021	31/05/2023	**Bailee**	N/A	N/A	Unregistered - UK	07-Apr-16	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	By vet after second fit	NO	N/A	**Suspected triggers:** Reaction to spot on flea treatment very negative - but not quite a fit. I can't identify a particular trigger as fits are now very regular, every five weeks. They seem cumulative rather than a reaction to any external influence, as far as I can see. The first fit came soon after puppy vaccinations, but may be a coincidence. **Medication:** Libromide 650mg, Epiphen 240mg, Diazepam 10 mg, Hepato support. Meds made the seizures regular and reduced number considerably. **Details:** Neutered. Tricolour. Very, very active dog with more stamina than in most collies, and very intelligent. Food taste changes dramatically after a fit, will not eat meat and after a seizure varies from binge eating to eating very little. After a fit he is not good in the house and seems depressed, but outside he exercises generally normally. **UPDATE 31/05/2023** - Bailee born 2016 died of traumatic seizures on 14 May 2023.	OWNER Updated 31.05.23
31/05/2022		**Bailey**	N/A	N/A	Unregistered - UK	23-Jan-10	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	5 years	YES	Confirmed at RVC with MRI	YES	N/A	**Suspected triggers:** No triggers provided. **Medication:** 1 x 400mg Pexion, 4 x 60mg Soliphen, 2 x 500mg Levetiracetam. When we first introduced Phenobarbital (subsequently Epiphen, now Soliphen), he was very wobbly on his feet. **Details:** Bailey is neutered and was having seizures every seven weeks but we have up'd his medication and currently he has been 11 weeks without one. Normally he has on average three grand mal seizures.	OWNER
31/10/2022		**Bailey**	N/A	N/A	Unregistered - UK	25-May-17	UK	Dog	Unknown Border Collie	Unknown	Unknown	Unknown	Unknown	Unknown	5 years	YES	Confirmed after 2 seizures within 24 hours. Bloods normal.	YES	N/A	**Suspected triggers:** No suspected triggers **Medication:** Phenobarbital , recently started. **Details:** Neutered at 7 month old.	OWNER
31/01/2021		**Bailey Lyness**	N/A	N/A	Unregistered - UK	02-Oct-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Glasgow Vet School and Hospital	YES	N/A	**Suspected triggers:** Have not been able to confirm a reason so far. **Medication:** Epiphen 120mg twice daily, Libromide 1.5 tablets a.m. and 1 tablet p.m., Zonegram 100mg twice daily, Keppra 500mg 2 tablets 3 times a day after each cluster fit for 7 days, Destolit 150mg tablets twice daily, 10mg CBD capsule at night. **Details:** Bailey is neutered and he has fits every 3 to 4 weeks generally although at the moment they are weekly. He has generally 3 cluster fits at a time that last 2 to 3 minutes but yesterday he had 7 fits over a 6 hour period. It is so stressful as it is hard to keep Bailey quiet after the fits as it takes him around an hour to come round and see properly as well as regain his balance. We have bought a childs playpen to keep him in so as he can't get out and hurt himself as the dog pens he was able to escape from. Typically Collie.	OWNER

Blood test normal, epilepsy diagnosed by vet.	YES	N/A	**Suspected triggers:** Not sure if this was a trigger but seems very strange, Ziggy's fist vaccinations were the L2 but in March 2023 at 2 years the vets changed to the L4. He had his booster on the 8th March 2023 then a week later had a focal seizure. He went for his second booster the lepto two weeks later then had a head shake. Nothing then till August then he had a full seizure on the 16th, he then had blood test and all normal. But then the 10th September 2023 he had 1 seizure, then 3 on the 11th September. We then went to the vets and he was diagnosed with epilepsy. **Medication:** Nexgaurd each month and annual booster L4 given with above results. Now on Epiphen twice a day 60mg and he's been all clear since. **Details:** Neutered at 15 months. Focal seizure like fly snapping. Paddling seizures lasted up to 4 mins. I can't be sure but think it was down to the vaccine or Nexgaurd. But I suppose I'll never know. He's doing really well now finger crossed. But I'm still heartbroken for him.	OWNER

19/07/2019		**Bewitched Over Pendle - Zara**	K136807	N/A	WSD - UK KC Activity Register	25-Dec-10	UK	Bitch	Unknown	Unknown	Unknown	Jess (ISDS no. not known)	Unknown	Unknown	6 years	YES	While in emergency vets, while in epileptic status	NO	6 years 2 months. Went downhill very quickly after another emergency admission to vet on Thursday 9th March 2017, collected her Friday evening seemed her normal self but not long after we arrived home she had another fit, spoke to vet who advised 3 days of Keppra, went rapidly downhill over the weekend to the point Zara seemed like she was in a coma, made the decision on Monday morning 13th March 2017 to PTS	**Suspected triggers:** No triggers that I was aware of. **Medication:** Sedation at emergency vet for epileptic status on January 5th 2017, then given IV Keppra and IV Phenobarbital. Came home 3 days later and was on Phenobarbital 12 hourly, very quiet and disorientated at first but got better and more her normal self over the following week, told by vet to give Keppra after fits to prevent clusters. **Details:** Had massive fit lasting 7 minutes. I set timer on my phone when I realised what was happening, this was her first fit to my knowledge, got her to vets within half an hour, seen by vet sent home and was told it was possibly a one off. Booked in for blood tests 2 days later, went into epileptic status same night with a trip to emergency vets, was stabilised and returned home on medication. Small fits recurred every couple of weeks, with 2 lots of clusters, went rapidly downhill after final 2 fits on 10th March 2017, one while still in vets and one at home but never seemed to fully come around from the last. Zara was a local farm bred Collie. I contacted breeder to ask if there was any history of Epilepsy within her breeding, wouldn't answer me and then blocked my tel number. Zara was PTS 13th March 2017 to avoid my girl any further suffering. Zara was spayed at 12 months.	OWNER

YES	N/A	**Suspected triggers:** No known triggers, it happened while playing, usually while sleeping. She had another set of seizures 4 months later, no correlation with deworming or other medication. **Medication:** She is doing well on 45 mg Phenobarbital twice a day. Initial dose was 30 mg, but she started having focal seizures, so we increased it. She seems to be fine on the meds. She is also on Proin 72 mg x 1/day and DES 1mg pill twice a week. **Details:** Seizure history - First seizure was 20th July 2021, 2-minute seizure in her sleep. The next day chemistry profile and a CBC test were done, everything was normal. Second seizure was on 10pm on 5th August 2021, she had a 1 minute seizure while playing. Third seizure 3am on 6th August 2021, 2 minute seizure while sleeping. A thorough vet check was done on 6th August 2021, everything was fine. Started her on Phenobarbital. The initial dose was 90 mg x 2/day that was decreased to 45 mg x 2/day two weeks later, and then decreased to 30 mg x2 /day at the beginning of September. Phenobarbital blood level was checked on 5th December 2021, it was 15	OWNER Updated 31.03.22
29/02/2020		**Blodwen**	N/A	N/A	Unregistered - UK	28-Feb-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Neurology assessment	YES	N/A	**Suspected triggers:** No known triggers. **Medication:** Started with CBD aged 6 months which kept symptoms under control until she was one year old. They became significantly worse and unmanageable so she was started on phenobarbital and levetiracetam - starting doses were steadily increased to maximum for her weight and we also increased CBD oil and finally introduced Epitaur. **Details:** Blodwen is a Double Merle collie from a breeder but to me via an informal rescue. She has focal seizures - her MRI was clear so the seizures are not related to brain trauma or disease. Over a six month period her seizure related behaviour gradually diminished (from jerking awake every few minutes all through the night, circling, twitching and being aggressive) and she now sleeps for up to 11 hours through the night with no issues and is markedly more settled in the daytime. She was spayed at 6 month old but the focal seizure symptoms had already started (leg twitching, staring with head tilted, circling). The neutering didn't appear to make it worse. I have come to understand Blodwen, her symptoms and treatment requirements through close observation, asking for help from a Double Merle Facebook group and researching this genetic problem. We have a regular border collie from a farm litter who has displayed no health problems, I had no knowledge of merle or double merle collies when we rescued Blodwen and this was not mentioned by the person we rescued her from.	OWNER
31/05/2024		**Blue**	N/A	N/A	Unregistered - UK	05-Jun-19	UK	Dog	Red Dog	Unknown	Unknown	Jess	Unknown	Unknown	3 years	YES	Neurologist	YES	N/A	**Suspected triggers:** Worming treatment (only us Panaca now). Stronghold flea treatment. **Medication:** Rectal Diazepam. Starting to look at full time medication now. **Details:** Fits where 6 months apart lasting 4.5 mins but are now a month apart and lasting between 2.5 - 3mins. Eats lots of grass right before a fit. Still intact due to nervousness. Brother Jester has sired a litter.	OWNER
31/01/2026		**Bob**	N/A	N/A	BC - Unregistered	09-Sep-23	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	10 months	YES	Vet blood test, video of sezures.	YES	N/A	**Suspected triggers:** Large traffic, lorry's, fast cars, vaccine, flea treatment. **Medication:** Didn't start treating till after 4 seizures. Started on Phenobarbital 30ml, went 3 weeks sezure free. Added on Keppra, went 3 weeks again, then had runs, strange reaction amount of Keppra, taken off it. Tried Pexion the same, eyes not normal more seizures. Started having cluster seizures so taken off that. Seems ok on Phenobarbital, more settled. Added Keppra back on, only reduced mg 250. Started to have seizures a lot after taking it, so reducing it to stop taking. Going to add on Epitaur to try. Has had 89 seizures since starting them. I have stuck with it, he comes out of seizures a lot better just taking Phenobarbital with Keppra added, half a day then cluster seizures. **Details:** He had one testical removed that didn't drop, just had that removed and left the other intact. I had him done at 16 months old for that removal. I noticed when he was 18 month the scent of bitches in heat can trigger a seizure I am doing a test for MFRDR1 gene next week. Think he is refractory to meds so ordered CBD oil to try if he is. It's a nightmare he is monitored 24/7. Full seizures laid shaking and unconscious, then gets up sometime as if nothing has happened. I will persevere. Had collies from a child, never had one with epilepsy. They only had puppy jabs. He's had a bad reaction to all his jabs. 2 months ago Lepto 4, Parvo, Distemper etc., I will never have him jabbed again.	OWNER
31/05/2023		**Bobbie**	N/A	N/A	Unregistered - UK	21-Dec-20	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 8 months	YES	Vets.	YES	N/A	**Suspected triggers:** Obsessed with ball play, not sure of any triggers. Bobbie has had all of her vaccines, regular worm and flea treatment. She was stung possibly by a bee prior to the fits. Bobbie did have an accident and ran into a park bench, but no apparent injury sustained. **Medication:** Phenobarbital, still on low dose. **Details:** Phantom pregnancy, prolonged lactation, requiring treatment. Bobbie was spayed after her first season. She has not had a fit for 5 months. Originally fits were quite short.	OWNER
31/08/2022		**Bobby**	N/A	N/A	Unregistered - UK	19-Apr-14	UK	Dog	Max	Unknown	Unknown	Molly	Unknown	Unknown	4 years	YES	By the vets.	YES	N/A	**Suspected triggers:** None noted. **Medication:** Originally put on 30mg of Epiphen twice daily and fits stopped for a couple of years, he started to have clusters every 10 to 14 days and the Epiphen was slowly increased plus Levetiracetam was added 3 times daily. He is now on 180mg Epiphen twice daily and 750mg Levetiracetam 3 times daily (increasing to 4 times during clusters). Recently the period between clusters has increased to 16 days sometimes and the time between each fit has got longer. **Details:** See above and usually each fit is about a minute, but varies a lot, some silent seizures, some thrashing and some thrashing and howling. Period between fits in a cluster varies from 2 to 12 hours and 6 to 8 fits.	OWNER

31/03/2020		**Boston**	N/A	N/A	Unregistered - UK	23-Jun-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years 6 months	YES	After initial seizure followed a couple of months later by a focal seizure and clusters - diagnosed with idiopathic epilepsy after MRI eliminated any brain issues	NO	Feb 4th 2020 - aged 5 years and 8 months. PTS as diagnosed with chronic liver failure due to Phenobarbital	**Suspected triggers:** Stress, over tiredness and heat would appear to be triggers. Stress from being bullied by our other collies, or going to the vet. **Medication:** Initially given Pexion - no impact. Then moved to Phenobarbital, then added Potassium Bromide. Keppra was given as an emergency protocol. Diazepam did not appear to work. **Details:** Boston had his first seizure on 4th Dec 2017. From then till he died on Feb 4th 2020 - he had approximately 80+ seizures lasting on average 60 seconds with some as cluster seizures. When he first started seizing it was shorter and he recovered relatively quickly. He never lost bladder control when he seized. The critical turning point was in September 2018 when he went into focal seizure mode and had to go to ICU. This followed another ICU episode in December 2018 where we thought we would lose him. The neurologists worked with us to find the right medication level. There were times we pushed back on the suggested medication levels and discussed it with the neurologists. I think it is important that owners who know their dogs best and have to manage the dog everyday feel confident to add their tuppence worth in. On hindsight we saw three issues: (1) the length of time it takes a medication level to work through and to assess impact means it is several weeks from each medication change before you see if it has had any impact in controlling the seizures; (2) the vets are highly dependent on blood lab results to ascertain the medication levels and in our case, there were blood results that was inaccurate/incorrect and thus unreliable. We queried this and new bloods were taken but each time there was an episode, this delayed the possibility of accurate blood works and (3) neurologists are focussed on controlling the seizures but need to work hand in hand with liver experts so any increase in PB should be done only after a check on the state of the liver, it should not be automatic. It is our belief that we might have been able to reverse the liver failure had Boston's PB not been raised after summer 2019. Though the seizures were better controlled, his liver was damaged beyond repair. On the other hand if the PB was tapered down in summer 2019 and only Bromide used (or possibly in tandem with Keppra), would he have succumbed to some grand mal seizure - we will never know. Ultimately, epilepsy is life limiting- that we do realise.	OWNER

21/08/2019		**Buddy**	N/A	N/A	Unregistered - UK	10-Oct-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years 3 months	YES	Vet	YES	N/A	**Suspected triggers:** None noted. **Medication:** Started on a low dose of epiphen, seizures were getting more frequent, now on 90g twice a day, eight in the morning eight at night. It started with a seizure then around four months later he had a cluster, put on keppra for a week, then just a few months ago he was having one every two weeks that's when the vet upped his meds. We now also give him CBD oil, fingers crossed he has not had one in about 4 weeks. **Details:** Stopped giving him worming and flea and tick medication looking at alternatives as there is a lot of people saying it can bring on a seizure through the dog epilepsy site.	OWNER
30/11/2022		**Buddy**	N/A	N/A	Non UK Crossbreed	31-Jul-18	AUSTRALIA	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 6 months	YES	Veterinarian, unknowns, we did not own Buddy then.	YES	N/A	**Suspected triggers:** Heat. **Medication:** Phenobarb, Keppra. Potassium Bromide - led to weakness in back legs and seems to have affected personality from fun loving to sombre. **Details:** Has cluster seizures averaging between 3-9 per month. Buddy was rehomed, we do not know a lot about his previous history. Although we were told he was a Border Collie we believe he is a cross breed.	OWNER

He still has a few fits a year and focal ones. Went from a quiet dog to being very noisy. Not neutered. His fits are a few mins, he takes a while to come round. Last one last year, he could not see and panicked, he took a while to recover.	OWNER
29/10/2019		**Choystean Wyken Pippin - Murphy**	AS00677402	N/A	BC - UK KC Pedigree	24-Jan-15	UK	Dog	Jackscrofter Silverbirch Over Choystean	SH CH Littlethorn Galaxy	Jackscrofter Greatglen Be My Girl	Sarkam Life Imitation In Choystean	Terannos Final Demand	Sarkam Destiny's Dream	2 years 2 months	YES	Referred to Willows at Solihull who examined & did an MRI scan	YES	N/A	**Suspected triggers:** No reason for fitting as far as I am aware. **Medication:** Initially Levetiracetam 3 times a day but as it did not control the fits Epiphen was included twice a day. **Details:** Full blown fit at lunchtime by my feet. Went on for a minute from which he got up and walked slightly wobbly into the garden. Up until then perfectly healthy, happy young dog. Fed on Millies kibble. Seizures are now under control. He was castrated at almost 3 yrs old but prior to that he was chemically castrated twice. He is currently well controlled on meds.	OWNER
31/07/2022		**Cilla**	N/A	N/A	Unregistered - UK	06-Jun-15	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 years	YES	The vet told me she likely has epilepsy after she ran tests.	YES	N/A	**Suspected triggers:** She eats a lot when on walks and I think certain things trigger her. I muzzle her on walks now. **Medication:** Not on meds. **Details:** Had two in the same day then went 5 months before she had a single one. Fits don't last long but she's very disoriented after.	OWNER
28/02/2021		**Cloudy**	N/A	N/A	Unregistered - UK	28-Aug-16	UK	Dog	Unknown	Unknown	Unknown	Misty	Unknown	Unknown	1 year 7 months	YES		YES	N/A	**Suspected triggers:** He definitely has epilepsy but the condition could have been triggered, or exacerbated, by the original liver problem. **Medication:** Cloudy responds very successfully to a regimen of KBr (Libromide), Levetiracetam (Keppra) and Phenobarbital (Epiphen) and has almost no fitting, with the occasional 'petit mal' seizures. He has very occasional full tonic-clonic seizures when his medication has been compromised e.g. missed dose or after activated charcoal treatment for ingestion of toxins. **Details:** Has epilepsy and liver shunt. He started fitting regularly at 18 months in February 2018 and responded well to Phenobarbital. Went into status in May, probably due to hepathic encephalopathy. Routine blood analysis showed a liver anomaly and it was found he had a hepatic shunt after scanning. Surgery was carried out in June with 100% success, but the fitting continued. He is still taking regular medication at 4+ years of age with occasional recurrence of fitting especially if medication is compromised, even though his liver is perfectly healthy and functioning. No indication of food relating to seizures but he is now on a hepatic diet due to the shunt.	DATA TRANSFER & UPDATE BY OWNER
22/12/2019		**Clover**	N/A	N/A	Unregistered - UK	10-Jun-07	UK	Bitch	Unknown	Unknown	Unknown	Nell	Unknown	Unknown	10 years	YES	Only by tests ruling out other possible causes	YES	N/A	**Suspected triggers:** Seems to be an association with worming. Last fit the morning after treatment with Milpro. **Details:** Fits are infrequent. Three or four over a year. ALWAYS within a narrow time slot 7.30am to 9am. Not sure if this is to do with length of time since feeding or hormonal fluctuation. I have disconnected all routine medication. Clover is spayed and in excellent health generally. She has had about 10fits in total. Approx 2 to 3 mins duration. Her mother had no history of fits though she died relatively young of oral cancer.	OWNER

Lived until she was 14 years.	**Suspected triggers:** None provided. **Medication:** Del was never given any medications as my vet thought they would cause more damage than the fits themselves. **Details:** Del used to fit every 6 months, 3 fits and then none for next approximately 6 months. This continued until I moved, then she stopped. Full bloods were done annually until towards the end of her life, there were no abnormalities thrown up. I moved when she was approximatley 11. Once I moved there were no more fits. Spayed.	OWNER
31/05/2020		**Delanor Pinball Wizard - Whiz**	AJ03743806	N/A	BC - UK KC Pedigree	22-Jun-08	UK	Dog	AG CH Forbyfor Turbo Diesel	Woodsorrel Red Wine	Tri Fly	Delanor Waggitt A Lot	Rosmarinus The Werryman	Delanor Kirri	5 years	YES	Various consultations and investigations with vet. Blood tests etc for other causes (nothing found). No scan was done.	NO	Whiz died in status when he was 7 years, 3 months. He started fitting early morning on Sept 19th 2015. He did not come out of the fit as he usually did and we were unable to stop it. After speaking to the emergency vet we managed to carry him to the car. Sadly he died on the way to the vets.	**Suspected triggers:** None knowns. I spent two years looking for triggers and did wonder if swimming in the sea was a trigger for Whiz (salt ???) but the day he died he hadn't been to the sea for two weeks. **Medication:** He was on Epiphen 30mg twice a day. This had kept him relatively stable until the last day. **Details:** Whiz was neutered at 15 months. I do not believe this had any effect as he did not start fitting until he was five. He had cluster fits, usually two or three lasting less than a minute with about half an hour between. He only had five groups of fits over an eighteen month period. He was, however, hospitalised overnight in July 2015 when he fitted six times over five hours. The vets gave him rectal valium.	OWNER
31/01/2024		**Denwyn Dazzle - Dazzle**	K168185	N/A	Collie Cross - UK KC Activity Register	02-Apr-20	UK	Dog	Ben working Bearded Collie	Bruno working Bearded Collie	Sky working Bearded Collie	Denwyn Brownie (ISDS 327432)	Zac (ISDS 263935)	Meg of Denwyn (ISDS 298148)	1 year	YES	MRI and tests at North West Veterinary specilists. Diagnosed as Idiopathic Epilepsy.	NO	Died at 3 years of age. Started to cluster, with grand mal seizures, and despite all his medecations, the seizures could not be stopped.	**Suspected triggers:** No triggers. **Medication:** He was on Epiphen, Potassium Bromide, Keppra and also Diazepam, but he was refractory and the drugs just gave him mobility issues but failed to control his epilepsy. **Details:** At first his fits were in early hours of the morning but at the end there was no pattern and hardly any seizure free days. Not neutered.	OWNER
31/10/2023		**Derek**	N/A	N/A	Unregistered - UK	14-Apr-18	UK	Dog	Brodie	Unknown	Unknown	Lass	Unknown	Unknown	5 years	YES	I kept a diary of dates and how Derek behaved, vet diagnosed epilepsy from this.	YES	N/A	**Suspected triggers:** All have happened after late night run around apart from the last one which was first thing in the morning, so possibly exercise? **Medication:** Derek was prescribed Pexion yesterday 26/10/23, so too early to notice changes **Details:** Neutered. 28/02/2021		**Easterdale's Fleet O'Foot**	K134734	N/A	WSD - UK KC Activity Register	07-Jan-10	UK	Dog	Easterdale's Prince Rory	Rock	Kim	Just the Tonic	Robbie	Tess	3 years 9 months	YES	Diagnosed by my vets and confirmed by specialist	NO	Age 8 years 4 months. Fleet was pts on 30 May 2018 following several hours of continuous fitting	**Suspected triggers:** None mentioned **Medication:** Started on Pexion December 2015 with Diazepam when needed. Changed to Libromide, with Keppra when needed and Diazepam for immediate treatment of fits. **Details:** First fit at 3yrs 9 mths at 4am, grand mal. 9 fits over next 2 years, very short, all grand mal, all around 4am. On no medication then. In December 2015 had a severe fit lasting 5 minutes and put on Pexion. 3 further fits and dose increased in Aug 2016 as last fit was 6 mins and required Diazepam. Severity seemed to increase but frequency varied from 4 weeks to 9 months. Then Fleet's fits sadly increased in frequency and severity and he eventually began to cluster fit. His meds were changed, but things continued to decline. He saw a specialist who advised the meds he was on were what he would recommend but to try changing the timing of meds. His fits continued to lengthen and he had several emergency trips to the vet in the middle of the night, when Diazepam did not bring him out. At the end he was fitting during the day as well as at night-time and the fits were taking a terrible toll on him. He was pts in my house following a night of almost continuous cluster fitting. Neutered at 12 months, well before fits started. On cereal free Salmon and Potato mix. Food did not seem to be a factor.	DATA TRANSFER & UPDATE BY OWNER

NO	Passed away 13 months after first seizure (7 years old). Had a seizure and never came round despite giving Diazepam and taking to vets.	**Suspected triggers:** Fell on hill (somersaulted) when on walk on day of 1st seizure. Got back up and walked fine. Had seizure after falling asleep. No particular triggers noted, however was easily excited, particularly around walk/work time. Vet noted possible slight heartbeat fluctuation when examined, but nothing found. **Medication:** Started on Pexion, increased after 2 months, then given with Phenoleptil as well. Diazepam was kept on standby. Medication seemed to work for a bit, then the seizures would be worse. Levetiracetam was kept to be given for a few days if seizures lasted over 15 minutes. **Details:** Half sister through dam has been having seizures since 3 years old, although not as severe or often. As far as aware, only 2 doing high impact work have seizures. Spayed. Fits happened every month, would sometimes get a gap of 2 months, but the seizures got more severe if there was a longer gap. Seizures lasted 10-20 minutes, some clusters. Couldn't see after seizures, no matter the length. Was mostly fine by the next day.	OWNER
31/03/2021		**Ellan-Vannin Millie**	AS0902157	00/332956	BC - Dual Registered UK KC & ISDS	18-May-14	UK	Bitch	Ellan-Vannin Kirk (ISDS 00/311443)	Joe	Breeze	Ellan-Vannin Mia 9ISDS 00/314110)	Spot	Bliss	2 years	YES	Bloods, head scans etc all normal but clinical diagnosis based on the episodes, seemingly brought on by touch, was one of a rare type of seizure / rage syndrome.	NO	Age 4. Due to the escalating frequency and intensity of the episodes which were very distressing for her and us, we sadly despite trying all we could, had her PTS.	**Suspected triggers:** Millie was a very loving girl who used to lay for hours next to me having cuddles and tummy rubs so this is all the harder to explain. Every six weeks a sudden explosive episode of rage with no warning. We didn't understand at first but there became a pattern to it and so the 2 year journey of trying to manage her seizures safely began. Before an episode she became increasingly sensitive to light and noise, afterwards she would hide and sleep it off. **Medication:** Pexion to start then stopped. Followed by a combination of Epiphen and Keppra. Prozac was also tried but made no difference so was stopped. We tried all different types of epilepsy medicine. **Details:** Frequency was from about every 6 weeks until Christmas 2017 when she started clustering. After the initial settling of the cluster episode the following seizures were more frequent with no pattern and each one was for a longer period of time. Food was not a trigger although to alleviate as much non natural things in her diet as possible, we changed her to a raw diet and although it did not help her seizures, she did very well on it. Millie was neutered but it made no difference, she was spayed before the onset of the seizures. Due to the severity and type of seizures Millie had, we could no longer manage her safely. Just to say that Millie would come to us probably feeling unwell for a cuddle and it was always as we would touch her that the seizure would happen. She would usually have been asleep beforehand. Never happened at play or with strong touch/rough cuddles only ever gentle strokes, episodes lasted 5 seconds but nearer the end more like 10 seconds and we just couldn't manage her safely and the most traumatic thing was we could no longer cuddle her as she or we would have wanted (the seizures along with disc degeneration was also ageing her rapidly too), so the heart breaking decision was made to say goodbye. It was truly a traumatic journey for and with her.	DATA TRANSFER & UPDATE BY OWNER 31.03.21

31/10/2025		**Enzo - Terry**	N/A	N/A	Unregistered - UK	03-Sep-22	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	Vets appointment, blood test and full check over. Next day epilepsy was confirmed.	YES	N/A	**Suspected triggers:** I can't think of any triggers. I noticed it was when he layed down and started to go to sleep. He's had no illness. He has monthly flea and tick tablets and worming every 3 months which the vet said has nothing contained which could cause fits. **Medication:** He started on meds straight away, he was given Levetiracetam, 3 1/2 tablets 3 times a day and Phenobarbital alongside. See detai;s for more info. **Details:** He had first fit on August 7th, we kept an eye to see if there was another. He had his next fit on Sat 11th Oct, then continued to fit on the Sunday 12th and night. He had 7 fits in 24 hrs, really very scary. I've had dogs all my life and so far none have had fits. We got an appointment with the vet Monday morning 13th and had a blood test and full check over. We got the results back the next day 14th, confirming epilepsy. He started on meds straight away, he was given Levetiracetam, 3 1/2 tablets 3 times a day and Phenobarbital alongside. He immediately stopped fits and since Tuesday 14th evening hasn't had one, but he's abit off his face bless him. He's getting checked tomorrow 18th Oct, and may start weening off the Levetiracetam over the next few days. I'm abit scared he may have a fit again while he comes off it and is left taking Phenobarbital. I love him so much and I can't stand it that this has happened. He was neutered when he was around a year. The frequency of the fits was around every 4 hrs over 48 hrs they lasted 30 seconds to 1 minute. He started after the last few coming round screaming and high pitch barking and very confused for about 5 minutes. This really is a horrible thing to witness you feel so absolutely like you can't do anything.	OWNER
31/08/2022		**Evy**	N/A	N/A	Non UK Unregistered (Border Collie)	24-Apr-19	NETHERLANDS	Bitch	Maison	Unknown	Unknown	Noa	Unknown	Unknown	2 years 6 months	YES	Epilepsy was diagnosed based on my observations.	YES	N/A	**Suspected triggers:** Evy suffers from primary epilepsy, no triggers. **Medication:** 150 mg of Phenoral a day.In case of fits in the next 6 weeks Potassium Bromide will be added. During fits we give 10 mg of Diazepam rectally. **Details:** Evy is spayed. She suffers from clustering epilepsy. Usually her fits start in the morning and she'll have 4-6 fits within the first 1.5 hours. We give Diazepam during the first or second fit. After that it stays calm all day and there is a big chance she has another fit about 12 - 14 hours later. We give another dose of Diazepam when that happens. Fits don't usually last long, 1.5 minute tops. They follow each other up very quickly so we need to be on top of things immediately. The current frequency between days is 5 - 7 weeks. We're hoping to bring that up to 12 weeks. Evy comes from an unofficial breeder. This woman just wanted to have a nest of puppies once. There is no family tree available. Both parents are carriers of the SN gene. 2 pups from the nest suffered the illness and died before their first birthday. Evy is a carrier too.	OWNER

Kidney failure	**Suspected triggers:** No obvious triggers - fitted approx twice per month - no pattern. **Medication:** Not on medication as vet thought he wasn't fitting regular enough. **Details:** Neutered at around 2 years old. Fits lasted for around 5 mins, approx 2 per month.	OWNER
30/04/2022		**Gigha**	N/A	N/A	Unregistered - UK	08-Jan-16	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	By taking her to the vet repeatedly and eventually taking her to different vets for alternative opinions as our first vet advised us to euthanise her. It came after a a year of increasingly regular fits during which Gigha was anxious and this lead to fear driven aggressive behaviour. It took reaching this climax for her to be diagnosed.	YES	N/A	**Suspected triggers:** We are unsure of triggers. **Medication:** Epiphen, her dosage has been changed three times since she was first prescribed. Its changed her life, she is a happy energetic collie now. **Details:** She still has a fit once a year or so and the build up to a fit is still noticeable but the Epiphen has made a huge difference. She has her bloods checked regularly at the vets. Fit lengths vary, they are on average 5+ mins long.	OWNER
31/03/2024		**Ginger**	N/A	N/A	Non UK	18-Oct-23	SOUTH AFRICA	Dog	Rex	Unknown	Dorothy	Unknown	Unknown	Unknown	1 Year 1 month	NO	N/A	YES	N/A	**Suspected triggers:** Unsure. Happens when he is asleep. **Medication:** Phenobarbital 1.5 tabs morning and 1 tab evening. Had a minor seizure 10 days after starting treatment. Had blood tests 2 weeks after starting treatment and levels were 70 (lower end of therapeutic dose). Vet chose to keep treatment as is. 3 days later had 8 seizures over 30 minutes and was rushed to hospital. They have now upped pheno to 2 tabs morning and night and added highest dose of Potassium Bromide. He is in an induced coma as he continues to have seizures when they wake him up (24/03/2024).	OWNER
30/11/2022		**Gizmo**	N/A	N/A	Unregistered - UK	22-Nov-21	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	9 months	YES	Gizmo had blood tests, MRI scans, urine tests etc to rule out other causes, vet diagnosed Idiopathic Epilepsy.	YES	N/A	**Suspected triggers:** Not sure. **Medication:** Gizmo is on Phenobarbital medication. Not had any other episodes but only had 2 before medication started. **Details:** The episodes Gizmo had weren't your typical fitting. He was acting very strange almost scared like, cowering / hiding away. Shaking, drooling and was like that for a few hours, then it happened again the day after.	OWNER
19/07/2019		**Glenalla Jack - Captain Jack Sparrow**	N/A	296035	BC - ISDS	21-Apr-08	UK	Dog	Kilcreen Fox (ISDS 276619)	INT. SUP. CH Craig (ISDS 249897)	Kilcreen Midge (ISDS 262307)	Nelle (ISDS 285347)	Ben Of Killiebrae (ISDS 220939)	Molly (ISDS 268821)	12 months	YES	Sparrow's idiopathic epilepsy was diagnosed following a full work up at the AHT Newmarket, including spinal tap, full U&Es, FBC, CT Scan, Acid bile test	NO	3 years old. Cluster seizure/status epilepticus	**Suspected triggers:** No triggers. Full investigations completed at AHT - other medical/traumatic causes ruled out. **Medication:** Tried Phenobarbitone, Potassium Bromide, Keppra, plus several other trial drugs (no positive changes) except Keppra gave us a 'honeymoon period' - made it to 5 weeks without seizures but then they were back to heavy clusters again, worsening over the 2 years we had with him. **Details:** Neutered. Cluster seizures lasting several minutes between weekly - 4 weekly prominently. For 2 yrs until we had to let him go.	OWNER
30/09/2021		**Glennie Glen**	K164560	N/A	WSD - UK KC Activity Register	17-May-16	UK	Dog	Glen (ISDS 00/313103)	INT SUP & WORLD CH Dewi Tweed (ISDS 278783)	Meg (ISDS 257352)	Gwen (ISDS 00/314102)	INT SUP & WORLD CH Roy (ISDS 266416)	Bet (ISDS 00/294932)	5 years	NO	I am very familiar with epilepsy, as I have previously had animals who had grande mal fits, so have no doubt this is what he has. At this stage I don't want to put him thru the trauma MRI testing etc.	YES	N/A	**Suspected triggers:** 18.07.21 - 5 days prior to 1st seizure he ate mystery substance at fishing lake. 19.7.21 - Following day very lethargic and not eating or drinking. Emergency vet visit required. General anaesthetic given. Oesephagus, trachea etc massively swollen. Vet prescribed a large dose of the steroid Dexamethadone and follow up Piriton to alleviate swelling. Almost immediate improvement, but diahorrea for 4 days. 23.7.21 - On day 5 after consumption of unknown substance, he had a full grande mal type seizure. 24.7.21 - This was repeated approx the same time the following day at 6.30 am when being let out in to garden. A time of excitement. **Medication:** Immediately after the first seizure I gave a drop of CBD Brothers Silver Edition Indica CBD Oil and another drop that night. A single drop was given the following morning immediately before he went outside, but he had another seizure at approx the same time and place and under the same circumstances. I believe because the Silver Oil had not yet been absorbed. I now give CBD Brothers Silver Edition Indica Oil 1 Single drop 3 x daily, Organic MCT Oil 1 level teaspoon 3 x daily, Epitaur Capsules 3 per day with food. **Details:** He has several small meals during the day now, instead of just one meal in the evening (as before). He is fed almost exclusively a raw keto diet. So far he has had no further seizures, but it is obviously very early days. He was neutered 3.5 weeks prior to the first seizure. Both grande mal type fits lasted between 10 and 15 seconds. He was unconcious, but eyes wide open and glazed. He was paddling and foaming at the mouth. He recovered pretty much back to normal within 2 to 3 minutes. I now understand that there is a history of seizures in his lines. His litter sister started fitting at 2.5 years of age, initially under similar circumstances (excitement), but has continued to fit, both while excited and at times of rest and has needed her veterinary meds increased over time. 31/07/2022		**Graham**	N/A	N/A	Collie Cross Unregistered - UK	25-Sep-20	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	11 months	YES	Discussed with Vet	YES	N/A	**Suspected triggers:** Not found any possible triggers - vet determined as generalised seizures. **Medication:** On Epiphen initially and then added Libromide as still having seizures frequently but not severe. **Details:** Currently seizures are about 7-10 days apart and last about 40 seconds max then recovers quite quickly. As well as having a careful diet he is on MCT oil and gelatin powder and CBD oil to help naturally. Graham is a collie/springer cross but don't know if any of his siblings are affected as was not aware of epilepsy in collies when we bought him. He's neutered.	OWNER
31/07/2024	31/08/2024	**Grant's Gwen CBCA Registered 10932**	N/A	N/A	Non UK Registered (Border Collie)	23-Apr-12	CANADA	Bitch	CWS Ky (CBCA 9143)	Don (also known as Tim) (CBCA 7258)	Gin (CBCA 5718)	Belle (ABCA 325208)	Roy (ISDS 264202)	Queen (ABC 197083)	12 years	NO	N/A	NO	Aged 12 yrs, 5 days after her first seizure. See Fitting details for more information.	**Suspected triggers:** At first I thought maybe heat related. Her second seizure came two days later, she had been kept very cool in the house since her first seizure. Gwen had blood work done last year when I was considering dental work, the Vet indicated for a dog her age her blood work was excellent. **Medication:** Nothing has changed with Gwen, she is on no medication, and has had a steady diet for a long time. **Details:** Her first seizure was about 3-4 minutes long, about an hour recovery then heavy sleep. Her second seizure I did not witness, but it obviously happened right before I came back from the garden. She was disoriented, her mouth was foamy and she had released a bit of urine. It took a good hour for her to come back. Just before I stepped out I noticed she was really tired. The first seizure happened at 9.30pm, the second at 6.00pm. That night she ate a hearty dinner, and had been good all day. Though 12 years old, Gwen is full on, I still work her on sheep (until the other day), I have noticed a significant decline in her energy levels. Gwen is a working sheep dog. She is CBCA registered. Her Aunt Alice died from Seizures (Alice is the top winning dog of North America). Gwens Dad, Alices brother is still alive. Gwen was a singleton. Gwen's mother was killed by a cow. I am in touch with her maternal grandparents owner to see what they died of. Queen and Roy were both imported from Scotland. Gwen was spayed at 2 years of age. **UPDATE ADDED 31/08/2024 -** Gwen was euthanised five days after her first seizure. She had four in total and they were coming fairly quickly. It was felt she had a brain tumor. She worked sheep as efficiently as ever the morning she died. I was on the phone to the vet when she had a huge seizure, and I felt it was enough. She was a fabulous strong dog, who never ever left my side. She died with her head in my hands:).	OWNER Updated 31.08.24
29/11/2019		**Grenaby Skeeal Graih**	Not known	Not known	BC	15-Sep-11	UK	Dog	Ludgate Red Laser	Woodsorrel Spectre AW	Firelynx Jumanji at Ludgate	Grenaby Editors Choice	Grenaby Tucker	Nunnery Kim At Grenaby (ISDS 231219)	1 year 6 months	YES	Vet confirmed as Epilepsy	Not known	Not known	**Suspected triggers:** Not noted. **Medication:** Pexion 400mg twice daily. **Details:** Initially fed on Skinners kibble then once the fitting started, a home prepared diet of brown rice, potatoes and vegetables with raw meat (to try and reduce gluten, corn, soy and casein as per the GARD diet). This seemed to help for a while, with improving gaps between fits until last week, when he had several fits and he became critically ill at the weekend with cluster fitting. Fits have change in frequency. We had got him up to 17 days between fits, and had wanted to try and manage it naturally (without drugs) but that all changed last week as described above and the treatment was necessary to save his life. After we got him, we heard that the dogs (not the bitches) in the previous litter had all started to fit. So we opted for an early castration at 5 months. We are very lucky that he is still with us, but it was devastating to see him so poorly. He was in intensive care for 3 days and has been home for 3 days now, improving visibly by the hour. If I can provide you with any additional information, please do not hesitate to shout.	DATA TRANSFER FROM LYN NORTON Added 11.09.13

29/11/2019		**Gwynfair You Were Made For Me**	Not known	Not known	WSD	22-Feb-05	UK	Dog	Fenom Full 'O' Fun	Summertime Sweep	Majacabus Oso Tricky	Tyzemade Maggie May of Gwynfair	Whatknow Rockin Symphony	Gwynfair Catch Me If You Can	1 year 10 months	YES	Vet confirmed as Epilepsy	NO	6 years 10 months. Dog is no longer alive. He went into a cluster fit episode that could not be stopped with medication and it was felt that he had suffered enough and had had his last fit.	**Suspected triggers:** Not noted. **Medication:** He was initially prescribed just Epiphen, but over the next 5 years his medication was gradually increased to try to control his fitting. From his first fit, he didn't have another for 18 months then the frequency increased until roughly every 3 weeks by this time he was on 120mg Epiphen at 8am and 8pm, 300mg Gabapentin at 8am, 2pm and 8pm, 500mg Keppra at 8am and 8pm, and 250mg at 2pm. **Details:** He was on Autarky at the onset of the fits but as the intensity increased, he was moved to a completely natural diet of chicken and vegetables. Much research was carried out into the ingredients of manufactured dog foods, and it was found that certain things can be a trigger factor to epilepsy so knowing what was in his food was important. He had cluster fits over 2 days on the first occasion and was given medication to try to stop the cluster, it was then 18 months before his next cluster fit. His next fit was then 3 months later, after which the frequency increased from around the age of 4 until the fits were happening every 3ish weeks. It was often a cluster of 3 or 4 fits over a couple of hours, but he needed veterinary assistance on 2 occasions where he was anesthetised to stop the fitting as the episodes had continued over 24 hours or more. NOT neutered as the vet advised against him being operated on because of the risks with his epilepsy.	DATA TRANSFER FROM LYN NORTON Added 10.09.13

One to two minutes fits up to 45 minutes to recover. Normally happen when asleep. Put a flea collar on in May and have wormed three times a year.	OWNER
28/02/2022		**Harry**	N/A	N/A	Non UK Unregistered (Border Collie)	08-May-19	SOUTH AFRICA	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 6 months	YES	After first fit we visited the vet and by eliminating other potential causes it was determined that Harry has idiopathic epilepsy, which was confirmed by subsequent fits	YES	N/A	**Suspected triggers:** It is still early to say as Harry only had his first fit two months ago. I suspect that his anti tick/flea medicine might have contributed (although my other BC has been on it for longer and has no health issues). Another suspected cause is the dam on the farm where we walk every day as his last two fits have been within 24 hours after swimming in/drinking from the dam, so we are now avoiding the dam to see if it makes any difference. Since starting to have fits I have stopped feeding my dog dry food (kibble) and moved him to a raw food diet (it is still to early to tell whether this is making any difference). **Medication:** Harry is not on any medication for epilepsy yet, I have an appointment with my vet to discuss our options next week. I do have ampules of Valium, which I carry with me at all times, so I can administer it in case he has a fit. **Details:** Harry was neutered at 13 months. He has had 7 fits to date, the first 5 were roughly 2 weeks apart and the last 2 happened on the same day, about 10 mins apart (although I think this was triggered when he saw me packing, which caused some additional stress). This was 2 weeks ago, he has not had another fit since then.	OWNER
31/10/2022		**Harry**	N/A	N/A	Unregistered - UK	19-Jul-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	7 years	YES	Had an MRI and various bloods/spinal tap at Rowe Referrals. Nothing found so diagnosed Idiopathic Epilepsy.	YES	N/A	**Suspected triggers:** Stress. 2 out 3 seizures have been when showering him. **Medication:** Gave rectal Diazepam after last seizure, no changes. **Details:** Neutered, fits less than 2 minutes. Had 3 seizures in 3 months.	OWNER

Vet confirmed as Idiopathic Epilepsy	YES	N/A	**Suspected triggers:** Seizures seem to occur when over tired or stressed but no real pattern or definite trigger. **Medication:** Started on Pexion but after 18 months fits got worse and started to cluster. Changed medication to Epiphen 60mg every 12 hours. After a couple of increases of Epiphen Caseys liver started to struggle. Added Bromide and reduced Epiphen. Now on 30mg Epiphen BID and 1 x 325mg Libromide. Reduced Epiphen because liver was damaged as a result of using Epiphen. **Details:** Neutered. Had IMHA in 2016. Was fed on James Wellbeloved, now on on Millies Wolfheart. Nothing unusual happened prior to onset. She has Grand Mal seizures and has done from the start. **UPDATE 31/10/2023** - (D) G.Sire and (D) G.Dam added.	OWNER Updated 31.10.23

31/10/2024		**Ivy Morag**	N/A	N/A	Unregistered - UK	18-May-19	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	5 years	YES	After a number of seizures and tests to rule out other causes, plus her littermate being diagnosed 6 weeks earlier (same vets and family known to us). Vets diagnosed Idiopathic Epilepsy. No MRI.	YES	N/A	**Suspected triggers:** No obvious triggers - the majority of the seizures happen when she is asleep. **Medication:** Daily Epiphen 30mg (just increased to 45mg) twice a day. Diazepam 10mg as emergency medication. Epiphen initially helped but has also caused weight gain, dose has just been adjusted. **Details:** Spayed. Food not changed. Vaccines not given this year due to my concerns.	OWNER
30/09/2021	31/10/2021	**Jack**	N/A	N/A	Unregistered - UK	17-Aug-20	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	11 months	YES	Vet diagnosis. Bloods tested to rule out other causes.	NO	12 months old - severe cluster fits never recovered and had to take heartbreaking decision to give him sleep.	**Suspected triggers:** No known triggers. **Medication:** Epiphen, 60mg twice per day **Details:** Neutered. Smaller focal seizures progressed to general seizures and cluster seizures. Parentage both BC - Sire BC ISDS 'Fen' . **UPDATE ADDED 31/10/2021** - I worked closely with the vets but Jack had regular and very severe cluster fits and rarely recovered inbetween. The medication (Epiphen) was unable to make any difference. I do believe that Jack may have had Idiopathic Epilepsy for longer than we knew before diagnosis. Now I have learnt much more about this disease, I think there were earlier signs. I had to take the heartbreaking decision and he was euthanised.	OWNER Updated 31.10.21
31/03/2025		**Jack**	N/A	N/A	Unregistered - UK	02-May-19	UK	Dog	Lignum Brin (ISDS 360404)	Moss (ISDS 334877)	Rosie (Unregistered)	Lignum Fig (ROM ISDS 360405)	Unknown Not registered	Unknown Not registered	3 years 7 months	NO	N/A	NO	Died in Dec 2024 as a result of huge cluster episode. Died 2 years after 1st seizure.	**Suspected triggers:** At first we thought it might be as a result of hormonal implant being inserted 3 months prior to first fit but vet said it wouldn't have been this. Seemed to be no triggers as he would be sleeping and it would happen or he would be resting and it would happen. **Medication:** None given. **Details:** Seizures were very random. Would go months without having one. Would last max 1.5 mins. Would usually start being sick then go into seizure. Outwith siezure he lived a very normal life. They didn't seem to impact him except during the episode.	OWNER
31/05/2020		**Jack**	N/A	00/355613	BC - ISDS	21-Sep-17	UK	Dog	Fellside Dash (ISDS 00/315780)	Killiebrae Laddie (ISDS 262753)	Killiebrae Jet (ISDS 283073)	Meg (ISDS 00/316242)	Spot (ISDS 258972)	Nell (ISDS 274798)	2 years 1 Month	YES	Vet	YES	N/A	**Suspected triggers:** Possibly stress. **Medication:** Epiphen and Libromide. **Details:** Intact Male. Seizure approx every 2-6weeks. Seizure length average 45seconds. We got Jack when he was 14 months old, he had his first seizure about 1 month after his 2nd birthday (late Oct 2019). I phoned the vet and they gave me some great advice on how to monitor and what to do during a seizure, unfortunately a couple hours later he began to cluster so was rushed off to our emergency vet for sedation. We discussed the options for meds and agreed that we would not medicate at this point. 2 months later he had his next seizure, so an appointment was made to check his bloods again, this time the vet suggested we put him on Epiphen. After a while with only the sporadic minor seizures he began to cluster again (5 in 2hours) he was kept at the vet that day and was started on Libromide and we were given emergency meds for future clusters. Since then Jack has been only having small seizures roughly once every 2 months. We continue to medicate with the Epiphen and Libromide and record any seizures in his diary or on film when we can. Jack is the most loving, happy dog and wants to be friends with everyone he meets. We love Jack dearly and wouldn't be without him.	OWNER
19/07/2019		**Jackscrofter Sapphire - Saffie**	AK02831107	N/A	BC - UK KC Pedigree	27-May-09	UK	Bitch	Bekkis Virtuoso	Grandver Master Copy	Bekkis Rhapsody	Jackscrofter Greatglen Charamel	Rosmarinus The Werryman	Greatglen Letitia	4 years 11 months	YES	Blood tests	YES	N/A	**Suspected triggers:** Excitement, anxiety. **Medication:** Started on Pexion 100mg twice daily which seemed to work reasonably well for about 12 months then fitting became more regular, after having nine fits in three months I told my vet I wanted to take her off Pexion and try Epiphen. She has been on Epiphen 30mg for four years and has been fit free for that time. **Details:** Spayed at about 18 months after being told by her breeder that a litter brother was having fits. Saffie has been able to live a full and active life.	OWNER

NO	Jazz was PTS at 13 yrs after suffering his 2nd stroke	**Suspected triggers:** None noted. **Medication:** He was medicated with low dose Phenobarbitone from 2.5yrs old until his death. **Details:** Jazz was a gentle dog who couldn't cope with stressful situations and was noise sensitive. Especially high pitched noises like drills or even insects. He would run out of a room if he heard wasps, bluebottles etc. There were no indications that food, vaccs, worming etc ever contributed to his fits. He was neutered. His fits lessened as he got older. At the onset they were around one a fortnight. By the end of his life probably only one or two a year.	OWNER

Fits have not changed in severity or frequency since onset. **Details:** Spayed.	DATA TRANSFER FROM LYN NORTON Added 09.09.13
31/05/2023		**JBK The Buck Stops Here @ JaBo - Buck AKC DN33800101**	N/A	N/A	Non UK Registered (Border Collie)	11-Nov-11	USA	Dog	DeeJay at Real Pearl	Lucky For You Armani	Jodie Fister at Real Pearl	Shoreland's Red Foxy	Shoreland's Kenetic Rip	Shoreland's Razzle Dazzle	5 years 6 months	YES	Video evidence	YES	N/A	**Suspected triggers:** Traumatic accident - concussion to head while herding **Medication:** Phenobarbital and Levetiracetam tried. Did not manage symptoms better than non-medicinal management, side effects significant. Dog does better without medication. **Details:** Neutered, seizures mild. Controlled by preventing him from getting too hot/overworked and feeding 3 times a day.	OWNER
21/08/2019		**Jess**	N/A	N/A	Unregistered - UK	27-Jun-03	UK	Bitch	Rip (ISDS 250011)	Glen (ISDS 198708)	Fran (ISDS 219858)	Floss (Not registered)	Ben (Not registered)	Jill (ISDS 225588)	2 years	YES	Blood tests and other family members fitting	NO	Died aged 11 in Status Epilepticus	**Suspected triggers:** No known triggers. Epileptic cousins. **Medications:** Initially Epiphen then Libromide added and finally Keppra. **Details:** Spayed before onset. Cluster fits showing signs of brain damage. Jess had refractory epilepsy. Despite increase in doses of Epiphen and addition of Libromide followed by Keppra she continued to have cluster fits admitted to vets on several occasions to try and stop the clusters. The only time she was fit free was on large doses of Epiphen which eventually caused her liver to have problems metabolising the drug and she started to fall over eventually being unable to walk. At this stage she was referred to a neurologist and put through MRI scan, spinal tap, blood tests etc. The result was that she was bring poisoned by the Epiphen which her liver wasn't metabolising. Her dose of Epiphen was reduced and she was put on a liver supplement. With the reduction of Epiphen she went back to cluster fitting every three months till she died 2 years later in status epilepticus.	OWNER
31/10/2020		**Jess**	N/A	N/A	Unregistered - UK	10-Mar-14	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	7 to 8 months	YES	Monitoring fits and keeping record of everything that happened	YES	N/A	**Suspected triggers:** None known. **Medication:** Pexion 600mg a day. **Details:** Rarely happens but occasional cluster fits, longest fit lasted 13 minutes usually last about 4 minutes. Can be months/weeks between fits since being on medication.	OWNER
31/03/2021		**Jess**	N/A	N/A	Unregistered - UK	20-Jun-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	About 18 months	YES	After videos we had taken and being tested at Fitzpatricks. They started her on medication, which caused her to fit more	YES	N/A	**Suspected triggers:** Extreme exercise, stress, heat in the summer. **Medication:** Phenobarbital and Pexion which she is being weaned off. Getting ready to start Potassium Bromide once Pexion has finished. **Details:** Jess has been spayed. She is a very anxious dog who is upset by any noise. Her fits are like petit mal at times but also grand mal fits where her nose and bottom jaw, her eyes roll up, then she starts to shake. They can last from between 30secs and 8mins. She also has episodes where she lays in her Dad's arms and flops her head on the sofa and can sleep for up to 30 mins. You can say pussycat, squirrel, dinner, name of a visitors and she doesn't move. All the time there, her limbs don't move and when she gets off she has left a small mark on his trousers. The last two fits she has been incontinent and wet the bed. Occasionally she can be aggressive, but normally a very placid girl. She has changed, doesn't like her harness on or collar, seems worried to go to my husband.	OWNER
29/02/2024		**Jess**	N/A	00/381801	BC - ISDS	06-Apr-21	UK	Bitch	Barook (ISDS 00/351072)	Hybeck Blake (ISDS DE/327335)	Denwyn Annie (ISDS 00/329996)	Sanduck Mai (ISDS TBC by owner)	Sanduck Moss (ISDS 00/306759)	Lyn (ISDS 282998)	2 years	YES	Saw Neurologist at Cave Veterinary, Somerset.	NO	Aged 2 years 10 months. Euthanased 17th February 2024 due to refractory epilepsy. She was cluster fitting every few hours. Medication was not stopping it.	**Suspected triggers:** No clear trigger. The initial start of Jess's epilepsy in October was cluster fits. This started the day after a 4 hour car journey (nothing new, we've travelled lots with Jess from a young age.) That week she'd had her flea, worm and tick treatment but she'd been on the same one for years. We also noticed an air freshener in the car we'd borrowed. Also the first fit was in the morning while playing frisbee. On another occasion Jess had a seizure while playing frisbee, so not sure if that was a trigger, we were to frightened to play frisbee again. **Medication:** Epilim and Keppra initially seemed to help. But then had to add in Potassium Bromide which again initially seemed to help - 50 days fit free. But unfortunately none of the meds seemed to be helping and uncontrollable seizures. **Details:** In the end we had 4 episodes of 5 day long cluster fits - grand mal. The last 2 episodes also involved a couple of hours long post ictal behaviour, walking into things, appearing unable to see. Jess was never aggressive after or during her fits.	OWNER
31/05/2026		**Jesse**	N/A	N/A	Non UK Unregistered (Border Collie)	25-May-22	SOUTH AFRICA	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	Took her to the vet and it was diagnosed.	YES	N/A	**Suspected triggers:** Trauma due to loss of another pet in the home, very salty foods, high excitement. **Medication:** Started on Phenobarbital 30mg, twice daily, took the seizures away for three months but started again. Increased dose with no improvement. Added Pexion full tablet twice daily but no improvement. Discontinued Pexion and added Potassium Bromide liquid at 1ml per day. Still had fits every 21 days and dose was increased to 1.9ml once a day. She still fitted at 21 days but Potassium Bromide takes a while to work as it was only started 3 months ago. Seizures have spread out, not just one day any more but stretched over 3 days with introduction of focal seizures. May be that seizures are starting to respond to Potassium Bromide. **Details:** Fits every 21 days and it has been cluster seizures since the start. Fits last around 2 minutes. She had been spayed.	OWNER

CBD oil plus herbal products. Everything has worked well initially but then has become less effective. He has just been prescribed Pexion to use for a few days after seizures to try to stop the cluster. **Details:** Jazz is entire. He fathered a litter before his seizures started - his son started having seizures at 15 months and was pts at under 2 years due to uncontrollable seizures. Jez' sister started fitting a year after him and she lost her battle in May this year. Jez always has GMs and always clusters. They have become progressively longer - will often be unconscious for up to 6 mins. We are very fortunate that Jez has a VNS implant. Langford vet hospital is doing a trial with Bristol Children's Hospital and Jez is the 4th dog to have the implant in June 2017. I am convinced that he would not still be alive if he hadn't had this. He is very active and 3 years ago started Rally Obedience and is now working at the top 2 levels.	OWNER
22/12/2019		**Jilly**	N/A	N/A	Unregistered - UK	05-Jan-15	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 6 months	NO	N/A	YES	N/A	**Suspected triggers:** Totally unknown, just happened one night. Taken to vet after first fit. Then continued monthly, always about 2am. **Medication:** Vet recommended not going on meds as they didn't last long and were so spread out just monitoring her and if anything changes consulting vet. Have rectal Diazepam in case she has another. **Details:** She had one large fit about 6 months ago followed by some smaller ones. Was left with a twitch but vet put her on diazepam for a week and twitch cleared. All her fits are over in a couple of minutes and doesn't seem to be a pattern to them apart from monthly and always about 2am. She has had fits monthly up until 14th of September, but nothing since (now 02/12/19). She is spayed.	OWNER

No change noted as put on 2nd time she fitted when she fitted 3 times in 3 days which coincided with having vitamin tablets. Put on **Details:** Purina Neurocare dog food which made a big difference in her recovery after a fit. When taken off this I started on Coconut Oil since when the time between fits has gone from roughly every 2 months to over 6 months. **UPDATED 30/06/2022** - Age and cause of death.	OWNER Updated 30.06.22
21/08/2019		**Kingsfarm Maid of Honor**	K139324	N/A	BC - UK KC Pedigree	08-Nov-11	UK	Bitch	Tamerrye Celtic Laird	Bellatrix Highlander CDex Udex	Tamerrye The Ferrari	Kingsfarm Dress To Impress	Borderlair King Of Swing	Merrymarsh Dress To Kill Of Kingsfarm	5 years 5 months	YES	Vet said it was because she had now had 4 episodes	YES	N/A	**Suspected triggers:** In vets during first one - stress? 2nd one it was a very hot day and had eaten cheese? **Medication:** Epiphen was prescribed 1 tablet twice a day. I also give her Epitaur 500, Milk Thistle (to help Liver on Epiphen) & CBD Oil. She has remained seizure free since. **Details:** The day of her first fit at home it was a very hot day she had also just eaten some cheese (which is now off the menu). Spayed in 2012. Her last fit was the worse - much more intense and longer (lasted about 3 minutes) and she took longer to come out of it. In April 2017 Macey had a routine dental examination. In waiting room afterwards I noticed her mouth was twitching and started to foam. The vet took her in side room where she was fitting on the floor. They kept her in for observation for a few hours. Vet thought as she was stressed this was probably the reason. No medication given to me as they said they only medicate when they have had 3. All ok and fit free until June 2018. Around 10am Macey was resting in kitchen and started to fit. No vet appointment until 4pm that day. No tablets given but was told to administer rectal diazepam if she had another. 2 hours after being home she had 2 more - more severe than before - rectal diazepam given. Called emergency vets as I couldn't cope with seeing her like it. They agreed to have her in overnight to observe. Got a call 3 hours later saying she was so stressed and would be better at home.	OWNER
30/11/2025		**Kiyani**	N/A	N/A	Non UK Unregistered Crossbreed	01-Apr-23	NETHERLANDS	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	11 months	YES	By vet, after blood tests confirmed primary epilepsy.	YES	N/A	**Suspected triggers:** I'm still trying to figure that out. **Medication:** Our vet still wants to wait with giving medication because of the possible side effects on his general health. We're carefully monitoring his seizures. **Details:** Kiyani isn't neutered. His seizures last usually about 5 minutes all together and are partial. No full blown seizures yet (lying on his side, trampling legs, foaming mouth and loss of urine). Sometimes he can go months without having one, sometimes there are 2 week gaps. Kiyani is a rescue from the north of Portugal. We have no history up until we got him at 11 months old, apart from knowing he was tied to the fence of a dogpound there in the middle of the night together with his brother. Just three days after we picked him up he had his first seizure, but he might have had a few before, we'll never know.	OWNER
19/07/2019		**Kobi**	N/A	N/A	Unregistered - UK	15-Jun-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 8 months	YES	Confirmed by vet	YES	N/A	**Suspected triggers:** Stress and also air pressure (thundery weather), bright lights. As Kobi is deaf and also almost blind he bumps into objects which stresses him. He can't go to vets surgery as stress causes seizures. **Medication:** Vets have tried almost all meds over the last four years. He still has seizures but they are 1-2 a month now. At the moment his meds are: Epiphen, Libromide, Levetiracetam and Sodium Valproate. Diazepam for cluster seizures. He has recently been diagnosed with diabetes too so is now on insulin too. We have struggled for four years to get him to this point and tried so many different meds. **Details:** Have also had advice from a neurologist who diagnosed textbook Epilepsy. Kobi has blood tests regularly to tweak his meds. He is a blue Merle, totally deaf, almost blind and now diabetic aged 6yrs old. While trying to get the right balance of his meds he was having clusters every other day. As his meds are now he will have 1-2 seizures which leave him completely exhausted and wobbly for days . His seizures are 1-2 a month at present. Neutered. Rescue dog from Border Collie Trust GB.	OWNER

29/02/2020		**Kooki**	N/A	N/A	Unregistered - UK	01-Feb-16	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 6 months	YES	Filmed event. Explained to vet. Examinations.	YES	N/A	**Suspected triggers:** No apparent trigger. **Medication:** None. **Details:** Thankfully it only happened twice and not since. Random seizures. Only had two in space of that month. Monitored and not happened since. Lasted around 10 mins each.	OWNER
21/08/2019		**Koopa**	N/A	N/A	Unregistered - UK	22-Feb-14	UK	Dog	Gwynion Paddy	Unknown	Unknown	Gwynion Gwen	Unknown	Unknown	2 years	YES	MRI	NO	5 years. He had two failed infusions, couldn't stop the seizures	**Suspected triggers:** None. **Medication:** He had a VNS implant, was on Epiphen, Pregabalin, Keppra and Zonisamide. KBR made him crazy and then unresponsive, we even had a VNS implant inside him to try help. CBD did nothing. **Details:** None noted.	OWNER
29/09/2019		**Lacey**	N/A	N/A	Non UK Unregistered (Border Collie)	10-May-19	SOUTH AFRICA	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	Blood tests MRI scans Diagnosed Idiopathic Epilepsy	YES	N/A	**Suspected triggers:** Bravecto tick and flea treatment. Light sensitivity. Extreme change of routine. **Medication:** Phenobarbital. This has helped control the seizures and we went 9 months seizure free at a stage. She seemed to develop resistance to it and due to her liver enzyme levels we added Keppra. Valium is used as a rescue medication. **Details:** Lacey is spayed. Behaviorally she is very active, not just border collie active (we have two) she has endless amounts of energy and it seems as though she rarely switches off. She chases shadows and light reflections endlessly and licks them mainly on floors and walls. She also seems very sensitive and reacts to seemingly normal activities she has a barking fit/tantrum if you shower, take off your shirt, use squeeze bottles etc. It's as though she doesn't like you doing it and even gets worked up before you begin to do it for example if she sees you take clothes out to shower she starts talking. 2017 May 1 seizure, July 1 seizure, August September, November and October (paritial seizures one each month), December 1 seizure. 2018 January 2 seizures increased phenobarbital meds, April 1 seizure. 2019 February 1 seizure, March 1 seizure, June 1 seizure, July 1 seizure added keppra. Partial seizure it seems as though a seizure is starting and she comes and asks for help but then their is no seizure only excessive drool or teeth chattering. Lacey's seizures are usually just over a minute and she urinates during her seizures.	OWNER
19/07/2019		**Lacinka Like A Rocket - Sam**	Not known	N/A	BC - UK KC Pedigree	10-Apr-11	UK	Dog	Rosmak Dapple Dandy	Canen Baz (ISDS 251245)	Rosmarinus Rising Star	Rosmarinus Gin Soda	AG CH ForByFor Turbo Diesel	Rosmarinus Pimms	9 months	YES	Vet and consultant neurologist	NO	Sam died at 15 months old from cluster fits.	**Suspected triggers:** No triggers known. **Medication:** Phenobarbitone, Keppra, Bromide - no improvement seen. **Details:** Fits started 1 a week. Cluster fits of up to 6 in an hour started after 2 months, sometimes only 3 days between clusters. Sam fitted almost constantly in his last 24 hours and had to be PTS because he fitted every time anyone went near him. A horrendous death as the chemicals to PTS made him fit more. Entire.	OWNER

Initially fed on James Wellbeloved. Changed to raw after onset fits considerably reduced. Initially the fits were one a month for the 4 months and then settled. The following year at the same time she had two in 3 months and that has been the pattern since 2011 but less in time and intensity. Spayed at 9 months.	DATA TRANSFER FROM LYN NORTON Added 05.07.14
31/12/2021		**Lana of Kaa Na Ale JKC-BCL-00695/17**	N/A	N/A	Non UK Registered (Border Collie)	14-May-16	JAPAN	Bitch	Nesbakkens Sweep (NKK-NO52441/14)	Nesbakkens Hillbilly Deluxe (NO50833/11)	Spottie (NO48366/12)	Astra Muka (UK KC Reg No - AM0901467)	Brock (ISDS 264333)	Bet (ISDS 282400)	4 years	YES	MRI and CT scans	YES	N/A	**Suspected triggers:** I can't think of any, she was very healthy. **Medication:** Lana weighs 1 kg. First, Zonisamide 100mg 0.5 tablets twice daily. Change to 1 tablet twice a day. Change to 1.5 tablets twice a day. Phenobarbital 30mg 1 tablet added twice daily. Changed to 1.5 tablets of Phenobarbital. Gabapentin 300mg 1 tablet added 3 times a day. Levetiracetam 250mg 1.5 tablets 3 times a day (cluster buster), Gabapentin was changed to Pregabalin. Discontinued Zonisamide and Pregabalin. Currently, Lacosamide 50mg 1 tablet twice daily. Levetiracetam 250mg 1.5 tablets 3 times a day. Phenobarbital 30mg 1.5 tablets twice daily. Midazolam nasal administration at the time of seizure. **Details:** I can't find anything that seems to be related. The first seizure was 16/5/2020. 70 major seizures to date. In addition, there are several small seizures. It can be a cluster (2 to 8 times) or a single one. It stops in 1 to 2 minutes. Excitement continues after the seizure. She's very hungry. She tries to eat anything, tissue paper, electric cords, carpets, etc ... No aggression. Many of the seizures when sleeping. She underwent contraceptive surgery in August 2019. There is little information on Border Collie epilepsy in Japan. I think there are many Border Collies who have epilepsy, but they are not public. People may be aware of breeders. Thank you letting me join this group. I will do my best positively.	OWNER

29/10/2019		**Little Ozzie**	Died before being able to be registered	N/A	Unregistered - UK	08-Mar-07	UK	Dog	OB CH Whatknow Razzmatazz (WSD)	Rockin Rapid	Forever Magic Fantasia	Croftmist Megan (BC)	Tanamerye Krismoss	Mainline Mist (BC)	45 days	NO	N/A	NO	46 days old. See Fitting details for more information	**Suspected triggers:** The vet suggested that he may have had worms but it was not the case. **Medication:** No medication for fitting but AB's and Anti-Inflams as below. **Details:** At 43 days he became quiet and stopped interacting with his siblings. At 44 days he started seeking out dark places. Taken to the vet and was given antibiotics and and anti-inflammatory injection. At 45 days he was again searching for dark places. He was very distressed when travelling back to the vets and fitted badly within minutes of arriving. At 46 days old he began fitting and was taken back to the emergency vet. He resembled a clockwork toy and was very rigid in his mobility. He seemed to have stopped growing. The vet blood tested for a liver-shunt which came back negative. As the vet examined him, Ozzie became very distressed when his head was held and was obviously in a great deal of pain. The vet diagnosed inflammation of the meningeal (tissue surrounding the brain). The vet and I agreed that euthanasia was the only option. Two other pups from the litter also fitted at later intervals and both have died. The rest of the litter were registered with my 'Croftmist' affix. Megan was spayed after. The two other dogs from the litter, that fitted, were put to sleep at young ages due to the fitting. Ozzie was unregistered but the rest of the litter were KC registered.	OWNER/ BREEDER

30/06/2022		**Logan Green**	N/A	N/A	Unregistered - UK	25-Jul-20	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Veterinary tests - bloods	YES	N/A	**Suspected triggers:** None known to date. **Medication:** Epirepress 90mg x 2 daily, Libromide x 2 daily, Levetiracetam x3 daily. Only meds that appear to give some sort of stability is the Levetiracetam. No improvement on the other 2 meds. **Details:** Since 8th Jan 2022 when he started clustering, over the months has gotten progressively worse. Hence the long term use of Levetiracetam, but he can never go past 2 wks without an episode. Recently has had a few occasions where he has gone blind following a seizure.	OWNER
30/11/2022		**Loki**	N/A	N/A	Unregistered - UK	28-Sep-20	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 8 months	YES	Vet.	YES	N/A	**Suspected triggers:** None noted. **Medication:** Pexion 0.5 twice a day. **Details:** Fits last under a minute, very unsteady after, disorientated, nervous doesn't know surroundings.	OWNER
28/12/2020		**Loki Shewbridge**	N/A	N/A	Unregistered - UK	25-Dec-17	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 2 days	YES	Vet diagnosed. Loki had liver blood test and they said he had Idiopathic Epilepsy. This was after the 2nd seizure.	YES	N/A	**Suspected triggers:** I currently am under the belief it's food related. Possibly grain but without testing I can't be sure. **Medication:** Loki started taking 1.5 x 30mg tablets twice daily. Because of his recent seizures medication has now increased to 2 x 30mg tablets twice daily. Loki was neutered at 10 months. **Details:** Loki's seizures before meds lasted approximately 1 minute (convulsions) it took him about 15 minutes to recover/recognise me. Since medication the last 3 seizures have been much shorter and he has not urinated. He takes about 5 to 10 minutes to recognise me.	OWNER
28/02/2022		**Lola**	N/A	N/A	Unregistered - UK	10-May-16	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	5 years	YES	Idiopathic epilepsy confirmed by vet after monitoring and blood tests.	YES	N/A	**Suspected triggers:** No identifiable trigger. **Medication:** 60mg x 2 daily Epiphen. Diazepam to be administered during seizure. **Details:** Fits started August 2021. Initially monthly then increased in frequency. Neutered aged 12 months.	OWNER
31/07/2022		**Lord Liquorice Rock - Barney**	N/A	N/A	Unregistered - UK	16-Aug-16	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 6 months	YES	Extensive tests/vet diagnosis.	NO	He died at 5 years 7 months old. Status Epilepticus.	**Suspected triggers:** Potassium Bromide caused pancreatis which started all his troubles, we had his seizures very well controlled. **Medication:** Keppra, Epiphen, Zonisamide (brilliant and we went 6 moths fit free on this drug). We stopped Potassium Bromide. **Details:** Neutered at 16 months old, didn't effect fits. His main prob was the Potassium Bromide causing the pancreatic flares, this was the beginning of all his troubles. He had peritonitis too and had surgery, he only lived to be 5.5 years old. He died on 4th April 2022 due to a lot of seizures that we couldnt stop, he had a huge fit and our vet tried everything to save him but we had to make the decision because he'd fitted for so long. We believe his epi meds stopped working due to a pancreatic flare and infection of the tum (yet again). He'd been very poorly. We miss him a lot.	OWNER

29/11/2019		**Lupitoonz Tazmanian Devil - Taz**	Not known	N/A	WSD - UK KC Activity Register	03-Mar-09	UK	Dog	Pied Pike (ISDS 254417)	Ben (ISDS 235217)	Bet (ISDS 230544)	OB CH Colliewood Candy Girl	WT CH Waggerland Fizz	Forest Sprite Psyche	2 years 10 months	YES	Referred to Animal Health Trust Newmarket for MRI & Spinal Tap (both clear)	NO	6 years 1 month. His liver was grossly enlarged and he could not breathe as he had fluid in his lungs. Extensive organ collapse and brain damage due to drugs and cluster fits. PTS 22.04.15	**Suspected triggers:** Never could find a trigger. First fits 2 weeks apart. **Medication:** He was on Phenobarbital, Libromide and another drug I can't remember the name of. Fit free for 8 months until Sept 2014, we struggled and could not get them better than one every 7-10 days. Had to increase his meds several times, this impacted on his body. **Details:** He had a period of seven months, during the twelve months before he died, when we thought we had him stable and no fits. Then they came back and we just could not get any control at all. At the end he was having constant Petit Mal seizures between the Grand Mal ones, the drugs just didn't work anymore. Also rectal Valium to stop the fits once they started. During his last three months he had some Prednisone. Taz was not neutered. His fits were, right from the start, five to eight minutes long and extremely violent. They occurred mostly when he was asleep or resting. Frequency two to four weeks apart but he might have two or three fits at a time. Pied Pike has sired other dogs that have fitted. Unfortunately none of them had started to fit before he was mated to Lulu.	DATA TRANSFER & UPDATE BY OWNER

No PM.	**Suspected triggers:** At age 12 weeks, was given Milbemax +/- 8am, then a Flea/Tick spot on at 12 noon. Fitting began at 5.30pm. **Medication:** Keppra & fortnightly B12 injections. Keppra phased out, 5 weeks later massive cluster fit & euthanised. **Details:** Dam and all surviving puppies in litter neutered.	DATA TRANSFER FROM LYN NORTON Added 07.12.12 Updated 20.03.13
29/02/2020		**Mandy Patrick**	N/A	N/A	Unregistered - UK	18-Jun-05	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	By the vet as she went on quickly to have a series of fits stopped only by being given an anaesthetic.	NO	Age 11. Death was related. Mandy went into a state of conscious shaking and her body shut down and she was unable to move over a period of days	**Suspected triggers:** All vaccines, flea and tick treatments, loud noises and stress eg: visit to vet, agility class, being left alone. **Medication:** Started on Epiphen, added Libromide, added Keppra as each drug became less effective. Also had rectal diazepam to bring her out of seizures. Extra Keppra used as preventative before a stressful event and after fitting to prevent recurrence. **Details:** Spayed age one. Mandy had fits, often two in a short space of time, around once a month once we got medication settled. We added more meds as they became more frequent each time. To begin with she was very unstable as vet wanted to introduce meds gradually. Several visits to emergency vet. Eight fits after vaccination when she was four. Always fitted five days after flea and tick treatment. Diagnosed as tonic clonic epilepsy. In her last few months she did not fit until last major episode. A beautiful girl who took it all in her stride and remained gentle and loving and full of life through it all. Major meds over nine years did not impact liver and kidneys which was one of our big concerns.	OWNER
30/06/2022		**Mara**	N/A	N/A	Unregistered - UK	11-Sep-11	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	10 years	YES	By vets Idiopathic Epilepsy	YES	N/A	**Suspected triggers:** Initially caused by contracting kennel cough. **Medication:** Epiphen and Epilease. Still settling the doses to best levels, meds have reduced grand mal section of seizure but overall length of time for full event is same. Ataxia varies from not much to wobbly, to very wobbly. Assumed from meds rather than brain injury. **Details:** Grand mal fits usually 2 mins grand mal then 3 mins recovery, usually brings self out of activity. Medication reduced Grandmal section but whole sequence usually lasts 4 - 5 minutes. Has had 3 sets of cluster seizures since start of Dec 2021, meds increased each time. Spayed.	OWNER

29/02/2020		**Marley**	N/A	N/A	Unregistered - UK	2011 approx	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	Not known (rescue dog, owned since 5 years old, had fits before being adopted)	YES	Blood tests excluded anything else, vet said most likely Idiopathic Epilepsy	YES	N/A	**Suspected triggers:** Triggers unknown, although previous owner mistreated him and was convicted of animal cruelty after kicking Marley repeatedly on numerous occasions. He had a broken tail. Could have had injuries to head maybe? **Medication:** He has had far less fits since starting a raw diet with coconut oil and CBD oil. Once a seizure starts, we give CBD drops immediately and the fit subsides quickly and he recovers far better. Before CBD he would have cluster fits and twice had status epilepticus where the seizure continued for nearly an hour. With CBD they last only a minute or two and are very mild. **Details:** Neutered at approx. 4 years old. Very dominant male, pushy with other male dogs. We think Marley is a Welsh collie. He is sable and white, herds upright and is loose eyed. Contacted the Welsh Sheepdog society who said epilepsy is very rare and practically unknown in registered Welsh Sheepdogs, although common in border collies. They suggested Marley is therefore most likely a Welsh Sheepdog/ BC cross, or if he's a pure Welsh, his epilepsy is probably injury related rather than inherited.	OWNER
30/06/2022		**Marley**	N/A	N/A	Unregistered - UK	28-Aug-15	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	YES	Blood test at vets	YES	N/A	**Suspected triggers:** There were no triggers at first, but we noticed after he had been put on medication he had a fit when he was anxious at the groomers. **Medication:** Marley is on Epiphen tablets. He has been OK apart from the groomers incident so far. **Details:** No more detail provided.	OWNER
29/11/2019		**Marshonelle Howdylicious**	Not known	Not known	BC	05-Nov-12	UK	Dog	Rosmarinus The Chocolatier	Rosmarinus Jaffa	Rosmarinus Demerara	Marshonelle Izzie	Rosmarinus The Rainmaker	Amazin Gracie	1 year 1 month	YES	Vet confirmed Idiopathic Epilepsy. All possible tests done, including an MRI scan and spinal fluid tap	Not known	Not known	**Suspected triggers:** See Details below. **Medication:** 40mg of Pexion twice a day. **Details:** He was flea treated a week before, to which he was stressed at time of doing so and was off colour from that point up to first fit. He was fed on mainly raw with some dry food. Had an allergy test done and he is allergic to chicken, duck, wheat and gluten. Changed to pure BARF diet minus the chicken and duck. In himself he became brighter when food was changed, he started to grow again, coat became fuller. His fits have become less frequent but this may coincide with having all possible tests done, including an MRI scan and spinal fluid tap to diagnose epilepsy and being put on the right medication. When they first started he had several in a week, once food changed these decreased and since medication started they have decreased further. Longest between fits has been 31 days.	DATA TRANSFER FROM LYN NORTON Added 30.04.14
19/07/2019		**Marshonelle Switch'N It On**	AP04298501	N/A	BC - UK KC Pedigree	05-Nov-12	UK	Dog	Rosmarinus The Chocolatier	Rosmarinus Jaffa	Rosmarinus Demerara	Marshonelle Izzie	Rosmarinus The Rainmaker	Amazin Gracie	7 months	YES	Vet confirmed as Idiopathic Epilepsy	NO	Major seizure	**Suspected triggers:** No triggers identified. Time frame was too short to collate information. **Medication:** Pexion 400mg twice daily. One small fit on 28.06.13 whilst asleep on sofa lasting less than a minute, recovered within 10 mins. No further fits until 9th July, when found fitting in the morning. Rectal Diazepam given. Fitted again same day at 3pm, same treatment, but 4 further fits, taken to vet, kept overnight and stabilised. Home on the 10th but fitting again between 11am and 2pm so back to vet and again kept in overnight and sedated, Phenobarbitone and on a drip. Prognosis was poor at this time. Brought home on the 13th July, Pexion 400mg twice daily. **Details:** Recovery seemed unlikely but daily improvements noted - motor function, spatial awareness, vision, recognition. Following 22 days charted phenomenal progress in physical and mental capabilities, by 1st Aug he was at 95% of his previous levels of Obedience training. On 2nd August he had another brief fit at 10pm (similar to his first) with the same outcome. At some time between 3am and 4am on the 4th Aug he suffered a major seizure, rectal diazepam x 3 was administered but to no avail, and he passed away shortly afterwards before the vet arrived. Vet hazarded a guess at major haemorrhage as cause of death. Neutered.	OWNER

NO	The dog was euthanised at the age of 4.	**Suspected triggers:** In the beginning there was no cause, later excitement was causing fits. **Medication:** Phenoleptil, Levetiracetam, Zonisamide. There was a good reaction at first, but there was no improvement after some time. **Details:** No other details.	OWNER
19/07/2019	31/07/2020	**Mojo Back at Robate**	Not disclosed	341808	BC - Dual Registered UK KC & ISDS	07-Dec-15	UK	Dog	Gipping Valley Troy	Bob (ISDS 290097)	Bess (ISDS 300896)	Marchup Midge (ISDS 314458)	Roy (ISDS 266416)	Calderdale Sue (ISDS 305475)	2 years	YES	Diagnosed at vets and later RVC	NO	4 years 5 months - status epilepticus	**Suspected triggers:** Not known. **Medication:** Epiphen 120mg bid, Keppra for clusters. **Details:** No fits since RVC increased epiphen to top of therapeutic dose. **UPDATE ADDED 31/07/2020** Since November 2019 Mojo was on Phenobarb 150mg twice daily, Potassium Bromide 500mg once daily & 300mg Keppra twice daily. He had Diazepam after every bad fit by injection. Was having worsening fits weekly. He was euthanised in April after going into status.	OWNER Updated 31.07.20
29/02/2024	31/05/2025	**Mollie**	N/A	N/A	Unregistered - UK	01-Dec-16	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	By neurologist through MRI, bloods, lumber puncture, obdervation of video evidence.	NO	Age 8 years 5 months after complications arising from uncontrolled clusters and status epilepticus.	**Suspected triggers:** No known triggers. **Medication:** Phenobarbital started after neurologist visit. Curently takes 30mg x 2. Levetiracetem added at 3 years old. Now on 1 tablet x 3. Libromide introduced at 5 years old. Now on 3/4 tablet x 3. She has Diazepam if she clusters. It is effective. Mollie is considered refractory. The drugs make her slow and unsteady and she eats and drinks more. We are trying to wean her off (see below) as in the past this has not altered fit frequency but has made her more active and playful. **Details:** Mollie's fits occur usually around every 6 - 10 days - longest ever gap was 27 days - and can be either focal or generalised. Now, they almost always occur in the night directly from sleep. She does not urinate, defacate or vomit during fits. Fits are quick - 20 seconds at most but recovery is slow - can take up to 1.5hrs to be back to normal and longer lasting if a focal seizure. Mollie was a rescue dog so history is unknown except she came to England from a farm in Ireland. We homed her at 5 months old. She has taken part in 2 RVC trials - The Big Brainy Border Collie and RESET. We have recently introduced MCT oil to her raw food diet and B12 was introduced today. In the past we were referred to a holistic vet who tried acupuncture and herbal remedies and weaned her off AEDs. They made Mollie no worse but no better either and she had no fewer or no more fits as a result hence refractory diagnosis. Mollie is spayed. **UPDATE ADDED 31/05/2025:** I'm sorry to say Mollie died yesterday, 4/5/25.	OWNER Updated 31.05.25
29/02/2020		**Molly**	N/A	N/A	Unregistered - UK	17-Aug-19	UK	Bitch	Unknown	Unknown	Unknown	Shadwell Sophie (ISDS 350782)	Jock (ISDS 327212)	Adelph Ember (ISDS 321991)	6 months	YES	All blood tests done and no underlying issues	YES	N/A	**Suspected triggers:** Stress may be a trigger. **Medication:** Pexion - this did not work in my opinion made it worse. Epiphen - immediately calmer and fitting stopped. **Details:** Molly had what we thought were panic attacks from when we brought her home. I now believe that these were partial seizures (Psychomotor), which evolved into full seizures. These stopped when Epiphen was introduced. She is also very anxious and hyper sensitive to certain sounds (cutlery, tin foil, running water), Epiphen has also helped with this.	OWNER

29/10/2019		**Moose**	N/A	N/A	Unregistered - UK	15-Jan-19	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Moose took his first fit at 6 months, from which I took him to the vet and blood tests were conducted. Since Moose was a male BC the vet believed it was a high probability that Moose was suffering from Idiopathic Epilepsy	NO	Passed away at 8 months old. Began fitting, fits were lasting around 4 minutes give or take. Was taken into vets where he was sedated. As he came out of the sedation he took a fit which he did not come out of	**Suspected triggers:** No suspected triggers. **Medication:** Started on Pexion and went two weeks without fitting. However had to be placed on Keppra as well due to him still fitting. After 3 weeks on Keppra and Pexion, Moose took a cluster of 7 fits within 18 hours and then was placed on Epiphen and Keppra. This allowed him to be fit free for 1 month until vets decided to lower the dosage of Keppra, the Keppra was dropped to half a tablet and then Moose took his final fits and eventually passed away. Due to the level of medication Moose was on, his focus and concentration were terrible. **Details:** I have recently read an article stating that the trainability of dogs suffering from epilepsy drops after their first fit and I can back this up from what I've seen with my boy.	OWNER
28/02/2025		**Morse**	N/A	N/A	Unregistered - UK	11-Apr-17	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	Diagnosed by own vet and also by a specialist in 2022.	YES	N/A	**Suspected triggers:** Unknown triggers but most seizures have started whilst asleep. **Medication:** Epiphen has been given since the first seizure and is now at 150mg twice a day. Libromide was added in November 2022 on recommendation from the specialist. Last seizure was March 2023. **Details:** Neutered at approximately 1 year old. First episode was just one seizure. Then we were going 4-6 weeks between seizures, which could be just one or a cluster. After a large cluster (16 in total) in early 2022 that lasted for 36 hours Morse was referred to a specialist and an MRI was performed. No brain damage was detected and the specialist confirmed idiopathic epilepsy.	OWNER
31/03/2026		**Murphy**	N/A	N/A	Unregistered - UK	12-Mar-25	UK	Dog	Barnie	Timba	Lily	Dottie	Unknown	Unknown	10 months	Yes	Taken to vets after first fit, bloods done and all fine. After more seizures started on medication.	NO	Started having very bad seizures very close together. Taken to the emergency vets and took over 24 hours for seizures to stop. Wasn't coming round like he should have, temperature was high and suspected brain damage. Put to sleep to end anymore suffering.	**Suspected triggers:** Unsure of triggers as most seizures started whilst asleep. Had his puppy vaccinations and flea treatment and wormer. Flea and wormer hadn't been given for months prior. **Medication:** Started on Soliphen 60mg 1 tablet twice a day. Upped to 1 1/4 tablets twice a day. Was in therapeutic range. Keppra added after first emergency vet visit. **Details:** After first seizure which was one, all the others were clusters. In less than 2 months, volume of seizures increased rapidly, lost count of how many on final weekend.	OWNER

MRI, CSF (cerebrospinal fluid), heart trace, bloods	YES	N/A	**Suspected triggers:** September- November during exercise offlead. **Medication:** Epiphen 60mg. **Details:** Fits up to one min, recover 1-3 mins, IGS carrier.	OWNER
30/06/2024		**Newzimbo Emeralds Son**	AW01230506	Not known	BC - UK KC Pedigree	16-Mar-19	UK	Dog	Turlowfields Prince Diesel (AT01215901)	Merl of Turlowfields (ISDS 00/316289)	Bet of Turlowfields (ISDS 00/307387)	Newzimbo Millie's Rose Petal (AQ04243803)	Zak of Newoak (ISDS 00/309907)	Newoak Blue Diamond Colley	2 years 7 months	YES	Appointment with neurologist at Paragon Wakefield. Wouldn't 100% confirm Idiopathic Epilepsy as no scan done, but they were convinced that's what it is. Especially given his age, breed and the fact he is fit outwith the seizures.	YES	N/A	**Suspected triggers:** No idea of triggers. **Medication:** Currently on: 60mg Epiphen 2 per day, 325mg Libromide 2.5 per day, 500mg Levetiracetam 3 per day. Emergency meds: Increase Levetiracetam to 1250mg 3 per day for 48/72 hours. **Details:** Fits normally last 1-2 minutes with about 5 mins recovery time. Normally when he is asleep although the last few have happened in the local park - which is unusual. Pretty much always generalised seizures, he does have clusters too. Longest he has gone between episodes is 22 weeks but then he tends to have a few and we take him to the vets and they increase the meds and we get a reasonable time before the next batch. It's like he gets used to the meds and the seizures come back again. He's had about 56 seizures in total. He was neutered before seizures started. Breeders were informed. Litter sister has now had puppies.	OWNER

30/11/2024		**Ozzie**	N/A	N/A	Unregistered - UK	04-Apr-22	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	After 3 seizures the vet diagnosed epilepsy.	Yes	N/A	**Suspected triggers:** Unknown triggers, currently has seizures while he is sleeping. **Medication:** Has started Pexion, so far no changes, we are only 1 week in of starting medication (as at 29 November 2024). **Details:** Ozzie has been neutered, seizures last 1 minute. Seems absolutely fine within himself after 5 minutes. No other symptoms.	OWNER
30/09/2020		**Ozzy Bear - Bear**	N/A	N/A	Unregistered - UK	31-Jan-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 9 months	YES	Taken to vets after seizures at home. Treated by local vet and also Animal Health Trust Newmarket Suffolk. Brain scans and medication check. The neurologist at Newmarket had told us that Bear was one of the most difficult dogs he'd seen to treat at the time. His brain scan showed white areas where brain damage had occured because of his seizures	NO	3 years - Passed to bridge 30th May 2017	**Data from 31.01.2016.** **Suspected triggers:** I've kept a diary since his first fit which was in October 2015 and at first we thought it was a supplement oil we put on his food. We stopped it but found the fits carried on regularly until he clustered and we had to put him on meds. They were 3 weeks apart within a day each time, then he had 2 in 3 hours. **Medication:** He started on Epiphen 45mg twice daily. He had blood tests every 3 weeks and after each blood test his dosage was increased by half a tablet each dose. As at the above date he was on 75mg twice daily. He also has Diazepam in case of severe fitting of 5 minutes. **Details:** Bears first seizure was at 6.30am, he'd last eaten at 5.30pm the evening before. He is fed Natures Diet which is cooked, he has that with Pedigree Chum mixer for large dogs. Most fits are between 4.30am and 6.30am when asleep. Since he started his meds he has not fitted, though after blood tests they have kept increasing his dosage. He has now been 6 weeks fit free. Bear is a very large collie weighing around 34kg. He came from a working farm in Wales as did his brother who is coming up to 3 with no signs of the same. He was neutered at 9 months old and had not fitted until October 2015. **UPDATE ADDED 30/09/2020 to:** Date of Birth/Registration Type/How epilepsy diagnosed/Is dog alive/Age & Cause of Death. 29/11/2019		**Paddy**	N/A	N/A	Unregistered - UK	12-Oct-17	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	Vet tested for all other possible conditions which were clear, this left us with Idiopathic Epilepsy	YES	N/A	**Suspected triggers:** Not sure as very early stages of any suspected triggers, only had first seizure on 1/10/19. Possibly stress related? **Medication:** Initially given Pexion 400mg half a tablet twice a day, 12 hours apart. On 15th November began fitting again, first one was as all the others, he was sleeping then began a cluster, Diazepam administered but continued to fit the morning after, on another trip to the vets they issued more Diazepam & introduced Epiphen, he had a loading dose for 24 hours (4 tabs) along with the Pexion then reverted to 2 tabs 12 hours apart plus Pexion for 24 hours, another vet trip booked for 18/11/19 to discuss future medication. **Details:** Neutered at months old. Seizures initially were when sleeping but in last 24 hours they have been when awake. Fits are never very long at the moment, around 30-45 seconds. Some seizures have appeared to be caused by one of the other dogs growling at him.	OWNER

OWNER
31/03/2022		**Quickstep NHSB 2180612**	N/A	N/A	Non UK Registered (Border Collie)	10-Mar-98	NETHERLANDS	Dog	Maks (NHSB 1824452)	Rex (NHSB Bijl. G-2 1323996)	Berrie (NHSB 1611999)	Donna (NHSB 1956472)	Vic (NHSB 1394952)	Bobby (NHSB 1756146)	3 years	YES	Diagnosed by a vet	NO	Quickstep was pts at the age of 12 1/2 years. He had enough seizures, his body couldn't take anymore.	**Suspected triggers:** Triggers were stress from other dogs, hormones, full moon and especially super moons. **Medication:** As there was only Phenobarbital and Potassium Bromide in those days as far as I know, he was on the max of both. **Details:** He still had a Grand Mal every month at a full moon at 03:30 at night. The Grand Mal took about 6 - 10 minutes. After his Grand Mal he was screaming for 2 hours and pacing, trying to hide behind anything and after that came 2 hours of walking and panting before he came to his normal self. And then he slept for 24 hours. It was the same every month. Only just before he was pts he started to have cluster seizures. Then I knew it was enough. Quickstep was an intact dog, thus the hormones were a problem with other dogs. He was bred without any health tests from the parents and got a Dutch pedigree. He was out of Working Sheepdog Lines, only a few generations in the Netherlands. He also got supplements like herbs and the food was changed from kibble to meat which helped a lot. As was normal in those days he had his vaccines and deworming on a regular base. Quickstep was pts at the age of 12 1/2 years. He had had enough seizures, his body couldn't take anymore. So it was the only humane thing to do, to give him peace. He had a very active life with walks to the horses and playing with a football and doing lots of things but only with us, no other dogs except the ones he knew before the seizures started.	OWNER

YES	N/A	**Suspected triggers:** Head trauma 10 months prior to fist fit (running after a ball head first into a bench. Required stitches and teeth. removed). Also given Nexgard Spectra 3 months prior to first fit. **Medication:** Not currently medicated. We have rescue Diazepam which we have used twice and now been prescribed Gabapentin to relax following fit. No preventative medications started. We recently started him on CBD oil. **Details:** One fit every two - three months. Lasting 3 minutes but prolonged post-ictal period lasting most of the day where he is very distressed. Seem to be caused by stress and vomiting. One fit he was in the shower, the other three were after vomiting which stresses him.	OWNER
29/11/2019		**Remajak Somerset Morn**	Not known	Not known	BC	11-Jun-13	UK	Dog	Altricia Double Dare To Arrodare	Altricia Mister Consistant	Altricia Lady Madge	Borderbeau Blithe Spirit At Remajak	Locheil Travellin' South To Borderbeau JW ShCm	Locheil First To Finnish At Borderbeau	1 year 4 months	NO	N/A	Not known	Not known	**Suspected triggers:** See Details below. **Medication:** see below. **Details:** First fit 28.10.14 - seizure in the afternoon, followed by a slow but full recovery to normal state. Second fit 29.10.14 at 7am. Seen by the vet after each seizure and blood tests undertaken. Vet advised diagnosis of Idiopathic Epilepsy at this stage but as yet no MRI or spinal tap has been carried out. He was otherwise fit and well with no further seizures as of 2.12.14. Initial course of Diazepam for approximately one week; treated with Epiphen twice daily from day of second fit for four weeks. Bloods have been sent to Epiphen to assess viability of phasing out medication. 24.9.14 castration under general anaesthetic; vet treated with Advantage for possible fleas same week; 1.10.14 first year vaccination; 25.10.14 routine worming with Panacur. He is otherwise fit and healthy. All breeders/owners directly connected were informed immediately with sire/dam owners agreeing to wait for completion of initial four week treatment plan before submitting to database; dam & littermates will never henceforth be bred from. DNA to be submitted in due course. Fed James Wellbeloved Turkey & Rice; no change before or after seizures. Neutered on 24th September, before onset of fits. **UPDATE ADDED 01.05.15** - Bryn suffered a seizure at 10.30pm. Recovery time was quicker than the initial two seizures last October but he lost vision for 15 minutes. 25 minutes after the seizure he took his ball to his owners to ask for a game. At the time of the seizure, his owners report that his Epiphen dose had been reduced gradually to 1/4 tablet each day (as he had suffered no further fits after the initial two) with the plan to take him off meds altogether in another week. However, their vet has now advised that the dosage should be returned to 1/2 tablet each day.	DATA TRANSFER FROM LYN NORTON Added 04.12.14 Updated 01.05.15

31/05/2020		**Rogue**	N/A	N/A	Unregistered - UK	17-Jun-14	UK	Bitch	Klevely The Muppet Meister	SH CH Goytre Going Places	Meisterwerk Thakat	Ruby	Unknown	Unknown	1 year 3 months	YES	First seizure at 15 months. 2 within close succession. Blood tests next morning, nothing found. No scans performed as veterinary advice was, due to her age, a tumour etc was unlikely. Idiopathic epilepsy diagnosed.	NO	PTS on 23/01/18 aged 3 years, 7 months after deteriorating over the previous few weeks. She'd been in season the previous December and although these had no effect before, she started to have focal seizures, almost daily	**Suspected triggers:** First seizure was 9 days after her first annual booster. Triggers were strong scents, some foods, being startled, stressful situations, although she didn't show stress signals. She would fit after vet visits for her blood work or if she got injured. **Medication:** She was on Epiphen and Potassium Bromide with Keppra for 5 days after a cluster and rectal Diazepam. When she deteriorated in the December, Keppra was added as a third drug, not just to break clusters and dosages were increased (can't remember specifics) but seizures couldn't be controlled. Was also seeing a homeopathic vet. She had a couple of remedies which helped in the short term. **Details:** Rogue was entire. Veterinary advise was not to spay due to her epilepsy and the fact she was a blue merle. Seizures were intense, she frequently had clusters but never lasted more than a couple of minutes, until the end. No two ever seemed the same.	OWNER
28/02/2022	31/12/2022	**Roguerys Made of Magic - Marvel**	N/A	00/384199	BC - ISDS	26-Jan-21	UK	Dog	Why Valley Ben (ISDS 00/307627)	Cwrt Zac (ISDS 00/263935)	Why Valley Babe (ISDS 00/287618)	Jill (ISDS 00/361050)	Sweep (ISDS 00/293085)	Jess (ISDS 00/306255)	9.5 months	YES	Confirmed by regular vet and veterinary neurologists at the University of Cambridge.	YES	N/A	**Suspected triggers:** None yet. **Medication:** Marvel is on 120mg Phenobarbital twice daily, in addition to 20mg Fluoxetine once daily. Phenobarbital has managed to control his grand-mal seizures and he hasn't had one in 4 months. However, it is suspected that he is having focal seizures most days and Phenobarbital has not controlled these as well (hence why he is on such a high dose). **Details:** Marvel had 2 grand mal seizures prior to being added to database, both in the morning (5:30am and 8:00am). First fit lasted for a minute, 2nd fit lasted for 2 minutes. Still waiting on Marvel's ISDS registration but I wanted him on the database. **UPDATE 31/12/2022:** Marvel's registered name, ISDS no. Epilepsy confirmation and Medication updated.	OWNER Updated 31.12.22

Lymphoma not the cause or trigger. **Medication:** Epiphen and Libromide plus Diazepam when fitting. **Details:** Entire, fits irregular and of fairly short duration once medicated, Kez was responding well to medication and managed 9 months fit free before Lymphoma took him. We were expecting to be able to reduce his dosage just before this. **UPDATE ADDED 30/04/2021** - KC Reg no. was incorrect.	OWNER Updated 30.04.21
29/10/2019		**Rosmak Fame & Fortune**	AP02543901	N/A	BC - UK KC Pedigree	16-May-12	UK	Bitch	Rosmarinus Gin Cooler	AG CH ForByFor Turbo Diesel	Rosmarinus Pimms	Rosmarinus Eclipse	Rosmarinus The Werryman	Rosmarinus Loganberry	5 Years 9 Months	YES	Tests done at Animal Health Trust, Newmarket. (Bloods, Spinal Tap, Imaging etc)	YES	N/A	**Suspected triggers:** It is Idiopathic Epilepsy, I have not noticed any triggers. **Medication:** Epiphen, changed August/September 2018 to Libromide 325mg & Levetiracetam 500mg. **Details:** Marnie is spayed & seizures usually occur early morning & last a few minutes. Medication changed August / Sept 2018 after she was admitted to AHT with liver failure, one of the possible causes could have been a reaction to Epiphen but this was never confirmed. There were 6 puppies in Marnies litter, 3 of which (including Marnie) have seizured, one died at approx 12-18 months, the other is still alive.	OWNER
19/07/2019		**Rosmak Fortune Seeker - Bilbo Baggins**	AP02543903	N/A	BC - UK KC Pedigree	16-May-12	UK	Dog	Rosmarinus Gin Cooler	AG CH ForByFor Turbo Diesel	Rosmarinus Pimms	Rosmarinus Eclipse	Rosmarinus The Werryman	Rosmarinus Loganberry	3 years	YES	He had several tests carried out, bloods, spinal fluid and other tests. These were to check for any other condition, which he didn't have. So he was diagnosed as having idiopathic epilepsy	YES	N/A	**Suspected triggers:** Don't know trigger point. **Medication:** 325mg Libromide and 75mg Epiphen twice daily. **Details:** Testicles didn't drop so had operation to find and remove. Has had 21 seizures since Mar 17.	OWNER
29/11/2019		**Rosmak Fortune Teller**	Not known	Not known	BC	16-May-12	UK	Dog	Rosmarinus Gin Cooler	AG CH ForByFor Turbo Diesel	Rosmarinus Pimms	Rosmarinus Eclipse	Rosmarinus The Werryman	Rosmarinus Loganberry	12 months	NO	N/A	NO	See Fitting Details	**Suspected triggers:** N/A **Medication:** N/A **Details:** He had had puppy vaccinations but not old enough to have needed booster yet. No injuries or changes to diet, not recently had flea or worm treatments. Entire. He was his usual happy, lively self when we left the house, drove to a show and was acting 'odd' when we arrived. He had drool hanging from his mouth and seemed a little vacant. Took him for a walk, he seemed spooked which wasn't his personality, went to put him on lead and he fell to the floor fitting. Lasted approx 8-10 minutes. No help available at show, phoned vets who recommended taking him in, said as it was his first fit would be highly unlikely to have another straight away. Travelled in van with myself, he didn't return to his usual self and started fitting again within minutes. I had a vet on speakerphone, the fits were huge and he was struggling to breathe, followed directions and tried to resuscitate. He very sadly died. Not confirmed as epilepsy as didn't want a postmortem but the vet said it was highly likely due to his physical appearance.	DATA TRANSFER FROM LYN NORTON Added 18.07.14

29/11/2019		**Sam**	N/A	N/A	Unregistered - UK	30-Mar-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	YES	Multiple fits leading to seeing a neurologist. He has had numerous blood tests and an MRI to eliminate tumours etc	YES	N/A	**Suspected triggers:** Suspected trigger is pollen as he is worse throughout the summer period. He is on a hypoallergenic diet. Fully vaccinated. Up to date on flea and worming. **Medication:** He started on Pexion which made clusters worse. He moved to Epiphen which was a lot better but still having them often. He has just started on Bromide and after 4 months, we are going to start reducing the Epiphen. **Details:** He is neutered. He was fitting every 2 weeks but currently 33 days seizure free from starting Bromide. His fits go on for approx 5 mins and they are all grand mal. I have not noticed him have a focal seizure nor does he just tipple. If he has a fit, it's always a big one. He starts his fit by turning his head all the way around and basically looks behind him. His eyes go wide and he starts to fit. He always pees and foams at the mouth. Sometimes he bites his tongue ending up in bloody spit being thrashed around.	OWNER
29/11/2019		**Sam**	Not known	Not known	BC	01-May-07	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years	YES	MRI and Lumbar Puncture. Bath Vet hospital confirmed as Epilepsy	NO	Died May 2013 aged 6 years. He fitted off and on for just over a week in clusters. We arrived home one evening to find that he had died. The vet said it was a grand mal seizure that only instant medication could have saved him and he would not have known what was going on	**Suspected triggers:** See Details below. **Medication:** Epiphen. **Details:** Nothing unusual happened that I can think of, I did notice it initially happened after we had been out and we got caught in the rain. Like he had caught a chill, it happened often after a soaking. The vet said it wasn't connected, I'm not so sure. After diagnosis at Bath Vet hospital where he had an MRI and I think a lumbar puncture he was initially given just Epiphen, strength and dose varied, then also given Lobramide when fits continued, can't remember strength. The fits did change even though he was on medication. The fits didn't last as long and I could tell when he was about to have one, or if he had had one when he was home alone. Usually when he was sleeping then he would wake, his head would shake he would fall over and his back legs would move as if he were running his front legs would be stiff. Was fed on Bakers complete. A lighter diet was offered after fits although he was usually starving when he came around. He gained weight so we were advised to give him a weight control food, there was no change in fits. He was neutered before the fits began.	DATA TRANSFER FROM LYN NORTON Added 21.06.14

28/02/2021		**Skye**	N/A	N/A	Unregistered - UK	05-Jun-17	UK	Bitch	Scottish Farm dog	Unknown	Unknown	Scottish Farm dog	Unknown	Unknown	3 years 3 months	YES	Several identical seizures. Vet feels as they started around 3 years old, otherwise extremely healthy fit bitch, epilepsy likely cause	YES	N/A	**Suspected triggers:** No known triggers at present, still documenting seizures to find any pattern or link. **Medication:** Treated with Phenobarbital twice daily (under duress), initially 60mg, halved to 30mg by me as behaviour badly subdued by dose. All ok at present, hopeful of stopping or reducing meds after spaying and hormonal fluctuations taken out of equation. Using EFT tapping, calming and enjoyable, also Reiki. Very doped, poor soul could barely walk. Have discussed with vet who agrees the treatment shouldn't be worse than the condition! **Details:** First fit at 4 am, jaw chattering woke me, foaming, twitching and urinary incontinence, (having worked with kids/seizures was aware of how scary it looks, and to time it). Around 3.5 mins, four long bouts and jumped up like nothing happened. Vet did urine test in morning, slightly elevated white count so treated with antibiotic in case of infection. All other fits (5 more) have been identical, only shorter in every case. Differing times, no real common denominator. One thing I am monitoring is we use a calor heater in sunroom topping up heat in autumn/ winter. Most recent seizure Skye had spent half a day with me there doing a 2oom course online. It is well ventilated and has a CO alarm, but wonder if she is affected by this? Just grasping at anything I can change to remove meds etc.	OWNER

29/10/2019		**Smudge**	N/A	N/A	Unregistered - UK	16-Jun-99	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	9 years	NO	N/A	NO	PTS following a significant seizure at 17.5 years. Vet concluded this last seizure had caused brain damage and a high probability of a recurrence within a few days	**Suspected triggers:** Over activity was definitely suspected as fits generally occurred outside of the home after ball chasing or similar. There was one event after a clash of heads whilst running for a ball with our other dog. **Medication:** No medication recommended by vet due to infrequency. **Details:** Fits were infrequent, possibly once or twice a year but reduced as his age increased and his activity levels decreased. Although he was 9 when we first realised he was fitting, with hindsight we realised there may have been earlier occasions where we had not recognised the symptoms from around 2 years of age. Registration status not known. He was full Border Collie but adopted from Border Collie Trust at approx. 10 weeks old. DOB added is approximate.	OWNER
29/11/2019		**Smudge**	Not known	Not known	Collie	19-Oct-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 1 month	YES	Vet confirmed as Epilepsy	Not known	Not known	**Suspected triggers:** Not noted. **Medication:** Epiphen increased to 2 twice daily 60mg. After 4 months given Libromide, which only made him lethargic and not acting like his usual self. Now on Epiphen and Levetiracetam which we used to give him now and then before a fit, but not on one every 8 hours. **Details:** Fits started off as around 8 or 9 clusters every 21 days, this increased to 11, his last one being 16 clusters from 2pm to 7 am the next day. Some last 30 to 40 seconds, some 2 or 3. There is usually 15 minutes in between but now a few minutes. Clenches jaw, then jaw wide, outstretched legs, urinates sometimes and a slaver from mouth and the smell is awful. Then he will pace, used to pace for 20 minutes and could not see us. Now he paces and tends not to bang into objects, seems to manoeuvres around them a little better. Before a fit, he howls at the moon, tries to escape, but now he tends to approach me to cuddle and follow me everywhere I go. You can see in his eyes that he is due to fit, his personality changes. The fits had increased to double the amount, but more often between them. Neutered before fits started. He had been neutered only 4 weeks before. He had trauma to his leg when only 5 months. And we had a collie out when he seized the following week.	DATA TRANSFER FROM LYN NORTON Added 16.07.15
30/04/2026		**Sparkle**	N/A	DE/356904	BC - ISDS	24-Dec-17	NETHERLANDS / GERMANY	Dog	Mettelberg Gismo (ISDS DE/326099)	Don (ISDS 264425)	Kate (ISDS 278347)	Annie (ISDS DE/331577)	Duke (ISDS 259164)	Dart (ISDS 313761)	6 years 6 months	Yes	Specialist diagnosed. Litter sister and litter brother affected at younger age.	NO	7 years 6 months. Seizures getting more frequent, ending in one large one. We had to let him go.	**Suspected triggers:** We treated with anti flea/tick drops. Previous we used other brand, which was not sufficient for ticks. After winter we started different brand, Vectra3D. 4 days later he had his first seizure. **Medication:** Phenobarbital at first. Increased the dose when seizures occured every other week. Not enough, therefore added Leviteracetam. Never got it under control unfortunately. **Details:** He reacted strongly to bitches in heat. Trying to lessen his reaction, we talked with vet and decided to neuter him. Before that we addionally tested him on MDR1, he was clear. We found out low levels B12. Injected him to get his levels up, which helped, but didn't stop having seizures. Started 1 small seizure. Few months later suddenly 3 on one day. Then frequency to every two weeks, all 3 seizures within 4 hours. Adjusting medication, back to 4 weeks, but still 3 seizures during the night. Then back to every two weeks. Seizures always 3, last one getting longer. Seizures always late evening. Then he was real calm for few days. We lost him within a year.	OWNER

Primary epilepsy	**Suspected triggers:** No triggers. **Details:** Everything was tried to save him, even the best clinic couldn't save him. He didn't get out of the fits. He had one minor fit for a minute, two weeks before the severe and deadly attack who took two days! Vet and specialist were helpless. Nothing worked, valium, anaesthesia etc.	OWNER
31/07/2023	06/09/2023 & 31/01/2024	**Stockyard Megamix Stytchin - Needle**	K0261020	N/A	Collie Cross - UK KC Activity Register	19-Mar-20	UK	Dog	Stockyard Mity Black Jack	Topeka Justa Silver Storm	Origine Deux Jee-Wizz (Imp Fra)	Jaybeez Meg (ISDS 00/350773)	Int.Br.Ch./Eng.Nat.Ch. Sweep (ISDS 00/293085)	Nan (ISDS 00/325084)	2 years 10 months 20 days	NO	N/A	NO	2 years, 10 months, 20 days. Pts to prevent further suffering. See Fitting details for more information.	**Suspected triggers:** None known. He was raw fed from birth, never treated with any chemicals. **Medication:** N/A. **Details:** Needle was a perfectly fit and healthy boy up until 00.04 on the 9th February 2023. At 00.05 he had his first fit. He then proceeded to continue to fit throughout the night and into the morning, each one longer and worse than the one before, and each one coming more quickly, culminating with him not coming around. He was given sleep to prevent his little body having to endure anymore seizures. Neutered. **UPDATE ADDED 06/09/2023 -** Request received from owner, Status Epilepticus removed from Cause of Death, admin auto response to description provided in fitting details. **UPDATE ADDED 31/01/2024 -** At the insistence of Needle's breeder please see further update; When trying to find a 'reason' it was found that Needle had put on weight prior to his fitting and photographs of him taken, four weeks prior to his death, whilst in a forest on holiday in Scotland, seemed to show enlarged pupils. (A veterinary professional that his breeder showed the photograph to gave a suggested diagnoses as he may have been poisoned!) His head shape also appeared slightly different to a photograph taken 6 months earlier. He suffered multiple seizures in a four & a half hour period, each one more severe with less recovery time between. As it was my choice not to have a postmortem his cause of death can only be surmised and nothing can be proved regarding IE; however he had shown no signs of 'illness' prior to his first fit. Hindsight is a wonderful thing. His breeder categorically states that there are no notable issues in his line. Needle was from one of two accidental crossbreed litters sired by her dog at the time. None of the other pups from either these, or the two subsequent litters he has sired, have any known issues.	OWNER Updated 06.09.23 Updated 31.01.24

30/09/2023		**T/K Decker** **ABCA 506630**	N/A	N/A	Non UK	22-Dec-20	USA	Dog	Spot (ISDS 362131)	Caeflin Clem (ISDS 344067)	Nel (ISDS 340962)	Imp. Floss (ABC 502518)	Sam (ISDS 334162)	Nell (ISDS 338696)	2 years 3 months	YES	Process of elimination through BW/ urinalysis/ sonogram/xray/physical exams	NO	2 years 7 months Multiple Seizures. See Fitting Details for more information	**Suspected triggers:** Exercise, activity, motion, stress, surgery, medications. **Medication:** Keppra, denamarin, cephalexin, anesthesia, acepromazine. **Details:** Conceived in Wales, born in USA. Decker was intact, never bred. DNA Clear for everything via optimal selection wisdom panel. His seizures were violent and lasted 5 to 7 minutes during, and after he would pace frantically, run into things while screaming. So, we crated him for safety. When not seizuring, he was a very happy, lovable, social dog with a strong desire to work all the time. We first witnessed a seizure during post op restricted exercise. He had surgery to remove an obstruction which turned out to be a swallowed part of a kong. The doctors in hindsight theorize the kong part was swallowed during a seizure unbeknownst to us at the time. The seizure allowed the item to enter the stomach to which it was unable to exit do to size. This they said solved the mystery as to how it got into the stomach in the first place. So, during post op, he had the first seizure we knew of. We stopped his pain meds, rushed him to the hospital where he started his journey of multiple tests leaving him with the diagnosis of epilepsy. Decker was being treated for seizures and undergoing multiple exams, tests, etc for 4 months. On July 18, 2023 he suffered 7 minute long, multiple full seizures before he could get into the hospital. His final seizure occurred upon arrival at the hospital. He was quickly sedated. Through consultation with the vet regarding his potential to have a safe and quality of life, a decision was made to relieve him of his suffering. A necropsy was performed which confirmed an additional complication of a diseased liver which the doctor said was congenital in nature. He determined this to be a separate underlying issue from the epilepsy.	OWNER
28/02/2021		**Taff**	N/A	289834	BC - ISDS	05-May-07	UK	Dog	Plas Major Storm (ISDS 249754)	Plas Major Gull (ISDS 189532)	Briar (ISDS 232390)	Ceri (ISDS 242461)	Don (ISDS 218243)	Nel (ISDS 210531)	7 years 5 months	YES	Vet ran blood tests which showed nothing that could be causing the fitting, so concluded Taff had Idiopathic Epilepsy	NO	Age 10 years. Taff died in May 2017 following a series of cluster seizures from which he never recovered	**Suspected triggers:** None mentioned. **Medication:** Epiphen **Details:** First seizure brought on by introduction of new dog into household. Taff was fairly stable, cluster seizures every 6-8 weeks. Castrated at 6 years of age. I found out from an article in the ISDS magazine that Taff's grandmother, Briar, was herself pts because of epilepsy. Her breeder consequently stopped breeding from this line (Plas Major). 19/07/2019		**Taliswood Tri Star -** **JJay**	K109344	N/A	WSD - UK KC Activity Register	10-Dec-02	UK	Dog	Zigzest Jaffa at Taliswood	Greatglen Hiawatha	Zigdan Zest	Jarro's Exclusive Edition	OB CH Dalemain Red Rascal	Trajan Jumpin' Jiff	4 years 7 months	YES	Animal Health Trust did all elimination tests necessary, MRI brain scan, cerebral fluid spinal top, ultrasound of all organs, proprioception tests and bloods,urine etc. Confirmed as Idiopathic Epilepsy	NO	12 years old. JJay starting fitting around breakfast time, not his normal time. After 3 fits we rushed him to vets as we always did at that stage, he never really came out of one before going into another. After all day in vets being treated we had to let him go. He died in Status Epilepticus.	**Suspected triggers:** Triggers we worked out over time were household cleaners especially air freshener sprays, plug ins and scented candles. We had to clean when he was out of house and have windows open. Stress was also a big factor, he didn't look stressed but didn't like changes, like one of us packing to go away. Also had to pack cases and load car so he didn't see or he would cluster. **Medication:** Initially given Epiphen 60mg x 2 daily. Continued to cluster fit so medication increased to 90mg 2x daily and Pottasium Bromide (Kbr) 975mg once daily added. The Kbr soon caused severe disorientated mental status, very wobbly and occasional falling while standing or walking. AHT said Kbr was causing toxicity, once it was withdrawn he was back to his normal alert self. Changed to 105mg of Epiphen 2x daily, 300mg 3x daily of Gabapentin. When he fitted was given rectal diazepam and an ice pack applied to his neck/ back area. Since meds changed, fits approx every 10-15 weeks and generally only has one fit instead of 4/5/6+ clusters within the space of 1-4 hours that he was having every 4-6 weeks. **Details:** We bred JJay, he always fitted in the early hours of the morning. Clusters reduced when on meds that suited him. We had to stop doing agillity as JJay's co-ordination wasn't good enough to continue. Castrated after being diagnosed with idiopathic epilepsy, made no difference to the pattern of his fitting. His Dam was spayed and owners of his litter brothers/sisters advised to neuter, which they all did. Our dog is the only one from the 2 litters of this parentage that has fitted out of the 11 puppies. They were all healthy to a grand age.	BREEDER/OWNER

Cluster fits, see Fitting Details for more information	**Suspected triggers:** None. **Medication:** Currently on Pexion, Keppra and Bromide. Epiphen - serious side affects and cannot be used - hospitalised her twice. **Details:** Neutered. **UPDATE ADDED 29/09/19** - Update on Tartan Ticking Time Bomb - devastated to say she was put to sleep on 20th August after cluster fits that went on over 55 hours and nothing could stop them (she was on double dose Keppra, also given in liquid form at start of cluster, Bromide and Pexion) . Phenobarb tried again but made her lose her mind and didn't know who she was and had no ability to switch off and stop.	OWNER Updated 29.09.19
29/09/2019		**Ted**	N/A	N/A	Unregistered - UK	01-Jun-15	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	By Cambridge University Veterinary Hospital	YES	N/A	**Suspected triggers:** Initially overheating, exercise (ball chasing). Gets overexcited/anxious. Now mostly happens at rest. **Medication:** Acupuncture (I'm an acupuncturist) helps to stop it. CUVH happy for me to use acupuncture to monitor it. For this last year CBD oil stops it quickly. **Details:** Although always a nervous collie, wary of some men for no reason, quickly forgetting if they moved or came back in room, fits started after he was neutered. Something went wrong with operation, he got abscess and took long time to heal. Initially they were 6 weekly, but now can be longer between or gets a lot at once. Just had 3 bad ones in 24 hours. No triggers. Without acupuncture or CBD, fits become very strong, full body tension/taught/trembling, head banging, drooling. Purchased as an 11 1/2 week old puppy from farm in Swineshead, Boston, Lincolnshire.	OWNER
31/12/2023		**Ted**	N/A	N/A	Unregistered - UK	18-Nov-18	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	YES	Bloods at Vets 4 Pets, Candy Valley, Chester	YES	N/A	**Suspected triggers:** Suspected oral flea and tick medication 'Bravecto'. Now changed to back of neck 'spot on' treatment. **Medication:** Not medicated for first 11 months, seizures were 10-12 weeks apart, very short and Ted recovered very quickly. Rectal Diazepam held on standby in case fit or recovery became longer, not had to use yet. When the next 2 fits were 4 weeks apart we decided to medicate. Epiphen 2 x 30mg a day. Had 2 month gap initially then 4 weeks and then 2 weeks. Meds changed to Phenoleptil 2 x 25mg because vet stopped using Epiphen. Changed vet and new vet recommended doing new bloods in 3 weeks, to give Phenoleptil time to get in his system. **Details:** Vet wanted to do MRI £2000 but Ted not insured and I don't have the money. If epilepsy was not a known condition in BC's I would have been more concerned. Fits less than 1 minute, recovery used to be very quick but is taking slightly longer now. . Identified coughing usually signals a siezure and vomits before fitting. Neutered. He was put on grain free food as a youngster as he was very hyper and whites of eyes were red at times.	OWNER

Just so devastating to see Tess like this. **Details:** I had a Labrador years ago who fitted every few months but not cluster fits like this. The poor dog didn't know where she was, who we were, couldn't walk - horrendous experience.	OWNER
29/02/2020		**Tess**	N/A	N/A	Unregistered - UK	02-Feb-11	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	8 years	YES	Consultation with specialist neurologist at Langford Vets in Bristol, who diagnosed Idiopathic Epilepsy	YES	N/A	**Suspected triggers:** No specific triggers that we know of although we have changed diet to a hypoallergenic one since her seizures started. She is on Tails hypoallergenic dry kibble & Natures hypoallergenic meat. **Medication:** Tess was started on a high dose of Phenobarbitone (Epiphen) after her appointment at Langford in March 2019 which made her drowsy and lose coordination of her back end for about a fortnight but gradually side effects wore off. The dosage was reduced to a maintenance level over a few months until she was on 15mg every 12 hours. She still fitted on medication, roughly once every 4-6 weeks. However, she developed incontinence due to increased thirst (side effect) and excessive drinking, so our vet introduced Pexion 200mg every 12 hours and we weaned her off Epiphen gradually over 3 months. Three days after her last Epiphen (September 2019), she had four seizures in a 24 hour period (previously only ever had one fit at a time) and was hospitalised overnight. She was started back on the Epiphen instantly but on maintenance amount, so is now on the same amounts as mentioned previously and hasn't fitted since September 2019. **Details:** Tess is a spayed bitch that we rehomed from the Border Collie Trust at 2 1/2 (already spayed when we got her). There was no medical history or evidence of seizures before we got her. Tess used to sleep downstairs in our previous house. A year after we moved to our current house in 2017, Tess started sleeping upstairs next to me in 2018. She started seizuring in March 2019. She only seizures in the middle of the night when she is asleep and as far as we know, she is unaware of them and when they are going to happen. They last around 30 secs. She wets and salivates excessively which is why we believe she never had seizures before she started sleeping upstairs because we would have felt the wet saliva on her face in the morning (it takes hours to dry). During the seizures her eyes roll, she stops breathing, her head is tilted back and her body is stiff. She paddles with her front feet before lying still and still, breathing heavily and then panting before she comes round. She is very disorientated for about 10-15mins and then goes back to sleep and wakes up 'normal'. Excessive exercise and stress don't seem to have any effect. I wonder if the hypoallergenic diet has made a difference as she has always been food sensitive and used to be very fussy with food (not eating, throwing up food in the mornings after eating). She loves the new diet and her stools are good. She is definitely more hungry on the medication.	OWNER
21/08/2019	28/01/2020 & 28/02/2020	**Tess O'Broomielaw**	AH0901331	278780	BC - Dual Registered UK KC & ISDS	14-Aug-05	UK	Bitch	Moss (ISDS 263829)	Mac (ISDS 224692)	Lynwood Nell (ISDS 234979)	Jen (ISDS 267609)	Glen (ISDS 243997)	Nell (ISDS 225113)	2 years 2 months	YES	Blood tests taken at same time as vet affirmed that description of seizures couldn't be anything else	NO	Tess died on Thursday 23rd January 2020 at 14 years old. She was pts quite peacefully as her spinal problems had spread considerably and we did not want her to get to a state of distress.	**Suspected triggers:** Certain paint smells, nervous excitement, illness, once we suspected a vaccine, vet certain it's bank holidays too as she always has a cluster when they are off duty!! **Medication:** Currently on Epirepress, Potassium Bromide, Levetiracetam and Scullcap & Valerian also has Gabapentin but that is now amongst drugs prescribed for spinal problems. She has been more stable on the Keppra than ever before. History of drugs tried en route available. **Details:** Spayed 13/3/06. Heard of others from the sire also diagnosed epileptic. Although we have occasional solitary fits they usual come in clusters (largest cluster was 27 over a Christmas holiday). We've kept a medical diary. If Tess didn't have spinal and hip dysplasia problems now I would suspect that she would still be enjoying a reasonably active life. As it is she still wants to play, go for short walks and eat as she nears her 14th birthday. The epilepsy has aged us rather than the dog! I would always advise working in partnership with the vet and insurance company and we have been blessed with all the support we have received. **UPDATE ADDED 28/02/2020 -** We regret to report that Tess died on Thursday 23rd January 2020. She was pts quite peacefully as her spinal problems had spread considerably and we did not want her to get to a state of distress. Having been warned by the vet who diagnosed her epilepsy that he doubted she would reach the age of two we feel blessed to have had her in our lives for over 14 years. 31/07/2025		**Tigger**	N/A	N/A	Unregistered - UK	11-Apr-24	UK	Dog	Charlie	Unknown	Unknown	I know her but forgotten her name.	Unknown	Unknown	11 months	YES	He went to a specialist at North West referrals. He had a brain scan and other tests. They confirmed he had Idiopathic Epilepsy.	NO	A series of violent seizures that he didn't recover from and they got worse within about 25 to 30 mins! He passed away very quickly as I held him. He was 14 and a half MONTHS !!	**Suspected triggers:** It always happened in the early hours between 1am and 4am. The only thing that was a common denominator was when it was hot. **Medication:** He was on Reconcile for his behaviour issues. Then Epilease which made him hyper and his behaviour got worse (because he had to come off Reconcile). He started taking Epiphen and went back on Reconcile. His behaviour improved dramatically but his fits were more frequent. The vets added Levetiracetam morning and evening. He started having seizures every 2 weeks so an extra tablet of Levetiracetam was added at lunchtime. He never got to take the extra as he died too soon. **Details:** All his fits never lasted for more than 20 seconds until the last one. Nothing was found on his brain. His behaviour was the worst that any vets and behaviourists had ever seen. We worked hard on this and he was improving. He was scared of everything, he was shadow and light obsessed, he was aggressive and unpredictable. But, we had just turned a corner and he was asking for cuddles, kisses and lots of tickles. He became loving towards us and trusted us to look after him. We loved him. He was a fantastic dog despite his many demons. If we hadn't have had him he would have undoubtedly been pts. But I wasn't going to give up on him despite how he was. I would dearly love to see Idiopathic Epilepsy understood and help find a way to stop it in its tracks. It is an awful condition. He was from a working farm.	OWNER

30/04/2021		**Tillychance Diamond Geezer**	TBA	N/A	BC - UK KC Pedigree	03-Nov-16	UK	Dog	Whiterose Dodger (ISDS 331985)	Hemp (ISDS 326075)	Bonnie (ISDS 322509)	Mercanti Diamond Dancer with Tillychance	Canes Sacre Bleu	Cranberry Havana Nights of Mercanti	1 year 11 months	NO Now diagnosed as cobalamin deficiency and will be treated with B12 injections	N/A	YES	N/A	**Suspected triggers:** Boss is a very intense fly ball and obedience dog. In all occasions Boss has been actively running. Bile acids were considered high by the vet as well as being dehyrdated. Vet school decided the figures were not that high. I can only assume the trigger is excitement and running. He was also constipated each time. **Medication:** Started with Phenols-TIL (phenobarbitals) 50mg tablets 2 x daily. Diazepam rectal tubes for emergencies. 7 June 2019 he changed to Epiphen as they stopped making the drug he was on. 8 July 2020 he was neutered with no issues. Now diagnosed as cobalamin deficiency and will be treated with B12 injections. **Details:** 4 seizures between October 2018 and January 2019. Mostly weeks apart except for the last 2 which were 2 in 1 week. Raw fed but had to watch bone content as very constipated. Had been on Nutriment but changed to the Just raw range. We have had to double the Keppra dose because of breakthrough seizure clusters. **Details:** He comes from a line known to have epilepsy, he is neutered. Toby is prone to cluster seizures lasting a minute at a time. Liquid Valium is helpful in breaking the cycle after the first seizure.	OWNER
29/09/2019	28/01/2020	**Tonlynor River**	AS04140201	N/A	BC - UK KC Pedigree	17-Nov-15	UK	Dog	Tonlynor Macleod	Pondeboys Macallum	Threjays Elian	Tonlynor Teagan	Threjays Cymro	Detania Line Dancer at Tonlynor	3 years	YES	Bazil was referred to Dick Whites neurology team by his vet in November 2019. They carried out a physical and neurological examination and exhaustive diagnostic procedures including an MRI brain scan and Cerebral Spinal Fluids. Idiopathic Epilepsy was diagnosed.	YES	N/A	**Suspected triggers:** Stress, anxiety and over excited. **Details:** Has had 5 fits each lasting 1-2 mins, all after being left and over excited when we returned and then a 6th during the night when new puppy wasn't settled. **Medication:** Bazil received a loading dose of Potassium Bromide while hospitalised, he is now on Soliphen 60mg: three quarters of a tablet every 12 hours and Libromide 325mg: one tablet every 12 hours with a full meal. **UPDATE ADDED 28/01/2020** - Update on Tonlynor River - Bazil has now been diagnosed with Idiopathic Epilepsy and started above medication.	OWNER Updated 28.01.20
31/08/2020		**Tosari Khamsin Kara - Kara**	Y1076401Y01	N/A	BC - UK KC Pedigree	01-Mar-98	UK	Bitch	Detania Summersam of Tosari	SH CH Caristan Champers JW	Detania Patti	Tosari Fleurie	SH CH Detania Magnum	Tosari She's a Cracker	Approx. 3 years	YES	MRI scan and Lumbar Puncture at AHT Newmarket	NO	Died 12/01/10 aged 11 years 10 months. She had cancer of the vulva which had spread to lungs. Euthanised as having difficulty breathing	**Suspected triggers:** No known suspected triggers. She had grand mals whilst at rest, work (Obedience) and from running so no particular trigger. **Medication:** She was on Phenobarbitone and regular blood tests from 2001 when diagnosed, until about 2006 when no more fits. Drug free for 3 years. Then started petit mals again and put on low dose of Phenobarbitone which controlled fits. **Details:** She then developed cancer. She was spayed at approx. 18 months. Did not thrash through fits but went completely rigid and tremored. Lasted about 3-4 minutes, then with coaxing came round and had a cold drink to bring her temperature down, then back to normal. Had Diazepam to administer rectally if did not come out of fit but never had to use it. In total probably had about 6 grand mals and several petit mals which were not too noticeable. Thought at first to have heatstroke, then due to raised calcium levels thought to be a problem with parathyroid gland. Believe other puppies	OWNER
29/11/2019		**Tragility Ruggine**	Not known	Not known	BC	10-Mar-10	UK	Dog	Tragility Diamond Dazzler	Bluella Woodman	Bluella Bewitched	Canen Avanti at Tragility	Canen Russ (ISDS 247239)	Haze (ISDS 249932)	4 years 7 months	YES	Vet confirmed as Epilepsy	Not known	Not known	**Suspected triggers:** Not noted. **Medication:** Epiphen 60mg twice daily - first prescribed 29.12.14. **Details:** He had a bad ear infection and was sedated then anaesthetised where his ear was flushed. We originally thought he had something in his ear as he was head shaking. With the drug Epiphen in his system the fits are less severe though still as debilitating but not for such a long period. He was neutered before the fits began. He had a retained testicle removed early on then a benign lump in the remaining testicle/overgrowth of hormonal cells. The testicle was removed in 2013. He is on Green Dog Turkey and Rice kibble and has always been on this food. It has never been changed.	DATA TRANSFER FROM LYN NORTON Added 15.03.15

28/02/2022		**Trickster of Mischief - Loki**	K150380	N/A	Collie Cross - UK KC Activity Register	30-Dec-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	MRI Brain scan and CSF tap	NO	5 years. Medication induced severe pancreatitis.	**Suspected triggers:** We had no clue as to his triggers. We eliminated certain foods, he still fitted so re-introduced them. We didn't think it was food related, although he was raw fed from diagnosis. He was chemically castrated 6 months before fits started, 3 months after chemical implant we had him surgically castrated. We wonder if that had an impact on the start of his seizures or not.. **Medication:** Initially started on Levetiracetam 250mg TDS. Seizures increased so drug was increased to 500mg. Christmas Day 2017 he suffered 4 seizures within 12 hours, instructed by specialist to load dose him over 5 days and meds increased to 750mg TDS. By June 2018 we had to introduce Pheno, this was increased at least twice. 2019 he started on Potassium Bromide. It made him extremely unstable, we had to use one of the Help Them Up Harnesses to help him get up as sometimes he couldn't manage. On a vet visit with one of our other dogs, my vet cried when she saw how uncoordinated he was, even though we had told his neurologist. She immediately got on to them and they reduced the drug. He did improve but still had little issues at times. Unfortunately I don't know the sire or dam, even though we met mum. However, I wracked my brains this morning and remembered that we got him from Barn Farm Border Collies in Stafford (or near there) and the chaps name was Ed (Edward). One thing we did do with Loki (our epileptic) was enrol him and his bestie (my wifes boy Darcy) onto the RVC's IDEAS study. They went for the day taking part in different trials and having fur and stool samples taken. That was pre Potassium Bromide. **Details:** We wondered if weather pressure changes can set seizures off as well, maybe environmental things. We have overhead electricity cables where we live but who knows. Castrated, seizures started 3 months after this.	DATA TRANSFER & UPDATE BY OWNER

The fits are very mild and she is at this time being treated holistically. **Details:** Her first fit was on a hot day when the dogs were out running and we thought that might have triggered it, however after her second one we took her to a vet to have it confirmed where several tests were done. She continues to fit regularly on average one to two times a month. Originally fed on Diamond High Energy at the onset but it was recommended that we place her in a less physical home so that her protein and fat content could be lowered. She is now in a pet home on an adult formula by Diamond. The fits are more frequent now but also more mild. Spayed.	DATA TRANSFER FROM LYN NORTON Added 14.10.14
21/08/2019		**Willow**	N/A	N/A	Unregistered - UK	05-Jul-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	14 weeks	YES	By a brain scan. They couldn't find any problems with her brain. So the conclusion was Idiopathic Epilepsy.	YES	N/A	**Suspected triggers:** No triggers known. Tends to have seizures only when sleeping. **Medication:** Started at 45mg of epiphen twice a day. Now currently on 60mg twice a day. Diazapam rectal tubes are given during or just after a seizure to help calm her down. Levetiracetam 500mg tablets are given to break up any clusters. 1 tablet after 2nd seizure and half a tablet every 8 hours until 48 hours after 2nd seizure. Since starting on 60mg of epiphen twice a day, Willow went 20 weeks without having a seizure. Before that she was having them every few weeks. **Details:** I had Willow from a local rescue centre when she was 10 weeks old. I have no background information of her at all. Willow has always been been clumsy. She's not your typical bright intelligent border collie. She tends to trip over her own feet, bump into things etc. At first I thought maybe it was just because she was a puppy getting used to her new surroundings but as she was getting older she was still the same. At 14 weeks she had a massive cluster where she had 9 before I even got her to the vets. They had to put her under anaesthetic 4 times to bring her out of the cluster. I don't know if this affected her brain but sometimes she's very uncoordinated.	OWNER

Vet said it's probably 'Idiopathic Epilepsy'.	YES	N/A	**Suspected triggers:** No suspected triggers. No accidents or illness prior to the fits. Wren only has had puppy vaccinations and I do not use chemical treatments on her. **Medication:** Since the fits she has been on MCT oil and has not had a seizure since. **Details:** Wren has been raw fed since a puppy. She had a lap spay after her third season at the age of two. She is a fit healthy dog and has never had any accidents or illness prior to the two fits. Wren had her first fit on Saturday 5th December 2020 at 6:45am. I heard a knocking downstairs and I found her collapsed having a generalised seizure which lasted under one minute. She made paddling movements, drooled/frothed and urinated. She came round quickly, being wobbly for 2-3 minutes. After that she was back to normal like nothing had happened. Her second fit was on Monday 14th December at 2:30am. She had got up in the night wanting to go outside. This is not unusual for her as she often gets up at this time to go toilet. As I opened the patio door she collapsed to the left and started fitting. Exactly the same as the time before. Quick recovery and within a few minutes she ran back upstairs back to bed and went to sleep.	OWNER
29/11/2019		**Wyndsend Maurice Traveller**	Not known	Not known	WSD	03-Dec-90	UK	Dog	Monkfield Minstral JW	SH CH Melodor Flint at Dykebar	SH CH Whenway Janita of Monkfield (ISDS 123211)	Caristan Charisma	SH CH Caristan Captain (ISDS 160585)	Rossacre Joanna of Mobella	8 months	YES	Vet confirmed as Epilepsy	NO	1 year 7 months. Euthanised in July 1992 when fit frequency increased to less that 1 week between clusters and the drugs were affecting his liver. His personality also changed and he lost the ability to remember simple commands	**Suspected triggers:** Not noted. **Medication:** Initially Valium and Phenobarbitone. Then Potassium Bromide and Epilim added after specialist advice. Doses systematically increased which increased the space between fits but did not reduce the intensity when the cluster fits happened. These required large doses of IV Vallium and Phenobarbitone for 12 hours. IV Dexamethasone was given the following day and subcutaneously the next 2 days. **Details:** No changes made to diet. First few were single fits then every fit was a cluster fit. Response to increased medication doses was to increase the time between fits. There were no fits between Feb and June 1992 then the intensity got increasingly worse. Neutered on Vets advice, but made no impact on fits.	DATA TRANSFER FROM LYN NORTON Added 11.09.13

Stress doesn't help. **Medication:** Epiphen, Libromide, Levetiracetam, Zonisamide. All help but have had to be added over time (in the order as written. Dosage tweaked over time too). **Details:** Neutered before 8 months old at The Dogs Trust. He cluster seizures and has worsened over time. Seizures usually last less than 1 minute, but had 1 spell last month of status epilepticus. The post ictal period varies in length although doesn't usually last more than 5 to 10 minutes. He is now on a Neuro diet. I also use extra Levetiracetam as pulse therapy as soon as he's able to swallow after a seizure.	OWNER

He was badly abused by a farm labourer which resulted in a head injury. **Medication:** Phenoleptil, 50mg x twice daily. **Details:** Zak was neutered at 2 yrs old. He hasn't had a seizure since leaving the farm and starting medication. The longest seizure I witnessed was around 5 mins, on that day he had 7 in total with the others lasting around 2 mins. I don't know anything about Zak's breeding, all I know is that he was bought from a shepherd in the Glenlyon area who has a constant stream of pups. He took part in the Newmarket Canine Health study a couple of years ago.	OWNER

31/05/2025		**Zeus**	N/A	N/A	Non UK Unregistered (Border Collie)	25-Nov-20	AUSTRALIA	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years 4 months	YES	Have been ruled backwards from doing MRI's, spinal tap and blood tests which have all come back fine. We are currently waiting on the seizure panel blood test results but vets have ruled it as Idiopathic.	YES	N/A	**Suspected triggers:** Vets have labelled it as Idiopathic - I am unsure regarding possible triggers? **Medication:** We have only been prescribed Phenobarbital to date which commences approximately 3-4 weeks ago after his first grand mal seizure. Currently awaiting his blood tests results checking the Phenobarbital levels and liver function to see if we need to change dosage or medication. **Details:** First fit recorded / seen was a cluster seizure approximately 1.5 hours apart. Lasting approximately 5 mins each. 2nd was a grand mal seizure lasting approximately the same time. 3rd was a more severe grand mal seizure lasting approximately 3.5 - 4 minutes (caught on security camera I've set up in our back patio). First time he has lost control of his bladder. His MRI did pick up other issues and investigation is currently underway into potential early onset of MMM disease (Masticatory Muscle Myositis). Entire.	OWNER
