29-11-19		<b>Absolutely Dot (AG CH)</b>	Not known	239196	BC	10-Jul-98		Bitch	Lethans Maximillion (ISDS 20856)	Roy (ISDS 161740)	Lethans Kip (ISDS 176421)	Pipped at the Post (ISDS Pip 225768)	Snip (ISDS 207611)	Tess (ISDS 196529)	5 years 6 months	NO	N/A	NO	Died of old age	Medication: None. Dot only ever had ONE 'almost fit', that came on 60 minutes after whelping. Diagnosed as pre-epilepsy. Treated with s/c calcium and magnesium for 2-3 weeks. Never fitted previously, and no further fit-like episodes afterwards. At age 14-15, started having drop attacks, where she would lose consciousness after making strange howling noises. Diagnosed as secondary to poor cardiac function, and she stopped having them after starting digoxin. Spayed.	DATA TRANSFER FROM LYNN NORTON Added 10.03.15

Died after choking on his own vomit	Medication: None noted. The fits started completely out of the blue just as he was approaching his 4th birthday. He had one fit in the early hours of the morning, checks were done at local vets and they couldn't agree what had caused it, a week later another fit followed by his body starting to shut down, laboured breathing and no energy. Taken to Porters Bar vets hospital, kept in for a week, one small fit whilst he was there, they said sudden onset epilepsy, bought him home as they said he might not fit again. He had been home from Porters Bar for 2 weeks with no fits, then had a major fit in his crate whilst we were out and died after choking on his own vomit. Roughly 6 weeks after his first fit. He was neutered at least two years before the fits started.	DATA TRANSFER FROM LYNN NORTON Added 29.05.14

29-02-20	Blodwen	N/A	N/A	Unregistered - UK	28-Feb-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Neurology assessment	YES	N/A	No known triggers. Blodwen is a Double Merle collie from a breeder but to me via an informal rescue. She has focal seizures - her MRI was clear so the seizures are not related to brain trauma or disease. Medication: Started with CBD aged 6 months which kept symptoms under control until she was one year old. They became significantly worse and unmanageable so she was started on phenobarbital and levetiracetam - starting doses were steadily increased to maximum for her weight and we also increased CBD oil and finally introduced Epitaur. Over a six month period her seizure related behaviour gradually diminished from jerking awake every few minutes all through the night, circling, twitching and being aggressive) and she now sleeps for up to 11 hours through the night with no issues and is markedly more settled in the daytime. She was spayed at 6 months old but the focal seizure symptoms had already started (leg twitching, staring with head tilted, circling). The neutering didn't appear to make it worse. I have come to understand Blodwen, her symptoms and treatment requirements through close observation, asking for help from a Double Merle Facebook group and researching this genetic problem. We have a regular border collie from a farm litter who has displayed no health problems, I had no knowledge of merle or double merle collies when we rescued Blodwen and this was not mentioned by the person we rescued her from. First single fits soon became frequent clusters. Would fit for 4 days at a time. He was neutered age 3, it made no difference.	DATA TRANSFER FROM LYNN NORTON Added 21.01.13
31-03-20	Boston	N/A	N/A	Unregistered - UK	23-Jun-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years 6 months	YES	After initial seizure followed a couple of months later by a focal seizure and clusters - diagnosed with idiopathic epilepsy after MRI eliminated any brain issues	NO	Feb 4th 2020 - aged 5 years and 8 months. PTS as diagnosed with chronic liver failure due to Phenobarbital	Suspected triggers: Stress, over tiredness and heat would appear to be triggers. Stress from being bullied by our other collies, or going to the vet. Medication: Initially given Pexion - no impact. Then moved to Phenobarbital, then added Potassium Bromide. Kepra was given as an emergency protocol. Diazepam did not appear to work. Boston had his first seizure on 4th Dec 2017. From then till he died on Feb 4th 2020 - he had approximately 80+ seizures lasting on average 60 seconds with some as cluster seizures. When he first started seizing it was shorter and he recovered relatively quickly, he never lost bladder control when he seized. The critical turning point was in September 2018 when he went into focal seizure mode and had to go to ICU. This followed another ICU episode in December 2018 where we thought we would lose him. The neurologists worked with us to find the right medication level. There were times we pushed back on the suggested medication levels and discussed it with the neurologists. I think it is important that owners who know their dog best and have to manage the dog everyday feel confident to add their tuppence worth in. On hindsight we saw three issues: (1) the length of time it takes a medication level to work through and to assess impact means it is several weeks from each medication change before you see if it has had any impact in controlling the seizures; (2) the vets are highly dependent on blood lab results to ascertain the medication levels and in our case, there were blood results that was inaccurate/incorrect and thus unreliable. We queried this and new bloods were taken but each time there was an episode, this delayed the possibility of accurate blood works and (3) neurologists are focused on controlling the seizures but need to work hand in hand with liver experts so any increase in PB should be done only after a check on the state of the liver, it should not be automatic. It is our belief that we might have been able to reverse the liver failure had Boston's PB not been raised after summer 2019. Though the seizures were better controlled, his liver was damaged beyond repair. On the other hand if the PB was tapered down in summer 2019 and only Bromide used (or possibly in tandem with Kepra), would he have succumbed to some grand mal seizure - we will never know. Unfortunately, epilepsy is life limiting - that we do realise.	OWNER

Lived until she was 14 years	Del used to fit every 6 months, 3 fits and then none for next approximately 6 months. This continued until I moved, then she stopped. Del was never given any medications as my vet thought they would cause more damage than the fits themselves. Full bloods were done annually until towards the end of her life, there were no abnormalities thrown up. I moved when she was approximately 11. Once I moved there were no more fits. Spawed.	OWNER	
31-05-20	Delanor Pinalbi Wizard - Whiz	A103743806	N/A	BC - UK KC Pedigree	22-Jun-08	UK	Dog	AG CH Forbyfor Turbo Diesel	Woodsoared Red Wine	Tri Fly	Delanor Waggit A Lot	Rosmarinus The Wherryman	Delanor Kirri	5 years	YES	Various consultations and investigations with vet. Blood tests etc for other causes (nothing found). No scan was done.	NO	NO	Whiz died in status when he was 7 years, 3 months. He started fitting early morning on Sept 20th 2015. He did not come out of the fit as he usually did and we were unable to stop it. After speaking to the emergency vet we managed to carry him to the car. Sadly he died on the way to the vets	No known triggers. I spent two years looking for triggers and did wonder if swimming in the sea was a trigger for Whiz (salt ???) but the day he died he hadn't been to the sea for two weeks. Medication: He was on Epiphen 30mg twice a day. This had kept him relatively stable until the last day. Whiz was neutered at 15 months. I do not believe this had any effect as he did not start fitting until he was five. He had cluster fits, usually two or three lasting less than a minute with about half an hour between. He only had five groups of fits over an eighteen month period. He was, however, hospitalised overnight in July 2015 when he fitted six times over five hours. The vets gave him rectal valium.	OWNER
29-11-19	Detania Glittering Pride	Not known	Not known	BC	29-Jun-97	UK	Bitch	Detania Cosworth	Detania Singing The Blues	Detania Keira	Detania Faith Moves	Detania Araz (ISDS 162879)	Detania Lady Lucy Lockett	4 to 5 years old	Not known	Not known	NO	10 <sup>17</sup> years old. Megan actually contracted Bone Cancer in her shoulder which sadly ended her life.	She started having epilepsy at around the age of 4 or 5 I think, with one fit which lasted probably less than a minute. They never actually lasted more than a minute I would guess, just seems a long time at the time. They gradually increased until about 18 months - 2 years, months later when she had 5 in one day, the vets then put her on medication - Phenyobarb? I believe. This stopped the fits until the dosage needed correcting. Megan had to have regular check ups every 6 months (!) think and the medication did gradually increase. That's about all the information I can give you I'm afraid - hope it helps in some way.	DATA TRANSFER FROM LYNN NORTON Added 25.07.14

29-11-19	Grenaby Skeelal Graih	Not known	Not known	BC	15-Sep-11	UK	Dog	Ludgate Red Laser	Woodrosorrel Spectre AW	Firelynx Jumanji at Ludgate	Grenaby Editors Choice	Grenaby Tucker	Nunny Kim At Grenaby (ISDS 2312159)	1 year 6 months	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Pexion 400mg twice daily. Initially fed on Slinkers kibbles then once the fitting started, a home prepared diet of brown rice, potatoes and vegetables with raw meat (to try and reduce gluten, corn, soy and casein as per the GARD diet). This seemed to help for a while, with improving gaps between fits until last week, when he had several fits and he became critically ill at the weekend with cluster fitting. Fits have change in frequency. We had got him up to 17 days between fits, and had wanted to try and manage it naturally (without drugs) but that all changed last week as described above and the treatment was necessary to save his life. After we got him, we heard that the dogs (not the bitch(es) in the previous litter had all started to fit. So we opted for an early castration at 5 months. We are very lucky that he is still with us, but it was devastating to see him so poorly. He was in intensive care for 3 days and has been home for 3 days now, improving visibly by the hour. If I can provide you with any additional information, please do not hesitate to about.	DATA TRANSFER FROM LYN NORTON Added 11.09.13
31-08-20	Gwen	N/A	N/A	Unregistered - UK	01-May-99	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	Veterinary observation	NO	16 years. Euthanasia after uncontrolled fitting	No known triggers. Medication: Phenobarbital given initially with limited success. Potassium Bromide controlled the epilepsy completely until aged 16 when digestive problems made the medication unusable. Spayed before 1yr by rescue charity. Survived Parvovirus virus aged 8 months. Fits became progressively longer and uncontrollable. She had to be sedated for up to two days to stop the fitting. Fits ceased immediately once potassium bromide was given (in solution twice daily with food). Unsure of any triggers. Medication: She was just put on Zonisamide 100mg in the am, and 50mg in the pm. She has had 4 grand mal seizures at night only. They started in Jan 2020 at 3 months apart, then once they got to a month apart, the neurologist put her on medication. She convulses, foams at mouth, eyes roll back, she loses consciousness and I am not able to stop her out of it. She used to run around the room right before she started seizing, but after doing this twice, I started crating her at night in a soft crate. Her seizures last a little over a minute, and she takes on average 3 minutes before she is completely conscious. She gets monthly chiropractic and acupuncture. I got a wellness check swab with fur sample done and it gave me a list of foods she is sensitive to. I have created her home cooked meals ensuring she only eats foods that she should. I have added MCT oil, B complex vitamins, omega3 and do a monthly liver cleanse.	OWNER

Frequency of all fits where around 10 minutes. Starts in 10/18 with her first fit (10 min). Then other 2 fits in a frequency of around 2-3 days, sometimes 2 fits a day. Starting with homeopathy, but there was no effect but the fits were shorter and the rehabilitation was faster. But the decision from 2 vets was to give her Phenaleptil starting with a half tablet in the morning and evening. After 9 weeks she had it again, so there was a new blood test and in case of the low phenoleptil value in blood the vet decided to give her a quarter tablet more in the morning and evening. The last fit was 1 week ago (25.06.2019). Between this fit and the last fit where 3 months.	OWNER																			
29-11-19	Itzjans Calypso at Kallijes	Not known	Not known	WSD	27-Nov-10	UK	Bitch	Forever Magic Xrated	Waggonland Mister Jake	Danesway Double Delight at Forever Magic	Janjoy Mr'shtalk of Jaro	Janjoy Red Storm	Jarro's New Release	2 years 6 months	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Paxion 400 mg. 1 whole tablet mornings, 1/2 tablet 12 hours later. Most of her fits have been whilst exercising, rather than at rest although she has had both. She is fed Pedigree Chum all in one and Pedigree Chum tinned. Good results since prescribed Paxion and after the tablets got into her system. She was already spayed before the fits started.	DATA TRANSFER FROM LYNN NORTON Added 23.03.14																			
31-05-20	Jack	N/A	00/355613	BC - ISDS	21-Sep-17	UK	Dog	Fellside Dash (ISDS 00/315780)	Killiebrae Laddie (ISDS 262753)	Killiebrae Jet (ISDS 283073)	Meg (ISDS 00/316242)	Spot (ISDS 258972)	Nell (ISDS 274798)	2 years 1 month	YES	Vet	YES	N/A	Suspected triggers: Possibly stress. Medication: Epiphen and Libromide. Intact Male. Seizure approx every 2-6 weeks. Seizure length average 45 seconds. We got Jack when he was 14 months old, he had his first seizure about 1 month after his 2nd birthday (late Oct 2019). I phoned the vet and they gave me some great advice on how to monitor and what to do during a seizure, unfortunately a couple hours later he began to cluster so was rushed off to our emergency vet for sedation. We discussed the options for meds and agreed that we would not medicate at this point. 2 months later he had his next seizure, so an appointment was made to check his bloods again, this time the vet suggested we put him on Epiphen. After a while with only the sporadic minor seizures he began to cluster again (5 in 2 hours) he was kept at the vet that day and was started on Libromide and we were given emergency meds for future clusters. Since then Jack has been only having small seizures roughly once every 2 months. We continue to medicate with the Epiphen and Libromide and record any seizures in his diary or on film when we can. Jack is the most loving, happy dog and wants to be friends with everyone he meets. We love Jack dearly and Suspected triggers: excitement, anxiety. Medication: Started on Paxion 100mg twice daily which seemed to work reasonably well for about 12 months then fitting became more regular, after having nine fits in three months I told my vet I wanted to take her off Paxion and try Epiphen. She has been on Epiphen 30mg for four years and has been fit free for that time. Spayed at about 18 months after being told by her breeder that a litter brother was having fits. Saffie has been able to live a full and active life.	OWNER

29-09-19	Jasper	N/A	N/A	Unregistered - UK	07-Jul-09	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	8 years	YES	Idiopathic Epilepsy	YES	N/A	No suspected triggers known to us. Medication: CBD oil was recommended by info page about dogs with epilepsy, but fits became more frequent, so vet prescribed phenobarbital 30mg to start, now on 50mg daily. Can go 8 weeks without a fit, but unsure if meds make a difference. Fits last about 3 mins, can happen anytime of day or night in the house mostly, but has happened a couple of times while out walking. Never had cluster fits. Usually always wees during fit, but no poop. Always standing when he comes out of fit.	OWNER																			
29-09-19	Jasper of Frostfields	Not known	181816	BC - Dual Registered UK KC & ISDS	21-Apr-89	UK	Dog	INT SUP CH Davy (ISDS 131049)	Bobby (ISDS 119815)	Sandie (ISDS 122755)	Winder Bess (ISDS 144629)	Dryden Spam (ISDS 112653)	Altwood Trim (ISDS 123288)	2 years 6 months	YES	Our vet was present when Jazz was fitting.	NO	Jazz was PTS at 13 yrs after suffering his 2nd stroke	Jazz was a gentle dog who couldn't cope with stressful situations and was noise sensitive. Especially high pitched noises like drills or even insects. He would run out of a room if he heard wasps, bluebottles etc. There were no indications that food, vaccs, worming etc ever contributed to his fits. Medication: He was medicated with low dose Phenobarbitone from 2.5 yrs old until his death. He was neutered. His fits lessened as he got older. At the onset they were around one a fortnight. By the end of his life probably only one or two a year.	OWNER

21-08-19	Jess	N/A	N/A	Unregistered - UK	27-Jun-03	UK	Bitch	Rip (ISDS 260011)	Glen (ISDS 198708)	Fran (ISDS 219858)	Floss (Not registered)	Ben (Not registered)	Jill (ISDS 225588)	2 years	YES	Blood tests and other family members fitting	NO	Died aged 11 in Status Epilepticus	No known triggers. Epileptic cousins. Medication: Initially Epiphen then Libromide added and finally Keppra. Spayed before onset. Cluster fits showing signs of brain damage. Jess had refractory epilepsy. Despite increase in doses of Epiphen and addition of Libromide followed by Keppra she continued to have cluster fits, admitted to vets on several occasions to try and stop the clusters. The only time she was fit free was on large doses of Epiphen which eventually caused her liver to have problems metabolising the drug and she started to fall over eventually being unable to walk. At this stage she was referred to a neurologist and put through MRI scan, spinal tap, blood tests etc. The result was that she was being poisoned by the epiphen which her liver wasn't metabolising. Her dose of Epiphen was reduced and she was put on a liver supplement. With the reduction of Epiphen she went back to cluster fitting every three months till she died 2 years later in Status Epilepticus.	OWNER																			
21-08-19	Jez - Jazz	K141385 (activity register)	00/313905	BC - ISDS	03-Apr-11	UK	Dog	Lad (ISDS 267484)	Roy (ISDS 245540)	Jan (ISDS 237153)	Tess (ISDS 00/301628)	Uwynsarn Nap (ISDS 253871)	Killiebrae Sky (ISDS 274792)	2 years 2 months	YES	MRI	YES	N/A	Possible glancing older bite - he had a puncture wound in his nose and swollen face for 4 weeks, frontline 4 days before. Medication: Epiphen, Potassium Bromide, Keppra and Diazepam to try to stop clusters. CBD oil plus herbal products. Everything has worked well initially but then has become less effective. He has just been prescribed Paxion to use for a few days after seizures to try to stop the cluster. Jazz is entire. He fathered a litter before his seizures started - his son started having seizures at 15 months and was ptt at under 2 years due to uncontrollable seizures. Jez' sister started fitting a year after him and she lost her battle in May this year. Jez always has GMS and always clusters. They have become progressively longer - will often be unconscious for up to 6 mins. We are very fortunate that Jez has a VNS implant. Langford vet hospital is doing a trial with Bristol Children's Hospital and Jez is the 4th dog to have the implant in June 2017. I am convinced that he would not still be alive if he hadn't had this. He is very active and 3 years ago started Rally Obedience and is now working at the top 2 levels.	OWNER

Medication: Epiphen (1 x twice a day), Eptaur 500, Milk Thistle & CBD Oil. She has remained fit free since. Spayed in 2012. Her last fit was the worse - much more intense and longer (lasted about 3 minutes) and she took longer to come out of it. In April 2017 Macey had a routine dental examination. In waiting room afterwards I noticed her mouth was twitching and started to foam. The vet took her in side room where she was fitting on the floor. They kept her in for observation for a few hours. Vet thought as she was stressed this was probably the reason. No medication given to me as they said they only medicate when they have had 3. All ok and fit free until June 2018. Around 6am Macey was resting in kitchen and started to fit. No vet appointment until 4pm that day. No tablets given but was told to administer rectal diazepam if she had another. 2 hours after being home she had 2 more - more severe than before - rectal diazepam given. Called emergency vets as I couldn't cope with seeing her like it. They agreed to have her in overnight to observe. Got a call 3 hours later saying she was so stressed and would be better at home. Epiphen was prescribed 1 tablet twice a day. I also give her Eptaur 500, Milk Thistle (to help liver on Epiphen) & CBD Oil. She has remained seizure free since. The day of her first fit at home it was a very hot day she had also just eaten some cheese which is now	OWNER

19-07-19	Kobi	N/A	N/A	Unregistered - UK	15-Jun-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 8 months	YES	Confirmed by vet	YES	N/A	Suspected triggers are stress and also air pressure (thunder weather), bright lights. As Kobi is deaf and also almost blind he bumps into objects which stresses him. He can't go to vets surgery as stress causes seizures. Medication: Vets have tried almost all meds over the last four years. He still has seizures but they are 1-2 a month now. At the moment his meds are: Epiphen, Libromide, Levetiracetam and Sodium Valproate. Diazepam for cluster seizures. He has recently been diagnosed with diabetes too so is now on insulin too. We have struggled for four years to get him to this point and tried so many different meds. Have also had advice from a neurologist who diagnosed toxicosis/Epilepsy. Kobi has blood tests regularly to tweak his meds. He is a blue Merle, totally deaf, almost blind and now diabetic aged 6yrs old. While trying to get the right balance of his meds he was having clusters every other day. As his meds are now he will have 1-2 seizures which leave him completely exhausted and wobbly for days. His seizures are 1-2 a month at present. Neurologist. Rescue dog	OWNER
29-02-20	Kooki	N/A	N/A	Unregistered - UK	01-Feb-16	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 6 months	YES	Filmed event. Explained to vet. Examinations.	YES	N/A	No apparent trigger. Medication: None. Thankfully it only happened twice and not since. Random seizures. Only had two in space of that month. Monitored and not happened since. Lasted around 10 mins each.	OWNER	
21-08-19	Koopa	N/A	N/A	Unregistered - UK	22-Feb-14	UK	Dog	Gwynion Paddy	Unknown	Unknown	Gwynion Gwen	Unknown	Unknown	2 years	YES	MRI	NO	5 years. He had two failed infusions, couldn't stop the seizures	No suspected triggers. Medication: he had a VNS implant, was on epiphen, pregabalin, kepra and zonisamide. KBR made him crazy and then unresponsive, we even had a VNS implant inside him to try help. CBD did nothing.	OWNER	
29-09-19	Lacey	N/A	N/A	Non UK Unregistered (Border Collie)	10-May-19	SOUTH AFRICA	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	Blood tests MRI scans Diagnosed Idiopathic Epilepsy	YES	N/A	Suspected triggers: Bravecto tick and flea treatment. Light sensitivity. Extreme change of routine. Medication: Phenobarbital. This has helped control the seizures and we went 9 months seizure free at a stage. She seemed to develop resistance to it and due to her liver enzyme levels we added Kepra. Valium is used as a rescue medication. Lacey is spayed. Behaviorally she is very active, not just border collie active (we have two) she has endless amounts of energy and it seems as though she rarely switches off. She chases shadows and light reflections endlessly and licks them mainly on floors and walls. She also seems very sensitive and reacts to seemingly normal activities she has a barking fit when if you shower, take off your shirt, use a squeeze bottle, etc. Although she doesn't like you doing it and even gets worked up before you begin to do it for example if she sees you take clothes out to shower she starts talking. 2017 May 1 seizure, July 1 seizure, August September, November and October (partial seizures one each month), December 1 seizure. 2018 January 2 seizures. Increased phenobarbital meds, April 1 seizure. 2019 February 1 seizure, March 1 seizure, June 1 seizure, July 1 seizure added kepra. Partial seizure it seems as though a seizure is starting and she comes and asks for help but then their is no seizure only excessive drool or teeth chattering. Lacey's seizures are usually just over a minute and she urinates during her seizures.	OWNER

29-10-19	Little Ozzie	Died before being able to be registered	N/A	WSD - UK KC Activity Register	08-Mar-07	UK	Dog	OB CH Whatknow Razzmatazz (WSD)	Rockin Rapid	Forever Magic Fantasia	Croftmist Megan (BC)	Tanameraye Krismass	Mainline Mist (BC)	45 days	NO	N/A	NO	46 days old. See Fitting details for more information	Suspected triggers: The vet suggested that he may have had worms but it was not the case. Medication: No medication for fitting but Aibs and Anti-inflams as below. At 43 days he became quiet and stopped interacting with his siblings. At 44 days he started seeking out dark places. Taken to the vet and was given antibiotics and anti-inflammatory injection. At 45 days he was again searching for dark places. He was very distressed when travelling back to the vets and fitted badly within minutes of arriving. At 46 days old he began fitting and was taken back to the emergency vet. He resembled a clogwork toy and was very rigid in his mobility. He seemed to have stopped growing. The vet blood tested for a liver-shunt which came back negative. As the vet examined him, Ozzie became very distressed when his head was held and was obviously in a great deal of pain. The vet diagnosed inflammation of the meningeal (tissue surrounding the brain). The vet and I agreed that euthanasia was the only option. Two other pups from the litter also fitted at later intervals and both have died. The rest of the litter were registered with my 'Croftmist' affix. Megan was spayed after. The two other dogs from the litter, that fitted, were put to sleep at young ages due to the fitting. Ozzie was unregistered by the rest of the litter. www.kc-activity.com	OWNER/BREEDER

29-11-19	Luptoonz Tazmanian Devil - Taz	Not known	N/A	WSD - UK KC Activity Register	03-Mar-09	UK	Dog	Pied Pike (ISDS 254417)	Ben (ISDS 235217)	Bet (ISDS 230544)	OB CH Colliewood Candy Girl	WT CH Waglander Fizz	Forest Sprite Psyche	2 years 10 months	YES	Referred to Animal Health Trust Newmarket for MRI & Spinal Tap (both clear)	NO	6 years 1 month. His liver was grossly enlarged and he could not breathe as he had fluid in his lungs. Extensive organ collapse and brain damage due to drugs and cluster fits. PTS 22.04.15	Never could find a trigger. First fits 2 weeks apart. Medication: He was on Phenobarbital, Libromide and another drug I can't remember the name of. Fit free for 8 months until Sept 2014, we struggled and could not get them better than one every 7-10 days. Had to increase his meds several times, this impacted on his body. He had a period of seven months, during the twelve months before he died, when we thought we had him stable and no fits. Then they came back and we just could not get any control at all. At the end he was having constant Petit Mal seizures between the Grand Mal ones, the drugs just didn't work anymore. Also rectal valium to stop the fits once they started. During his last three months he had some Prednisone. Taz was not neutered. His fits were, right from the start, five to eight minutes long and extremely violent. They occurred mostly when he was asleep or resting. Frequency two to four weeks apart but he might have two or three fits at a time. Pied Pike has sired other dogs that have fitted. Unfortunately none of them had started to fit before he	DATA TRANSFER & UPDATE BY OWNER

At age 12 weeks, was given Milbemax +/- Ram, then a Flea/Tick spot on at 12 noon. Fitting began at 5.30pm. Medication: Kepra & 6 monthly B12 injections. Kepra phased out. 5 weeks later massive cluster fits & euthanised. Dam and all surviving puppies in litter neutered.	DATA TRANSFER FROM LYNN NORTON Added 07.12.12 Updated 20.03.13	
29-02-20	Mandy Patrick	N/A	N/A	Unregistered - UK	18-Jun-05	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	By the vet as she went on quickly to have a series of fits stopped only by being given an anaesthetic.	NO	Age 11. Death was related. Mandy went into a state of conscious shaking and her body shut down and she was unable to move over a period of days	OWNER		
29-02-20	Marley	N/A	N/A	Unregistered - UK	2011 approx	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	5 years	YES	Blood tests excluded anything else, vet said most likely idiopathic Epilepsy	YES	N/A	Suspected triggers: All vaccines, flea and tick treatments, loud noises and stress eg: visit to vet, agility class, being left alone. Medication: Started on Epiphen, added Libromide, added Kepra as each drug became less effective. Also had rectal diazepam to bring her out of seizures. Extra Kepra used as preventative before a stressful event and after fitting to prevent recurrence. Spayed age one. Mandy had fits, often two in a short space of time, around once a month once we got medication settled. We added more meds as they became more frequent each time. To begin with she was very unstable as vet wanted to introduce meds gradually. Several visits to emergency vet. Eight fits after vaccination when she was four. Always fitted five days after flea and tick treatment. Diagnosed as tonic clonic epilepsy. In her last few months she did not fit until last major episode. A beautiful girl who took it all in her stride and remained gentle and loving and full of life through it all. Major meds over nine years did not mean liver and kidneys which was one of our big concerns.	Triggers unknown, although previous owner mistreated him and was convicted of animal cruelty after kicking Marley repeatedly on numerous occasions. He had a broken tail. Could have had injuries to head maybe? Medication: He has had far less fits since starting a raw diet with coconut oil and CBD oil. Once a seizure starts, we give CBD drops immediately and the fit subsides quickly and he recovers far better. Before CBD he would have cluster fits and twice had status epilepticus where the seizure continued for nearly an hour. With CBD they last only a minute or two and are very mild. Neutered at approx. 4 years old. Very dominant male, pushy with other male dogs. We think Marley is a Welsh collie. He is sable and white, herds upright and is loose eyed. Contacted the Welsh Sheepdog society who said epilepsy is very rare and practically unknown in registered Welsh Sheepdogs, although common in border collies. They suggested Marley is the reform most likely a Welsh Sheepdog/BC cross, or if he's a pure Welsh, his epilepsy is probably injury related rather than inherited.	OWNER
29-11-19	Marshonelle Howdylicious	Not known	Not known	BC	05-Nov-12	UK	Dog	Rosmarinus The Chocolatier	Rosmarinus Jaffa	Rosmarinus Demerara	Marshonelle Izzie	Rosmarinus The Rainmaker	Amazin Grace	1 year 1 month	YES	Vet confirmed Idiopathic Epilepsy. All possible tests done, including an MRI scan and spinal fluid tap.	Not known	Not known	Medication: 40mg of Pexion twice a day. He was flea treated a week before, to which he was stressed at time of doing so and was off colour from that point up to first fit. He was fed on mainly raw with some dry food. Had an allergy test done and he is allergic to chicken, duck, wheat and gluten. Changed to pure BARF diet minus the chicken and duck. In himself if he became brighter when food was changed, he started to grow again, coat became fuller. His fits have become less frequent but this may coincide with having all possible test done, including an MRI scan and spinal fluid tap, to diagnose epilepsy and being put on the right medication. When they first started he had several in a week, once food changed these decreased and since medication started they have decreased further, longest between fits has been 31 days. No triggers identified. Time frame was too short to collate information.	DATA TRANSFER FROM LYNN NORTON Added 30.04.14	
19-07-19	Marshonelle Switch'N It On	AP04298501	N/A	BC - UK KC Pedigree	05-Nov-12	UK	Dog	Rosmarinus The Chocolatier	Rosmarinus Jaffa	Rosmarinus Demerara	Marshonelle Izzie	Rosmarinus The Rainmaker	Amazin Grace	7 months	YES	Vet confirmed as Idiopathic Epilepsy	NO	Major seizure	Medication: Pexion 400mg twice daily. One small fit on 28.06.13 whilst asleep on sofa lasting less than a minute, recovered within 10 mins. No further fits until 9th July, when found fitting in the morning. Rectal Diazepam given. Fitted again same day at 3pm, same treatment, but 4 further fits, taken to vet, kept overnight and stabilised. Home on the 10th but fitting again between 11am and 2pm so back to vet and again kept overnight and sedated. Phenobarbitone and on a drip. Prognosis was poor at this time. Brought home on the 13th July, Pexion 400mg twice daily. Recovery seemed unlikely but daily improvements noted - motor function, spatial awareness, vision, recognition. Following 22 days charted phenomenal progress in physical and mental capabilities, by 1st Aug he was at 95% of his previous levels of Obedience training. On 2nd August he had another brief fit at 10pm (similar to his first) with the same outcome. At some time between 3am and 4am on the 4th Aug he suffered a major seizure, rectal diazepam x 3 was administered but to no avail, and he passed away shortly afterwards before the vet arrived. Vet hazarded a guess at major haemorrhage as cause of death. Suspect	OWNER

No fits since RVC increased epiphen to top of therapeutic dose. UPDATE Added 31/07/2020 Since November 2019 Mojo was on Phenobarb 150mg twice daily, Potassium Bromide 500mg once daily & 200mg Kepra twice daily. He had Diazepam after every bad fit by injection. Was having worsening fits weekly. He was euthanised in April after going into status.	OWNER
29-02-20		Molly	N/A	N/A	Unregistered - UK	17-Aug-19	UK	Bitch	Unknown	Unknown	Unknown	Shadwell Sophie (SDS 350762)	Jock (SDS 327212)	Adeligh Ember (SDS 321991)	6 months	YES	All blood tests done and no underlying issues	YES	N/A	Suspected trigger: Stress may be a trigger. Medication: Pexion - this did not work in my opinion made it worse. Epiphen - immediately calmer and fitting stopped. Molly had what we thought were panic attacks from when we brought her home. I now believe that these were partial seizures (Psychomotor), which evolved into full seizures. These stopped when Epiphen was introduced. She is also very anxious and hyper sensitive to certain sounds (cutlery, tin foil, running water) - Epiphen has also helped with this.	OWNER
29-10-19		Moose	N/A	N/A	Unregistered - UK	15-Jan-19	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Moose took his first fit at 6 months, from which I took him to the vet and blood tests were conducted. Since Moose was a male BC the vet believed it was a high probability that Moose was suffering from idiopathic Epilepsy	NO	Passed away at 8 months old. Began fitting. Fits were lasting around 4 minutes give or take. Was taken into vets where he was sedated. As he came out of the sedation he took a fit which he did not come out of	No suspected triggers. Medication: Started on Pexion and went two weeks without fitting. However had to be placed on Kepra as well due to him still fitting. After 3 weeks on Kepra and Pexion, Moose took a cluster of 7 fits within 18 hours and then was placed on Epiphen and Kepra. This allowed him to be fit free for 1 month until vets decided to lower the dosage of Kepra, the Kepra was dropped to half a tablet and then Moose took his final fits and eventually came out of the sedation he took a fit which he did not come out of. I have recently read an article stating that the trainability of dogs suffering from epilepsy drops after their first fit and I can back this up from what I've seen with my boy.	OWNER

First fit 28.10.14 - seizure in the afternoon, followed by a slow but full recovery to normal state. Second fit 29.10.14 at 7am. Seen by the vet after each seizure and blood tests undertaken. Vet advised diagnosis of idiopathic Epilepsy at this stage but as yet no MRI or spinal tap has been carried out. He was otherwise fit and well with no further seizures as of 2.12.14. Initial course of Diazepam for approximately one week; treated with Epiphen twice daily from day of second fit for four weeks. Bloods have been sent to Epiphen to assess viability of phasing out medication. 24.9.14 castration under general anaesthetic; vet treated with Advantage for possible fleas same week; 1.10.14 first year vaccination; 25.10.14 routine worming with Panacur. He is otherwise fit and healthy. All breeders/owners directly connected were informed immediately with sire/dam owners agreeing to wait for completion of initial four week treatment plan before submitting to database; dam & littermates will never henceforth be bred from. DNA to be submitted in due course. Fed James Wellbeloved Turkey & Rice; no change before or after seizures. Neutered on 24th September, before onset of fits. UPDATE ADDED 01.05.15 - Bryn suffered a seizure at 10.30pm. Recovery time was quicker than the initial two seizures last October but he lost vision for 15 minutes. 25 minutes after the seizure he took his ball to his owners to ask for a game. At the time of the seizure, his owners report that his Epiphen dose had been reduced gradually to 1/4 tablet each day (as he had suffered no further fits after the initial two) with the plan to take him off meds altogether in another week. However, their vet has now advised that the dosage should be returned to 1/2 tablet each day.	DATA TRANSFER FROM LYNN NORTON Added 04.12.14 Update 01.05.15

31-05-20	Rogue	N/A	N/A	Unregistered - UK	17-Jun-14	UK	Bitch	Klevely The Muppet Meister	SH CH Goytre Going Places	Meisterwerk Thakat	Ruby	Unknown	Unknown	1 year 3 months	YES	First seizure at 15 months. 2 within close succession. Blood tests next morning, nothing found. No scans performed as veterinary advice was, due to her age, a tumour etc was unlikely. Idiopathic epilepsy diagnosed.	NO	PTS on 23/01/18 aged 3 years, 7 months after deteriorating over the previous few weeks. She'd been in season the previous December and although these had no effect before, she started to have focal seizures, almost daily	First seizure was 9 days after her first annual booster. Triggers were strong stress signals, some foods, being startled, stressful situations, although she didn't show stress signals. She would fit after vet visits for her blood work or if she got injured. Medication: She was on Epiphen and Potassium Bromide with Kepra for 5 days after a cluster and rectal Diazepam. When she deteriorated in the December, Kepra was added as a third drug, not just to break clusters and dosages were increased (can't remember specifics) but seizures couldn't be controlled. Was also seeing a homeopathic vet. She had a couple of remedies which helped in the short term. Rogue was entire. Veterinary advice was not to spay due to her epilepsy and the fact she was a blue merle. Seizures were intense, she frequently had clusters but never lasted more than a couple of minutes, until the end. No two ever seemed the same.	OWNER

He has had numerous blood tests and an MRI to eliminate tumours etc	YES	N/A	Suspected trigger is pollen as he is worse throughout the summer period. He is on a hypoallergenic diet. Fully vaccinated. Up to date on flea and worming. Medication: He started on Pexion which made clusters worse. He moved to Epiphen which was a lot better but still having them often. He has just started on Bromide and after 4 months, we are going to start reducing the Epiphen. He is neutered. He was fitting every 2 weeks but currently 33 days seizure free from starting Bromide. His fits go on for approx 5 mins and they are all grand mal. I have not noticed him have a focal seizure nor does he just tuggle. If he has a fit, it's always a big one. He starts his fit by turning his head all the way around and basically looks behind him. His eyes go wide and he starts to fit. He always pees and foams at the mouth. Sometimes he bites his tongue ending up in bloody spit being thrashed around.	OWNER	
29-11-19	Sam	Not known	Not known	BC	01-May-07	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years	YES	MRI and Lumbar Puncture. Bath Vet hospital confirmed as Epilepsy	NO	Died May 2013 aged 6 years. He fitted off and on for just over a week in clusters. We arrived home one evening to find that he had died. The vet said it was a grand mal seizure that only instant medication could have saved him and he would not have known what was going on	It initially happened after we had been out and we got caught in the rain. Like he had caught a chill, it happened often after a soaking. The vet said it wasn't connected. I'm not so sure. After diagnosis at Bath Vet hospital where he had an MRI and I think a lumbar puncture he was initially given just Epiphen, strength and dose varied, then also given Lobarbamide when fits continued, can't remember strength. The fits did change even though he was on medication. The fits didn't last as long and I could tell when he was about to have one, or if he had had one when he was home alone. Usually when he was sleeping then he would wake, his head would shake he would fall over and his back legs would move as if he were running his front legs would be stiff. Was fed on Bakers complete. A lighter diet was offered after fits although he was usually starving when he came around. He gained weight so we were advised to give him a weight control food. There was no change in fits. He was neutered before the suspected triggers: On keeping a diary fits always on around spot on flea treatment - stopped using and fits a lot less severe and less frequent, plus have changed his diet to part raw and don't give any vet meds unless very necessary (use alternative and herbal) and ALWAYS check they are suitable for dogs with seizures. Medication: None. Fits always in a morning after a deep sleep but have been able to halt them when I see and hear the signs (vomiting noise and lip licking) and talk to him and stroke him gently. Now fed part raw part JWB kibble. Did read an article about giving frozen vanilla ice cream immediately after a fit. Have only tried this once but was AMAZING at bringing him round very quickly. Fits have gone from every 3 to 4 months to every 5 to 6 months (last time was 5 months 22 days) and are less severe lasting less than 1 min and recovery time afterwards a lot quicker (due to ice cream?). Dog came from a rescue and was neutered before owner got him.	DATA TRANSFER FROM LYN NORTON Added 21.06.14

29-11-19		Smudge	Not known	Not known	Collie	19-Oct-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 1 month	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Epiphen increased to 2 twice daily 50mg. After 4 months given Libromide, which only made him lethargic and not acting like his usual self. Now on Epiphen and Levetiracetam which we used to give him now and then before a fit, but not on one every 8 hours. Fits started off as around 8 or 9 clusters every 21 days, this increased to 11, his last one being 18 clusters from 3pm to 7am the next day. Some last 30 to 40 seconds, some 2 or 3. There is usually 15 minutes in between but now a few minutes. Clenches jaw, then jaw wide, outstretched legs, urinates sometimes and a slobber from mouth and the smell is awful. Then he will pace, used to pace for 30 minutes and could not see us. Now he paces and tends not to bang into objects, seems to manoeuvre around them a little better. Before a fit, he howls at the moon, tries to escape, but now he tends to approach me to cuddle and follow me everywhere I go. You can see in his eyes that he is due to fit, his personality changes. The fits had increased to double the amount, but more often between them. Neutered before fits started. He had been neutered only 4 weeks before. He had trauma to his leg when only 5 months. And we had a collie out when he seized the following week. No potential triggers identified. Tried elimination diet. Thyroid panel on low side of normal. Medication: Using valium to stop a seizure starting - had symptoms prior to a seizure, restless, anxious. Unfortunately with the family history and a sister with poorly controlled bad clusters, decision taken to euthanise after very bad cluster seizure. On elimination diet, didn't make any difference. Spayed at 10 months. Uncle (Ryans Miki) had seizures, gradually got worse until euthanised. With hindsight probably IE. Litter sister has cluster to seizure - diagnosed IE. Started around 18 months. Still alive at 6 years old but has clusters every few weeks. 2 older sisters of dam produced 1 affected each to very different ages - these started fitting much older and post Caes and had Medication: Phenobarbital. Had seizures weekly until medicated, and then went to one or two a year until he died. No known triggers, dog usually fitted whilst resting. Unsure what he was fed but his owner said they never left food or medication was a trigger. <del>Kepra etc.</del>	DATA TRANSFER FROM LYN NORTON Added 16.07.15

The fits are very mild and she is at this time being treated holistically. Her first fit was on a hot day when the dogs were out running and we thought that might have triggered it, however after her second one we took her to a vet to have it confirmed where several tests were done. She continues to fit regularly on average one to two times a month. Originally fed on Diamond High Energy at the onset but it was recommended that we place her in a less physical home so that her protein and fat content could be lowered. She is now in a pet home on an adult formula by Diamond. The fits are more frequent now but also more mild. Solved.	DATA TRANSFER FROM LYNN NORTON Added 14.10.14																	
21-08-19	Willow	N/A	N/A	Unregistered - UK	05-Jul-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	14 weeks	YES	By a brain scan. They couldn't find any problems with her brain. So the conclusion was Idiopathic Epilepsy.	YES	N/A	No triggers known. Tends to have seizures only when sleeping. Medication: Started at 45mg of epiphen twice a day. Now currently on 60mg twice a day. Diazepam rectal tubes are given during or just after a seizure to help calm her down. Levetiracetam 500mg tablets are given to break up any clusters. 1 tablet after 2nd seizure and half a tablet every 8 hours until 48 hours after 2nd seizure. Since starting on 60mg of epiphen twice a day, Willow went 20 weeks without having a seizure. Before that she was having them every few weeks. Had Willow from a local rescue centre when she was 10 weeks old. I have no background information of her at all. Willow has always been very clumsy. She's not your typical bright intelligent border collie. She tends to trip over her own feet, bump into things etc. At first I thought maybe it was just because she was a puppy getting used to her new surroundings but as she was getting older she was still the same. At 14 weeks she had a massive cluster where she had 9 before I even got her to the vets. They had to put her under anaesthetic 4 times to bring her out of the cluster. I don't know if this affected her brain but sometimes she's very uncoordinated.	OWNER
