19-Jul-19		Bewitched Over Pendle - Zara	X136807	N/A	WSD - UK KC Activity Register	25-Dec-10	UK	Bitch	Unknown	Unknown	Unknown	Jess (ISDS no. not known)	Unknown	Unknown	6 years 5	YES	While in emergency vets, while in epileptic status	NO	6 years 2 months. Went downhill very quickly after another emergency admission to vet on Thursday 9th March 2017, collected her Friday evening seemed her normal self but not long after we arrived home she had another fit, spoke to vet who advised 3 days of Kepra, went rapidly downhill over the weekend to the point Zara seemed like she was in a coma, made the decision on Monday morning 13th March 2017 to PTS.	No triggers that I was aware of. Medication: Sedation at emergency vet for epileptic status on January 5th 2017, then given IV Kepra and IV Phenobarbital. Came home 3 days later and was on Phenobarbital 12 hourly, very quiet and disorientated at first but got better and more her normal self over the following week, told by vet to give Kepra after fits to prevent clusters. Had massive fit lasting 7 minutes. I set timer on my phone when I realised what was happening, this was her first fit to my knowledge, got her to vets within half an hour, seen by vet sent home and was told it was possibly a one off. Booked in for blood tests 2 days later, went into epileptic status same night with a trip to emergency vets, was stabilised and returned home on medication. Small fits recurred every couple of weeks, with 2 lots of clusters, went rapidly downhill after final 2 fits on 10th March 2017, one while still in vets and one at home but never seemed to fully come around from the last. Zara was a local farm bred Collie. I contacted breeder to ask if there was any history of Epilepsy within her breeding, wouldn't answer me and then blocked my tel number. Zara was PTS 13th March 2017 to avoid my mind further suffering. Zara was sedated at 12 months	OWNER

29-Feb-20		Blodwen	N/A	N/A	Unregistered - UK	28-Feb-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Neurology assessment	YES	N/A	No known triggers. Blodwen is a Double Merle collie from a breeder but to me via an informal rescue. She has focal seizures - her MRI was clear so the seizures are not related to brain trauma or disease. Medication: Started with CBD aged 6 months which kept symptoms under control until she was one year old. They became significantly worse and unmanageable so she was started on phenobarbital and levetiracetam - starting doses were steadily increased to maximum for her weight and we also increased CBD oil and finally introduced Epilaur. Over a six month period her seizure related behaviour gradually diminished from jerking awake every few minutes all through the night, circling, twitching and being aggressive) and she now sleeps for up to 11 hours through the night with no issues and is markedly more settled in the daytime. She was spayed at 6 months old but the focal seizure symptoms had already started (leg twitching, staring with head tilted, circling). The neutering didn't appear to make it worse. I have come to understand Blodwen, her symptoms and treatment requirements through close observation, asking for help from a Double Merle Facebook group and researching this genetic problem. We have a regular border collie from a farm litter who has displayed no health problems, I had no knowledge of merle or double merle collies when we rescued Blodwen and this was not mentioned by the person we rescued her from. 29-Nov-19		Gwynfair You Were Made For Me	Not known	Not known	WSD	22-Feb-05	UK	Dog	Fenom Full 'O' Fun	Summertime Sweep	Majacabus Oso Tricky	Tyzemed Maggie May of Gwynfair	Whathnow Rockin Symphony	Gwynfair Catch Me If You Can	1 year 10 months	YES	Vet confirmed as Epilepsy	NO	6 years 10 months. Dog is no longer alive. He went into a cluster fit episode that could not be stopped with medication and it was felt that he had suffered enough and had his last fit.	Medication: He was initially prescribed just Epiphen, but over the next 5 years his medication was gradually increased to try to control his fitting. From his first fit, he didn't have another for 18 months then the frequency increased until roughly every 3 weeks by this time he was on 120mg Epiphen at 8am and 8pm, 300mg Gabapentin at 8am, 2pm and 8pm, 500mg Kepra at 8am and 8pm, and 250mg at 2pm. He was on Autarky at the onset of the fits but as the intensity increased, he was moved to a completely natural diet of chicken and vegetables. Much research was carried out into the ingredients of manufactured dog foods, and it was found that certain things can be a trigger factor to epilepsy so knowing what was in his food was important. He had cluster fits over 2 days on the first occasion and was given medication to try to stop the cluster. It was then 18 months before his next cluster fit. His next fit was then 3 months later, after which the frequency increased from around the age of 4 until the fits were happening every 3ish weeks. It was often a cluster of 3 or 4 fits over a couple of hours, but he needed veterinary assistance on 2 occasions where he was anaesthetised to stop the fitting as the episodes had continued over 24 hours or more. NOT neutered as the vet advised against him being operated on because	DATA TRANSFER FROM LYN NORTON Added 10.09.13

Fits have not changed in severity or frequency since onset. Spayed.	DATA TRANSFER FROM LYN NORTON Added 09.09.13
21-Aug-19		Jess	N/A	N/A	Unregistered - UK	27-Jun-03	UK	Bitch	Rip (ISDS 250011)	Glen (ISDS 198708)	Fran (ISDS 219558)	Floss (Not registered)	Ben (Not registered)	Jill (ISDS 225588)	2 years	YES	Blood tests and other family members fitting	NO	Died aged 11 in Status Epilepticus	No known triggers. Epileptic cousins. Medications: Initially Epiphen then Libromide added and finally Kepra. Spayed before onset. Cluster fits showing signs of brain damage. Jess had refractory epilepsy. Despite increase in doses of Epiphen and addition of Libromide followed by Kepra she continued to have cluster fits admitted to vets on several occasions to try and stop the clusters. The only time she was fit free was on large doses of Epiphen which eventually caused her liver to have problems metabolising the drug and she started to fall over eventually being unable to walk. At this stage she was referred to a neurologist and put through MRI scan, spinal tap, blood tests etc. The result was that she was being poisoned by the epiphen which her liver wasn't metabolising. Her dose of Epiphen was reduced and she was put on a liver supplement. With the reduction of Epiphen she went back to cluster fitting every three months till she died 7 weeks later in Status Epilepticus.	OWNER
21-Aug-19		Jez - Jazz	K141585 (activity register)	00/313905	BC - ISDS	03-Apr-11	UK	Dog	Lad (ISDS 267484)	Roy (ISDS 245540)	Jan (ISDS 237153)	Tess (ISDS 00/301628)	Uwyrnsarn Nap (ISDS 253871)	Killiebray Sky (ISDS 274792)	2 years 2 months	YES	MRI	YES	N/A	Possible glancing adder bite - he had a puncture wound in his nose and swollen face for 4 weeks, frontline 4 days before. Medication: Epiphen, Potassium Bromide, Kepra and Diazepam to try to stop clusters. CBD oil plus herbal products. Everything has worked well initially but then has become less effective. He has just been prescribed Pexion to use for a few days after seizures to try to stop the cluster. Jazz is entire. He fathered a litter before his seizures started - his son started having seizures at 15 months and was pts at under 2 years due to uncontrollable seizures. Jez' sister started fitting a year after him and she lost her battle in May this year. Jez always has GMS and always clusters. They have become progressively longer - will often be unconscious for up to 6 mins. We are very fortunate that Jez has a VNS implant. Langford vet hospital is doing a trial with Bristol Children's Hospital and Jez is the 4th dog to have the implant in June 2017. I am convinced that he would not still be alive if he hadn't had this. He is very active and 3 years ago started Rally Obedience and is now working at the top 2 levels.	OWNER
22-Dec-19		Jilly	N/A	N/A	Unregistered - UK	05-Jan-15	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 6 months	NO	N/A	YES	N/A	Taken to vet after first fit. Suspected triggers are totally unknown, just happened one night. Then continued monthly, always about 2am. Medication: Vet recommended not going on meds as they didn't last long and were so spread out just monitoring her and if anything changes consulting vet. Have rectal Diazepam in case she has another. She had one large fit about 6 months ago followed by some smaller ones. Was left with a twitch but vet put her on diazepam for a week and twitch cleared. All her fits are over in a couple of minutes and doesn't seem to be a pattern to them apart from monthly and always about 2am. She has had fits monthly up until 14th of September, but nothing since (now 07/12/20). She is spayed.	OWNER

Medication: 200mg Pexion twice daily. No change noted as put on 2nd time she fitted when she fitted 3 times in 3 days which coincided with having vitamin tablets. Put on Purina Neurocare dog food which made a big difference in her recovery after a fit. When taken off this I started on Coconut Oil since when the time between fits has gone from roughly every 2 months to over 6 months.	OWNER
21-Aug-19		Kingsfarm Maid of Honor	K139324	N/A	BC - UK KC Pedigree	08-Nov-11	UK	Bitch	Tamerryre Celtic Laird	Bellatrix Highlander Cdex Udex	Tamerryre The Ferrari	Kingsfarm Dress To Impress	Borderlair King Of Swing	Merrymarsh Dress To Kill Of Kingsfarm	5 years 5 months	YES	Vet said it was because she had now had 4 episodes	YES	N/A	In vets during first one - stress? 2nd one it was a very hot day and had eaten cheese? Medication: Epiphen (1 x twice a day), Epitaur 500, Milk Thistle & CBD Oil. She has remained fit free since. Spayed in 2012. Her last fit was the worse - much more intense and longer (lasted about 3 minutes) and she took longer to come out of it. In April 2017 Macey had a routine dental examination. In waiting room afterwards I noticed her mouth was twitching and started to foam. The vet took her in side room where she was fitting on the floor. They kept her for observation for a few hours. Vet thought as she was stressed this was probably the reason. No medication given to me as they said they only medicate when they have had 3. All ok and fit free until June 2018. Around 30m Macey was resting in kitchen and started to fit. No vet appointment until 4pm that day. No tablets given but was told to administer rectal diazepam if she had another. 2 hours after being home she had 2 more - more severe than before - rectal diazepam given. Called emergency vets as I couldn't cope with seeing her like it. They agreed to have her in overnight to observe. Got a call 3 hours later saying she was so stressed and would be better at home. Epiphen was prescribed 1 tablet twice a day. I also give her Epitaur 500, Milk Thistle (to help liver on Epiphen) & CBD Oil. She has remained seizure free since. The day of her first fit at home - it was a very hot day and she had also just eaten some cheese which I suspect triggers are stress and also air pressure (thunder weather), bright lights. As Kobi is deaf and also almost blind he bumps into objects which stresses him. He can't go to vets surgery as stress causes seizures. Medication: Vets have tried almost all meds over the last four years. He still has seizures but they are 1-2 a month now. At the moment his meds are: Epiphen, Libromide, Levitraacetam and Sodium Valproate. Diazepam for cluster seizures. He has recently been diagnosed with diabetes too so I now on insulin too. We have struggled for four years to get him to this point and tried so many different meds. Have also had advice from a neurologist who diagnosed textbook Epilepsy. Kobi has blood tests regularly to tweak his meds. He is a blue Merle, totally deaf, almost blind and now diabetic aged 6yrs old. While trying to get the right balance of his meds he has been having clusters every other day. As his meds are now he will have 1-2 seizures which leave him completely exhausted and wobbly for days. His seizures are 1-2 a month at present. Neutered. Rescue dog	OWNER
19-Jul-19		Kobi	N/A	N/A	Unregistered - UK	15-Jun-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 8 months	YES	Confirmed by vet	YES	N/A	No apparent trigger. Medication: None. Thankfully it only happened twice and not since. Random seizures. Only had two in space of that month. Monitored and not happened since. Lasted around 10 mins each.	OWNER
29-Feb-20		Kooki	N/A	N/A	Unregistered - UK	01-Feb-16	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 6 months	YES	Filmed event. Explained to vet. Examinations.	YES	N/A	No triggers known. Medication: he had a VNS implant, was on epiphen, pregabalin, kepra and zonisamide. KBR made him crazy and then unresponsive, we even had a VNS implant inside him to try help. CBD did nothing. Suspected triggers: Braxecto Lix and flea treatment. Light sensitivity. Extreme change of routine. Medication: Phenobarbital. This has helped control the seizures and we went 5 months seizure free at a stage. She seemed to develop resistance to it and due to her liver enzyme levels we added Kepra. Valium is used as a rescue medication. Lacey is spayed. Behaviorally she is very active, not just border collie active (we have two) she has endless amounts of energy and it seems as though she rarely switches off. She chases shadows and light reflections endlessly and licks them mainly on floors and walls. She also seems very sensitive and reacts to seemingly normal activities she has a barking fit/antrum if you shower, take off your shirt, use squeeze bottles etc. It's as though she doesn't like you doing it and even gets worked up before you begin to do it for example if she sees you take clothes out to shower she starts talking. 2017 May seizure, July 1 seizure, August September, November and October (partial seizures one each month), December 1 seizure. 2018 January 2 seizures increased phenobarbital meds, April 1 seizure. 2019 February 1 seizure, March 1 seizure, June 1 seizure, July 1 seizure added kepra. Partial seizure it seems as though a seizure is starting and she comes and asks for help but then there is no seizure only excessive drool or teeth chattering. Lacey's seizures are usually just over a minute and she urinates during her seizures.	OWNER

29-Oct-19		Little Ozle	Died before being able to be registered	N/A	WSD - UK KC Activity Register	08-Mar-07	UK	Dog	OB CH Whatknow Razzmatazz (WSD)	Rockin Rapid	Forever Magic Fantasia	Croftmist Megan (BC)	Tanamery Krismass	Mainline Mist (BC)	45 days	NO	N/A	NO	46 days old. See Fitting details for more information	Suspected triggers: The vet suggested that he may have had worms but it was not the case. Medication: No medication for fitting but ABs and Anti-inflams as he became quiet and stopped interacting with his siblings. At 43 days he became quiet and started seeking out dark places. Taken to the vet and was given antibiotics and anti-inflammatory injection. At 44 days he started seeking out dark places. He was very distressed when travelling back to the vets and fitted badly within minutes of arriving. At 46 days old he began fitting and was taken back to the emergency vet. He resembled a coddle toy and was very rigid in his mobility. He seemed to have stopped growing. The vet blood tested for a liver-shunt which came back negative. As the vet examined him, Ozle became very distressed when his head was held and was obviously in a great deal of pain. The vet diagnosed inflammation of the meningeal (tissue surrounding the brain). The vet and I agreed that euthanasia was the only option. Two other pups from the litter also fitted at later intervals and both have died. The rest of the litter were registered with my 'Croftmist' affix. Megan was spayed after. The two other dogs from the litter, that fitted, were put to sleep at young ages due to the fitting. Ozle was unregistered but the rest of the litter were KC registered.	OWNER/ BREEDER

At age 12 weeks, was given Milbemax +/- Ban, then a Flea/Flick spot on at 12 noon. Fitting began at 5.30pm. Medication: Kepra & Fortnigly B12 injections. Kepra phased out, 5 weeks later massive cluster fit & euthanised. Dam and all surviving puppies in litter neutered.	DATA TRANSFER FROM LYN NORTON Added 07.12.12 Updated 20.03.13
29-Feb-20		Mandy Patrick	N/A	N/A	Unregistered - UK	18-Jun-05	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	By the vet as she went on quickly to have a series of fits stopped only by being given an anaesthetic.	NO	Age 11. Death was related. Mandy went into a state of conscious shaking and her body shut down and she was unable to move over a period of days	Suspected triggers: All vaccines, flea and tick treatments, loud noises and stress eg: visit to vet, agility class, being left alone. Medication: Started on Epiphen, added Libromide, added Kepra as each drug became less effective. Also had rectal diazepam to bring her out of seizures. Extra Kepra used as preventative before a stressful event and after fitting to prevent recurrence. Spayed age one. Mandy had fits, often two in a short space of time, around once a month once we got medication settled. We added more meds as they became more frequent each time. To begin with she was very unstable as we wanted to introduce meds gradually. Several visits to emergency vet. Eight fits after vaccination when she was four. Always fitted five days after flea and tick treatment. Diagnosed as tonic clonic epilepsy. In her last few months she did not fit until last major episode. A beautiful girl who took it all in her stride and remained gentle and loving and full of life through it all. Major meds over nine years did not impact liver and kidneys which was one of our big concerns. Triggers unknown, although previous owner mistreated him and was convicted of animal cruelty after kicking Mandy repeatedly on numerous occasions. He had a broken tail. Could have had injuries to head maybe? Medication: He has had far less fits since starting a raw diet with coconut oil and CBD oil. Once a seizure starts, we give CBD drops immediately and the fits subsides quickly and he recovers far better. Before CBD he would have cluster fits and twice had status epilepticus where the seizure continued for nearly an hour. With CBD they last only a minute or two and are very mild. Neutered approx. 4 years old. Very dominant male, pushy with other male dogs. We think Marley is a Welsh collie. He is sable and white, herds upright and is loose eyed. Contacted the Welsh Sheepdog society who said epilepsy is very rare and practically unknown in registered Welsh Sheepdogs, although common in border collies. They suggested Marley is the reform most likely a Welsh Sheepdog/BC cross, or if he's a pure Welsh, his epilepsy is probably unique related rather than inherited.	OWNER

29-Nov-19		Marshonelle Howdyficious	Not known	Not known	BC	05-Nov-12	UK	Dog	Rosmarinus The Chocolatier	Rosmarinus Jaffa	Rosmarinus Demerara	Marshonelle Izzie	Rosmarinus The Rainmaker	Amazin Gracie	1 year 1 month	YES	Vet confirmed Idiopathic Epilepsy. All possible tests done, including an MRI scan and spinal fluid tap	Not known	Not known	Medication: 40mg of Pexion twice a day. He was flea treated a week before, to which he was stressed at time of doing so and was off colour from that point up to first fit. He was fed on mainly raw with some dry food. Had an allergy test done and he is allergic to chicken, duck, wheat and gluten. Changed to pure BARF diet minus the chicken and duck. In himself he became brighter when food was changed, but started to grow again, coat became fuller. His fits have become less frequent but this may coincide with having all possible test done, including an MRI scan and spinal fluid tap, to diagnose epilepsy and being put on the right medication. When they first started he had several in a week, once food changed these decreased and since medication started they have decreased further. Longest between fits has been 31 days.	DATA TRANSFER FROM LYN NORTON Added 30.04.14
19-Jul-19		Marshonelle Switch'N It On	AP04298501	N/A	BC - UK KC Pedigree	05-Nov-12	UK	Dog	Rosmarinus The Chocolatier	Rosmarinus Jaffa	Rosmarinus Demerara	Marshonelle Izzie	Rosmarinus The Rainmaker	Amazin Gracie	7 months	YES	Vet confirmed as Idiopathic Epilepsy	NO	Major seizure	No triggers identified. Time frame was too short to collate information. Medication: Pexion 400mg twice daily. One small fit on 28.06.13 whilst asleep on sofa lasting less than a minute, recovered within 10 mins. No further fits until 9th July, when found fitting in the morning. Rectal Diazepam given. Fitted again same day at 3pm, same treatment, but 4 further fits, taken to vet, kept overnight and stabilised. Home on the 10th but fitting again between 11am and 2pm so back to vet and again kept in overnight and sedated, Phenobarbitone and on a drip. Prognosis was poor at this time. Brought home on the 13th July, Pexion 400mg twice daily. Recovery seemed unlikely but daily improvements noted - motor function, spatial awareness, vision, recognition. Following 22 days charted phenomenal progress in physical and mental capabilities, by 1st Aug he was at 95% of his previous levels of Obedience training. On 2nd August he had another brief fit at 10pm (similar to his first) with the same outcome. At some time between 3am and 4am on the 4th Aug he suffered a major seizure, rectal diazepam x 3 was administered but to no avail, and he passed away shortly afterwards before the vet arrived. Vet haarded a guess at major haemorrhage as cause of death. Neutered.	OWNER

No fits since RVC increased epiphen to top of therapeutic dose.	OWNER
29-Feb-20		Molly	N/A	N/A	Unregistered - UK	17-Aug-19	UK	Bitch	Unknown	Unknown	Unknown	Shadwell Sophie	Jock	Adelph Ember	6 months	YES	All blood tests done and no underlying issues	YES	N/A	Suspected trigger: Stress may be a trigger. Medication: Pexion - this did not work in my opinion made it worse. Epiphen - immediately calmer and fitting stopped. Molly had what we thought were panic attacks from when we brought her home. I now believe that these were partial seizures (Psychomotor), which evolved into full seizures. These stopped when Epiphen was introduced. She is also very anxious and hyper sensitive to certain sounds (cutlery, tin foil, running water). Epiphen has also helped with this.	OWNER
29-Oct-19		Moose	N/A	N/A	Unregistered - UK	15-Jan-19	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Moose took his first fit at 6 months, from which I took him to the vet and blood tests were conducted. Since Moose was a male BC the vet believed it was a high probability that Moose was suffering from Idiopathic Epilepsy	NO	Passed away at 8 months old. Began fitting, fits were lasting around 4 minutes give or take. Was taken into vets where he was sedated. As he came out of the sedation he took a fit which he did not come out of	No suspected triggers. Medication: Started on Pexion and went two weeks without fitting. However had to be placed on Kepra as well due to him still fitting. After 3 weeks on Kepra and Pexion, Moose took a cluster of 7 fits within 18 hours and then was placed on Epiphen and Kepra. This allowed him to be fit free for 1 month until vets decided to lower the dosage of Kepra, the Kepra was dropped to half a tablet and then Moose took his final fits and eventually passed away. Due to the level of medication Moose was on, his focus and concentration were terrible. I have recently read an article stating that the trainability of dogs suffering from epilepsy drops after their first fit and I can back this up from what I've seen with my boy.	OWNER

29-Nov-19		Paddy	N/A	N/A	Unregistered - UK	12-Oct-17	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	Vet tested for all other possible conditions which were clear, this left us with idiopathic Epilepsy	YES	N/A	Not sure as very early stages of any suspected triggers, only had first seizure on 1/10/19. Possibly stress related? Medication: Initially given Pexion 400mg half a tablet twice a day, 12 hours apart. On 15th November began fitting again, first one was as all the others, he was sleeping then began a cluster, Diazepam administered but continued to fit the morning after, on another trip to the vets they issued more Diazepam & introduced Epiphen, he had a loading dose for 24 hours (4 tabs) along with the Pexion then reverted to 2 tabs 12 hours apart plus Pexion for 24 hours, another vet trip booked for 18/11/19 to discuss future medication. Neutered at month old. Seizures initially were when sleeping but in last 24 hours they have been when awake. Fits are never very long at the moment, around 30-45 seconds. Some seizures have appeared to be caused by one of the other dogs knowing at him.	OWNER
21-Aug-19		Phoenix	N/A	N/A	Non UK Unregistered (Border Collie)	30-Jan-14	CANADA	Dog	Eltrick Moss (CBCA 7365)	Imp Jake (ABC 174412)	Eltrick Fait (ABC 184189)	Tess (Unregistered)	Quill	Reba (CBCA Reg)	4 years	YES	Toxoplasmosis Titre	YES	N/A	It's only been a year and we are looking for triggers. Neurologist suspects seasonal pollen. Medication: Kepra, Topiramate, Zonisamide. Seizures stopped after the addition of Zonisamide. All three meds are taken three times a day. Seizures stopped all winter and started up again in May. One in May, one in June, one in July. Peanut butter and potato chips might be a trigger. Neutered at 11 months, seizures average 2 mins. My dog is healthy, fit and competes in Rally-Obedience trials. His personality has changed and he barks more, will often lack focus and will only obey half of the time now. He has started whining and is completely ball obsessed. Sire registered CBCA. Dam not registered. Phoenix is the only dog out of two Moss/Tess breedings (18 pups) with a seizure disorder. Phoenix's seizures are from Toxoplasmosis. It might be good to allow others connected to him through genetics to know that it is not an inherited disorder.	OWNER

YES	N/A	No triggers identified. No medications. Originally seizures thought to be due to inflammation due to infection, however repeat MRI and spinal taps concluded that seizures continued despite no further evidence of inflammation. Therefore likely cause is idiopathic epilepsy. She has been raw fed since a puppy and was not spayed at the time of first seizure. Fits are approx 3 monthly and short in duration, hence no medication required. She had 2 litters prior to first seizure. All pups neutered, but relatives continue to be bred from despite the knowledge of her condition.	OWNER

First fit 28.10.14 - seizure in the afternoon, followed by a slow but full recovery to normal state. Second fit 29.10.14 at 7am. Seen by the vet after each seizure and blood tests undertaken. Vet advised diagnosis of Idiopathic Epilepsy at this stage but as yet no MRI or spinal tap has been carried out. He was otherwise fit and well with no further seizures as of 2.12.14. Initial course of Diazepam for approximately one week; treated with Epiphen twice daily from day of second fit for four weeks. Bloods have been sent to Epiphen to assess viability of phasing out medication. 24.9.14 castration under general anaesthetic; vet treated with Advantage for possible fleas same week; 1.10.14 first year vaccination; 25.10.14 routine worming with Panacur. He is otherwise fit and healthy. All breeders/owners directly connected were informed immediately with sire/dam owners agreeing to wait for completion of initial four week treatment plan before submitting to database; dam & littermates will never henceforth be bred from. DNA to be submitted in due course. Fed James Wellbeloved Turkey & Rice; no change before or after seizures. Neutered on 24th September, before onset of fits. UPDATE ADDED 01.05.15 - Bryn suffered a seizure at 10.30pm. Recovery time was quicker than the initial two seizures last October but he lost vision for 15 minutes. 25 minutes after the seizure he took his ball to his owners to ask for a game. At the time of the seizure, his owners report that his Epiphen dose had been reduced gradually to 1/4 tablet each day (as he had suffered no further fits after the initial two) with the plan to take him off meds altogether in another week. However, their vet has now advised that the dosage should be returned to 1/2 tablet each day.	DATA TRANSFER FROM LYN NORTON Added 04.12.14 Update 01.05.15

No injuries or changes to diet, not recently had flea or worm treatments. Entire. He was his usual happy, lively self when we left the house, drove to a show and was acting 'odd' when we arrived. He had drool hanging from his mouth and seemed a little vacant. Took him for a walk, he seemed spooked which wasn't his personality, went to put him on lead and he fell to the floor fitting. Lasted approx 8-10 minutes. No help available at show, phoned vets who recommended taking him in, said as it was his first fit would be highly unlikely to have another straight away. Travelled in van with myself, he didn't return to his usual self and started fitting again within minutes. I had a vet on speakerphone, the fits were huge and he was struggling to breathe, followed directions and tried to resuscitate. He very sadly died. Not confirmed as epilepsy as didn't want a postmortem but the vet said it was highly likely due to this.	DATA TRANSFER FROM LYN NORTON Added 18.07.14

Seizures getting worse, developed into cluster seizures preceded by running without purpose inurline into	No triggers identified. Went on elimination diet, then natural diet only (Holistic vet advice). Thyroid panel showed normal range. Medication: Phenobarb and Kbr. Increasing dosages but seizures got worse.	OWNER
29-Nov-19		Sam	N/A	N/A	Unregistered - UK	30-Mar-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	YES	Multiple fits leading to seeing a neurologist. He has had numerous blood tests and an MRI to eliminate tumours etc	YES	N/A	Suspected trigger is pollen as he is worse throughout the summer period. He is on a hypoallergenic diet. Fully vaccinated. Up to date on flea and worming. Medication: He started on Pevion which made clusters worse. He moved to Epiphen which was a lot better but still having them often. He has just started on Bromide and after 4 months, we are going to start reducing the Epiphen. He is neutered. He was fitting every 2 weeks but currently 38 days seizure free from starting Bromide. His fits go on for approx 5 mins and they are all grand mal. I have not noticed him have a focal seizure nor does he just tittle. If he has a fit, it's always a big one. He starts his fit by turning his head all the way around and basically looks behind him. His eyes go wide and he starts to fit. He always pees and foams at the mouth. Sometimes he bites his tongue ending up in bloody spit being thrashed around.	OWNER
29-Nov-19		Sam	Not known	Not known	BC	01-May-07	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years	YES	MRI and lumbar Puncture. Bath Vet hospital confirmed as Epilepsy	NO	Died May 2013 aged 6 years. He fitted off and on for just over a week in clusters. We arrived home one evening to find that he had died. The vet said it was a grand mal seizure that only instant medication could have saved him and he would not have known what was going on	Medication: Epiphen. Nothing unusual happened that I can think of I did notice it initially happened after we had been out and we got caught in the rain. Like he had caught a chill, it happened often after a soaking. The vet said it wasn't connected, I'm not sure. After diagnosis at Bath Vet hospital where he had an MRI and I think a lumbar puncture he was initially given just Epiphen, strength and dose varied, then also given Lorbaramide when fits continued, can't remember strength. The fits did change even though he was on medication. The fits didn't last as long and I could tell when he was about to have one, or if he had had one when he was home alone. Usually when he was sleeping then he would wake, his head would shake he would fall over and his back legs would move as if he were running his front legs would be stiff. Was fed on Bakers complete. A lighter diet was offered after fits although he was usually starving when he came around. He gained weight so we were advised to give him a weight control food, there was no change in fits. He was neutered before the suspected triggers: On keeping a diary fits always on around spot on flea treatment - stopped using and fits a lot less severe and less frequent, plus have changed his diet to part raw and don't give any vet meds unless very necessary (use alternative and herbal) and ALWAYS check they are suitable for dogs with seizures. Medication: None. Fits always in a morning after a deep sleep but have been able to halt them when I see and hear the signs (vomiting noise and lip licking) and talk to him and stroke him gently. Now fed part raw/part JWB kibble. Did read an article about giving frozen vanilla ice cream immediately after a fit. Have only tried this once but was AMAZING at bringing him round very quickly. Fits have gone from every 3 to 4 months to every 5 to 6 months (last time was 5 months 22 days) and are less severe lasting less than 1 min and recovery time afterwards a lot quicker (due to ice cream?). Dog came from a rescue and was neutered before owner got him	DATA TRANSFER FROM LYN NORTON Added 21.06.14

Seizures were controlled by stopping agility along with medications. Fed on high quality gran free kibble. Neutered.	DATA TRANSFER FROM LYN NORTON Added 21.01.15
19-Jul-19		Simba	N/A	N/A	Unregistered - UK	06-Feb-11	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years	YES	Not disclosed	YES	N/A	Medication: Phenobarbital 90mg twice daily. Neutered. Fits approx every 6 weeks, approx 2 min duration with 5 min average recovery. Rescue dog.	OWNER
29-Nov-19		Skye	Not known	Not known	BC - Unregistered	09-Jul-10	UK	Bitch	Blue	Ted	Meg	Dot	Glen	Nell	3 years	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Epiphen 60mg twice a day and Pexion 400mg half twice a day. It was a really hot day in July 2013 late afternoon evening, was going to take Skye in the car to park. It happened outside, then again at the same time on the next day while taking her to the car and the following week then same happened. Then was diagnosed as epileptic. To start they were every 21 days and not that intense but the last couple of months they have become more intense and not regularly. The last weeks she had cluster fits more and more so medication was changed to Pexion and weaned off Epiphen but that did not work she was put back on Epiphen and Pexion and so far it is working well. Fed on Bakers complete and Cesar. Entire.	DATA TRANSFER FROM LYN NORTON Added 12.05.14

YES	N/A	No triggers identified. Medication: Epiphen started 3 weeks ago. No seizures since. Fits are normally 2-4 weeks apart. Mostly grand mal. 3 weeks lasting 5-6 mins.	OWNER
29-Oct-19		Smudge	N/A	N/A	Unregistered - UK	16-Jun-99	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	9 years	NO	N/A	NO	PTS following a significant seizure at 17.5 years. Vet concluded this last seizure had caused brain damage and a high probability of a recurrence within a few days to weeks. DOB added as appropriate.	Suspected triggers: Over activity was definitely suspected as fits generally occurred outside of the home after ball chasing or similar. There was one event after a clash of heads whilst running for a ball with our other dog. Fits were frequent, possibly once or twice a year but reduced as his age increased and his activity levels decreased. Medication: No medication recommended by vet due to infrequency. Although he was 9 when we first realised he was fitting with hindsight we realised there may have been earlier occasions where we had not recognised the symptoms from around 2 years of age. Registration status not known. He was full Border Collie but adopted from Border Collie Trust at approx. 10 weeks old. DOB added as appropriate.	OWNER
29-Nov-19		Smudge	Not known	Not known	Collie	19-Oct-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 1 month		Vet confirmed as Epilepsy	Not known	Not known	Medication: Epiphen increased to 2 twice daily 60mg. After 4 months given Libromide, which only made him lethargic and not acting like his usual self. Now on Epiphen and Levetiracetam which we used to give him now and then before a fit, but not on one every 8 hours. Fits started off as around 8 or 9 clusters every 21 days, this increased to 11, his last one being 16 clusters from 2pm to 7am the next day. Some last 30 to 40 seconds, some 2 or 3. There is usually 15 minutes in between but now a few minutes. Clenches jaw, the jaw wide, outstretched legs, urinates sometimes and a slower from mouth and the smell is awful. Then he will pace, used to pace for 20 minutes and could not see us. Now he paces and tends not to bang into objects, seems to manoeuvre around them a little better. Before a fit, he howls at the moon, tries to escape, but now he tends to approach me to cuddle and follow me everywhere I go. You can see in his eyes that he is due to fit, his personality changes. The fits had increased to double the amount, but more often between them. Neutered before fits started. He had been neutered only 4 weeks before. He had trauma to his leg when only 5 months. And we had a collar on when he seized the following week.	DATA TRANSFER FROM LYN NORTON Added 16.07.15
19-Jul-19		Springfield Cean N6919-13 (NSWSDW)	N/A	N/A	Non UK Registered	17-Mar-13	AUSTRALIA	Bitch	Ryans Sean V4073	Princes Dooley V2955	Allandale Gypsy Q3536	Liz Bright Star N Tri of Ohutu (Link) (ISDS 292657)	Astra Cap (ISDS 277223)	Astra Cloud (ISDS 27711)	2 years	YES	Due to severity of cluster seizures and family history (sister and uncle with confirmed epilepsy), no tests apart from basic bloods were undertaken	NO	Euthanased after very bad cluster seizure	No potential triggers identified. Tried elimination diet. Thyroid panels on low side of normal. Medication: Using Valium to stop a seizure starting - had symptoms prior to a seizure, restless, anxious. Unfortunately with the family history and a sister with poorly controlled bad clusters, decision taken to euthanase after very bad cluster seizure. On elimination diet, didn't make any difference. Spayed at 10 months. Uncle (Ryans Mirk) had seizures, gradually got worse until euthanised. With hindsight probably IE. Litter sister has cluster seizures - diagnosed IE. Started around 18 months. Still alive at 6 years old but has clusters every few weeks. 2 older sisters of dam produced 1 affected each to very different sizes - these started fitting much older and post fix and her.	OWNER

Primary epilepsy	No triggers. Everything was tried to save him, even the best clinic couldn't save him. He didn't get out of the fits. He had one minor fit for a minute, two weeks before the severe and deadly attack who took two days! Vet and specialist were helpless. Nothing worked, valium, anaesthesia etc.	OWNER
19-Jul-19		Taliswood Tri Star - JJay	X109344	N/A	WSD - UK KC Activity Register	10-Dec-02	UK	Dog	Zigest Jaffa at Taliswood	Greatglen Hawatha	Zigdan Zest	Jarro's Exclusive Edition	OB CH Dalemair Red Rascal	Trajan Jumpin' Jiff	4 years 7 months	YES	Animal Health Trust did all elimination tests necessary, MRI brain scan, cerebral fluid spinal tap, ultrasound of all organs, proprioception tests and bloods, urine etc. Confirmed as idiopathic Epilepsy	NO	12 years old. JJay starting fitting around breakfast time, not his normal time. After 3 fits we rushed him to vets as we always did at that stage, he never really came out of one before going into another. After all day in vets being treated we had to let him go. He died in Status Epilepticus.	We bred JJay, he always fitted in the early hours of the morning. Clusters reduced when on meds that suited him. We had to stop doing agility as JJay's coordination wasn't good enough to continue. Triggers we worked out over time were household cleaners especially air freshener sprays, plug ins and scented candles. We had to clean when he was out of house and have windows open. Stress was also a big factor, he didn't look stressed but didn't like changes, like one of us packing to go away. Also had to pack cases and load car so he didn't see or he would cluster. Medication: Initially given Epiphen 60mg x 2 daily. Continued to cluster fit so medication increased to 90mg 2x daily and Pottassium Bromide (Kbr) 975mg once daily added. The Kbr soon caused severe disorientated mental status, very wobbly and occasional falling while standing or walking. AHT said Kbr was causing toxicity, once it was withdrawn he was back to his normal alert self. Changed to 105mg of Epiphen 2x daily, 300mg 2x daily of Gabapentin. When he fitted was given rectal diazepam and an ice pack applied to his neck/back area. Since meds changed, fits approx every 10-15 weeks and generally only has one fit instead of 4/5/6+ clusters within the space of 1-4 hours that he was having every 4-6 weeks. Castrated after being diagnosed with idiopathic epilepsy, made no difference to the pattern of his fitting. His Dam was spayed and owners of his litter brother/sisters advised to neuter, which they all did. Our dog is the only one from the 2 litters of this parentage that has fitted out of the 11 puppies. They were all healthy to a grand.	OWNER

29-Feb-20		Tess	N/A	N/A	Unregistered - UK	02-Feb-11	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	8 years	YES	With specialist neurologist at Langford Vets in Bristol, who diagnosed Idiopathic Epilepsy	YES	N/A	Recurrent triggers that we know of although we have struggled to see a hypoallergenic diet since her seizures started. She is on Tall hypoallergenic dry kibble & Neurohypoallergenic meat. Medication: Tess was started on a high dose of Phenytoin (Epiphen) after her appointment at Langford in March 2019 which made her droopy and loss coordination of her back end for about a fortnight but gradually side effects wore off. The dosage was reduced to a maintenance level over a few months until she was on 15mg every 12 hours. She still fitted on medication, though once every 4 weeks. However, the developed intermittent due to increased thirst (side effect) and excessive drinking, so our vet introduced Pexion 200mg every 12 hours and we were back off Epiphen gradually over 3 months. Three days after her last Epiphen (September 2019), she had four seizures in a 24 hour period (previously only ever had one fit at a time) and was hospitalised overnight. She was started back on the Epiphen instantly but on maintenance amount, so is now on the same amount as mentioned previously (she hasn't fitted since September 2019). Tess is a spayed bitch that we rehomed from the Border Collie Trust 2 x 1/2 (already spayed) when we got her. She has no medical history or evidence of seizures before we got her. Tess used to sleep downstairs in our previous house. A year after we moved to our current house in 2017, Tess started sleeping upstairs next to me in 2018. She started seizure in March 2019. She only wakes in the middle of the night when she is asleep and is fit as we know, she is unaware of them and when they are going to happen. They last around 30 secs. She wets and salivates excessively which is why we believe she never had seizures before she started sleeping upstairs because we would have felt the wet on her face in the morning (it takes hours to dry). During the seizures her eyes roll, she stops breathing, her head is tilted back and her body is stiff. She paddles with her front feet before lying off and still, breathing heavily and then panting before she comes round. She is very disorientated for about 20 mins and then goes back to sleep and wakes up normal. Excessive exercise and stress don't seem to have any effect. I wonder if the hypoallergenic diet has made a difference as she has always been food sensitive and used to be very wary.	OWNER
29-Sep-19		Tess	N/A	00/325720	BC - ISDS	23-Jan-13	UK	Bitch	Dewi Tweed (ISDS 278783)	Lad (ISDS 254796)	Cammen Gem (ISDS 271779)	Meg (ISDS 301667)	Mac (ISDS 276484)	Del (ISDS 266631)	3 years 11 months	YES	Stable	NO	Put to sleep at 3 yrs 11 months due to cluster fits and too much damage done to dog neurologically.	Suspected triggers: No idea other than routine booster vaccine given 3 weeks previously. Medication: Tess was in vet hospital for 2 days to try to stabilise. Just so devastating to see Tess like this. I had a Labrador years ago who fitted every few months but not cluster fits like this. The poor dog didn't know where she was, who we were, couldn't walk, horrendous experience.	OWNER

They carried out a physical and neurological examination and exhaustive diagnostic procedures including an MRI brain scan and Cerebral Spinal Fluids. Idiopathic Epilepsy was diagnosed.	YES	N/A	Suspected triggers: Stress, anxiety and over excited. Has had 5 fits each lasting 1-2 mins, all after being left and over excited when we returned and then a 6th during the night when new puppy wasn't settled. UPDATE ADDED 28/01/2020 - Update on Tonlynor River - Bazil has now been diagnosed with Idiopathic Epilepsy and started medication. Medication: Bazil received a loading dose of Potassium Bromide while hospitalised, he is now on Soliphen 60mg three quarters of a tablet every 12 hours and Libromide 325mg one tablet every 12 hours with a full meal.	OWNER
29-Nov-19		Tragility Ruggine	Not known	Not known	BC	10-Mar-10	UK	Dog	Tragility Diamond Dustier	Blueella Woodman	Blueella Bewitched	Canen Avanti at Tragility	Canen Russ (ISDS 247239)	Haze (ISDS 248932)	4 years 7 months	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Epiphen 60mg twice daily - first prescribed 29.12.14. He had a bad ear infection and was sedated then anaesthetised where his ear was flushed. We originally thought he had something in his ear as he was head shaking. With the drug Epiphen in his system the fits are less severe though still as debilitating but not for such a long period. He was neutered before the fits began. He had a retained testicle removed early on then a benign lump in the remaining testicle/overgrowth of hormonal cells. The testicle was removed in 2013. He is on Green Dog Turkey and Rice kibble and has always been on this food. It has never been changed.	DATA TRANSFER FROM LYN NORTON Added 15.03.15

The fits are very mild and she is at this time being treated holistically. Her first fit was on a hot day when the dogs were out running and we thought that might have triggered it, however after her second one we took her to a vet to have it confirmed where several tests were done. She continues to fit regularly on average one to two times a month. Originally fed on Diamond High Energy at the onset but it was recommended that we place her in a less physical home so that her protein and fat content could be lowered. She is now in a pet home on an adult formula by Diamond. The fits are more frequent now but also more mild. Seized.	DATA TRANSFER FROM LYN NORTON Added 14.10.14
21-Aug-19		Willow	N/A	N/A	Unregistered - UK	05-Jul-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	14 weeks	YES	By a brain scan. They couldn't find any problems with her brain. So the conclusion was Idiopathic Epilepsy.	YES	N/A	No triggers known. Tends to have seizures only when sleeping. Medication: Started at 45mg of epiphen twice a day. Now currently on 60mg twice a day. Diazepam rectal tubes are given during or just after a seizure to help calm her down. Levetiracetam 500mg tablets are given to break up any clusters. 1 tablet after 2nd seizure and half a tablet every 8 hours until 48 hours after 2nd seizure. Since starting on 60mg of epiphen twice a day, Willow went 20 weeks without having a seizure. Before that she was having them every few weeks. I had Willow from a local rescue centre when she was 10 weeks old. I have no background information of her at all. Willow has always been clumsy. She's not your typical bright intelligent border collie. She tends to trip over her own feet, bump into things etc. At first I thought maybe it was just because she was a puppy getting used to her new surroundings but as she was getting older she was still the same. At 14 weeks she had a massive cluster where she had 9 before I even got her to the vets. They had to put her under anaesthetic 4 times to bring her out of the cluster. I don't know if this affected her brain but sometimes she's very uncoordinated.	OWNER

Euthanased in July 1992 when fit frequency increased to less than 1 week between clusters and the drugs were affecting his liver. His personality also changed and he lost the ability to remember simple commands	Medication: Initially Valium and Phenobarbitone. Then Potassium Bromide and Epilim added after specialist advice. Doses systematically increased which increased the space between fits but did not reduce the intensity when the cluster fits happened. These required large doses of IV Valium and Phenobarbitone for 12 hours. IV dexamethasone was given the following day and subcutaneously the next 2 days. No changes made to diet. First few were single fits then every fit was a cluster fit. Response to increased medication doses was to increase the time between fits. There were no fits between Feb and June 1992 then the intensity got increasingly worse. Neutered on Vets advice. but made no impact on fits.	DATA TRANSFER FROM LYN NORTON Added 11.09.13
