29-11-19		<b>Absolutely Dot (AG CH)</b>	Not known	239196	BC	10-Jul-98	UK	Bitch	Lethans Maximillion (ISDS 208556)	Roy (ISDS 161740)	Lethans Kip (ISDS 176421)	Pipped at the Post (ISDS Pip 225768)	Snip (ISDS 207611)	Tess (ISDS 196529)	5 years 6 months	NO	N/A	NO	Died of old age	Medication: None. Details: Dot only ever had ONE 'almost fit', that came on 60 minutes after whelping. Diagnosed as pre-eclampsia. Treated with 1/4 calcium and magnesium for 2-3 weeks. Never fitted previously, and no further fit-like episodes afterwards. At age 14-15, started having drop attacks, where she would lose consciousness after making strange howling noises. Diagnosed as secondary to poor cardiac function, and she stopped having them after starting digoxin. Saved.	DATA TRANSFER FROM LYN NORTON Added 10.03.15

Died after choking on his own vomit	Suspected triggers: None noted. Details: The fits started completely out of the blue just as he was approaching his 4th birthday. He had one fit in the early hours of the morning, checks were done at local vets and they couldn't agree what had caused it, a week later another fit followed by his body starting to shut down, laboured breathing and no energy. Taken to Potters Bar vets hospital, kept in for a week, one small fit whilst he was there, they said sudden onset epilepsy, bought him home as they said he might not fit again. He had been home from Potters Bar for 2 weeks with no fits, then had a major fit in his crate whilst we were out and died after choking on his own vomit. Roughly 8 weeks after his first fit. He was neutered at least two years before the fits started.	DATA TRANSFER FROM LYN NORTON Added 29.05.14

19-07-19		Bewitched Over Pendle - Zara	K133807	N/A	WSD - UK KC Activity Register	25-Dec-10	UK	Bitch	Unknown	Unknown	Unknown	Jess (ISDS no. not known)	Unknown	Unknown	6 years	YES	While in emergency vets, while in epileptic status.	NO	6 years 2 months. Went downhill very quickly after another emergency admission to vet on Thursday 9th March 2017, collected her Friday evening seemed her normal self but not long after we arrived home she had another fit, spoke to vet who advised 3 days of Kepra, went rapidly downhill over the weekend to the point Zara seemed like she was in a coma, made the decision on Monday morning 12th March 2017 to PTS	No triggers that I was aware of. Medication: Sedation at emergency vet for epileptic status on January 23rd 2017, then given IV Kepra and IV Phenobarbital. Came home 3 days later and was on Phenobarbital 12 hourly, very quiet and disorientated at first but got better and more her normal self over the following week, told by vet to give Kepra after fits to prevent clusters. Had massive fit lasting 2 minutes, I set timer on my phone when I realised what was happening. This was her first fit to my knowledge, got her to vets within half an hour, seen by vet sent home and was told it was possibly a one off. Booked in for blood tests 2 days later, went into epileptic status same night with a trip to emergency vets, was stabilised and returned home on medication. Small fits recurred every couple of weeks, with 2 lots of clusters, went rapidly downhill after final 2 fits on 10th March 2017, one while still in vets and one at home but never seemed to fully come around from the last. Zara was a local farm bred Collie. I contacted breeder to ask if there was any history of Epilepsy within her breeding, wouldnt answer me and then blocked my tel number. Zara was PTS 13th March 2017 to avoid my pit any further suffering. Zara was spayed at 12 months.	OWNER

29-02-20		Blodwen	N/A	N/A	Unregistered - UK	28-Feb-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Neurology assessment	YES	N/A	No known triggers. Blodwen is a Double Merle collie from a breeder but to me via an informal rescue. She has focal seizures - her MRI was clear so the seizures are not related to brain trauma or disease. Medication: Started with CBD aged 6 months which kept symptoms under control until she was one year old. They became significantly worse and unmanageable so she was started on phenobarbital and levetiracetam - starting doses were steadily increased to maximum for her weight and we also increased CBD oil and finally introduced Eptaur. Over a six month period her seizure related behaviour gradually diminished (leg twitching, staring with head tilted, circling). The neutering didn't appear to make it worse. I have come to understand Blodwen, her symptoms and treatment requirements through close observation, asking for help from a Double Merle Facebook group and researching this genetic problem. We have a regular border collie from a farm litter who has displayed no health problems, I had no knowledge of merle or double merle collies when we rescued Blodwen and this was not mentioned by the person we rescued her from. 31-03-20		Boston	N/A	N/A	Unregistered - UK	23-Jun-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years 6 months	YES	After initial seizure followed a couple of months later by a focal seizure and clusters - diagnosed with idiopathic epilepsy after MRI eliminated any brain issues	NO	Feb 4th 2020 - aged 5 years and 8 months. PTS as diagnosed with chronic liver failure due to Phenobarbital	Suspected triggers: Stress, over tiredness and heat would appear to be triggers. Stress from being bullied by our other collies, or going to the vet. Medication: Initially given Fenoin - no impact. Then moved to Phenobarbital, then added Potassium Bromide. Kepra was given as an emergency protocol. Diazepam did not appear to work. Boston had his first seizure on 4th Dec 2017. From then till he died on Feb 4th 2020 - he had approximately 10+ seizures lasting on average 60 seconds with some as cluster seizures. When he first started seeing it was shorter and he recovered relatively quickly. He never lost bladder control when he seized. The critical turning point was in September 2018 when he went into focal seizure mode and had to go to ICU. This followed another ICU episode in December 2018 where we thought we would lose him. The neurologists worked with us to find the right medication level. There were times we pushed back on the suggested medication level and discussed it with the neurologists. I think it is important that owners who know their dog best and have to manage the dog every day feel confident to add their tuppence worth in. In hindsight we saw three issues: (1) the length of time it takes a medication level to work through and to assess impact means it is several weeks from each medication change before you see if it has had any impact in controlling the fits; (2) the vets are highly dependent on blood lab results to ascertain the medication levels and in our case, there were blood results that was inaccurate/incorrect and thus unreliable. We queried this and new bloods were taken but each time there was an episode, this delayed the possibility of accurate blood works and (3) neurologists are focused on controlling the seizures but need to work hand in hand with liver experts so any increase in PB should be done only after a check on the state of the liver. It should not be automatic. It is our belief that we might have been able to reverse the liver failure had Boston's PB not been raised after summer 2019. Though the seizures were better controlled, his liver was damaged beyond repair. On the other hand if the PB was tapered down in summer 2019 and only Bromide used (or possibly in tandem with Kepra), would he have succumbed to some grand mal seizure - we will never know. Ultimately, epilepsy is life limiting - that we do realise.	OWNER

Medication: Jack has Epiphen 1 x 60 mg twice a day and has just started him on Traadone. Details: Vet started Jack on Epiphen did well then had occasional fit, tried higher dose but he was worse so put him back on lower dose. He still has a few fits a year and focal ones. Went from a quiet dog to being very noisy. Not neutered. His fits are a few mins, he takes a while to come round. Last one last year, he could not see and panicked, he took a while to recover. No reason for fitting as far as I am aware. Medication: Initially levetiracetam 3 times a day but as it did not control the fits Epiphen was included twice a day.	OWNER
29-10-19		Choystean Wyken Pippin - Murphy	ASD0677402	N/A	BC - UK KC Pedigree	24-Jan-15	UK	Dog	Jacksrofer SilverBirch Over Choystean	SH CH Littlethorn Galaxy	Jacksrofer Greatglen Be My Girl	Sarkam Life Imitation In Choystean	Terannos Final Demand	Sarkam Destiny's Dream	2 years 2 months	YES	Referred to Willows at Southill who examined & did an MRI scan	YES	N/A	Full blown fit at lunchtime by my feet. Went on for a minute from which he got up and walked slightly wobbly into the garden. Up until then perfectly healthy, happy young dog, great on Millies kibble. Seizures are now under control. He was castrated at almost 3 yrs old but prior to that he was chemically castrated twice. He is currently well controlled on meds.	OWNER
28-02-21		Cloudy	N/A	N/A	Unregistered - UK	28-Aug-16	UK	Dog	Unknown	Unknown	Unknown	Misty	Unknown	Unknown	1 year 7 months	YES		YES	N/A	Suspected triggers: He definitely has epilepsy but the condition could have been triggered, or exacerbated, by the original liver problem. Medication: Cloudy responds very successfully to a regimen of KBr (Lidobromide), Levetiracetam (Kepra) and Phenobarbital (Epiphen) and has almost no fitting, with the occasional 'petit mal' seizures. He has very occasional full tonic-clonic seizures when his medication has been compromised e.g. missed dose or after activated charcoal treatment for ingestion of toxins. Details: Has epilepsy and liver shunt. He started fitting regularly at 18 months in February 2018 and responded well to Phenobarbital. Went into status in May, probably due to hepatic encephalopathy. Routine blood analysis showed a liver anomaly and it was found he had a hepatic shunt after scanning. Surgery was carried out in June with 100% success, but the fitting continued. He is still taking regular medication at 4+ years of age with occasional recurrence of fitting especially if medication is compromised, even though his liver is perfectly healthy and functioning. No indication of food relating to seizures but he is now on a hepatic diet due to the shunt.	DATA TRANSFER & UPDATE BY OWNER

Lived until she was 14 years	Del used to fit every 6 months, 3 fits and then none for next approximately 6 months. This continued until I moved, then she stopped. Del was never given any medications as my vet thought they would cause more damage than the fits themselves. Full bloods were done annually until towards the end of her life, there were no abnormalities thrown up. I moved when she was approximately 11. Once I moved there were no more fits. Spayed.	OWNER
31-05-20		Delanor Pinball Wizard - Whiz	AJ03743806	N/A	BC - UK KC Pedigree	22-Jun-08	UK	Dog	AG CH Forbyor Turbo Diesel	Woodsorrel Red Wine	Tri Fly	Delanor Waggit A Lot	Rosmarinus The Werryman	Delanor Kirri	5 years	YES	Various consultations and investigations with vet. Blood tests etc for other causes (nothing found). No scan was done.	NO	Whiz died in status when he was 7 years, 3 months. He started fitting early morning on Sept 19th 2015. He did not come out of the fit as he usually did and we were unable to stop it. After speaking to the emergency vet we managed to carry him to the car. Sadly he died on the way to the vets.	Suspected triggers: None known. I spent two years looking for triggers and did wonder if swimming in the sea was a trigger for Whiz (sart ??) but the day he died he hadn't been to the sea for two weeks. Medication: He was on Epiphen 30mg twice a day. This had kept him relatively stable until the last day. Details: Whiz was neutered at 15 months. I do not believe this had any effect as he did not start fitting until he was five. He had cluster fits, usually two or three lasting less than a minute with about half an hour between. He only had five groups of fits over an eighteen month period. He was, however, hospitalised overnight in July 2015 when he fitted six times over five hours. The vets gave him rectal valium.	OWNER
29-11-19		Detania Glittering Pride	Not known	Not known	BC	29-Jun-97	UK	Bitch	Detania Cosworth	Detania Singing The Blues	Detania Keira	Detania Faith Moves	Detania Araz (ISDS 162879)	Detania Lady Luck	4 to 5 years old	Not known	Not known	NO	10 <sup>1/2</sup> years old. Megan actually contracted Bone Cancer in her shoulder which sadly ended her life.	She started having epilepsy at around the age of 4 or 5 I think, with one fit which lasted probably less than a minute. They never actually lasted more than a minute I would guess, just seems a long time at the time. They gradually increased until about 18 months - 2 years, months later when she had 5 in one day, the vets then put her on medication - Phenoobarb? believe. This stopped the fits until the dosage needed correcting. Megan had to have regular check ups every 6 months (I think) and the medication did gradually increase. That's about all the information I can give you I'm afraid - hope it helps in some way.	DATA TRANSFER FROM LYN NORTON Added 25.07.14

28-02-21		Easterdale's Fleet O'Foot	K134734	N/A	WSD - UK KC Activity Register	07-Jan-10	UK	Dog	Easterdale's Prince Rory	Rock	Kim	Just the Tonic	Robbie	Tess	3 years 9 months	YES	Diagnosed by my vets and confirmed by specialist	NO	Age 8 years 4 months. Fleet was pts on 30 May 2018 following several hours of continuous fitting	Suspected triggers: None mentioned Medication: Started on Pexion December 2015 with Diazepam when needed. Changed to Libromide, with Keppra when needed and Diazepam for immediate treatment of fits. Details: First fit at 3yrs 9 mths at 4am, grand mal. 9 fits over next 2 years, very short, all grand mal, all around am. On no medication then. In December 2025 had a severe fit lasting 5 minutes and put on Pexion. 3 further fits and dose increased in Aug 2026 as last fit was 6 mins and required Diazepam. Severity seemed to increase but frequency varied from 4 weeks to 9 months. Then Fleet's fits sadly increased in frequency and severity and he eventually began to cluster fit. His meds were changed, but things continued to decline. He saw a specialist who advised the meds he was on were what he would recommend but to try changing the timing of meds. His fits continued to lengthen and he had several emergency trips to the vet in the middle of the night, when Diazepam did not bring him out. At the end he was fitting during the day as well as at night-time and the fits were taking a terrible toll on him. He was pts in my house following a night of almost continuous cluster fitting. Neutered at 12 months, well before fits started. <a href="#">On central free Salmon and Potatoes mix. Food did not</a>	DATA TRANSFER & UPDATE BY OWNER

31-03-21		Elian-Vannin Millie	AS0902157	00/32956	BC - Dual Registered UK KC & ISDS	18-May-14	UK	Bitch	Elian-Vannin Kirk (ISDS 00/311443)	Joe	Breeze	Elian-Vannin Mia (ISDS 00/314110)	Spot	Bliss	2 years	YES	Bloods, head scans etc all normal but clinical diagnosis based on the episodes, seemingly brought on by touch, was one of a rare type of seizure / rage syndrome.	NO	Age 4. Due to the escalating frequency and intensity of the episodes which were very distressing for her and us, we sadly despite trying all we could, had her PTS	Suspected triggers: Millie was a very loving girl who used to lay for hours next to me having cuddles and tummy rubs so this is all the harder to explain. Every six weeks a sudden episode of rage with no warning. We didn't understand at first but there became a pattern to it and so the 2 year journey of trying to manage her seizures safely began. Before an episode she became increasingly sensitive to light and noise, afterwards she would hide and sleep off. Medication: Pexion to start then stopped. Followed by a combination of Epiphen and Keppra. Prozac was also tried but made no difference so was stopped. We tried all different types of epilepsy medicines. Details: Frequency was from about every 6 weeks until Christmas 2017 when she started clustering. After the initial settling of the cluster episode the following seizures were more frequent with no pattern and each one was for a longer period of time. Food was not a trigger although to alleviate as much non natural things in her diet as possible, we changed her to a raw diet and although it did not help her seizures, she did very well on it. Millie was neutered but made no difference, she was spayed before the onset of her seizure. Due to the severity and type of seizures Millie had, we could no longer manage her safely. Just to say that Millie would come to us probably feeling unwell for a cuddle and it was always as we would touch her that the seizure would happen. She would usually have been as limp beforehand. Never happened at play or with strong touch/rough cuddles only ever gentle strokes, episodes lasted 5 seconds but nearer the end more like 10 seconds and we just couldn't manage her safely and the most traumatic thing was we could no longer cuddle her as she or we would have wanted the seizure along with deterioration was also ageing her rapidly too, so the heart breaking decision was made to say goodbye. It was truly a traumatic journey for and with her.	DATA TRANSFER & UPDATE BY OWNER 31.03.21

21-08-19		George Thor of Townsend - George	Not Known	N/A	WSD - UK KC Activity Register	15-Jul-98	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	7 weeks	YES	By vet - suspected at 7 weeks, confirmed a few months later after another fit	NO	9 years. Kidney failure	No obvious triggers - fitted approx twice per month - no pattern. Not on medication as vet thought he wasn't fitting regular enough. Neutered at around 2 years old. Fits lasted for around 5 mins, approx 2 per month.	OWNER
19-07-19		Glenalla Jack - Captain Jack Sparrow	N/A	296035	BC - ISDS	21-Apr-08	UK	Dog	Kilcreen Fox (ISDS 279619)	INT. SUP. CH Craig (ISDS 249897)	Kilcreen Midge (ISDS 262307)	Nelle (ISDS 285347)	Ben Of Killiebrae (ISDS 220938)	Molly (ISDS 268821)	12 months	YES	Sparrow's idiopathic epilepsy was diagnosed following a full work up at the AHT Newmarket, including spinal tap, full UBEs, FBC, CT Scan, Acid bile test	NO	3 years old. Cluster seizure/status epilepticus	No triggers. Full investigations completed at AHT - other medical/traumatic causes ruled out. Medication: Tried Phenobarbitone, Potassium Bromide, Keppra, plus several other trial drugs (no positive changes) except Keppra gave us a 'honeymoon period' - made it to 5 weeks without seizures but then they were back to heavy clusters again, worsening over the 2 years we had with him. Neutered. Suffered seizures lasting several minutes between weekly - 4 weekly prominently. For 2 yrs until we had to let him go.	OWNER
29-11-19		Grenaby Skeeal Graih	Not known	Not known	BC	15-Sep-11	UK	Dog	Ludgate Red Laser	Woodsorrel Spectre AW	Firelynx Jumanji at Ludgate	Grenaby Editors Choice	Grenaby Tucker	Nunny Kim At Grenaby (ISDS 231219)	1 year 6 months	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Pexion 400mg twice daily, initially fed on Skinners kibbles then once the fitting started, a home prepared diet of brown rice, potatoes and vegetables with raw meat (to try and reduce gluten, corn, soy and casein as per the GARD diet). This seemed to help for a while, with improving gaps between fits until last week, when he had several fits and he became critically ill at the weekend with cluster fitting. Fits have change in frequency. We had got him up to 17 days between fits, and had wanted to try and manage it naturally (without drugs) but that all changed last week as described above and the treatment was necessary to save his life. After we got him, we heard that the dogs (not the bitches) in the previous litter had all started to fit. So we opted for an early castration at 5 months. We are very lucky that he is still with us, but it was devastating to see him so poorly. He was in intensive care for 3 days and has been home for 3 days now, improving visibly by the hour. If I can provide you with any additional information, please do not hesitate to shout.	DATA TRANSFER FROM LYN NORTON Added 11.09.13

31-08-20		Gwen	N/A	N/A	Unregistered - UK	01-May-99	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	Veterinary observation	NO	16 years. Euthanasia after uncontrolled fitting	<b>Suspected triggers:</b> No known triggers. <b>Medication:</b> Phenobarbital given initially with limited success. Potassium Bromide controlled the epilepsy completely until aged 16 when digestive problems made the medication unusable. <b>Details:</b> Spayed before 2yr by rescue charity. Survived Parvovirus virus aged 8 months. Fits became progressively longer and uncontrollable. She had to be sedated for up to two days to stop the fitting. Fits ceased immediately once potassium bromide was given (in solution twice daily with food).	OWNER
31-08-20		Gwyneth (ABC 421786)	N/A	N/A	Non UK Registered (Border Collie)	02-Jun-15	USA	Bitch	Yosemite Gold (Flash) (ABC 320881)	Race (ABC 145723)	Bella Jewel (ABC 239542)	BB Honey (ABC 397387)	MISR BB Shiloh (ABC 386155)	BB's Scorch (ABC 338096)	4 years 6 months	YES	All tests came back normal. MRI, spinal tap, and bloodwork all normal. The neurologist diagnosed her with idiopathic epilepsy	YES	N/A	<b>Suspected triggers:</b> Unsure of any triggers. <b>Medication:</b> She was just put on Zonisamide 100mg in the am and 50mg in the pm. <b>Details:</b> She has had 4 grand mal seizures at night only. They started in Jan 2020 at 3 months apart, then once they got to a month apart, the neurologist put her on medication. She convulses, foams at mouth, eyes roll back, she loses consciousness and I am not able to snap her out of it. She used to run around the room right before she started seizing, but after doing this twice, I started crating her at night in a soft crate. Her seizures last a little over a minute, and she takes on average 3 minutes before she is completely conscious. She gets monthly chiropractic and acupuncture. I got a wellness check swab with fur sample done and it gave me a list of foods she is sensitive to. I have created her home cooked meals ensuring she only eats foods that she should. I have added MCT oil, B complex vitamins, omega3s and do a monthly liver cleanse. <b>Medication:</b> Initially Pexion, after 6 weeks Levetiracetam was added. This combination was satisfactory for a while but then fits resumed, if anything worse than previously, he then had Epiphen and also Diazepam. Neutered after onset of fits. From the outset his fits were severe and caused significant memory loss and required a lot of restraining etc. We had a honeymoon period when we thought that the medication was going to control the seizures but when they resumed each time he had one it was severe and the recuperation period took longer. He had a very severe cluster of fits which effectively wiped his memory and character. He was very close to death but pulled through. We taught him to walk etc again and after 6 weeks he was basically ok. He was a different dog but he liked us and was content in his life. <b>UPDATE ADDED</b>	OWNER

31-05-20		Jack	N/A	00/355613	BC - ISDS	21-Sep-17	UK	Dog	Fellside Dash (ISDS 00/315780)	Killiebrae Laddie (ISDS 262753)	Killiebrae Jet (ISDS 283073)	Meg (ISDS 00/316242)	Spot (ISDS 258972)	Neil (ISDS 274798)	2 years 1 month	YES	Vet	YES	N/A	Suspected triggers: Possibly stress. Medication: Epiphen and Libromide. Intact Male. Seizure approx every 2-6 weeks. Seizure length average 45seconds. We got Jack when he was 14 months old, he had his first seizure about 1 month after his 2nd birthday (late Oct 2019). I phoned the vet and they gave me some great advice on how to monitor and what to do during a seizure, unfortunately a couple hours later he began to cluster so was rushed off to our emergency vet for sedation. We discussed the options for meds and agreed that we would not medicate at this point. 2 months later he had his next seizure, so an appointment was made to check his bloods again, this time the vet suggested we put him on Epiphen. After a while with only the sporadic minor seizures he began to cluster again (5 in 2 hours) he was kept at the vet that day and was started on Libromide and we were given emergency meds for future clusters. Since then Jack has been only having small seizures roughly once every 2 months. We continue to medicate with the Epiphen and Libromide and record any seizures in his diary or on film when we can. Jack is the most loving, happy dog and wants to be friends with everyone he meets. We love Jack dearly and suspected triggers: excitement, anxiety. Medication: Started on Pexion 100mg thinking which seemed to work reasonably well for about 12 months then fitting became more regular, after having nine fits in three months I told my vet I wanted to take her off Pexion and try Epiphen. She has been on Epiphen 30mg for four years and has been fit free for that time. Spayed at about 18 months after being told by her breeder that a litter brother was having fits. Saffie has been able to live a full and active life.	OWNER

29-09-19		Jasper	N/A	N/A	Unregistered - UK	07-Jul-09	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	8 years	YES	Idiopathic Epilepsy	YES	N/A	No suspected triggers known to us. Medication: CBD oil was recommended by info page about dogs with epilepsy, but fits became more frequent, so vet prescribed phenobarbital 30 mg to start, now on 90mg daily!! Can go 8 weeks without a fit, but unsure if meds make a difference!! Fits last about 3 mins, can happen anytime of day or night in the house mostly, but has happened a couple of times while out walking. Never had cluster fits. Usually always wees during fit, but soooo. Always starving when he comes out of fit.	OWNER
29-09-19		Jasper of Frostfields	Not known	181816	BC - Dual Registered UK KC & ISDS	21-Apr-89	UK	Dog	INT SUP CH Davy (ISDS 131049)	Bobby (ISDS 119815)	Sandie (ISDS 122755)	Winder Bess (ISDS 144629)	Dryden Spam (ISDS 112653)	Attwood Trim (ISDS 123285)	2 years 6 months	YES	Our vet was present when Jazz was fitting.	NO	Jazz was PTS at 13 yrs after suffering his 2nd stroke	Jazz was a gentle dog who couldn't cope with stressful situations and was noise sensitive. Especially high pitched noises like drills or even insects. He would run out of a room if he heard wasps, blueberries etc. There were no indications that food, vacms, worming etc ever contributed to his fits. Medication: He was medicated with low dose Phenobarbitone from 2.5yrs old until his death. He was neutered. His fits lessened as he got older. At the onset they were around one a fortnight. By the end of his life probably only one or two a year.	OWNER

21-08-19		Jess	N/A	N/A	Unregistered - UK	27-Jun-03	UK	Bitch	Rip (ISDS 250011)	Glen (ISDS 198706)	Fran (ISDS 219858)	Floss (Not registered)	Ben (Not registered)	Jill (ISDS 225588)	2 years	YES	Blood tests and other family members fitting	NO	Died aged 11 in Status Epilepticus	No known triggers. Epileptic cousins. Medications: Initially Epiphen then Libromide added and finally Keppra. Spayed before onset. Cluster fits showing signs of brain damage. Jess had refractory epilepsy. Despite increase in doses of Epiphen and addition of Libromide followed by Keppra she continued to have cluster fits - admitted to vets on several occasions to try and stop the clusters. The only time she was fit free was on large doses of Epiphen which eventually caused her liver to have problems metabolising the drug and she started to fall over eventually being unable to walk. At this stage she was referred to a neurologist and put through MRI scan, spinal tap, blood tests etc and the result was that she was being poisoned by the epiphen which her liver wasn't metabolising. Her dose of Epiphen was reduced and she was put on a liver supplement. With the reduction of Epiphen she went back to cluster fitting every three months till she died 2 years later in status epilepticus.	OWNER

31-03-21		Jess	N/A	N/A	Unregistered - UK	20-Jun-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	About 18 months	YES	After videos we had taken and being tested at Fitzpatrick's. They started her on medication, which caused her to fit more	YES	N/A	<b>Suspected triggers:</b> Extreme exercise, stress, heat in the summer. <b>Medication:</b> Phenobarbital and Pexion which she is being weaned off. Getting ready to start Potassium Bromide once Pexion has finished. <b>Details:</b> Jess has been spayed. She is a very anxious dog who is upset by any noise. Her fits are like petit mal fits at times but also grand mal fits where her nose and bottom jaw, her eyes roll up, then she starts to shake. They can last from between 30secs and 5mins. She also has episodes where she lays in her Dad's arms and flops her head on the sofa and can sleep for up to 30 mins. You can say pussycat, squirrel, dinner, name of a visitors and she doesn't move. All the time there, her limbs don't move and when she gets off she has left a small mark on his trousers. The last two fits she has been incontinent and wet the bed. Occasionally she can be aggressive, but normally a very placid girl. She has changed, doesn't like her harness on or collar, seems worried to go to my possible glancing side bite - he had a puncture wound in his nose and swollen face for 4 weeks, frontline 4 days before. Medication: Epiphen, Potassium Bromide, Kepra and Diazepam to try to stop clusters. CBD oil plus herbal products. Everything has worked well initially but then has become less effective. He has just been prescribed Pexion to use for a few days after seizures to try to stop the cluster. Jess is entire. He fathered a litter before his seizures started - his son started having seizures at 15 months and was pitted at under 2 years due to uncontrollable seizures. Jez' sister started fitting a year after him and she lost her battle in May this year. Jez always has GMs and always clusters. They have become progressively longer - will often be unconscious for up to 6 mins. We are very fortunate that Jez has a VNS implant. Langford vet hospital is doing a trial with Bristol Children's Hospital and Jez is the 4th dog to have the implant in June 2017. I am convinced that he would not still be alive if he hadn't had this. He is very active and 3 years ago started Rally Obedience and is now working at the top 2 levels.	OWNER

Medication: 200mg Pexion twice daily. No change noted as put on 2nd time she fitted when she fitted 3 times in 3 days which coincided with having vitamin tablets. Put on Purina Neurocare dog food which made a big difference in her recovery after a fit. When taken off this I started on Coconut Oil since when the time between fits has gone from roughly every 2 months to over 6 months.	OWNER
21-08-19		Kingsfarm Maid of Honor	K139324	N/A	BC - UK KC Pedigree	08-Nov-11	UK	Bitch	Tameryce Celtic Laird	Bellatrix Highlander CDex Udex	Tameryce The Ferrari	Kingsfarm Dress To Inpress	Borderlair King Of Swing	Merrymarsh Dress To Kill Of Kingsfarm	5 years 5 months	YES	Vet said it was because she had now had 4 episodes	YES	N/A	In vets during first one - stress? 2nd one it was a very hot day and had eaten cheese? Medication: Epiphen (1x twice a day), Epitaur 500, Milk Thistle & CBD Oil. She has remained fit free since. Spayed in 2012. Her last fit was the worse - much more intense and longer (lasted about 3 minutes) and she took longer to come out of it. In April 2017 Macey had a routine dental examination. In waiting room afterwards I noticed her mouth was twitching and started to foam. The vet took her in side room where she was fitting on the floor. They kept her in for observation for a few hours. Vet thought as she was stressed this was probably the reason. No medication given to me as they said they only medicate when they have had 3. All ok and fit free until June 2018. Around 10am Macey was resting in kitchen and started to fit. No vet appointment until 4pm that day. No tablets given but was told to administer rectal diazepam if she had another. 2 hours after being home she had 2 more - more severe than before - rectal diazepam given. Called emergency vets as I couldn't cope with seeing her like it. They agreed to have her in overnight to observe. Got a call 3 hours later saying she was so stressed and would be better at home. Epiphen was prescribed 1 tablet twice a day. I also give her Epitaur 500, Milk Thistle (to help Liver on Epiphen) & CBD Oil. She has remained seizure free since. The day of her first fit at home it was a very hot day she had also just eaten some cheese which it was suspected triggers are stress and also air pressure (thunder weather), bright lights. As Kobi is deaf and also almost blind he bumps into objects which stresses him. He can't go to vets surgery as stress causes seizures. Medication: Vets have tried almost all meds over the last four years. He still has seizures but they are 1-2 a month now. At the moment his meds are: Epiphen, Libromide, Levitracetam and Sodium Valproate. Diazepam for cluster seizures. He has recently been diagnosed with diabetes too so is now on insulin too. We have struggled for four years to get him to this point and tried so many different meds. Have also had advice from a neurologist who diagnosed textbook epilepsy. Kobi has blood tests regularly to check his meds. He is a bit Mute, totally deaf, almost blind and now diabetic aged 6yrs old. While trying to get the right balance of his meds he was having clusters every other day. As his meds are now he will have 1-2 seizures which leave him completely exhausted and wobbly for days. His seizures are 1-2 a month at present. Neurologist. Bloodwork. No apparent trigger. Medication: None. Thankfully it only happened twice and not since. Random seizures. Only had two in space of that month. Monitored and not happened since. Lasted around 10 mins each.	OWNER

29-09-19		Lacey	N/A	N/A	Non UK Unregistered (Border Collie)	10-May-19	SOUTH AFRICA	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	Blood tests MRI scans Diagnosed Idiopathic Epilepsy	YES	N/A	Suspected triggers: Bravecto tick and flea treatment. Light sensitivity. Extreme change of routine. Medication: Phenobarbital. This has helped control the seizures and we went 9 months seizure free at a stage. She seemed to develop resistance to it and due to her liver enzyme levels we added Keppra. Valium is used as a rescue medication. Lacey is spayed. Behaviorally she is very active, not just border collie active (we have two) she has endless amounts of energy and it seems as though she rarely switches off. She chases shadows and light reflections endlessly and licks them mainly on floors and walls. She also seems very sensitive and reacts to seemingly normal activities she has barking (hi/antum) for a few hours, take off your shirt, use squeeze bottles etc. It's as though she doesn't like you doing it and even gets worked up before you begin to do it for example if she sees you take clothes out to shower she starts talking. 2017 May 1 seizure, July 1 seizure, August September, November and October (partial seizures one each month), December 1 seizure. 2018 January 2 seizures increased phenobarbital meds, April 1 seizure. 2019 February 1 seizure, March 1 seizure, June 1 seizure, July 1 seizure added keppra. Partial seizure it seems as though a seizure is starting and she comes and asks for help but then their is no seizure only excessive drool or teeth chattering. Lacey's seizures are usually just over a minute and she urinates during her seizures.	OWNER
19-07-19		Lacinka Like A Rocket - Sam	Not known	N/A	BC - UK KC Pedigree	10-Apr-11	UK	Dog	Rosmak Dapple Dandy	Canen Baz (ISDS 251245)	Rosmarinus Rising Star	Rosmarinus Gin Soda	AG CH ForByFor Turbo Diesel	Rosmarinus Pimms	9 months	YES	Vet and consultant neurologist	NO	Sam died at 15 months old from cluster fits.	No triggers known. Medication: Phenobarbitone, Keppra, Bromide - no improvement seen. Fits started 1 week. Cluster fits of up to 6 in an hour started after 2 months, sometimes only 3 days between clusters. Sam fitted almost constantly in his last 24 hours and had to be PTS because the fits were every time anyone went near him. A horrendous death as the chemicals to PTS made him fit more. Entire.	OWNER

Medication: Currently 400mg Pexion twice a day, 20mg Fluoxetine (for anxiety). As yet, seizures not under control. Also trialling MCT oil and will be trialling Chinese herbs for epilepsy prescribed by vet. Details: Spayed, clonic-tonic seizures on a monthly basis lasting approx. 2-3 minutes.	OWNER
29-10-19		Little Ozzie	Died before being able to be registered	N/A	WSD - UK KC Activity Register	08-Mar-07	UK	Dog	OB CH Whatknow Razmstazz (WSD)	Rockin Rapid	Forever Magic Fantasia	Crofmist Megan (BC)	Tanameryce Krisnoss	Mainline Mist (BC)	45 days	NO	N/A	NO	46 days old. See Fitting details for more information	Suspected triggers: The vet suggested that he may have had worms but it was not the case. Medication: No medication for fitting but ABs and Anti-inflamm as below. At 43 days he became quiet and stopped interacting with his siblings. At 44 days he started seeking out dark places. Taken to the vet and was given antibiotics and anti-inflammatory injection. At 45 days he was again searching for dark places. He was very distressed when travelling back to the vets and fitted badly within minutes of arriving. At 46 days old he began fitting and was taken back to the emergency vet. He resembled a clockwork toy and was very rigid in his mobility. He seemed to have stopped growing. The vet blood tested for a liver-shunt which came back negative. As the vet examined him, Ozzie became very distressed when his head was held and was obviously in a great deal of pain. The vet diagnosed inflammation of the meningeal (tissue surrounding the brain). The vet and I agreed that euthanasia was the only option. Two other pups from the litter also fitted at later intervals and both have died. The rest of the litter were registered with my 'Crofmist' affix. Megan was spayed after. The two other dogs from the litter, that fitted, were put to sleep at young ages due to the fitting. Ozzie was registered but the rest of the litter were not registered.	OWNER/ BREEDER

29-02-20		Mandy Patrick	N/A	N/A	Unregistered - UK	18-Jun-05	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	By the vet as she went on quickly to have a series of fits stopped only by being given an anaesthetic.	NO	Age 11. Death was related. Mandy went into a state of conscious shaking and her body shut down and she was unable to move over a period of days	<b>Suspected triggers:</b> All vaccines, flea and tick treatments, loud noises and stress eg: visit to vet, agility class, being left alone. Medication: Started on Epiphen, added Libromide, added Kepra as each drug became less effective. Also had rectal diazepam to bring her out of seizures. Extra Kepra used as preventative before a stressful event and after fitting to prevent recurrence. Spayed age one. Mandy had fits, often two in a short space of time, around one a month once we got medication settled. We added more meds as they became more frequent each time. To begin with she was very unstable as vet wanted to introduce meds gradually. Several visits to emergency vet. Eight fits after vaccination when she was four. Always fitted five days after flea and tick treatment. Diagnosed as tonic clonic epilepsy. In her last few months she did not fit until last major episode. A beautiful girl who took it all in her stride and remained gentle and loving and full of life through it all. Major meds over nine years, not impact liver and kidneys, which was one of our big concerns. <b>Suspected triggers:</b> Weather and pressure <b>Medication:</b> Epiphen 45mg x 2 daily <b>Details:</b> Neutered. Fits last up to 2 mins and about 10 mins recovery. Mandy was bought from working farm at 4 weeks old... was not the first to leave the farm and was the smallest.	OWNER
30-04-21		Marky	N/A	N/A	Unregistered - UK	27-Jan-15	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 4 months	YES	Blood tests after change of vets	YES	N/A	<b>Suspected triggers:</b> Weather and pressure <b>Medication:</b> Epiphen 45mg x 2 daily <b>Details:</b> Neutered. Fits last up to 2 mins and about 10 mins recovery. Marky was bought from working farm at 4 weeks old... was not the first to leave the farm and was the smallest.	OWNER
29-02-20		Marley	N/A	N/A	Unregistered - UK	2011 approx	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	Not known (rescue dog, owned since 5 years old, had fits before being adopted)	YES	Blood tests excluded anything else, vet said most likely Idiopathic Epilepsy	YES	N/A	Triggers unknown, although previous owner mistreated him and was convicted of animal cruelty after kicking Marley repeatedly on numerous occasions. He had a broken tail. Could have had injuries to head maybe? Medication: He has had far less fits since starting a raw diet with coconut oil and CBD oil. Once a seizure starts, we give CBD drops immediately and the fit subsides quickly and he recovers far better. Before CBD he would have cluster fits and twice had status epilepticus where the seizure continued for nearly an hour. With CBD they last only a minute or two and are very mild. Neutered at approx. 4 years old. Very dominant male, pushy with other male dogs. We think Marley is a Welsh collie. He is sable and white, heads upright and is loose eyed. Contacted the Welsh Sheepdog society who said epilepsy is very rare and practically unknown in registered Welsh Sheepdogs, although common in border collies. They suggested Marley is therefore most likely a Welsh Sheepdog/BC cross, or if he's pure Welsh, his epilepsy is probably inherited rather than triggered. <b>Medication:</b> 40mg of Pexion twice a day. He was flea treated a week before, to which he was stressed at time of doing so and was off colour from that point up to first fit. He was fed on mainly raw with some dry food. Had an allergy test done and he is allergic to chicken, duck, wheat and gluten. Changed to pure BARF diet minus the chicken and duck. In himself he became brighter when food was changed, he started to grow again, coat became fuller. His fits have become less frequent but this may coincide with having all possible test done, including an MRI scan and spinal fluid tap, to diagnose epilepsy and being out on the right medication. When they first started he had several in a week, once food changed these decreased and since medication started they have decreased further. Longest between fits has been 31 days.	OWNER

29-02-20		Molly	N/A	N/A	Unregistered - UK	17-Aug-19	UK	Bitch	Unknown	Unknown	Unknown	Shadwell Sophie (ISDS 350782)	Jack (ISDS 327212)	Adelph Ember (ISDS 321991)	6 months	YES	All blood tests done and no underlying issues	YES	N/A	<b>Suspected trigger:</b> Stress may be a trigger. Medication: Pexion - this did not work in my opinion made it worse. Epihen - immediately calmer and fitting stopped. Molly had what we thought were panic attacks from when we brought her home. I now believe that these were partial seizures (Psychomotor), which evolved into full seizures. These stopped when Epihen was introduced. She is also very anxious and hyper sensitive to certain sounds (cutlery, tin foil, running water). Epihen has also helped with this.	OWNER
29-10-19		Moose	N/A	N/A	Unregistered - UK	15-Jan-19	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Moose took his first fit at 6 months, from which I took him to the vet and blood tests were conducted. Since Moose was a male BC the vet believed it was a high probability that Moose was suffering from Idiopathic Epilepsy	NO	Passed away at 8 months old. Began fitting. Fits were lasting around 4 minutes give or take. Was taken into vets where he was sedated. As he came out of the sedation he took a fit which he did not come out of	No suspected triggers. Medication: Started on Pexion and went two weeks without fitting. However had to be placed on Kepra as well due to him still fitting. After 3 weeks on Kepra and Pexion, Moose took a cluster of 7 fits within 18 hours and then was placed on Epihen and Kepra. This allowed him to be fit free for 1 month until vets decided to lower the dosage of Kepra, the Kepra was dropped to half a tablet and then Moose took his final fits and eventually passed away. Due to the level of medication Moose was on, his focus and concentration were terrible. I have recently read an article stating that the trainability of dogs suffering from epilepsy drops after their first fit and I can back this up from what I've seen with my own	OWNER

30-09-20		Ozy Bear - Bear	N/A	N/A	Unregistered - UK	31-Jan-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 9 months	YES	Taken to vets after seizures at home. Treated by local vet and also Animal Health Trust Newmarket Suffolk. Brain scans and medication check. The neurologist at Newmarket had told us that Bear was one of the most difficult dogs he'd seen to treat at the time. His brain scan showed white areas where brain damage had occurred because of his seizures	NO	3 years - Passed to bridge 30th May 2017	Suspected triggers: I've kept a diary since his first fit which was in October 2015 and at first we thought it was a supplement oil we put on his food. We stopped it but found the fits carried on regularly until he clustered and we had to put him on meds. They were 3 weeks apart within a day each time, then he had 2 in 3 hours. Medication: He started on Epiphen 45mg twice daily. He had blood tests every 3 weeks and after each blood test his dosage was increased by half a tablet each dose. As at the above date he was on 75mg twice daily. He also has Diazepam in case of severe fitting of 5 minutes. Details: Bears first seizure was at 6.30am, he'd last eaten at 5.30pm the evening before. He is fed Natures Diet which is cooked, he has that with Pedigree Chum mixer for large dogs. Most fits are between 6.30am and 6.30am when asleep. Since he started his meds he has not fitted, though after blood tests they have kept increasing his dosage. He has now been 6 weeks fit free. Bear is a very large collie weighing around 34kg. He came from a working farm in Wales as did his brother who is coming up to 3 with no signs of the same. He was neutered at 9 months old and had not fitted until October 2015. 29-11-19		Paddy	N/A	N/A	Unregistered - UK	12-Oct-17	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	Vet tested for all other possible conditions which were clear, this left us with idiopathic Epilepsy	YES	N/A	UPDATE ADDED 30/09/2020: Date of Birth/Registration Time/Flow available. Not sure as very early stages of any suspected triggers, only had first seizure on 1/10/19. Possibly stress related? Medication: Initially given Pexion 450mg half a tablet twice a day, 12 hours apart. On 15th November began fitting again, first one was as all the others, he was sleeping then began a cluster, Diazepam administered but continued to fit the morning after, on another trip to the vets they issued more Diazepam & introduced Epiphen, he had a loading dose for 24 hours (4 tabs) along with the Pexion then reverted to 2 tabs 12 hours apart plus Pexion for 24 hours, another vet trip booked for 18/11/19 to discuss future medication. Neutered at months old. Seizures initially were when sleeping but in last 24 hours they have been when awake. Fits are never very long at the moment, around 30-45 seconds. Some seizures have appeared to be caused by one of the other dogs growing at him.	OWNER

He was also very nasty coming out of fits and would have bitten both human & dogs. Euthanised a few weeks later.	DATA TRANSFER FROM LYN NORTON Added 10.01.13 Updated 20.10.13
29-11-19		Remajak Somerset Morn	Not known	Not known	BC	11-Jun-13	UK	Dog	Alicria Double Dare To Arradare	Alicria Mister Consistant	Alicria Lady Madge	Borderbeau Blithe Spirit At Remajak	Locheil Travellin' South To Borderbeau JW SpCm	Locheil First To Finish At Borderbeau	1 year 4 months	NO	N/A	Not known	Not known	Medication: see below. First fit 28.10.14 - seizure in the afternoon, followed by a slow but full recovery to normal state. Second fit 29.10.14 at 7am. Seen by the vet after each seizure and blood tests undertaken. Vet advised diagnosis of Idiopathic Epilepsy at this stage but as yet no MRI or spinal tap has been carried out. He was otherwise fit and well with no further seizures as of 2.12.14. Initial course of Diazepam for approximately one week; treated with Epiphen twice daily from day of second fit for four weeks. Bloods have been sent to Epiphen to assess viability of phasing out medication. 28.04.14 castration under general anaesthetic; vet treated with Advantage for possible fleas same week; 1.10.14 first year vaccination; 25.10.14 routine worming with Panacur. He is otherwise fit and healthy. All breeders/owners directly connected were informed immediately with sire/dam owners agreeing to wait for completion of initial four week treatment plan before submitting to database; dam & littermates will never henceforth be bred from. DNA to be submitted in due course. Fed James Wellbeloved Turkey & Rice; no change before or after seizures. Neutered on 24th September, before onset of fits. <b>UPDATE ADDED 01.05.15</b> - Bynn suffered a seizure at 10.30pm. Recovery time was quicker than the initial two seizures last October but he lost vision for 15 minutes. 25 minutes after the seizure he took his ball to his owners to ask for a game. At the time of the seizure, his owners report that his Epiphen dose had been reduced gradually to 1/4 tablet each day (as he had suffered no further fits after the initial two) with the plan to take him off meds altogether in another week. However, their vet has now advised that the dosage should be returned to 1/2 tablet each day.	DATA TRANSFER FROM LYN NORTON Added 04.12.14 Update 01.05.15

No injuries or changes to diet, not recently had flea or worm treatments. Entire. He was his usual happy, lively self when we left the house, drove to a show and was acting 'odd' when we arrived. He had drool hanging from his mouth and seemed a little vacant. Took him for a walk, he seemed spooked which wasn't his personality, went to put him on lead and he fell to the floor fitting. Lasted approx 8-10 minutes. No help available at show, phoned vets who recommended taking him in, said as it was his first fit would be highly unlikely to have another straight away. Travelled in van with myself, he didn't return to his usual self and started fitting again within minutes. I had a vet on speakerphone, the fits were huge and he was struggling to breathe, followed directions and tried to resuscitate. He very sadly died. Not confirmed as epilepsy as didn't want a postmortem but the vet said it was highly likely due to his physical appearance.	DATA TRANSFER FROM LYN NORTON Added 18.07.14

He has had numerous blood tests and an MRI to eliminate tumours etc	YES	N/A	Suspected trigger is pollen as he is worse throughout the summer period. He is on a hypoallergenic diet. Fully vaccinated. Up to date on flea and worming. Medication: He started on Pexion which made clusters worse. He moved to Epiphen which was a lot better but still having them often. He has just started on Bromide and after 4 months, we are going to start reducing the Epiphen. He is neutered. He was fitting every 2 weeks but currently 33 days seizure free from starting Bromide. His fits go on for approx 5 mins and they are all grand mal. I have not noticed him have a focal seizure nor does he just tittle. If he has a fit, it's always a big one. He starts his fit by turning his head all the way around and basically looks behind him. His eyes go wide and he starts to fit. He always pees and foams at the mouth. Sometimes he bites his tongue ending up in bloody spit being thrashed around.	OWNER	
29-11-19		Sam	Not known	Not known	BC	01-May-07	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years	YES	MRI and Lumbar Puncture. Bath Vet hospital confirmed as Epilepsy	NO	Died May 2013 aged 6 years. He fitted off and on for just over a week in clusters. We arrived home one evening to find that he had died. The vet said it was a grand mal seizure that only instant medication could have saved him and he would not have known what was going on	Medication: Epiphen. Nothing unusual happened that I can think of I did notice it initially happened after we had been out and we got caught in the rain. Like he had caught a chill, it happened often after a soaking. The vet said it wasn't connected, I'm not so sure. After diagnosis at Bath Vet hospital where he had an MRI and I think a lumbar puncture he was initially given just Epiphen, strength and dose varied, then also given Lobarbamide when fits continued, can't remember strength. The fits did change even though he was on medication. The fits didn't last as long and I could tell when he was about to have one, or if he had had one when he was home alone. Usually when he was sleeping then he would wake, his head would shake he would fall over and his back legs would move as if he were running his front legs would be stiff. Was fed on Bakers complete. A lighter diet was offered after fits although he was usually starving when he came around. He gained weight so we were advised to give him a weight control food, there was no change in fits. He was neutered before the fits began.	DATA TRANSFER FROM LYN NORTON Added 21.06.14	
30-06-21		Scalpsie Gem - Gem	N/A	00/354423	BC - ISDS	15-Sep-17	NETHERLANDS	Bitch	Skid (ISDS 297208)	Bill (ISDS 245411)	Meg (ISDS 253243)	Fae (ISDS 333930)	Hank From Shepherds Own (ISDS 312500) [Deu]	Kite (ISDS 325501)	2 years	YES	By a vet	NO	3 years 8 months. She passed away on the 25th of May 2021 as she did not come out of a epileptic attack and we had to put her down	Suspected triggers: No specific triggers lead to the attacks. Medication: She was given Pexion at first, but had Phenoral at least the last 3 months. The periods between the attacks became longer. From once a week to the maximum of a little over 3 weeks. Details: The length of the fits were about 1 to 2 minutes, after that she needed a little time to recover, maybe 5 - 10 minutes. Then she was her normal, happy self again. Gem was not neutered.	OWNER	
29-11-19		Seve	Not known	Not known	WSD - Unregistered	approx 02-Nov-07	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	Vet confirmed as Epilepsy	Not known	Not known	Suspected triggers: On keeping a diary fits always on around spot on flea treatment - stopped using and fits a lot less severe and less frequent, plus have changed his diet to part raw and don't give any vet meds unless very necessary (use alternative and herbal) and ALWAYS check they are suitable for dogs with seizures. Medication: None. Fits always in a morning after a deep sleep but have been able to halt them when I see and hear the signs (vomiting noise and lip licking) and talk to him and stroke him gently. Now fed part raw part JWB kibble. Did read an article about giving frozen vanilla ice cream immediately after a fit. Have only tried this once but was AMAZING at bringing him round very quickly. Fits have gone from every 3 to 4 months to every 5 to 6 months (last time was 5 months 22 days) and are less severe lasting less than 1 min and recovery time afterwards a lot quicker (due to ice cream?). Dog came from a rescue and was neutered before owner got him.	DATA TRANSFER FROM LYN NORTON Added 11.09.13 Updated 20.10.13

29-11-19		Skye	Not known	Not known	BC - Unregistered	09-Jul-10	UK	Bitch	Blue	Ted	Meg	Dot	Glen	Neil	3 years	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Epiphen 60mg twice a day and Pexion 60mg half twice a day. It was a really hot day in July 2013 late afternoon evening, was going to take Skye in the car to park. It happened outside, then again at the same time on the next day while taking her to the car and the following week then same happened. Then was diagnosed as epileptic. To start they were every 21 days and not that intense but the last couple of months they have become more intense and not regularly. The last week she had cluster fits more and more so medication was changed to Pexion and weaned off Epiphen but that did not work so she was put back on Epiphen and Pexion and so far it is working well. Fed on Bakers complete and Cesar. Entire.	DATA TRANSFER FROM LYN NORTON Added 12.05.14	
28-02-21		Skye	N/A	N/A	Unregistered - UK	05-Jun-17	UK	Bitch	Scottish Farm dog	Unknown	Unknown	Scottish Farm dog	Unknown	Unknown	3 years 3 months	YES	Several identical seizures. Vet feels as they started around 3 years old, otherwise extremely healthy fit bitch, epilepsy likely cause	YES	N/A	Suspected triggers: No known triggers at present, still documenting seizures to find any pattern or link. Medication: Treated with Phenobarbital twice daily (under duress), initially 60mg, halved to 30mg by me as behaviour badly subdued by dose. All ok at present, hopeful of stopping or reducing meds after spaying and hormonal fluctuations taken out of equation. Using EFT tapping, calming and enjoyable, also Reiki. Very dogged, poor soul could barely walk. Have discussed with vet who agrees the treatment shouldn't be worse than the condition! Details: First fit at 4 am, jaw chattering woke me, foaming, twitching and urinary incontinence. (Having worked with kids/seizures was aware of how scary it looks, and at time it). Around 3.5 mins, four long bouts and jumped like nothing happened. Vet did urine test in morning, slightly elevated white count so treated with antibiotic in case of infection. All other fits (5 more) have been identical, only shorter in every case. Differing times, no real common denominator. One thing I am monitoring is we use a calor heater in sunroom topping up heat in autumn/ winter. Most recent seizure Skye had spent half a day with me there doing a Zoom course online. It is well ventilated and has a CO alarm, but wonder if she is affected by this? Just grasping at anything I can change to remove meds etc.	OWNER	
21-08-19		Skyes Royal Connection - Fozzie	AR03359402	N/A	BC - UK KC Pedigree	31-Aug-14	UK	Bitch	Foxbarton Kings Ransom	Janbell Jamieson	Foxbarton Lady Chandon	Foxbarton Kings Consort	Foxbarton Royal Lion	Foxbarton Something Blue	4 years	YES	MRI scan, spinal tap and numerous blood tests to exclude any other cause.	YES	N/A	No triggers identified. Medication: Epiphen started 3 weeks ago. No seizures since. Fits are normally 2-4 weeks apart. Mostly grand mal. 3 waves lasting 5-6 mins.	Suspected triggers: Over activity was definitely suspected as fits generally occurred outside of the home after ball chasing or similar. There was one event after a clash of heads whilst running for a ball with our other dog. Fits were infrequent, possibly once or twice a year but reduced as his age increased and his activity levels decreased. Medication: No medication recommended by vet due to infrequency. Although he was 9 when we first realised he was fitting, with hindsight we realised there may have been earlier occasions where we had not recognised the symptoms from around 2 years of age. Registration status not known. He was full border collie but adopted from Border Collie Trust at approx. 10 weeks old. PCB added is approximate.	OWNER

29-11-19		Smudge	Not known	Not known	Collie	19-Oct-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 1 month	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Epiphen increased to 2 twice daily 60mg. After 4 months given Libromide, which only made him lethargic and not acting like his usual self. Now on Epiphen and Levitracetam which we used to give him now and then before a fit, but not on one every 8 hours. Fits started off as around 8 or 9 clusters every 21 days, this increased to 11, his last one being 16 clusters from 2pm to 7 am the next day. Some last 30 to 40 seconds, some 2 or 3. There is usually 15 minutes in between but now a few minutes. Clenches jaw, then jaw wide, outstretched legs, urinates sometimes and a slaver from mouth and the smell is awful. Then he will pace, used to pace for 20 minutes and then would see us. Now he paces and tends not to bang into objects, seems to manoeuvres around them a little better. Before a fit, he howls at the moon, tries to escape, but now he tends to approach me to cuddle and follow me everywhere I go. You can see in his eyes that he is due to fit, his personality changes. The fits had increased to double the amount, but more often between them. Neutered before fits started. He had been neutered only 4 weeks before. He had trauma to his leg when only 5 months. And we had a collar cut when he seized the following week.	DATA TRANSFER FROM LYNN NORTON Added 16.07.15

28-02-21		Taff	N/A	289834	BC - ISDS	05-May-07	UK	Dog	Plas Major Storm (ISDS 249754)	Plas Major Gull (ISDS 189532)	Briar (ISDS 232390)	Ceri (ISDS 242461)	Don (ISDS 218243)	Nel (ISDS 210531)	7 years 5 months	YES	Vet ran blood tests which showed nothing that could be causing the fitting, so concluded Taff had Idiopathic Epilepsy	NO	Age 10 years. Taff died in May 2017 following a series of cluster seizures from which he never recovered	<b>Medication:</b> Epiphen mentioned. <b>Details:</b> First seizure brought on by introduction of new dog into household. Taff was fairly stable, cluster seizures every 6-8 weeks. Castrated at 6 years of age. I found out from an article in the ISDS magazine that Taff's grandmother, Briar, was herself pts because of epilepsy. Her breeder consequently stopped breeding from this line (Plas Major). <b>Suspected triggers:</b> Triggers we worked out over time were household cleaners especially air freshener sprays, plug ins and scented candles. We had to clean when he was out of house and have windows open. Stress was also a big factor, he didn't look stressed but didn't like changes, like one of us packing to go away. Also had to pack cases and load car so he didn't see or he would cluster. <b>Medication:</b> Initially given Epiphen 60mg x 2 daily. Continued to cluster fit so medication increased to 90mg 2x daily and Pottassium Bromide (Kbr) 975mg once daily added. The Kbr soon caused severe disorientated mental status, very wobbly and occasional falling while standing or walking. AHT said Kbr was causing toxicity, once it was withdrawn he was back to his normal alert self. <b>Medication:</b> Initially given Epiphen 2x daily, 200mg 3x daily of Gabapentin. When he fitted was given rectal diazepam and an ice pack applied to his neck/ back area. Since meds changed, fits approx every 10-15 weeks and generally only has one fit instead of 4/5/6w clusters within the space of 1-4 hours that he was having every 4-6 weeks. 29-09-19		Tess	N/A	00/325720	BC - ISDS	23-Jan-13	UK	Bitch	Dewi Tweed (ISDS 278783)	Lad (ISDS 254796)	Cammen Gem (ISDS 271279)	Meg (ISDS 301667)	Mac (ISDS 276484)	Del (ISDS 266631)	3 years 11 months	YES	Vet	NO	Put to sleep at 3 yrs 11 months due to cluster fits and too much damage done to dog neurologically.	Suspected triggers: No idea other than routine booster vaccine given 3 weeks previously. Medication: Tess was in vet hospital for 2 days to try to stabilise. Just so devastating to see Tess like this. I had a Labrador years ago who fitted every few months but not cluster fits like this. The poor dog didn't know where she was, who we were, couldn't walk - horrendous experience.	OWNER
29-02-20		Tess	N/A	N/A	Unregistered - UK	02-Feb-11	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	8 years	YES	Consultation with specialist neurologist at Langford Vets in Bristol, who diagnosed Idiopathic Epilepsy	YES	N/A	Seizures started. She is on Tails hypoallergenic dry kibble & Halo hypoallergenic meat. Medication: Tess was started on a high dose of Phenytoin (Epiphen) after her appointment at Langford in March 2019 which made her drowsy and lose coordination of her back and for about a fortnight but gradually side effects wore off. The dosage was reduced to a maintenance level over a few months until she was on 15mg every 12 hours. She still fit on medication, roughly once every 4 weeks. However, she developed intolerance due to increased thirst (side effect) and excessive drinking, so her vet introduced Proneal 200mg every 12 hours and we weaned her off Epiphen gradually over 3 months. Three days after her last Epiphen (September 2019), she had her seizure in a 24 hour period (previously only ever had one fit at a time) and was hospitalised overnight. She was started back on the Epiphen instantly but on maintenance instead. So in line on the same amount as mentioned previously and hasn't fit since September 2019. (Tess is a registered dog who returned from the Border Collie Trust & I'd just already spoken when we got her). There was no medical history or evidence of seizures before we got her. Tess used to sleep downstairs in our previous house. A year after we moved to our current house in 2021, Tess started sleeping upstairs next to me in 2018. She started seizing in March 2019. She only seizures in the middle of the night when she is asleep and as far as we know, she is unaware of them and when they are going to happen. They last around 30 secs. She wets and salivates excessively which is why we believe the next had seizures before she started sleeping upstairs because we would have felt the wet saliva on her face in the morning if it takes hours to dry. During the seizures, her eyes roll, she stops breathing, her head is tilted back and her body is stiff. She paddles with her front feet before lying stiff and still, breathing heavily and then panting before she comes out. She is very disoriented for about 10-15mins, and then goes back to sleep and wakes up "normal". Exercise, exercise and stress don't seem to have any effect. I wonder if the hypoallergenic diet has made a difference as she has always been food sensitive and used to be very	OWNER

She was pts quite peacefully as her spinal problems had spread considerably and we did not want her to get to a state of distress.	Tess died on Thursday 23rd January 2020 at 14 years old. She was pts quite peacefully as her spinal problems had spread considerably and we did not want her to get to a state of distress. She has been more stable on the Keppra than ever before. History of drugs tried en route available. Spayed 13/3/06. Heard of others from the sire also diagnosed epileptic. Although we have occasional solitary fits they usual come in clusters (largest cluster was 27 over a Christmas holiday). We've kept a medical diary. If Tess didn't have spinal and hip dysplasia problems now I would suspect that she would still be enjoying a reasonably active life. As it is she still wants to play, go for short walks and eat as she nears her 14th birthday. The epilepsy has aged us rather than the dog! I would always advise working in partnership with the vet and insurance company and we have been blessed with all the support we have received. SECOND UPDATE ADDED 28/02/2020: We regret to report that Tess died on Thursday 23rd January 2020. She was pts quite peacefully as her spinal problems had spread considerably and we did not want her to get to a state of distress. Having been warned by the vet who diagnosed her epilepsy that he doubted she would reach the age of two, we had hoped to have had her in our lives for longer.	OWNER Updated 28.01.20 Updated 28.02.20

After about 1 year started to cluster, with increasing frequency. Went on Phenobarbital which helped for a few months, then clusters returned increasing frequency. Entire. <b>Medication:</b> None. The fits are very mild and she is at this time being treated holistically. Her first fit was on a hot day when the dogs were out running and we thought that might have triggered it, however after her second one we took her to a vet to have it confirmed where several tests were done. She continues to fit regularly on average one to two times a month. Originally fed on Diamond High Energy at the onset but it was recommended that we place her in a less physical home so that her protein and fat content could be lowered. She is now in a pet home on an adult formula by Diamond. The fits are more frequent now but also more mild. Spayed.	DATA TRANSFER FROM LYN NORTON Added 20.10.13
29-11-19		Wildblue Intuition	Not known	Not known	BC	16-Jul-09	USA	Bitch	AKC CH Kybota Wildblue Rhythm	AUS CH Devondene Kiwi Legend CD	AUS CH Kybota City Rhythm	Wildblue Eternal Dream (USA)	AKC CH Wildblue Eternity	AKC CH Wildblue In A Dream	4 years	YES	Vet confirmed as Epilepsy	Not known	Not known	No triggers known. Tends to have seizures only when sleeping. Medication: Started at 45mg of epiphen twice a day. Now currently on 60mg twice a day. Diazepam rectal tubes are given during or just after a seizure to help calm her down. Levitracetam 500mg tablets are given to break up any clusters. 1 tablet after 2nd seizure and half a tablet every 8 hours until 48 hours after 2nd seizure. Since starting on 60mg of epiphen twice a day, Willow went 20 weeks without having a seizure. Before that she was having them every few weeks. I had Willow from a local rescue centre when she was 10 weeks old. I have no background information of her at all. Willow has always been clumsy. She's not your typical bright intelligent border collie. She tends to trip over her own feet, bump into things etc. At first I thought maybe it was just because she was a puppy getting used to her new surroundings but as she was getting older she was still the same. At 14 weeks she had a massive cluster where she had 9 before I even got her to the vets. They had to put her under anaesthetic 4 times to bring her out of the cluster. I don't know if this affected her brain but sometimes she's very uncoordinated.	DATA TRANSFER FROM LYN NORTON Added 14.10.14

Vet said it's probably 'Idiopathic Epilepsy'.	YES	N/A	<b>Suspected triggers:</b> No suspected triggers. No accidents or illness prior to the fits. Wren only has had puppy vaccinations and I do not use chemical treatments on her. <b>Medication:</b> Since the fits she has been on MCT oil and has not had a seizure since. <b>Details:</b> Wren has been raw fed since a puppy. She had a lap spay after her third season at the age of two. She is a fit healthy dog and has never had any accidents or illness prior to the two fits. Wren had her first fit on Saturday 5th December 2020 at 6:45am. I heard a knocking downstairs and I found her collapsed having a generalised seizure which lasted under one minute. She made paddling movements, drooled/frothed and urinated. She came round quickly, being wobbly for 2-3 minutes. After that she was back to normal like nothing had happened. Her second fit was on Monday 14th December at 2:30am. She had got up in the night wanting to go outside. This is not unusual for her as she often gets up at this time to go toilet. As I opened the patio door she collapsed to the left and started fitting. Exactly the same as the time before. Quick recovery and within a few minutes she ran back upstairs back to bed and went to sleep.	OWNER

Euthanised in July 1992 when fit frequency increased to less than 1 week between clusters and the drugs were affecting his liver. His personality also changed and he lost the ability to remember simple commands	Medication: Initially Vallium and Phenobarbitone. Then Potassium Bromide and Epilin added after specialist advice. Doses systematically increased which increased the space between fits but did not reduce the intensity when the cluster fits happened. These required large doses of IV Vallium and Phenobarbitone for 12 hours. IV dexamethasone was given the following day and subcutaneously the next 2 days. No changes made to diet. First few were single fits then every fit was a cluster fit. Response to increased medication doses was to increase the time between fits. There were no fits between Feb and June 1992 then the intensity got increasingly worse. Neutered on Vets advice, but made no impact on fits.	DATA TRANSFER FROM LYNN NORSTON Added 11.09.13

Stress doesn't help. <b>Medication:</b> Epiphen, Libromide, Levetiracetam, Zonisamide. All help but have had to be added over time (in the order as written. Dosage tweaked over time too). <b>Details:</b> Neutered before 8 months old at The Dogs Trust. He cluster seizures and has worsened over time. Seizures usually last less than 1 minute, but had 1 spell last month of status epilepticus. The post ictal period varies in length although doesn't usually last more than 5 to 10 minutes. He is now on a Neuro diet. I also use extra Levetiracetam as pulse therapy as soon as he's able to swallow after a seizure.	OWNER

He was badly abused by a farm labourer which resulted in a head injury. <b>Medication:</b> Phenoletol. 50mg twice daily. Zak was neutered at 2 yrs old. He hasn't had a seizure since leaving the farm and starting medication. The longest seizure I witnessed was around 5 mins, on that day he had 7 in total with the others lasting around 2 mins. I don't know anything about Zak's breeding, all I know is that he was bought from a shepherd in the Glenlyon area who has a constant stream of pups. He took part in the Newmarket Canine Health study a	OWNER
