29-Nov-19		Absolutely Dot (AG CH)	Not known	239196	BC	10-Jul-08	UK	Bitch	Lethans Maximillon (ISDS 208556)	Roy (ISDS 161740)	Lethans Kip (ISDS 176421)	Pipped at the Post (ISDS Pip 225768)	Srip (ISDS 207611)	Tess (ISDS 196529)	5 years 6 months	NO	N/A	NO	Died of old age	Medication: None. Details: Dot only ever had ONE "almost fit", that came on 60 minutes after whelping. Diagnosed as pre-epilepsy. Treated with s/c calcium and magnesium for 2-3 weeks. Never fitted previously, and no further fit-like episodes afterwards. At age 14-15, started having drop attacks, where she would lose consciousness after making strange howling noises. Diagnosed as secondary to poor cardiac function, and she stopped having them after starting digoxin. Spayed.	DATA TRANSFER FROM LYNN NORTON Added 10.03.15

Euthanised for reasons unrelated to epilepsy.	Stress triggers fits. Medication: Epiphen 60mg bid Epilate 300mg uid. Spayed after onset of fits. No fits since 7 years old on medication. UPDATE ADDED 31/08/2020. Andrate of Robate was euthanised on 05/08/2020 for reasons unrelated to epilepsy.	OWNER Updated 31.08.20
29-Nov-19		Arfields Touch Of Clan-Ti	N/A	294032	BC - ISDS	26-Sep-07	UK	Dog	Paddy Gwynion (ISDS 280634)	Glen (ISDS 244809)	Bess (ISDS 242897)	Kelly Gwynion (ISDS 286252)	Lad (ISDS 231344)	Jess (ISDS 244950)	4 years	YES	Vet confirmed as Epilepsy	NO	4 years old. Died after choking on his own vomit	Medication: None noted. The fits started completely out of the blue just as he was approaching his 4th birthday. He had one fit in the early hours of the morning, checks were done at local vets and they couldn't agree what had caused it, a week later another fit followed by his body starting to shut down, laboured breathing and no energy. Taken to Potters Bar vets hospital, kept in for a week, one small fit whilst he was there, they said sudden onset epilepsy, bought him home as they said he might not fit again. He had been home from Potters Bar for 2 weeks with no fits, then had a major fit in his crate whilst we were out and died after choking on his own vomit. Roughly 8 weeks after his first fit. He was neutered at least two years before the fits started.	DATA TRANSFER FROM LYNN NORTON Added 29.05.14

He went on to take 2 massive seizures back to back a couple of days later - he fitted for around 10mins in total and was left brain damaged and had to be put to rest.	Suspected triggers: N/A Medication: Phenobarbital Details: See previous column. UPDATE ADDED 31/05/2021 - ISDS number added.	OWNER Updated 31.05.21
29-Nov-19		Back in Black Shelby's Shelter - Millie NHSB 3139994 (Dutch KC Reg)	N/A	N/A	Non UK Registered (Border Collie)	08-Nov-18	NETHERLANDS	Bitch	Dutchfield's Wisp a Straw in the Wind (NHSB 3049350)	Dutchfield's Dillon Streak of Light (NHSB 022938790)	Rinn Run Rings Out (NHSB 2971463 KCR AQ0902628)	Shelby Oongh House on Fire (NHSB 3019514 KCR AQ0903912)	Drift Shaken not Stirred (NHSB 2928858 KCR AQ0902678)	Queenie (ISDS 00/306132)	11 months	YES	By the vet through blood test	NO	Millie died one day short of her 1st birthday. We put her to sleep after 9 seizures the day before and ongoing seizures that day after a night of sedation to try to get her to recover: it was hopeless, and too much for her small body.	No triggers at all, all seizures were sudden and no warning signs. Medication: She was on Phenoral, but the seizures went right through it. Stesold did not have any effect. The seizures started two weeks before she died - it was so intense and aggressive, there was nothing we could do. It was heartbreaking to see such a young dog, so sweet and gentle, and a great sportsperson, turn from a lively sporty playful pup to a miserable, suffering soul.	OWNER
29-Nov-19		Back Wilderness	Not known	Not known	BC	01-Sep-09	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	13 years	NO	N/A	NO	Not known	Medication: None specified. Nothing unusual happened that might have caused fitting to start. Fed on IAMS Dog Senior & Mature (Dry Food). Had a total of 10-12 seizures over a period of less than 20 hrs. They occurred either every 2-3 hours or when he lay down (whichever came first). Until that day he had NEVER had any seizures. No longer alive.	DATA TRANSFER FROM LYNN NORTON Added 11.08.14
29-Nov-19		Badger Joe of Carollary	N/A	300538	BC - ISDS	15-Jan-09	UK	Dog	Groesfaen Cruise (ISDS 286449)	Roy (ISDS 266416)	Kim (ISDS 258951)	Canen Jane (ISDS 284944)	Canen Trip to Away (ISDS 247442)	Canen Rika (ISDS 272026)	3 years	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Epiphen & Libromide Levacetaracetam as and when to stop clusters. First fit occurred as Age UK cold alarm went off just before; so a cold morning. After having clusters of fits for days every few weeks, up to 8 a day, has been free for 5 months after starting Libromide (potassium bromide). Dog entire. 31-Jan-21		Bailey Lyness	N/A	N/A	Unregistered - UK	02-Oct-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	4 YES	Glasgow Vet School and Hospital	YES	N/A	Suspected triggers: Have not been able to confirm a reason so far. Medication: Epiphen 120mg twice daily, Libromide 1.5 tablets a.m. and 1 tablet p.m., Zaregram 100mg twice daily, Keppra 500mg 2 tablets 3 times a day after each cluster fit for 7 days, Destolit 150mg tablets twice daily, 10mg CBD capsule at night. Details: Bailey is neutered and he has fits every 3 to 4 weeks generally although at the moment they are weekly. He has generally 3 cluster fits at a time that last 2 to 3 minutes but yesterday he had 7 fits over a 6 hour period. It is so stressful as it is hard to keep Bailey quiet after the fits as it takes him around an hour to come round and see properly as well as regain his balance. We have bought a child's playpen to keep him in so as he can't get out and hurt himself as the dog pens he was able to escape from. Typically Collie.	OWNER
29-Oct-19		Bargoyne King of Hearts	TBA	N/A	BC - UK KC Pedigree	21-Mar-17	UK	Dog	Borderpaws Dark Secret	Perranfell Don't Stop Me Now	Darleyfalls Dark Secret	Sarkam Push The Button	Teranos Final Demand	Sarkam Destiny's Dream	4 months	YES	Vet confirmed	NO	Fitted all night, had to be put to vets - 16 months old	No triggers noted. Medication: Started at 12 months of age, was fit free for 3 months then reviewed. Phenobarbitone 30mg twice a day. The fits stopped after medication was first given, but the fits returned. Millies Wolfheart fed, no change of food. He was neutered.	OWNER
29-Sep-19		Barr ram ewe	K159876	N/A	WSD - UK KC Activity Register	29-May-16	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 5 months	YES	He has had blood tests but no MRI, the vet has said it's Epilepsy	YES	N/A	Have found no triggers, it seems to be after a full morn but on one occasion he had 3 seizures within 24 hrs which I put down to the stress of my daughter getting a puppy. Medication: He is on 50mg Epiphen twice a day and Libromide. He was quite unbalanced when the Libromide was added but since the dose has been split to getting half twice a day instead of once on a day he seems better.	OWNER

Fits began after being treated with worming tablet Milbemax. He has been fed various brands and homemade. No change of food been given. Approx 2 months for 1st year, then 3 to 4 monthly for 2nd year. His rown not fitted for 5 months. So becoming less regular. Neutered, no change in fits.	DATA TRANSFER FROM LYN NORTON Added 23.03.14
19-Jul-19		Bewitched Over Pendle - Zara	K136807	N/A	WSD - UK KC Activity Register	25-Dec-10	UK	Bitch	Unknown	Unknown	Unknown	Jess (ISDS no. not known)	Unknown	Unknown	6 years	YES	While in emergency vets, while in epileptic status	NO	6 years 2 months. Went downhill very quickly after another emergency admission to vet on Thursday 9th March 2017, collected her Friday evening seemed her normal self but not long after we arrived home she had another fit, spoke to vet who advised 3 days of Keppra, went rapidly downhill over the weekend to the point Zara seemed like she was in a coma, made the decision on Monday morning 13th March 2017 to PTS	No triggers that I was aware of. Medication: Sedation at emergency vet for epileptic status on January 5th 2017, then given IV Keppra and IV Phenytoin. Came home 3 days later and was on Phenytoin 12 hourly, very quiet and disorientated at first but got better and more her normal self over the following week, told by vet to give Keppra after fits to prevent clusters. Had massive fit lasting 7 minutes. 1st timer on my phone when I realised what was happening, this was her first fit to my knowledge, got her to vets within half an hour, seen by vet sent home and was told it was possibly a one off. Booked in for blood tests 2 days later, went into epileptic status same night with a trip to emergency vets, was stabilised and returned home on medication. Small fits occurred every couple of weeks, with 2 lots of clusters, went rapidly downhill after final 2 fits on 10th March 2017, one while still in vets and one at home but never seemed to fully come around from the last. Zara was a local farm bred collie. I contacted breeder to ask if there was any history of Epilepsy within her breeding, wouldn't answer me and then blocked my tel number. Zara was PTS 13th March 2017 to avoid my girl any further suffering. Zara was spayed at 12 months.	OWNER

29-Feb-20		Blodwen	N/A	N/A	Unregistered - UK	28-Feb-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Neurology assessment	YES	N/A	No known triggers. Blodwen is a Double Merle collie from a breeder but to me via an informal rescue. She has focal seizures - her MRI was clear so the seizures are not related to brain trauma or disease. Medication: Started with CBD aged 6 months which kept symptoms under control until she was one year old. It became significantly worse and unmanageable so she was started on phenobarbital and levetiracetam - starting doses were steadily increased to maximum for her weight and we also increased CBD oil and finally introduced Eptaur. Over a six month period her seizure related behavior gradually diminished (from jerking awake every few minutes all through the night, circling, twitching and being aggressive) and she now sleeps for up to 11 hours through the night with no issues and is markedly more settled in the daytime. She was spayed at 6 months old but the focal seizure symptoms had already started (leg twitching, staring with head tilted, circling). The neutering didn't appear to make it worse. I have come to understand Blodwen, her symptoms and treatment requirements through close observation, asking for help from a Double Merle Facebook group and researching this genetic problem. We have a regular border collie from a farm litter who has displayed no health problems. I had no knowledge of merle or double merle collies when we rescued Blodwen and this was not mentioned by the person we rescued her from.	OWNER

31-Mar-20		Boston	N/A	N/A	Unregistered - UK	23-Jun-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years 6 months	YES	After initial seizure followed a couple of months later by a focal seizure and clusters - diagnosed with idiopathic epilepsy after MRI eliminated any brain issues	NO	Feb 4th 2020 - aged 5 years and 8 months. PTS as diagnosed with chronic liver failure due to Phenytoin	Suspected triggers: Stress, over tiredness and heat would appear to be triggers. Stress from being bullied by our other collies, or going to the vets. Medication: Initially given Pexkin - no impact. Then moved to Phenytoin, then added Potassium Bromide. Keppra was given as an emergency protocol. Diazepam did not appear to work. Boston had his first seizure on 4th Dec 2017. From then until he died on Feb 2020 - he had approximately 80 seizures lasting on average 60 seconds with some as cluster seizures. When he first started seizing it was shorter and he recovered relatively quickly. He never lost bladder control when he seized. The critical turning point was in September 2018 when he went into focal seizure mode and had to go to ICU. This followed another ICU episode in December 2018 where we thought we would lose him. The neurologist worked with us to find the right medication level. There were times we pushed back on the suggested medication levels but discussed it with the neurologist. I think it is important that owners who know their dogs best and have to manage the dog everyday feel confident to add their 'supperne worth in. On hindsight we have three issues (1) the length of time it takes a medication level to work through and to assess impact means it is several weeks from each medication change before you see if it has had any impact in controlling the seizures; (2) the vets are highly dependent on blood lab results to ascertain the medication levels and in our case, there were blood results that was inaccurate/incorrect and thus unreliable. We queried this and new bloods were taken but each time there was an episode, this delayed the possibility of accurate blood works and (3) neurologists are focussed on controlling the seizures but need to work hand in hand with liver experts so any increase in PB should be done only after a check on the state of the liver, it should not be automatic. It is our belief that we might have been able to reverse the liver failure had Boston's PB not been raised after summer 2018. Though the seizures were better controlled, his liver was damaged beyond repair. On the other hand if the PB was tapered down in summer 2019 and only Bromide used (or possibly in tandem with Keppra), would he have succumbed to some grand mal seizure - we will never know. Ultimately, epilepsy is life limiting - that we do realise.	OWNER

Medication: Jack has Epiphen 1 x 60 mg twice a day and has just started him on Traxidone. Details: Vet started Jack on Epiphen did well then had occasional fit, tried higher dose but he was worse so put him back on lower dose. He still has a few fits a year and focal ones. Went from a quiet dog to being very noisy. Not neutered. His fits are a few mins, he takes a while to come round. Last one last year, he could not see and panicked, he took a while to recover.	OWNER
29-Oct-19		Choystean Mylen Pippin - Murphy	AS0067402	N/A	BC - UK KC Pedigree	24-Jan-15	UK	Dog	Jacksroffer Silverbitch Over Choystean	SH CH Littlehorn Galaxy	Jacksroffer Greatglen Be My Girl	Sarkam Life Initiation In Choystean	Terannos Final Demand	Sarkam Destiny's Dream	2 years 2 months	YES	Referred to Willows at Solihull who examined & did an MRI scan	YES	N/A	No reason for fitting as far as I am aware. Medication: Initially Levetiracetam 3 times a day but as it did not control the fits Epiphen was included twice a day. Full blow fit at lunchtime by my feet. Went on for a minute from which he got up and walked slightly wobbly into the garden. Up until then perfectly healthy, happy young dog. Fed on Millies kibbles. Seizures are now under control. He was castrated at almost 3 yrs old but prior to that he was chemically castrated twice. He is currently well controlled on meds.	OWNER
28-Feb-21		Cloudy	N/A	N/A	Unregistered - UK	28-Aug-16	UK	Dog	Unknown	Unknown	Unknown	Misty	Unknown	Unknown	1 year 7 months	YES	Not disclosed	YES	N/A	Suspected triggers: He definitely has epilepsy but the condition could have been triggered or exacerbated, by the original liver problem. Medication: Cloudy responds very successfully to a regimen of KBr (Lithiumide), Levetiracetam (Keppra) and Phenobarbital (Epphen) and has almost no fitting, with the occasional 'petit mal' seizures. He has very occasional full tonic-clonic seizures when his medication has been compromised, e.g. missed dose or after activated charcoal treatment for ingestion of toxins. Details: Has epilepsy and liver shunt. He started fitting regularly at 18 months in February 2018 and responded well to Phenobarbital. Went into status in May probably due to hepatic encephalopathy. Routine blood analysis showed a liver anomaly and it was found he had a hepatic shunt after scanning. Surgery was carried out in June with 100% success, but the fitting continued. He is still taking regular medication at 4+ years of age with occasional recurrence of fitting especially if medication is compromised, even though his liver is perfectly healthy and functioning. No indication of food relating to seizures but he is now on a hepatic diet due to the shunt.	DATA TRANSFER & UPDATE BY OWNER

19-Jul-19		Del o'Inquest - Del	Stud book no. 0208CB	175755	BC - Dual Registered UK KC & ISDS	14-Jun-88	UK	Bitch	Craig (ISDS 1213701)	Spot (ISDS 82060)	Jill (ISDS 84277)	Gem (ISDS 132338)	Spot (ISDS 91062)	Shias (ISDS 115444)	3 years	NO	N/A	NO	Death was unrelated to fits. Lived until she was 14 years	Del used to fit every 6 months, 3 fits and then none for next approximately 6 months. This continued until I moved, then she stopped. Del was never given any medications as my vet thought they would cause more damage than the fits themselves. Full bloods were done annually until towards the end of her life, there were no abnormalities thrown up. I moved when she was approximately 11. Once I moved there were no more fits. Spayed.	OWNER	
31-May-20		Delanor Pinball Wizard - Whiz	A03743806	N/A	BC - UK KC Pedigree	22-Jun-08	UK	Dog	AG OH Forbylor Turbo Diesel	Woodcorrel Red Wine	Tri Fly	Delanor Waggit A Lot	Rosmarinus The Werrymann	Delanor Kirri	5 years	YES	Various consultations and investigations with vet. Blood tests etc for other causes (nothing found). No scan was done.	NO	Whiz died in status when he was 7 years, 3 months. He started fitting early morning on 1st Sept 2015. He did not come out of the fits as he usually did and we were unable to stop it. After speaking to the emergency vet we managed to carry him to the car. Sadly he died on the way to the vets	Suspected triggers: None known. I spent two years looking for triggers and did wonder if swimming in the sea was a trigger for Whiz (sdr ???) but the day he died he hadn't been to the sea for two weeks. Medication: He was on Epiphen 30mg twice a day. This had kept him relatively stable until the last day. Details: Whiz was neutered at 15 months. I do not believe this had any effect as he did not start fitting until he was five. He had cluster fits, usually two or three lasting less than a minute with about half an hour between. He only had five groups of fits over an eighteen month period. He was, however, hospitalised overnight in July 2015 when he fitted six times over five hours. The vets gave him rectal valium.	OWNER	
29-Nov-19		Detania Glistening Pride	Not known	Not known	BC	29-Jun-97	UK	Bitch	Detania Cosworth	Detania Singing The Blues	Detania Keira	Detania Faith Moves	Detania Arza (ISDS 162879)	Detania Lady Lucy Lockett	4 to 5 years old	Not known	Not known	NO	NO	She started having epilepsy at around the age of 4 or 5 I think, with one fit which lasted probably less than a minute. They never actually lasted more than a minute I would guess, just seems a long time at the time. They gradually increased until about 18 months - 2 years, months later when she had 5 in one day, the vets then put her on medication - Phenobarbital I believe. This stopped the fits until the dosage needed correcting. Megan had to have regular check ups every 6 months (I think) and the medication did gradually increase. That's about all the information I can give you I'm afraid - hope it helps in some way.	10-12 years old. Megan actually contracted Bone Cancer in her shoulder which ended her life.	DATA TRANSFER FROM LYNN NORTON Added 25.07.14

28-Feb-21		Easterdale's Fleet O'Foot	K134734	N/A	WSD - UK KC Activity Register	07-Jan-10	UK	Dog	Easterdale's Prince Rory	Rock	Kim	Just the Tonic	Robbie	Tess	3 years 9 months	YES	Diagnosed by my vets and confirmed by specialist	NO	Age 8 years 4 months. Fleet was pts on 30 May 2018 following several hours of continuous fitting.	Suspected triggers: None mentioned Medication: Started on Pexion December 2015 with Diazepam when needed. Changed to Libromide, with Kepra when needed and Diazepam for immediate treatment of fits. Details: First fit at Jays 9 mths at 4am, grand mal. 9 fits over next 2 years, very short, all grand mal, all around 4am. On no medication then. In December 2015 had a severe fit lasting 5 minutes and put on Pexion. 3 further fits and dose increased in Aug 2016 as last fit was 6 mins and required Diazepam. Severely seemed to increase but frequency varied from 4 weeks to 9 months. Then Fleet's fits sadly increased in frequency and severity and he eventually began to cluster fit. His meds were changed, but things continued to decline. He saw a specialist who advised the meds he was on were what he would recommend but to try changing the timing of meds. His fits continued to lengthen and he had several emergency trips to the vet in the middle of the night, when Diazepam did not bring him out. At the end of the fit fitting during the day as well as at night-time and the fits were taking a terrible toll on him. He was pts in my house following a night of almost continuous cluster fitting. Neutered at 12 months, well before fits started. On cereal free Salmon and Potato mix. Food did not seem to be a factor.	DATA TRANSFER & UPDATE BY OWNER

31-Mar-21		Ellan-Vannin Millie	AS0902157	00/332956	BC - Dual Registered UK KC & ISDS	18-May-14	UK	Bitch	Ellan-Vannin Kirk (SDS 00/31443)	Joe	Breeze	Ellan-Vannin Mia 91SDS 00/314110	Spot	Bliss	2 years	YES	All normal, but clinical diagnosis based on the episodes, seemingly brought on by touch, was one of a rare type of seizure / rage syndrome.	NO	Age 4. Due to the escalating frequency and intensity of the episodes which were very distressing for her and us, we sadly despite trying all we could, had her PTS.	Suspected triggers: Millie was a very loving girl who used to lay for hours next to me having cuddles and sunny naps so this is all the harder to explain. Every six weeks a sudden explosive episode of rage with no warning. We didn't understand at first but there became a pattern to it and so the 2 year journey of trying to manage her seizures safely began. Before an episode she became increasingly sensitive to light and noise, afterwards she would hide and sleep 8 off. Medication: Pexion to start then stopped. Followed by a combination of Epiphan and Kepra. Prozac was also tried but made no difference so was stopped. We tried all different types of epilepsy medicine. Details: Frequency was from about every 6 weeks until Christmas 2017 when she started clustering. After the initial setting of the cluster episode the following seizures were more frequent with no pattern and each one was for a longer period of time. Food was not a trigger although to alleviate as much non natural things in her diet as possible, we changed her to a raw diet and although it did not help her seizures, she did very well on it. Millie was neutered but it made no difference, she was spayed before the onset of the seizure. Due to the severity and type of seizure Millie had, we could no longer manage her safely, just to say that Millie would come to us probably feeling unwell for a couple and it was always as we would touch her that the seizure would happen. She would usually have been asleep beforehand. Never happened at play or with strong touch/rough cuddles only ever gentle strokes, episodes lasted 5 seconds but near the end more like 10 seconds and we just couldn't manage her safely and the most traumatic thing was we could no longer cuddle her as she or we would have wanted (the seizures along with disc degeneration was also aging her rapidly too), so the heart breaking decision was made to say goodbye. It was truly a traumatic journey for and with her.	DATA TRANSFER & UPDATE BY OWNER 31.03.21

29-Nov-19		Grenaby Skeel Graih	Not known	Not known	BC	15-Sep-11	UK	Dog	Ludgate Red Laser	Woodroffe Spectre AW	Firelynx Jumanji at Ludgate	Grenaby Editors Choice	Grenaby Tucker	Nunory Kim At Grenaby (SDS 231219)	1 year 6 months	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Pexion 400mg twice daily. Initially fed on Skinners kibble then once the fitting started, a home prepared diet of brown rice, potatoes and vegetables with raw meat to try and reduce gluten, corn, soy and casing per the GAD diet. This seemed to help for a while, with improving gaps between fits until last week, when he had several fits and he became critically ill at the weekend with cluster fitting. Fits have changed in frequency. We had got him up to 17 days between fits, and had wanted to try and manage it naturally (without drugs) but that all changed last week as described above and the treatment was necessary to save his life. After we got him, we heard that the dogs (not the bitches) in the previous litter had all started to fit. So we opted for an early castration at 5 months. We are very lucky that he is still with us, but it was devastating to see him so poorly. He was in intensive care for 3 days and has been home for 3 days now, improving visibly by the hour. If I can provide you with any additional information, please do not hesitate to shout.	DATA TRANSFER FROM LYNN NORTON Added 11.09.13
31-Aug-20		Gwen	N/A	N/A	Unregistered - UK	01-May-99	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	Veterinary observation	NO	16 years. Euthanasia after uncontrolled fitting	Suspected triggers: No known triggers. Medication: Phenobarbital given initially with limited success. Potassium Bromide controlled the epilepsy completely until aged 16 when digestive problems made the medication unusable. Details: Spayed before 1yr by rescue charity. Survived Parvovirus virus aged 8 months. Fits became progressively longer and uncontrollable. She had to be sedated for up to two days to stop the fitting. Fits ceased immediately once potassium bromide was given (in solution twice daily with food).	OWNER
31-Aug-20		Gwyneth (ABC 421786)	N/A	N/A	Non UK Registered (Border Collie)	02-Jun-15	USA	Bitch	Yosemite Gold (Flash) (ABC 220881)	Race (ABC 145723)	Bella Jewel (ABC 239542)	BB Honey (ABC 397387)	MIR BB Shihoh (ABC 386155)	BB's Scotch (ABC 380996)	4 years 6 months	YES	All tests came back normal. MRI, spinal tap, and bloodwork all normal. The neurologist diagnosed her with idiopathic epilepsy	YES	N/A	Suspected triggers: Unsure of any triggers. Medication: She was just put on Zonisamide 100mg in the am and 50mg in the pm. Details: She has had 4 grand mal seizures at night only. They started in Jan 2020 at 3 months apart, then once they got to a month apart, the neurologist put her on medication. She convulsed, foams at mouth, eyes roll back, she loses consciousness and I am not able to snap her out of it. She used to run around the room right before she started seizing, but after doing this twice, I started crating her at night in a soft crate. Her seizures last a couple of minutes, and she takes on average 3 minutes before she is completely conscious. She gets monthly chiropractic and acupuncture. I got a wellness check swab with fur sample done and it gave me a list of foods she is sensitive to. I have created a home cooked meals ensuring she only eats foods that she should. I have added MCT oil, B complex vitamins, omegas and do a monthly liver cleanse.	OWNER
29-Nov-19	31-03-20	Gwynfar Marc My Words	Not known	Not known	BC - UK KC Pedigree	19-Dec-11	UK	Dog	Wildblue R's The Business	AM CH Kybota Wildblue Rhythm	Wildblue Eternal Dream	Trevellis She's A Gem at Gwynfar	Altricia Shady Blue	Dentelle of Sunloch Valley	2 years 2 months	YES	Vet confirmed as Epilepsy	NO	3 years 5 months. He had another severe seizure during the night which left him paralysed from the shoulders. We then made the decision that he should be p/s 1st June 2020. 11/01/2020 - Update to Registration Type.	Medication: Initially Pexion, after 6 weeks Libromide was added This combination was satisfactory for a while but then fits resumed, if anything worse than previously, he then had Epiphen and also Diazepam. Neutered after onset of fits. From the outset his fits were severe and caused significant memory loss and required a lot of retraining etc. We had a honeymoon period when we thought that the medication was going to control the seizures but when they resumed each time it was more severe and the recuperation period took longer. He had a very severe cluster of fits which effectively wiped his memory and character. He was very close to death but pulled through. We taught him to walk etc again and after 6 weeks he was basically ok. He was a different dog but he lived us and was content in his life. UPDATE ADDED 31/01/2020 - Update to Registration Type. 29-Nov-19		Gwynfar You Were Made For Me	Not known	Not known	WSD	22-Feb-05	UK	Dog	Fenom Full 'O' Fun	Summertime Sweep	Majacabus Oso Trick	Tyeemade Maggie May of Gwynfar	Wharknow Rockin Symphony	Gwynfar Catch Me If You Can	1 year 10 months	YES	Vet confirmed as Epilepsy	NO	6 years 10 months. Dog is no longer alive. He went into a cluster fit episode that could not be stopped with medication and it was felt that he had suffered enough and had had his last fit.	Medication: He was initially prescribed Just Epiphen, but over the next 5 years his medication was gradually increased to try to control his fitting. From his first fit, he didn't have another for 18 months then the frequency increased until roughly every 3 weeks by this time he was on 230mg Epiphen at 8am and 8pm, 300mg Gabapentin at 8am, 2pm and 8pm, 500mg Kepra at 8am and 8pm, and 250mg at 2pm. He was on Autarky at the onset of the fits but as the intensity increased, he was moved to a completely natural diet of chicken and vegetables. Much research was carried out into the ingredients of manufactured dog foods, and it was found that certain things can be a trigger factor to epilepsy so knowing what was in his food was important. He had cluster fits over 2 days on the first occasion and was given medication to try to stop the cluster, it was then 18 months before his next cluster fit, his next fit was then 3 months later, after which the frequency increased from around the age of 4 until the fits were happening every 3th weeks. It was often a cluster of 3 or 4 fits over a couple of hours, but he needed veterinary assistance on 2 occasions when he was anaesthetised to stop the fitting as the episodes had continued over 24 hours or more. NOT neutered as the vet advised against him being operated on because of the risks with his epilepsy.	DATA TRANSFER FROM LYNN NORTON Added 10.09.13

Good results since prescribed Pexion and after the tablets got into her system. She was already spayed before the fits started.	DATA TRANSFER FROM LYNN NORTON Added 23.03.14
31-May-20		Jack	N/A	00355613	BC - ISDS	21-Sep-17	UK	Dog	Felvide Dash (ISDS 007915798)	Killiebrae Laddie (ISDS 262793)	Killiebrae Jet (ISDS 283073)	Meg (ISDS 00516242)	Spot (ISDS 268972)	Nell (ISDS 274798)	2 years 1 month	YES	Vet	YES	N/A	Suspected triggers: Possibly stress. Medication: Epiphen and Libromide. Intact Male. Seizure approx every 2-6 weeks. Seizure length average 45 seconds. We got Jack when he was 14 months old, he had his first seizure about 2 months after his 2nd birthday (late Oct 2019). I phoned the vet and they gave me some great advice on how to monitor and what to do during a seizure, unfortunately a couple hours later he began to cluster so was rushed off to our emergency vet for sedation. We discussed the options for meds and agreed that we would not medicate at this point. 2 months later he had his next seizure, so an appointment was made to check his bloods again, this time the vet suggested we put him on Epiphen. After a while with only the sporadic minor seizures he began to cluster again (5 in 2 hours) he was kept at the vet that day and was started on Libromide and we were given emergency meds for future clusters. Since then Jack has been only having small seizures roughly once every 2 months. We continue to medicate with the Epiphen and Libromide and record any seizures in his diary or on film when we can. Jack is the most loving, happy dog and wants to be friends with everyone he meets. We love Jack dearly and wouldn't be without him.	OWNER

21-Aug-19		Jess	N/A	N/A	Unregistered - UK	27-Jun-03	UK	Bitch	Rip (ISDS 250011)	Glen (ISDS 198708)	Fran (ISDS 219858)	Floss (Not registered)	Ben (Not registered)	Jill (ISDS 225588)	2 years	YES	Blood tests and other family members fitting	NO	Died aged 11 in Status Epilepticus	No known triggers. Epileptic cousins. Medications: Initially Epiphen then Libromide added and finally Keppra. Spayed before onset. Cluster fits showing signs of brain damage. Jess had refractory epilepsy. Despite increase in doses of Epiphen and addition of Libromide followed by Keppra she continued to have cluster fits admitted to vets on several occasions to try and stop the clusters. The only time she was fit free was on large doses of Epiphen which eventually caused her liver to have problems metabolising the drug and she started to fall over eventually being unable to walk. At this stage she was referred to a neurologist and put through MRI scan, spinal tap, blood tests etc. The result was that she was being poisoned by the epiphen which her liver wasn't metabolising. Her dose of Epiphen was reduced and she was put on a liver supplement. With the reduction of Epiphen she went back to cluster fitting every three months till she died 2 years later in status epilepticus.	OWNER

Medication: Pexion 600mg a day. Details: Rarely happens but occasional cluster fits, longest fit lasted 13 minutes usually last about 4 minutes. Can be months/weeks between fits since being on medication.	OWNER
31-Mar-21		Jess	N/A	N/A	Unregistered - UK	20-Jun-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	About 18 months	YES	After videos we had taken and being tested at Fitzpatrick. They started her on medication, which caused her to fit more	YES	N/A	Suspected triggers: Extreme exercise, stress, heat in the summer. Medication: Phenobarbital and Pexion which she is being weaned off. Getting ready to start Potassium Bromide once Pexion has finished. Details: Jess has been spayed. She is a very anxious dog who is upset by any noise. Her fits are like petit mal at times but also grand mal fits where her nose and bottom jaw, her eyes roll up, then she starts to shake. They can last from between 30secs and 2 mins. She also has episodes where she lays in her dad's arms and flops her head on the sofa and can sleep for up to 30 mins. You can say pussycat, squirrel, dinner, name of a visitor and she doesn't move. All the time there, her limbs don't move and when she gets off she has left a small mark on his trousers. The last two fits she has been incoherent and wet the bed. Occasionally she can be aggressive, but normally a very placid girl. She has changed, doesn't like her harness on or collar, seems worried to go to my husband.	OWNER
21-Aug-19		Jez - Jazz	K14155S (activity register)	00/913905	BC - ISDS	03-Apr-11	UK	Dog	Lad (ISDS 267484)	Roy (ISDS 245540)	Jan (ISDS 237153)	Tess (ISDS 00/301628)	Lwynnys Nap (ISDS 253871)	Killbrae Sky (ISDS 274792)	2 years 2 months	YES	MRI	YES	N/A	Possible glancing adder bite - he had a puncture wound in his nose and swollen face for 4 weeks, for 4 days before. Medication: Epiphen, Potassium Bromide, Keppra and Diazepam to try to stop clusters. CBD oil plus herbal products. Everything has worked well initially but then has become less effective. He has just been prescribed Pexion to use for a few days after seizures to try to stop the cluster. Jazz is entire. He fathered a litter before his seizures started - his son started having seizures at 15 months and was pgs at under 2 years due to uncontrollable seizures. Jez' sister started fitting a year after him and she lost her battle in May this year. Jez always has GMs and always clusters. They have become progressively longer - will often be unconscious for up to 6 mins. We are very fortunate that Jez has a VNS implant. Langford vet hospital is doing a trial with Bristol Children's Hospital and Jez is the 4th dog to have the implant in June 2017. I am convinced that he would not still be alive if he hadn't had this. He is very active and 3 years ago started Rally Obedience and is now working at the top 2 levels.	OWNER
22-Dec-19		Jilly	N/A	N/A	Unregistered - UK	05-Jan-15	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 6 months	NO	N/A	YES	N/A	Taken to vet after first fit. Suspected triggers are totally unknown, just happened one night. Then continued monthly, always about 2am. Medication: Vet recommended not going on meds as they didn't last long and were so spread out just monitoring her and if anything changes consulting vet. Have rectal Diazepam in case she has another. She had one large fit about 6 months ago followed by some smaller ones. Was left with a twitch but vet put her on diazepam for a week and twitch cleared. All her fits are over in a couple of minutes and doesn't seem to be a pattern to them apart from monthly and always about 2am. She has had fits monthly up until 14th of September, but nothing since (now 02/12/19). She is spayed.	OWNER

Vet unable to stabilise fits after hours of continuous fitting, decision taken to euth.	No trigger known. Medication: Epiphem, stabilised for a while. Short fits for first few times, 5 to 10 minutes until one which lasted at least 5 to 6 hours. Went into Status Epilepticus, found fitting at 12.30 pm, taken to vets, still fitting at 4.00 pm.	OWNER
29-Sep-19		Kingsfarm Lady In Red - Indi	K127121	N/A	WSD - UK KC Activity Register	22-Feb-08	UK	Bitch	Borderair King Of Swing	Sh CH Brookside Country Classic	Borderair Pink Fizz	Menymarsh Dress To Kill Of Kingsfarm	Tenita Black Magic At Kingsfarm	Faith In Menymarsh	9 years	YES	Blood Tests	YES	N/A	No suspected triggers. Medication: 200mg Pexon twice daily. No change noted as put on 2nd time she fitted when she fitted 3 times in 3 days which coincided with having vitamin tablets. Put on Purina Neurocare dog food which made a big difference in her recovery after a fit. When taken off this I started on Coconut Oil since when the time between fits has gone from roughly every 2 months to over 6 months.	OWNER
21-Aug-19		Kingsfarm Male Of Honor	K139324	N/A	BC - UK KC Pedigree	08-Nov-11	UK	Bitch	Tameryne Celtic Laird	Bellariv Highlandr CDEX UDX	Tameryne The Ferrari	Kingsfarm Dress To Impress	Borderair King Of Swing	Menymarsh Dress To Kill Of Kingsfarm	5 years 5 months	YES	Vet said it was because she had now had 4 episodes	YES	N/A	In vets during first one - stress? 2nd one it was a very hot day and had eaten cheese? Medication: Epiphem 1x 2 twice a day, Epitaur 500, Milk Thistle & CBD Oil. She has remained fit free since. Spayed in 2012. Her last fit was the worse - much more intense and longer (lasted about 3 minutes) and she took longer to come out of it. In April 2017 Macey had a routine dental examination. In waiting room afterwards I noticed her mouth was twitching and started to foam. The vet took her in side room where she was fitting on the floor. They kept her in for observation for a few hours. Vet thought as she was stressed this was probably the reason. No medication given to me as they said they only medicate when they have had 3. All at and fit free until 2018. Around 10am Macey was resting in kitchen and started to fit. No vet appointment until 4pm that day. No tablets given but was told to administer rectal diazepam if she had another. 2 hours after being home she had 2 more - more severe than before - rectal diazepam given. Called emergency vets as I couldn't cope with seeing her fit. They agreed to have her in overnight to observe. Got a call 3 hours later saying she was so stressed and would be better at home. Epiphem was prescribed 1 tablet twice a day. I also got her Epitaur 500, Milk Thistle (to help her with Epiphem & CBD Oil. She has remained seizure free since. The day of her first fit at home it was a very hot day she had also just eaten some cheese (which is now off the menu).	OWNER
19-Jul-19		Kobi	N/A	N/A	Unregistered - UK	15-Jun-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 8 months	YES	Confirmed by vet	YES	N/A	Suspected triggers are stress and also air pressure (bumpy weather), bright lights. As Kobi is deaf and also almost blind he bumps into objects which stresses him. He can't go to vets surgery as stress causes seizures. Medication: Vets have tried almost all meds over the last four years. He still has seizures but they are 1-2 a month now. At the moment his meds are: Epiphem, Uibromide, Levitracetam and Sodium Valproate. Diazepam for cluster seizures. He has recently been diagnosed with diabetes too so is now on insulin too. We have struggled for four years to get him to this point and tried so many different meds. Have also had advice from a neurologist who diagnosed textbook Epilepsy. Kobi has blood tests regularly to tweak his meds. He is a blue merle, totally deaf, almost blind and now diabetic aged 5yrs old. While trying to get the right balance of his meds he was having clusters every other day. As his meds are now he will have 1-2 seizures which leave him completely exhausted and wobbly for days. His seizures are 1-2 a month at present. Neutered. Rescue dog from Border Collie Trust GB.	OWNER

YES	N/A	No apparent trigger. Medication: None. Thankfully it only happened twice and not since. Random seizures. Only had two since that month. Monitored and not happened since. Lasted around 10 mins each.	OWNER
21-Aug-19		Koopa	N/A	N/A	Unregistered - UK	22-Feb-14	UK	Dog	Gwynion Paddy	Unknown	Unknown	Gwynion Gwen	Unknown	Unknown	2 years	YES	MRI	NO	5 years. He had two failed infusions, couldn't stop the seizures	No suspected triggers. Medication: he had a VNS implant, was on epiphem, pregabalin, leppers and zonisamide. KBR made him crazy and then unresponsive, we even had a VNS implant inside him to try help. CBD did nothing.	OWNER
29-Sep-19		Lacey	N/A	N/A	Non UK Unregistered (Border Collie)	10-May-19	SOUTH AFRICA	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	Blood tests MRI scans Diagnosed idiopathic Epilepsy	YES	N/A	Suspected triggers: Bravecto tick and flea treatment. Light sensitivity. Extreme change of routine. Medication: Phenobarbital. This has helped control the seizures and we went 9 months seizure free at a stage. She seemed to develop resistance to it and due to her liver enzyme levels we added Kepra. Valium is used as a rescue medication. Lacey is spayed. Behaviorally she is very active, not just border collie active (we have two) she has endless amounts of energy and it seems as though she rarely switches off. She chases shadows and light reflections endlessly and barks them mainly on floors and walls. She also seems very sensitive and reacts to seemingly normal activities she has a barking fit/hartrum if you shower, take off your shirt, use squeeze bottles etc. It's as though she doesn't like you doing it and even gets worked up before you begin to do it for example if she sees you take clothes out to shower she starts barking. 2017 May 1 seizure, July 1 seizure, August September, November and October (partial) seizures one each month, December 1 seizure. 2018 January 2 seizures increased phenobarbital meds, April 1 seizure. 2019 February 1 seizure, March 1 seizure, June 1 seizure, July 1 seizure added lepra. Partial seizure it seems as though a seizure is starting and she comes and asks for help but then there is no seizure only excessive drool or teeth chattering. Lacey's seizures are usually just over a minute and she urinates during her seizures.	OWNER
19-Jul-19		Ladika Like a Rocket - Sam	Not known	N/A	BC - UK KC Pedigree	10-Apr-11	UK	Dog	Rosmak Dapple Dandy	Canen Baz (ISDS 251245)	Rosmarinus Rising Star	Rosmarinus Gin Soda	AG CH ForByFor Turbo Diesel	Rosmarinus Pimms	9 months	YES	Vet and consultant neurologist	NO	Sam died at 15 months old from cluster fits.	No triggers known. Medication: Phenobarbitone, Kepra, Bromide - no improvement seen. Fits started 1 a week. Cluster fits of up to 6 in an hour started after 2 months, sometimes only 3 days between clusters. Sam fitted almost constantly in his last 24 hours and had to be PTS because he fitted every time anyone went near him. A horrendous death as the chemicals to PTS made him fit more. Entire.	OWNER

29-Oct-19		Little Ozlie	Died before being able to be registered	N/A	WSD - UK KC Activity Register	08-Mar-07	UK	Dog	OB CH Whaknow Razmatazz (WSD)	Rockin Rapid	Forever Magic Fantasia	Croftmist Megan (KC)	Tanamerlye Krismons	Mainline Mist (KC)	45 days	NO	N/A	NO	46 days old. See Fitting details for more information	Suspected triggers: The vet suggested that he may have had worms but it was not the case. Medication: No medication for fitting but ABs and Anti-inflams as below. At 44 days he became quiet and stopped interacting with his siblings. At 44 days he started seeking out dark places. Taken to the vet and was given antibiotics and anti-inflammatory injection. At 45 days he was again searching for dark places. He was very distressed when travelling back to the vets and fitted badly within minutes of arriving. At 46 days old he began fitting and was taken back to the emergency vet. He resembled a clockwork toy and was very rigid in his mobility. He seemed to have stopped growing. The vet blood tested for a liver shunt which came back negative. As the vet examined him, Ozlie became very distressed when his head was held and was obviously in a great deal of pain. The vet diagnosed inflammation of the meningeal (tissue surrounding the brain). The vet and I agreed that euthanasia was the only option. Two other pups from the litter also fitted at later intervals and both have died. The rest of the litter were registered with my 'Croftmist' affix. Megan was spayed after. The two other dogs from the litter, that fitted, were put to sleep at young ages due to the fitting. Ozlie was unregistered but the rest of the litter were KC registered.	OWNER/BREEDER

29-Nov-19		Lugitoonz Tazmanian Devil - Taz	Not known	N/A	WSD - UK KC Activity Register	03-Mar-09	UK	Dog	Frod Pike (SDS 254417)	Ben (SDS 235217)	Ben (SDS 23544)	OB CH Collewood Candy Girl	WT CH Waggerland Fitz	Forest Sprite Psyche	2 years 10 months	YES	Referred to Animal Health Trust Newmarket for MRI & Spinal Tap (both clear)	NO	6 years 1 month. His liver was grossly enlarged and he could not breathe as he had fluid in his lungs. Extensive organ collapse and brain damage due to drugs and cluster fits. PIS 22.04.15	Never could find a trigger. First fits 2 weeks apart. Medication: He was on Phendibital, Libromide and another drug I can't remember the name of. Fit free for 8 months until Sept 2014, we struggled and could not get them better than one every 7-10 days. Had to increase his meds several times, this impacted on his body. He had a period of seven months, during the twelve months before he died, when we thought we had him stable and no fits. Then they came back and we just could not get any control at all. At the end he was having constant Petit Mal seizures between the Grand Mal ones, the drugs just didn't work anymore. Also rectal Valium to stop the fits once they started. During his last three months he had some Prednisone. Taz was not neutered. His fits were, right from the start, five to eight minutes long and extremely violent. They occurred mostly when he was asleep or resting. Frequency two to four weeks apart but he might have two or three fits at a time. Pied Pike has sired other dogs that have fitted. Unfortunately none of them had started to fit before he was mated to Lulu.	DATA TRANSFER & UPDATE BY OWNER

29-Feb-20		Marley	N/A	N/A	Unregistered - UK	2011 approx	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	Not known (rescue dog, owned since 5 years old, had fits before being adopted)	YES	Blood tests excluded anything else, vet said most likely Idiopathic Epilepsy	YES	N/A	Triggers unknown, although previous owner mistreated him and was convicted of animal cruelty after kicking Marley repeatedly on numerous occasions. He had a broken tail. Could have had injury to head maybe? Medication: he has had for less fits since starting a raw diet with coconut oil and CBD oil. Once a seizure starts, we give CBD drops immediately and the fit subsides quickly and he recovers far better. Before CBD he would have cluster fits and twice had status epilepticus where the seizure continued for nearly an hour. With CBD they last only a minute or two and are very mild. Neutered at approx. 4 years old. Very dominant male, pushy with other male dogs. We think Marley is a Welsh collie. He is sable and white, herds upright and is loose eyed. Contacted the Welsh Sheepdog society who said epilepsy is very rare and practically unknown in registered Welsh Sheepdogs, although common in border collies. They suggested Marley is therefore most likely a Welsh Sheepdog/ BC, cross, or if he's a pure Welsh, his epilepsy is probably injury related rather than inherited.	OWNER
29-Nov-19		Marshonelle Howdylicious	Not known	Not known	BC	05-Nov-12	UK	Dog	Rosmarinus The Chocolater	Rosmarinus Jaffa	Rosmarinus Demerara	Marshonelle Izzie	Rosmarinus The Rainmaker	Amazin Gracie	1 year 1 month	YES	Vet confirmed Idiopathic Epilepsy. All possible tests done, including an MRI scan and spinal fluid tap	Not known	Not known	Medication: 40mg of Pexion twice a day. He was flea treated a week before, to which he was stressed at time of doing so and was off colour from that point up to first fit. He was fed on mainly raw with some dry food. Had an allergy test done and he is allergic to chicken, duck, wheat and gluten. Changed to pure BA6F diet minus the chicken and duck. In himself he became brighter when food was changed, he started to grow again, coat became fuller. His fits have become less frequent but this may coincide with having all possible test done, including an MRI scan and spinal fluid tap, to diagnose epilepsy and being put on the right medication. When they first started he had several in a week, once food changed these decreased and since medication started they have decreased further. Longest between fits has been 31 days.	DATA TRANSFER FROM LYN NORTON Added 30.04.14
19-Jul-19		Marshonelle Switch It On	AP0428501	N/A	BC - UK KC Pedigree	05-Nov-12	UK	Dog	Rosmarinus The Chocolater	Rosmarinus Jaffa	Rosmarinus Demerara	Marshonelle Izzie	Rosmarinus The Rainmaker	Amazin Gracie	7 months	YES	Vet confirmed as Idiopathic Epilepsy	NO	Major seizure	No triggers identified. Time frame was too short to collate information. Medication: Pexion 400mg twice daily. One small fit on 28.06.13 whilst asleep on sofa lasting less than a minute, recovered within 10 mins. No further fits until 9th July, when found fitting in the morning. Rectal Diazepam given. Fitted again same day at 3pm, same treatment, but 4 further fits, taken to vet, kept overnight and stabilised. Home on the 10th but fitting again between 11am and 2pm so back to vet and again kept in overnight and sedated, Phenobarbitone on and a drip. Prognosis was poor at this time. Brought home on the 13th July, Pexion 400mg twice daily. Recovery seemed unlikely but daily improvements noted - motor function, spatial awareness, vision, recognition. Following 22 days charted phenomenal progress in physical and mental capabilities, by 1st Aug he was at 95% of his previous levels of Obedience training. On 2nd August he had another brief fit at 3:00pm (similar to his first) with the same outcome. At some time between 3am and 4am on the 4th Aug he suffered a major seizure, rectal diazepam x 3 was administered but to no avail, and he passed away shortly afterwards before the vet arrived. Vet hazarded a guess at major haemorrhage as cause of death. Neutered.	OWNER

No fits since RVC increased epiphen to top of therapeutic dose. UPDATE Added 23/07/2020 Since November 2019 Mojo was on Phenobarb 150mg twice daily, Potassium Bromide 500mg once daily & 300mg Keppra twice daily. He had Diazepam after every bad fit by injection. Having worsening fits weekly. He was euthanised in April after going into status.	OWNER Updated 31.07.20
29-Feb-20		Molly	N/A	N/A	Unregistered - UK	17-Aug-19	UK	Bitch	Unknown	Unknown	Unknown	Shadwell Sophie (SDS 350782)	Joak (SDS 327212)	Adelph Ember (SDS 321991)	6 months	YES	All blood tests done and no underlying issues	YES	N/A	Suspected trigger: Stress may be a trigger. Medication: Pexion - this did not work in my opinion made it worse. Epiphen - immediately calmer and fitting stopped. Molly had what we thought were panic attacks from when we brought her home. I now believe that these were partial seizures (Psychomotor), which evolved into full seizures. These stopped when Epiphen was introduced. She is also very anxious and hyper sensitive to certain sounds (cutlery, tin foil, running water). Epiphen has also helped with this.	OWNER
29-Oct-19		Moose	N/A	N/A	Unregistered - UK	15-Jan-19	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Moose took his first fit at 6 months, from which I took him to the vet and blood tests were conducted. Since Moose was a male BC the vet believed it was a high probability that Moose was suffering from Idiopathic Epilepsy	NO	Passed away at 8 months old. Began fitting. Fits were lasting around 4 minutes give or take. Was taken into vets where he was sedated. As he came out of the sedation he took a fit which he did not come out of	No suspected triggers. Medication: Started on Pexion and went two weeks without fitting. However had to be placed on Keppra as well due to him still fitting. After 3 weeks on Keppra and Pexion, Moose took a cluster of 7 fits within 18 hours and then was placed on Epiphen and Keppra. This allowed him to be fit free for 1 month until vets decided to lower the dosage of Keppra, the Keppra was dropped to half a tablet and Moose took his final fits and eventually passed away. Due to the level of medication Moose was on, his focus and concentration were terrible. I have recently read an article stating that the trainability of dogs suffering from epilepsy drops after their first fit and I can back this up from what I've seen with my boy.	OWNER

30-Sep-20		Ozzy Bear - Bear	N/A	N/A	Unregistered - UK	31-Jan-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 9 months	YES	Taken to vets after seizures at home. Treated by local vet and also Animal Health Trust Newmarket Suffolk. Brain scans and medication check. The neurologist at Newmarket had told us that Bear was one of the most difficult dogs he'd seen to treat at the time. His brain scan showed white areas where brain damage had occurred because of his seizures	NO	3 years - Passed to bridge 30th May 2017	Data from 31.01.2016. Suspected triggers: I've kept a diary since his first fit which was in October 2015 and at first we thought it was a supplement or we put on his food. We stopped it but found the fits carried on regularly until he clustered and we had to put him on meds. They were 2 weeks apart within a day each time, then he had 2 in 3 hours. Medication: He started on Epiphen 45mg twice daily. He had blood tests every 3 weeks and after each blood his dosage was increased by half a tablet each dose. As at the above date he was on 75mg twice daily. He also has Diazepam in case of severe fitting of 5 minutes. Details: Bear's first seizure was at 6.30am, he'd last eaten at 5.30pm the evening before. He is fed Naturals Diet which is cooked, he has that with Pedigree Chum mixer for large dogs. Most fits are between 4.30am and 6.30am when asleep. Since he started his meds he has not fitted, though after blood tests they have kept increasing his dosage. He has now been 6 weeks fit free. Bear is a very large collie weighing around 34kg. He came from a working farm in Wales as did his brother who is coming up to 3 with no signs of the same. He was neutered at 9 months old and had not fitted until October 2015. UPDATE ADDED 30/09/2020 to: Date of Birth/Registration Type/How epilepsy diagnosed/Is dog alive/Age & Cause of Death. 29-Nov-19		Paddy	N/A	N/A	Unregistered - UK	12-Oct-17	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	Vet tested for all other possible conditions which were clear, this left us with Idiopathic Epilepsy	YES	N/A	Not sure as very early stages of any suspected triggers, only had first seizure on 12/02/19. Possibly stress related? Medication: initially given Peixon 400mg half a tablet twice a day, 12 hours apart. On 15th November began fitting again, first one was as all the others, he was sleeping then began a cluster, Diazepam administered but continued to fit the morning after, on another trip to the vets they issued more Diazepam & introduced Epiphen, he had a loading dose for 24 hours (4 tabs) along with the Peixon then reverted to 2 tabs 12 hours apart plus Peixon for 24 hours, another vet trip booked for 18/11/19 to discuss future medication. Neutered at months old. Seizures initially were when sleeping but in last 24 hours they have been when awake. Fits are never very long at the moment, around 30-45 seconds. Some seizures have appeared to be caused by one of the other dogs growing at him.	OWNER
21-Aug-19		Phoenix	N/A	N/A	Non UK Unregistered (Border Collie)	30-Jan-14	CANADA	Dog	Eltreck Moss (CBCA 7365)	Imp Jake (ABC 174412)	Eltreck Falt (ABC 184189)	Tess (Unregistered)	Quill	Reba (CBCA Reg)	4 years	YES	Toxoplasmosis Titre	YES	N/A	It's only been a year and we are looking for triggers. Neurologist suspects seasonal pollen. Medication: Keppra, Iprinatam, Zonisamide. Seizures stopped after the addition of Zonisamide. All three meds are taken three times a day. Seizures stopped all winter and started up again in May. One in May, one in June, one in July. Peanut butter and potato chips might be a trigger. Neutered at 11 months, seizures average 2 mins. My dog is healthy, fit and competes in Rally-Obedience trials. His personality has changed and he has started, will often lack focus and will obey half of the time now. He has halted whining and is completely ball obsessed. Sire registered CKCA, Dam not registered. Phoenix is the only dog out of two Moss/Tess breedings (18 pups) with a seizure disorder. Phoenix's seizures are from Toxoplasmosis. It might be good to allow others connected to him through genetics to know that it is not an inherited disorder.	OWNER

He was also very nasty coming out of his fits and would have bitten both human & dog. Euthanised a few weeks later.	DATA TRANSFER FROM NORTON Added 10.01.13 Updated 20.10.13
29-Nov-19		Remajak Somerset Morn	Not known	Not known	BC	11-Jun-13	UK	Dog	Altricia Double Dare To Arrodare	Altricia Mister Consistant	Altricia Lady Madge	Borderbeau Blithe Spirit At Remajak	Lochell Travellin' South To Borderbeau JW ShCm	Lochell First To Firewh At Borderbeau	1 year 4 months	NO	N/A	Not known	Not known	Medication: see below. First fit 28.10.14 - seizure in the afternoon, followed by a slow but full recovery to normal state. Second fit 29.10.14 at 7am. Seen by the vet after each seizure and blood tests undertaken. Vet advised diagnosis of idiopathic Epilepsy at this stage but as yet no MRI or spinal tap has been carried out. He was otherwise fit and well with no further seizures as of 2.12.14. Initial course of Diazepam for approximately one week; treated with Epiphen twice daily from day of second fit for four weeks. Bloods have been sent to Epiphen to assess viability of phasing out medication. 24.1.14 castration under general anaesthetic; vet treated with advantage for possible fleas same week; 1.10.14 first year vaccination; 25.10.14 routine worming with Panacur. He is otherwise fit and healthy. All breeders/owners directly connected were informed immediately with sire/dam owners agreeing to wait for completion of initial four week treatment plan before submitting to database; dam & littermates will never henceforth be bred from. DNA to be submitted in due course. Fed James Wellblowed Turkey & Rice; no change before or after seizures. Neutered on 24th September, before onset of fits. UPGRADE ADDED 03.05.15 - Ryan suffered a seizure at 10.30pm. Recovery time was quicker than the initial two seizures last October but he lost vision for 15 minutes. 25 minutes after the seizure he took his ball to his owners to ask for a game. At the time of the seizure, his owners report that the Epiphen dose had been reduced gradually to 1/4 tablet each day (as he had suffered no further fits after the initial two) with the plan to take him off meds altogether in another week. However, their vet has now advised that the dosage should be returned to 1/2 tablet each day.	DATA TRANSFER FROM NORTON Added 04.12.14 Update 01.05.15

Thunder, full moon, fireworks. Medications: Phenobarbital, Keppra, Potassium Bromide, Nasal midazolam rescue, Diazepam preventative and rescue. Intact male, monthly fits clusters but stops after midazolam.	OWNER
30-Sep-20		Rusha Bright Little One - Nell	Not disclosed	N/A	WSD - UK KC Activity Register	10-Apr-15	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	YES	By the vet after having three in one morning	YES	N/A	No known triggers. Medication: Soliphen 90mg a day. Neutered. 1 year apart the fits.	OWNER
19-Jul-19		Ryans Mirk V4072 (VSDWA)	N/A	N/A	Non UK Registered	19-Mar-07	AUSTRALIA	Dog	Princes Dooley V2955	Braiston Don V2203	Princes Zoe N0102	Allandale Gypsy Q3536	Dan (SDS 220972)	Crowdsdale Cindy Sarah Q2789	10 months	YES	All usual testing was undertaken to rule out other causes (not MRI)	NO	Euthanased (17 months) after bad weekend and seizure on the Monday morning - very restless, whiny, regular valium to settle. Seizures getting worse, developed into cluster seizures preceded by running without purpose including into fences/walls.	No triggers identified. Went on elimination diet, then natural diet only (Holistic vet advised). Thyroid panel showed normal range. Medication: Phenobarb and KBr. Increasing dosages but seizures got worse.	OWNER
29-Nov-19		Sam	N/A	N/A	Unregistered - UK	30-Mar-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	YES	Multiple fits leading to seeing a neurologist. He has had numerous blood tests and an MRI to eliminate tumours etc	YES	N/A	Suspected trigger is pollen as he is worse throughout the summer period. He is on a hypoallergenic diet. Fully vaccinated. Up to date on flea and worming. Medication: He started on Penion which made clusters worse. He moved to Epiphen which was a lot better but still having them often. He has just started on bromide and after 4 months, we are going to start reducing the Epiphen. He is neutered. He was fitting every 2 weeks but currently 33 days seizure free from starting Bromide. His fits go on for approx 5 mins and they are all grand mal. I have not noticed him have a focal seizure nor does he just tingle. If he has a fit, it's always a big one. He starts his fit by turning his head all the way around and basically looks behind him. His eyes go wide and he starts to fl. He always paws and foams at the mouth. Sometimes he bites his tongue ending up in bloody spit being strangled around.	OWNER
29-Nov-19		Sam	Not known	Not known	BC	01-May-07	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years	YES	MRI and Lumbar Puncture. Bath Vet hospital confirmed as Epilepsy	NO	Died May 2013 aged 6 years. He fitted off and on for just over a week in clusters. We arrived home one evening to find that he had died. The vet said it was a grand mal seizure that only instant medication could have saved him and he would not have known what was going on	Medication: Epiphen. Nothing unusual happened that I can think of I did notice it initially happened after we had been out and we got caught in the rain. Like he had caught a chill, it happened often after a soaking. The vet said it wasn't connected, I'm not so sure. After diagnosis at Bath Vet hospital where he had an MRI and I think a lumbar puncture he was initially given just Epiphen, strength and dose varied, then also given Libramide when fits continued, can't remember strength. The fits did change even though he was on medication. The fits didn't last as long and I could tell when he was about to have one, or if he had had one when he was home alone. Usually when he was sleeping then he would wake, his head would shake he would fall over and his back legs would move as if he were running his front legs would be stiff. Was fed on Bakers complete. A lighter diet was offered after fits although he was usually starving when he came around. He gained weight so we were advised to give him a weight control food, there was no change in fits. He was neutered before the fits began.	DATA TRANSFER FROM LYNN NORTON Added 21.06.14
30-Jun-21		Scalpie Gem - Gem	N/A	00/354423	BC - ISDS	15-Sep-17	NETHERLANDS	Bitch	Skid(SDS 297208)	Bill (SDS 249411)	Meg (SDS 253243)	Fae (SDS 333930)	Hank From Shepherds Own (SDS 312500) [Deu]	Kite (SDS 325501)	2 years	YES	By a vet	NO	3 years 8 months. She passed away on the 25th of May 2021 as she did not come out of a epileptic attack and we had to put her down	Suspected triggers: No specific triggers lead to the attacks. Medication: She was given Penion at first, but had Phenoral at least the last 3 months. The periods between the attacks became longer. From once a week to the maximum of a little over 3 weeks. Details: The length of the fits were about 1 to 2 minutes, after that she needed a little time to recover, maybe 5 - 10 minutes. Than she was her normal, happy self again. Gem was not neutered.	OWNER
29-Nov-19		Seve	Not known	Not known	WSD - Unregistered	approx 02-Nov-07	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	Vet confirmed as Epilepsy	Not known	Not known	Suspected triggers: On keeping a diary fits always on around spot on flea treatment - stopped using and fits a lot less severe and less frequent, plus have changed his diet to part raw and don't give any vet meds unless very necessary (use alternative and herbal) and ALWAYS check they are suitable for dogs with seizures. Medication: None. Fits always in a morning after a deep sleep but have been able to halt them when I see and hear the signs (vomiting noise and lip licking) and talk to him and stroke him gently. Now fed part raw part IWS kibbles. Did read an article about giving frozen vanilla ice cream immediately after a fit. Have only tried this once but was AMAZING at bringing him round very quickly. Fits have gone from every 3 to 4 months to every 5 to 6 months (last time was 5 months 22 days) and are less severe lasting less than 1 min and recovery time afterwards a lot quicker (due to ice cream?). Dog came from a rescue and was neutered before owner got him.	DATA TRANSFER FROM LYNN NORTON Added 11.09.13 Updated 20.10.13

28-Feb-21		Skye	N/A	N/A	Unregistered - UK	05-Jun-17	UK	Bitch	Scottish Farm dog	Unknown	Unknown	Scottish Farm dog	Unknown	Unknown	3 years 3 months	YES	Several identical seizures. Vet feels as they started around 3 years old, otherwise extremely healthy fit bitch, epilepsy likely cause	YES	N/A	<p>Suspected triggers: No known triggers at present, still documenting seizures to find any pattern or link.</p> <p>Medication: Treated with Phenobarbital twice daily (under duress), initially 60mg, halved to 30mg by me as behaviour badly subdued by dose. All ok at present, hopeful of stopping or reducing meds after spaying and hormonal fluctuations taken out of equation. Using EFT taping, calming and enjoyable, also Reiki. Very dooped, poor soul could barely walk. Have discussed with vet who agrees the treatment shouldn't be worse than the condition!</p> <p>Details: First fit at 4 am, jaw chattering woke me, foaming, twitching and urinary incontinence. Having worked with kids/seizures was aware of how scary it can be to time it! Around 3.5 mins, four long bouts and jumped up like nothing happened. Vet did urine test in morning, slightly elevated white count so treated with antibiotics in case of infection. All other fits (5 more) have been identical, only shorter in every case. Differing times, no real common denominator. One thing I am monitoring is we use a calor heater in sunroom topping up heat in autumn/winter. Most recent seizure Skye had spent half a day with me there doing a Zoom course online. It is well ventilated and has a CO alarm, but wonder if she is affected by this? Just grasping at anything I can change to remove meds etc.</p>	OWNER

29-Nov-19		Smudge	Not known	Not known	Collie	19-Oct-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 1 month	YES	Vet confirmed as Epilepsy	Not known	Not known	<p>Medication: Epiphen increased to 2 twice daily 60mg. After 4 months given Libramide, which only made him lethargic and not acting like his usual self. New on Epiphen and Levetiracetam which we used to give him now and then before a fit, but not on one every 8 hours. Fits started off as around 8 or 9 clusters every 21 days, this increased to 11, his last one being 16 clusters from 2pm to 7am the next day. Some last 30 to 40 seconds, some 2 or 3. There is usually 15 minutes in between but now a few minutes. Clenches jaw, then jaw wide, outstretched legs, urinates sometimes and a slaver from mouth and the smell is awful. Then he will pace, used to pace for 20 minutes and could not see us. Now he paces and tends not to bang into objects, seems to manoeuvre around them a little better. Before a fit, he howls at the moon, tries to escape, but how he tends to approach me to cuddle and follow me everywhere I go. You can see in his eyes that he is due to fit, his personality changes. The fits had increased to double the amount, but more often between them. Neutered before fits started. He had been neutered only 4 weeks before. He had trauma to his leg when only 5 months. And we had a collie out when he started the following week.</p>	DATA TRANSFER FROM LYN NORTON Added 16.07.15

19-Jul-19		Taliswood Tri Star - Jay	K109344	N/A	WSD - UK KC Activity Register	10-Dec-02	UK	Dog	Zigzag Jaffa at Taliswood	Greogien Hiawatha	Zigdan Zest	Jarro's Exclusive Edition	OB CH Daleman Red Rascal	Trajan jumpin' jiff	4 years 7 months	YES	Animal Health Trust did all elimination tests necessary, MRI brain scan, cerebral fluid spinal top, ultrasound of all organs, proprioception tests and bloods, urine etc. Confirmed as Idiopathic Epilepsy	NO	12 years old. Jay starting fitting around breakfast time, not his normal time. After 3 fits we rushed him to vets as we always did at that stage, he never really came out of one before going into another. After all day in vets being treated we had to take him go. He died in Status Epilepticus.	We bred Jay, he always fitted in the early hours of the morning. Clusters reduced when on meds that suited him. We had to stop doing agility as Jay's co-ordination wasn't good enough to continue. Triggers: we worked out over time were household cleaners especially air freshener sprays, plug ins and scented candles. We had to clean when he was out of house and have windows open. Stress was also a big factor, he didn't look stressed but didn't like changes, like one of us packing the car away. Also had to pack cases and load car so he didn't see or be wowed cluster. Medication: Initially given Epiphen 60mg x 2 daily. Continued to cluster fit so medication increased to 90mg 2x daily and Potassium Bromide (Br) 175mg once daily added. The Kbr soon caused severe disorientated mental status, very wobbly and occasional falling while standing or walking. AHI said Kbr was causing toxicity, once it was withdrawn he was back to his normal alert self. Changed to 105mg of Epiphen 2x daily, 300mg 3x daily of Gabapentin. When he fitted was given rectal diazepam and an ice pack applied to his neck/back area. Since meds changed, fits approx every 10-15 weeks and generally only has one fit instead of 4/5/6+ clusters within the space of 1-4 hours that he was having every 4-6 weeks. Castrated after being diagnosed with idiopathic epilepsy, made no difference to the pattern of his fitting. His Dam was spayed and owners of his litter brothers/sisters advised to neuter, which they all did. Our dog is the only one from the 2 litters of this parentage that has fitted out of the 11 puppies. They were all healthy to a grand age.	OWNER

29-Sep-19		Tess	N/A	00/325720	BC - ISDS	23-Jan-13	UK	Bitch	Drew Tawed (SDS 278783)	Lad (SDS 254796)	Gammem Gem (SDS 271779)	Meg (SDS 301667)	Mac (SDS 276484)	Del (SDS 266631)	3 years 11 months	YES	Vet	NO	Put to sleep at 3 yrs 11 months due to cluster fits and too much damage done to dog neurologically.	Suspected triggers: No idea other than routine booster vaccine given 3 weeks previously. Medication: Tess was in vet hospital for 2 days to try to stabilise. Just so devastating to see Tess like this. Had a Labrador years ago who fitted every few months but not cluster fits like this. The poor dog didn't know where she was, who we were, couldn't walk, horrendous regression.	OWNER
29-Feb-20		Tess	N/A	N/A	Unregistered - UK	02-Feb-11	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	8 years	YES	Consultation with specialist neurologist at Langford Vets in Bristol, who diagnosed Idiopathic Epilepsy	YES	N/A	No specific triggers that we know of although we have changed diet to a hypoallergenic one since her seizures started. She is on Tally Hypoallergenic dry kibble & Nature Hypoallergenic meat. Medication: Tess was started on a high dose of Phenobarbitone Epiphen when her appointment at Langford in March 2013 which made her seizure and loss coordination of her back end for about a fortnight but gradually side effects wore off. The dosage was reduced to a maintenance level over a few months until she was on 10mg every 12 hours. She still fitted on medication, roughly once every 4-6 weeks. However, she developed incontinence due to increased blood urea effect and excessive drinking, so our vet increased Pexion 200mg every 12 hours and we weaned her off Epiphen gradually over 7 months. Three days after her last Epiphen (September 2020), she had four seizures in a 24 hour period (generally only ever had one fit a week) and was hospitalised overnight. She was started back on the Epiphen, initially but on maintenance amount, so is now on the same amount as mentioned previously and back to her usual September 2020. Tess is a spayed bitch that was returned from Border Collie Trust at 2/2 (initially carried when we got her). There was no medical history or evidence of seizures before we got her. Tess used to sleep downstairs in our previous house. A year after we moved to our current house in 2017, Tess started sleeping upstairs next to me in 2018. She started seizing in March 2020. She only seizes in the middle of the night when she is asleep and as far as we know, she is unaware of them and when they are going to happen. They start with her eyes closed & she whines and whistles quietly which is why we believe she never had seizures before she started sleeping upstairs because we would have felt the wet surface of her face in the morning if she knew how to do. During the seizures, her eyes will, she stops breathing, her head is tilted back and her body is stiff. She paddles with her front feet before going stiff and still, breathing heavily and then passing before she comes round. She is very disorientated for about 30-40 mins and then goes back to sleep and wakes up 'normal'. Excessive exercise and stress don't seem to have any effect. Wonder if the hypoallergenic diet has made a difference as she has never had food sensitivities and used to be very fussy with food (just eating, throwing up food in the morning after eating). She loves the raw diet and her stools are good (in a healthy) form thanks to the medication.	OWNER

The fits are very mild and she is at this time being treated holistically. Her first fit was on a hot day when the dogs were out running and we thought that might have triggered it, however after her second one we took her to a vet to have it confirmed where several tests were done. She continues to fit regularly on average one to two times a month. Originally fed on Diamond High Energy at the onset but it was recommended that we place her in a less physical home so that her protein and fat content could be lowered. She is now in a pet home on an adult formula by Diamond. The fits are more frequent now but also more mild. Spayed.	DATA TRANSFER FROM LYNN MORTON Added 14.10.14
21-Aug-19		Willow	N/A	N/A	Unregistered - UK	05-Jul-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	14 weeks	YES	By a brain scan. They couldn't find any problems with her brain, so the conclusion was idiopathic Epilepsy.	YES	N/A	No triggers known. Tends to have seizures only when sleeping. Medication: Started at 45mg of epiphen twice a day. Now currently on 50mg twice a day. Disappear rectal tubes are given during or just after a seizure to help calm her down. Levetiracetam 500mg tablets are given to break up any clusters. 1 tablet after 2nd seizure and half a tablet every 8 hours until 48 hours after 2nd seizure. Since starting on 60mg of epiphen twice a day, Willow went 20 weeks without having a seizure. Before that she was having them every few weeks. I had Willow from a local rescue centre when she was 10 weeks old. I have no background information of her at all. Willow has always been clumsy. She's not your typical bright intelligent border collie. She tends to trip over her own feet, bump into things etc. At first I thought maybe it was just because she was a puppy getting used to her new surroundings but as she was getting older she was still the same. At 14 weeks she had a massive cluster where she 9 before I even got her to the vets. They had to put her under anaesthetic 4 times to bring her out of the cluster. I don't know if this affected her brain but sometimes she's very uncoordinated.	OWNER

Nothing unusual happened that might have caused fitting to start. She was being fed on dry food, now on Chugaga. Fits are happening more often and are more severe. Neutered, but didn't make any difference to the fits.	DATA TRANSFER FROM LYNN MORTON Added 25.07.14
21-Aug-19		Woughstock Wattdass - Try	KCOR045443	N/A	WSD - UK KC Activity Register	27-Dec-92	UK	Dog	OB CH Bisquet Dan	OB CH Chalkwell Greywood Danny	Aikres Sea Spangle	Woughstock Wydeseyne	Master Kip of Keysoe	Woughstock Wonder	4 years	YES	By vet and process of elimination	NO	15 years - age related	Sudden excitement would always trigger a fit but also fitted in his sleep. Medication: Phenobarbitone 60mg x 2 daily controlled fits from 6 weeks to around 3 a year. At 6 years I took him to see holistic vet Christopher Day and gave a very detailed diary of events. He had fitted every 6 weeks prior to meds and now fitted around 3 times a year. He prescribed a homeopathic remedy which I gave daily. At 8 years I dared to start to reduce the pheno as had not fitted since visit to Mr Day. I reduced over 6 months to 0 pheno and Try never fitted again.	OWNER
30-Apr-21		When You Have It Flaunt It - Wren	K158363	N/A	WSD - UK KC Activity Register	21-Oct-16	UK	Bitch	Kiamogue Old King Cole	Kiamogue Thats Dar's Tri	Detania Golden Girl	Stella	Cookvale Dark Stranger	Lucy	4 years 2 months	YES	Had blood tests after the second fit. Vet said it's probably Idiopathic Epilepsy.	YES	N/A	Suspected triggers: No suspected triggers. No accidents or illness prior to the fits. When only has had puppy vaccinations and I do not use chemical treatments on her. Medication: Since the fits she has been on MCT oil and has not had a seizure since. Details: Wren has been row fed since a puppy. She had a lap spay after her third season at the age of two. She is a fit healthy dog and has never had any accidents or illness prior to the fits. When had her first fit on Saturday 5th December 2020 at 6:45am. I heard a knocking downstairs and I found her collapsed having a generalised seizure which lasted under one minute. She made paddling movements, drooled/rothed and urinated. She came round quickly, being wobbly for 2-3 minutes. After that she was back to normal like nothing had happened. Her second fit was on Monday 14th December at 2:30am. She had got up in the night wanting to go outside. This is not unusual for her as she often gets up at this time to go toilet. As I opened the patio door she collapsed to the left and started fitting. Exactly the same as the time before. Quick recovery and within a few minutes she ran back upstairs to bed and went to sleep.	OWNER
29-Nov-19		Woodsend Maurice Traveller	Not known	Not known	WSD	03-Dec-90	UK	Dog	Monkfield Minstral IW	SH CH Melodor Flint at Dylabar	SH CH Whemewy Janie of Monkfield (ISDS 123211)	Caristan Charisma	SH CH Caristan Captain (ISDS 160585)	Rossacre Joanna of Mobella	8 months	YES	Vet confirmed as Epilepsy	NO	1 year 7 months. Euthanised in July 1992 when fit frequency increased to less than 1 week between clusters and the drug were affecting his liver. His personality also changed and I lost the ability to remember simple commands	Medication: Initially Valium and Phenobarbitone. Then Potassium Bromide and Epilim added after specialist advice. Doses systematically increased which increased the space between fits but did not reduce the intensity when the cluster fits happened. These required large doses of IV Valium and Phenobarbitone for 12 hours. IV diazepam/serosone was given the following day and subsequently the next 2 days. No changes made to diet. First few were single fits then every fit was a cluster fit. Response to increased medication doses was to increase the time between fits. There were no fits between Feb and June 1992 then the intensity got increasingly worse. Neutered on Vets advice, but made no impact on fits.	DATA TRANSFER FROM LYNN MORTON Added 11.09.13
31-Oct-20		Wyslywys - Wysi	N/A	N/A	Collie Cross - UK KC Activity Register	Unknown estimated as 19-09-09	Presume UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	5 years	YES	Neurologist at AHT after MRI and spinal tap to rule out any other cause	YES	N/A	Suspected triggers: Usually, but not always, after sleeping. Stress doesn't help. Medication: Epilim, Libromide, Levetiracetam, Zonisamide. All help but have had to be added over time (in the order as written). Dosage tweaked over time too. Details: Neutered before 8 months old at The Dogs Trust. He cluster seizures and has worsened over time. Seizures usually last less than 1 minute, but had 1 spell last month of status epilepticus. The post ictal period varies in length although doesn't usually last more than 5 to 10 minutes. He is now on a Neuro diet. I also use extra Levetiracetam as pulse therapy as soon as he's able to swallow after a seizure.	OWNER

Neutered, Grand Mal / Primary Seizures - clusters.	OWNER
19-Jul-19		Zak	N/A	N/A	Unregistered - UK	15-Jun-12	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	8 months	YES	Blood tests	YES	N/A	Suspected trigger - exposure to Ivermectin based cattle and sheep products. He was badly abused by a farm labourer which resulted in a head injury. Medication: Phenoelptil, 50mg x twice daily. Zak was neutered at 2 yrs old. He hasn't had a seizure since leaving the farm and starting medication. The longest seizure I witnessed was around 5 mins, on that day he had 7 in total with the others lasting around 2 mins. I don't know anything about Zak's breeding, all I know is that he was bought from a shepherd in the Glenlynk area who has a constant stream of pups. He took part in the Newmarket Canine Health study a couple of years ago.	OWNER
