31-01-22	28-02-22	Artana JP's Dino Banana - Dino JKC-BCL-0047216	N/A	N/A	Non UK Registered (Border Collie)	16-Dec-15	JAPAN	Dog	Try of A. Tsutsumi JP	Boya Farm Sam	Fairy of Y. Maeda FCI	Yume-July of Premier Hakata JP	Mr.Cima of Artana JP	Rosemary of Big Boy Saito JP	3 years 4 months	YES	He was diagnosed by a veterinarian	YES	N/A	Suspected triggers: None noted. Medication: He takes Zonisamide 100mg twice a day, 150mg once a day. In case of seizures, he takes Levetiracetam 3 times a day for 3 days. I used to use Gabapentin at the time of the attack, but I changed to Levetiracetam. Details: He underwent castration surgery after the onset. He has seizures once every 30 days. Seizures are short, but occur several times, several hours apart. UPDATE ADDED 28/02/2022: Registration Type changed from BC to Non UK Registered (Border Collie).	OWNER Updated 28/02/2022
29-11-19		Absolutely Dot (AG CH)	Not known	239196	BC	10-Jul-98	UK	Bitch	Lethans Maximillion (ISDS 208556)	Roy (ISDS 161740)	Lethans Kip (ISDS 176421)	Pipped at the Post (ISDS Pip 225768)	Snip (ISDS 207611)	Tess (ISDS 196629)	5 years 6 months	NO	N/A	NO	Died of old age	Details: Dot only ever had ONE "almost fit" that came on 60 minutes after whelping. Diagnosed as pre-epilepsia. Treated with 1/2 calcium and magnesium for 2 1/2 weeks. Never fitted previously, and no further fit-like episodes afterwards. At age 14-15, started having drop attacks, where she would lose consciousness after making strange howling noises. Diagnosed as secondary to poor cardiac function, and she stopped having them after starting digoxin. Spayed.	DATA TRANSFER FROM LYN NORTON Added 10.03.15

Died after choking on his own vomit	Suspected triggers: None noted. Medication: None noted. Details: The fits started completely out of the blue just as he was approaching his 4th birthday. He had one fit in the early hours of the morning, checks were done at local vets and they couldn't agree what had caused it, a week later another fit followed by his body starting to shut down, laboured breathing and no energy. Taken to Potters Bar vets hospital, kept in for a week, one small fit whilst he was there, they said sudden onset epilepsy, brought him home as they said he might not fit again. He had been home from Potters Bar for 2 weeks with no fits, then had a major fit in his crate whilst we were out and died after choking on his own vomit. Roughly 8 weeks after his first fit. He was neutered at two years before the fits started.	DATA TRANSFER FROM LYN NORTON Added 25.05.14

He went on to take 2 massive seizures back to back couple of days later - he fitted for around 10mins in total and was left brain damaged and had to be put to rest.	Suspected triggers: N/A Medication: Phenobarbital Details: See previous column. UPDATE ADDED 31/05/2021 - ISDS number added.	OWNER Updated 31.05.21
29-11-19		Back in Black Shelby's Shelter - Millie NHSB 3139934 (Dutch KC reg)	N/A	N/A	Non UK Registered (Border Collie)	08-Nov-18	NETHERLANDS	Bitch	Dutchfield's Wisp a Straw in the Wind (NHSB 3049250)	Dutchfield's Dillon Streak of Light (NHSB G.2918790)	Rinn Run Rings Out (NHSB 2971463 KCR AR0902628)	Shelby Oongh House on Fire (NHSB 3018514 KCR AQ0903912)	Drift Shaken not Stirred (NHSB 2928558 KCR AQ0902678)	Queenie (ISDS 00766131)	11 months	YES	By the vet through blood test	NO	Millie died one day short of her 1st birthday. We put her to sleep after 9 seizures the day before and ongoing seizures that day after a night of sedation to try to get her to recover. It was hopeless, and too much for her small body.	Suspected triggers: No triggers at all, all seizures were sudden and no warning signs. Medication: She was on Phenoral, but the seizures went right through it. Seizoles did not have any effect. Details: The seizures started two weeks before she died. It was so intense and aggressive, there was nothing we could do. It was heartbreaking to see such a young dog, so sweet and gentle, and a great sportsperson, turn from a lively sporty puppy play to a miserable, suffering soul.	OWNER
29-11-19		Back Wilderness	Not known	Not known	BC	01-Sep-99	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	13 years	NO	N/A	NO	Not known	Suspected triggers: Nothing unusual happened that might have caused fitting to start. Medication: None specified. Details: Fed on IAMS Dog Senior & Mature (Dry Food). Had a total of 10-12 seizures within a period of less than 20 hrs. They occurred either every 2-3 hours or when he lay down (whichever came first). Until that day he had NEVER had any seizures. No longer alive.	DATA TRANSFER FROM LYN NORTON Added 11.08.14
29-11-19		Badger Joe of Carollary	N/A	300538	BC - ISDS	15-Jan-09	UK	Dog	Greenfaen Cruise (ISDS 286449)	Roy (ISDS 266416)	Kim (ISDS 258951)	Caran Jane (ISDS 284944)	Caran Trip to Aaway (ISDS 247242)	Caran Rika (ISDS 272026)	3 years	YES	Vet confirmed as Epilepsy	Not known	Not known	Suspected triggers: None noted. Medication: Epiphen & Libromide Levetiracetam as and when to stop clusters. Details: First fit occurred as Age UK cold alarm went off just before, so a cold morning, after having clusters of fits for days every few weeks, up to 8 a day, has been free for 5 months after starting Libromide (potassium bromide). Dog entire.	DATA TRANSFER FROM LYN NORTON Added 07.12.12 Updated 19.03.13
31/11/2021		Baltee	N/A	N/A	Unregistered - UK	07-Apr-16	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	By vet after second fit	YES	N/A	Suspected triggers: Reaction to spot on flea treatment very negative - but not quite a fit. I can't identify a particular trigger as fits are now very regular, every five weeks. They seem cumulative rather than a reaction to any external influence, as far as I can see. The first fit came soon after puppy vaccinations, but may be a coincidence. Medication: Libromide 650mg; Epiphen 300mg; Dasepam 10 mg. Hepato support. Meds made the seizures regular and reduced number considerably. Details: Neutered. Tricolour. Very, very active dog with more stamina than in most collies, and very intelligent. Food taste changes dramatically after a fit, will not eat meat and after a seizure varies from binge eating to eating very little. After a fit he is not good in the house and seems depressed, but outside he exercises generally normally.	OWNER
31-01-21		Bailey Lyness	N/A	N/A	Unregistered - UK	02-Oct-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Glasgow Vet School and Hospital	YES	N/A	Suspected triggers: Have not been able to confirm a reason so far. Medication: Epiphen 120mg twice daily, Libromide 1.5 tablets a.m. and 1 tablet p.m., Zovigram 100mg twice daily, Kepra 500mg 2 tablets 3 times a day after each cluster fit for 7 days, Destoli 150mg tablets twice daily, 10mg CBD capsule at night. Details: Bailey is neutered and he has fits every 3 to 4 weeks generally although at the moment they are weekly. He has generally 3 cluster fits at a time that last 2 to 3 minutes but yesterday he had 7 fits over a 6 hour period. It is so stressful as it is hard to keep Bailey quiet after the fits as it takes him around an hour to come round and see properly as well as regain his balance. We have bought a child's playpen to keep him in so as he can't get out and hurt himself as the dog pens he was able to escape from. Typically Collie.	OWNER
29-10-19		Bargayne King of Hearts	TBA	N/A	BC - UK KC Pedigree	21-Mar-17	UK	Dog	Borderpaws Dark Secret	Perranfell Don't Stop Me Now	Darleyfals Dark Secret	Sarkam Push The Button	Terannos Final Demand	Sarkam Destiny's Dream	4 months	YES	Vet confirmed	NO	Fitted all night, had to be put to vets - 16 months old	Suspected triggers: No triggers noticed. Medication: Started at 12 months of age, was fit free for 3 months then reviewed. Phenobarbitone 30mg twice a day. The fits stopped after medication was first given, but the fits returned. Details: Millies Wolfheart fed, no change of food. He was neutered.	OWNER
28-02-22		Barkis is Willing	K155245	N/A	WSD - UK KC Activity Register	29-Jun-16	UK	Dog	Ted Harved (ISDS 007337168)	INT SUP CH Liangwim Cap (ISDS 00315270)	Huastable Iida (ISDS 00302710)	Not My Kipper	Unknown	Unknown	5 years 6 months	YES	Blood tests, and visual by Vet.	YES	N/A	Suspected triggers: Possible stress of other dog (related Uncle) having a cluster of 7 fits in one day. Medication: Now on Solphen 45mg twice a day and seizure free for 6wks. Details: Barkis had a small focal seizure, which I was very lucky to see a week later he had another one again very lucky to see it. 3 hours later he had his first fit. His second fit was 4 days later and then another the next morning which is when he was put onto medication.	OWNER
29-09-19		Barr ram ewe	K159876	N/A	WSD - UK KC Activity Register	29-May-16	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 5 months	YES	He has had blood tests but no MRI, the vet has said it's Epilepsy	YES	N/A	Suspected triggers: Have found no triggers, it seems to be after a full moon but on one occasion he had 3 seizures within 24 hrs which I put down to the stress of my daughter getting a puppy. Medication: He is on 90mg Epiphen twice a day and Libromide. He was quite unbalanced when the Libromide was added but since the dose has been split to getting half twice a day instead of one once a day he seems better. Details: No further information provided. Medication: Initially Homeopathic, then Epiphen 30mg twice daily. Details: First fit happened a few days after Advocate applied. 3 months later 6 fits in 10 days went to homeopathic vet got them under control until fireworks night when he had 10 over 3 weeks. My usual vet prescribed Epiphen 30mg twice daily he went 13 months clear until new years eve fire works, Epiphen increased to one & half twice daily, he has been clear for 18 months but for the fireworks weeks. I put an Adaptil collar on Tonic, he was very stressed before putting it on him, it was like magic 2 minutes after putting it on him he got a toy to play with then went in his bed and slept for the evening. Fed on raw food, fits improved since medication began. Neutered June fits were controlled.	DATA TRANSFER FROM LYN NORTON Added 05.07.14 Updated 10.07.14
21-08-19		Beckim Surprise Surprise - Vito	K136870	N/A	WSD - UK KC Activity Register	05-Dec-10	UK	Dog	Forever Magic Phantom	Changol Dizzy	Forever Magic Moon Madness	Gypton Just A Breeze	Quillers Scaryled Surprise	Isatka Sugar N Spice	7 years 5 months	NO	N/A	YES	N/A	Medication: Epiphen 3 x 1 caps per day, CBD oil 1 drop AM and 2 drops PM, Melatonin 3 mg PM. No more fits for now. Details: Really high cholesterol, all other blood test ok. Low fat raw meat diet which lowered cholesterol. High cholesterol according to vet doesn't give fits. Vito had 3 fits 2 weeks between fits. Always during the night, hence the medication. Grand ma's lasting about 4 to 5 min (from start to fully recovered). Have put Vito on low fat raw meat diet which lowered his cholesterol. Not given any traditional meds yet. Had all relevant blood tests done but no MRI. Vito is recovered.	OWNER

YES	N/A	Suspected triggers: No known triggers, it happened while playing, usually while sleeping. She had another set of seizures 4 months later, no correlation with deworming or other medication. Medication: She is doing well on 45 mg Phenobarbital twice a day. Initial dose was 30 mg, but she started having focal seizures, so we increased it. She seems to be fine on the meds. She is also on From 72 mg 1 day and DES 5mg qll twice a week. Details: Seizure history - First seizure was 20th July 2021, 2 minute seizure in her sleep. The next day chemistry profile and a CBC test were done, everything was normal. Second seizure was on 10pm on 5th August 2021, she had a 1 minute seizure while playing. Third seizure 3am on 6th August 2021, 2 minute seizure while sleeping. A thorough vet check was done on 6th August 2021, everything was fine. Started her on Phenobarbital. The initial dose was 50 mg x 2/day that was decreased to 45 mg x 2/day two weeks later, and then decreased to 30 mg x2 /day at the beginning of September. Phenobarbital blood level was checked on 5th December 2021, it was 15 g/mL. Increasing the dosage is under consideration since she is having 1-2 second seizures while playing fetch. She had two more 2 minute seizures in her sleep in January 2022 so meds were increased to 45 mg. Neutered. 29-02-20		Blodwen	N/A	N/A	Unregistered - UK	28-Feb-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Neurology assessment	YES	N/A	<p>Suspected triggers: No known triggers.</p> <p>Medication: Started with CBD aged 6 months which kept symptoms under control until she was one year old. They became significantly worse and unmanageable so she was started on phenobarbital and levetiracetam - starting doses were steadily increased to maximum for her weight and we also increased CBD oil and finally introduced Epitaur.</p> <p>Details: Blodwen is a Double Merle collie from a breeder but to me via an informal rescue. She has focal seizures - her MRI was clear so the seizures are not related to brain trauma or disease. Over a six month period her seizure related behaviour gradually diminished (from jinking awake every few minutes all through the night, circling, twitching and being aggressive) and she now sleeps for up to 11 hours through the night with no issues and is markedly more settled in the daytime. She was stayed at 6 months old but the focal seizure symptoms had already started (leg twitching, staring with head tilted, circling). The neutering didn't appear to make it worse. I have come to understand Blodwen, her symptoms and treatment requirements through close observation, asking for help from a Double Merle Facebook group and researching this genetic problem. We have a regular border collie from a farm litter who has displayed no health problems, I had no knowledge of merle or double merle collies when we rescued Blodwen and this was not mentioned by the person we rescued her from.</p>	OWNER

31-03-20		Boston	N/A	N/A	Unregistered - UK	23-Jun-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years 6 months	YES	After initial seizure followed a couple of months later by a focal seizure and clusters - diagnosed with idiopathic epilepsy after MRI eliminated any brain issues	NO	Feb 4th 2020 - aged 5 years and 8 months. PTS as diagnosed with chronic liver failure due to Phenobarbital	<p>Suspected triggers: Stress, over tiredness and heat would appear to be triggers. Stress from being buffed by our other collies, or going to the vet. Medication: Initially given Pexion - no impact. Then moved to Phenobarbital, then added Potassium Bromide. Keppra was given as an emergency protocol. Diazepam did not appear to work.</p> <p>Details: Boston had his first seizure on 4th Dec 2017. From then till he had on Feb 4th 2020 - he had approximately 80+ seizures lasting on average 60 seconds, with some as cluster seizures. When he first started seizing it was shorter and he recovered relatively quickly. He never lost bladder control when he seized. The critical turning point was in September 2018 when he went into focal seizure mode and had to go to ICU. This followed another ICU episode in December 2018 where we thought we would lose him. The neurologists worked with us to find the right medication level. There were stress we pushed back on the suggested medication levels and discussed it with the neurologists. I think it is important that owners who know their dogs best and how to manage the dog everyday feel confident to add their tuppence worth (in. On hindsight we saw three issues: (1) the length of time it takes a medication level to work through and to assess impact means it is several weeks from each medication change before you see if it has any impact on controlling the seizures; (2) the vets are highly dependent on blood lab results to ascertain the medication levels and in our case, there were blood results that was inaccurate/correct and thus unreliable. We queried this and new bloods were taken but each time there was an episode, this delayed the possibility of accurate blood works and (3) neurologists are focussed on controlling the seizures but need to work hand in hand with liver experts so any increase in pts should be done only after a check on the state of the liver; it should not be automatic; it is our belief that we might have been able to reverse the liver failure had Boston's PB not been raised after summer 2019. Though the seizures were better controlled, his liver was damaged beyond repair. On the other hand if the PB was tapered down in summer 2019 and only Bromide used (or possibly in tandem with Keppra), would he have succumbed to some grand mal seizure - we will never know. Ultimately, epilepsy is life limiting that we do not live.</p>	OWNER

28-02-22		Chaos	N/A	N/A	Non UK Unregistered (border Callie)	24-Dec-17	USA	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	A neurologist evaluated and diagnosed.	YES	N/A	Suspected triggers: If he gets too tired, such as when school break is out and my son stays up until midnight or 1am, Chaos often has a "fit" later that night. Medication: I have been controlling by avoiding triggers and avoided medication thus far. Details: Intact. Came from a breeder in Montrose Colorado. Purebred Border Collie, confirmed with DNA test.	OWNER
29-11-19	31/03/2021 & 30/06/2021	Cherikee Dancing Flame	KC0R04572	N/A	WSD	06-Dec-96	UK	Bitch	Kai Intrepid (ISDS 195382) TDee	Glen (ISDS 128107)	Beck (ISDS 162199)	Woughstock Watermymgh at Cherikee	Mounthill Mischief	Woughstock Wyedesyne OW	2 years	YES	Vet confirmed as Epilepsy	NO		Medication: Not noted. Details: Fits worsened over a period of time. Breeder of this dog (Josie Bleese) is deceased, however Jean Payne, breeder of Woughstocks, has given her blessing to the publication of this information. UPDATE 31/03/2021: It has been brought to our attention by the owner of Cherikee Rain Dancer (the dog we had named in this entry), that the information does not relate to her dog. Although he is from the same litter, he did not have epilepsy, and he is deceased during his lifetime. We are therefore going all we can to locate the owner and include the correct registered name of this bitch. UPDATE 30/06/2021: After carrying out some research we located the owner of this Cherikee bitch and they've sent us an update. Added full registered name of fitting dog, added KC reg no., updated G.Dam ISDS no and updated Dam's registered name. We now believe this entry to be correct. Only allowed Neurocare plus fruit and veg. Medication: Keppra, Epiphen, Zonisamide, Libromide, plus Diazepam when required. Details: Always cluster fits usually last about 1 min 30s, 3 weeks frequency. Recovers quickly after fitting.	OWNER
29-09-19		Choysteen Oregano	KC0R053265	N/A	WSD - UK KC Activity Register	26-Apr-96	UK	Dog	Ruskath Regal Image	Don (ISDS 168044)	Ruskath Segal Image (ISDS 187602)	Choysteen Sweet Bay	Seamus of Winsome	Elanita of The Wood at Choysteen	3 to 4 years	YES	Vet - Bamie fitted mostly at night, so recorded when thought he fitted, until I broke my leg, and whether it was the stress he fitted one after the other.	NO	Nearly 12 years old. Cancer	Suspected triggers: We did wonder whether it was the security lights coming on at night, dont know. Medication: Phenobarbitone which controlled the fits, but he was never quite there.	OWNER
28-02-21		Choysteen Rocket	TBA	N/A	BC - UK KC Pedigree	28-Dec-12	UK	Dog	Jacksroffer Silverbrich Over Choysteen	SH CH Littleshorn Galaxy	Jacksroffer Greatglen Be My Girl	Sarkam Life Imitation In Choysteen	Teramos Final Demand	Sarkam Destiny's Dream	3 years	YES	Referred to vets, blood tests, then MRI scan	YES	N/A	Suspected triggers: No reason he went to door just stood looking outside then went stiff and started fitting. Medication: Jack has Epiphen 1 x 60 mg twice a day and have just started him on Trazodone. Details: Vet started Jack on Epiphen did well then had occasional fit, tried higher dose but he was worse so put him back on lower dose. He still has a few fits a year and focal ones. Went from a quiet dog to being very noisy. Not neutered. His fits are a few mins, he takes a while to come round. Last one last year, he could not see and panicked, he took a while to recover.	OWNER
29-10-19		Choysteen Whyan Pippin - Murphy	AS00677402	N/A	BC - UK KC Pedigree	24-Jan-15	UK	Dog	Jacksroffer Silverbrich Over Choysteen	SH CH Littleshorn Galaxy	Jacksroffer Greatglen Be My Girl	Sarkam Life Imitation In Choysteen	Teramos Final Demand	Sarkam Destiny's Dream	2 years 2 months	YES	Referred to Willows at Solihull who examined & did an MRI scan	YES	N/A	No reason for fitting as far as I am aware. Medication: Initially Levetiracetam 3 times a day but as it did not control the fits Epiphen was included twice a day. Full blown fit at lunchtime by my feet. Went on for a minute from which he got up and walked slightly wobbly into the garden. Up until then perfectly healthy, happy young dog. Fed on Millies Tobi's. Seizures are now under control. He was castrated at almost 3 yrs old but prior to that he was chemically castrated twice. He is currently well controlled on meds.	OWNER
28-02-21		Cloudy	N/A	N/A	Unregistered - UK	28-Aug-16	UK	Dog	Unknown	Unknown	Unknown	Misty	Unknown	Unknown	1 year 7 months	YES		YES	N/A	Suspected triggers: He definitely has epilepsy but the condition could have been triggered, or exacerbated, by the original liver problem. Medication: Cloudy responds very successfully to a regimen of KBr (Lidormide), Levetiracetam (Keppra) and Phenobarbital (Epiphen) and has almost no fitting, with the occasional 'petit mal' seizures. He has very occasional full tonic-clonic seizures when his medication has been compromised e.g. missed dose or after activated charcoal treatment for ingestion of toxins. Details: Has epilepsy and liver shunt. He started fitting regularly at 18 months in February 2018 and responded well to Phenobarbital. Went into status in May, probably due to hepatic encephalopathy. Routine blood analysis showed a liver anomaly and it was found he had a hepatic shunt after scanning. Surgery was carried out in June with 100% success, but the fitting continued. He is still taking regular medication at 4 years of age with occasional recurrence of fitting especially if medication is compromised, even though his liver is perfectly healthy and functioning. No indication of food relating to seizures but he is now on a hepatic diet due to the shunt.	DATA TRANSFER & UPDATE BY OWNER

Fitting coincided with coming into heat. Before fitting began she was fed kibbles, after start of fits she is fed B.A.R.F. The first 3 fits were short, approx. 40-60 sec. The 4th and last fits were clearly more violent, approx. 3 minutes. After the 4th, medication was adjusted. Entire.	DATA TRANSFER FROM LYNN NORTON ADDED 23.03.14
28-02-21		Easterdale's Fleet O'Foot	K134734	N/A	WSD - UK KC Activity Register	07-Jan-10	UK	Dog	Easterdale's Prince Rory	Rock	Kim	Just the Tonic	Robbie	Tess	3 years 9 months	YES	Diagnosed by my vets and confirmed by specialist	NO	Age 8 years 4 months. Flew fits on 30 May 2018 following several hours of continuous fitting	Suspected triggers: None mentioned Medication: Started on Pexion December 2015 with Diazepam when needed. Changed to Libromide, with Kepra when needed and Diazepam for immediate treatment of fits. Details: First fit at 3yrs 9 mths at 4am, grand mal. 9 fits over next 2 years, very short, all grand mal, all around 4am. On no medication then. In December 2015 had a severe fit lasting 5 minutes and put on Pexion. 3 further fits and dose increased in Aug 2016. Last fit was 4 mins and required Diazepam. Severity seemed to increase but frequency varied from 4 weeks to 9 months. Then Fleet's fits sadly increased in frequency and severity and he eventually began to cluster fit. His meds were changed, but things continued to decline. He saw a specialist who advised the meds he was on were what he would recommend but to try changing the timing of meds. His fits continued to lengthen and he had several emergency trips to the vet in the middle of the night when Diazepam did not bring him out. At the end he had his fitting during the day as well as at night-time and the fits were taking a terrible toll on him. He was pts in my house following a night of almost continuous cluster fitting. Neutered at 12 months, well before fits started. On cereal free Salmon and Potato mix. Food did not seem to be a factor.	DATA TRANSFER & UPDATE BY OWNER

28-02-22		Eevee	N/A	N/A	Unregistered - UK	02-Dec-16	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	NO	We're under investigation, however the vet has said it is epilepsy. I just can't afford the required scans as they're not covered by insurance	YES	N/A	Suspected triggers: Only trigger we have found and confirmed is hunger vomiting. Medication: Phenobarbital, but was stopped due to potential damage on kidneys. Details: Seizures are usually between 20-40 seconds, the shorter the seizure the longer the recovery. Our recent seizure was just under 20 seconds and the recovery was around an hour. Not spayed.	OWNER
31-03-21		Elian-Vannin Millie	AS0902157	00/332956	BC - Dual Registered UK KC & ISDS	18-May-14	UK	Bitch	Elian-Vannin Kik (ISDS 00/31443)	Joe	Breeze	Elian-Vannin Mia (ISDS 00/34410)	Spot	Bliss	2 years	YES	Bloods, head scans etc all normal but clinical diagnosis based on the episodes, seemingly brought on by touch, was one of a rare type of seizure / rage syndrome.	NO	Age 4. Due to the escalating frequency and intensity of the episodes which were very distressing for her and us, we sadly despite trying all we could, had her P/S	Suspected triggers: Millie was a very loving girl who used to lay for hours next to me having cuddles and tummy rubs so this is all the harder to explain. Every six weeks a sudden explosive episode of rage with no warning. We didn't understand at first but there became a pattern to it and so the 2 year journey of trying to manage her seizures safely began. Before an episode she became increasingly sensitive to light and noise, afterwards she would hide and sleep it off. Medication: Pexion to start then stopped. Followed by a combination of Epiphen and Kepra. Prozac was also tried but made no difference so was stopped. We tried all different types of epilepsy medicine. Details: Frequency was from about every 6 weeks until Christmas 2019 when she started clustering. After the initial settling of the cluster episode the following seizures were more frequent with no pattern and each one was for a longer period of time. Food was not a trigger although it always as much natural things in her diet as possible, we changed her to a raw diet and although it did not help her seizures, she did very well on it. Millie was neutered but it made no difference, she was spayed before the onset of the seizures. Due to the severity and type of seizures Millie had, we could no longer manage her safely, just to say that Millie would come to us probably feeling unwell for a cuddle and it was always as we would touch her that the seizure would happen. She would usually have been asleep beforehand. Never happened at play or with strong touch/rough tuddies only ever gentle strokes, episodes lasted 5 seconds but nearer the end more like 10 seconds and we just couldn't manage her safely and the most traumatic thing was we could no longer cuddle her as she or we would have wanted (the seizures along with disorientation was also aging her rapidly too), so the heart breaking decision was made to say goodbye. It was truly a traumatic journey for and with her.	DATA TRANSFER & UPDATE BY OWNER 31.03.21

NO	3 years old. Cluster seizure/status epilepticus	Suspected triggers: No triggers. Full investigations completed at AHF - other medical/traumatic causes ruled out. Medication: Tried Phenobarbitone, Potassium Bromide, Keppra, plus several other trial drugs (no positive changes) except Keppra gave us a "honeymoon period" - made it to 5 weeks without seizures but then they were back to heavy clusters again, worsening over the 2 years we had with him. Details: Neutered. Cluster seizures lasting several minutes between weekly - 4 weekly prominently. For 2 yrs until we had to let him go.	OWNER
30-09-21		Glennie Glen	K164560	N/A	WSD - UK KC Activity Register	17-May-16	UK	Dog	Glen (ISDS 00/313103)	INT SUP & WORLD CH Dewa Tweed (ISDS 278793)	Meg (ISDS 257352)	Gwen (ISDS 00/314102)	INT SUP & WORLD CH Roy (ISDS 264414)	Bet (ISDS 00/294932)	5 years	NO	I am very familiar with epilepsy, as I have previously had animals who had grand mal fits, so have no doubt this is what he has. At this stage I don't want to put him thru the trauma MRI testing etc.	YES	N/A	Suspected triggers: 18.07.21 - 5 days prior to 1st seizure he ate mystery substance at fishing lake. 19.7.21 - Following day very lethargic and not eating or drinking. Emergency vet visit required. General anaesthetic given. Oesophagus, trachea etc massively swollen. Vet prescribed a large dose of the steroid Dexamethasone and follow up Primoin to alleviate swelling. Almost immediate improvement, but diarrhoea for 4 days. 23.7.21 - On day 5 after consumption of unknown substance, he had a full grand mal type seizure. 24.7.21 - This was repeated: approx the same time the following day at 6:30 am when being let out into garden. A time of excitement. Medication: Immediately after the first seizure I gave a drop of CBD Brothers Silver Edition Sativa CBD Oil and another drop that night. A single drop was given the following morning immediately before he went outside, but he had another seizure at approx the same time and place and under the same circumstances. I believe because the Silver Oil had not yet been absorbed. I now give CBD Brothers Silver Edition Sativa Oil 1 Single drop 3 x daily. Organic MCT Oil 1 level teaspoon 3 x daily. Eptaur Capsules 3 per day with food. Details: He has several small meals during the day now, instead of just one meal in the evening (as before). He is fed almost exclusively a raw keto diet. So far he has had no further seizures, but it is obviously very early days. He was neutered 3.5 weeks prior to the first seizure. Both grand mal type fits lasted between 10 and 15 seconds. He was unconscious, but eyes wide open and glazed. He was paddling and flailing at the mouth. He recovered pretty much back to normal within 2 to 3 minutes. I now understand that there is a history of seizures in his lines. His litter sister started fitting at 2.5 years of age, initially under similar circumstances (excitement), but has continued to fit, both while excited and at times of rest and has needed her veterinary meds increased over time.	OWNER
29-11-19		Grenaby Skeel Grail	Not known	Not known	BC	15-Sep-11	UK	Dog	Ludgate Red Laser	Woodrose Spectre AW	Firelynx Jamaraj at Ludgate	Grenaby Editors Choice	Grenaby Tucker	Nunery Kim At Grenaby (ISDS 231219)	1 year 6 months	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Pevion 400mg twice daily. Initially fed on Skinners kibble then once the fitting started, a home prepared diet of brown rice, potatoes and vegetables with raw meat (to try and reduce gluten, corn, soy and casein as per the GARD diet). This seemed to help for a while, with improving gaps between fits until last week, when he had several fits and he became critically ill at the weekend with cluster fitting. Fits have change in frequency. We had got him up to 17 days between fits, and had wanted to try and manage it naturally (without drugs) but that all changed last week as described above and the treatment was necessary to save his life. After we got him, we heard that the dogs (not the batches) in the previous litter had all started to fit. So we opted for an early castration at 5 months. We are very lucky that he is still with us, but it was devastating to see him so poorly. He was in intensive care for 3 days and has been home for 3 days now, improving visibly by the hour. If I can provide you with any additional information, please do not hesitate to shout.	DATA TRANSFER FROM LYN NORTON Added 11.09.13
31-08-20		Gwen	N/A	N/A	Unregistered - UK	01-May-99	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	Veterinary observation	NO	16 years. Euthanasia after uncontrolled fitting	Suspected triggers: No known triggers. Medication: Phenobarbital given initially with limited success. Potassium Bromide controlled the epilepsy completely until aged 16 when digestive problems made the medication unusable. Details: Spayed before 1yr by rescue charity. Survived Parvovirus virus aged 8 months. Fits became progressively longer and uncontrollable. She had to be sedated for up to two days to stop the fitting. Fits ceased immediately once potassium bromide was given (in solution twice daily with food).	OWNER
31-08-20		Gwyneth (ABC 421786)	N/A	N/A	Non UK Registered (Border Collie)	03-Jun-15	USA	Bitch	Yosemite Gold (Flash) (ABC 320881)	Race (ABC 145723)	Bella Jewel (ABC 239542)	BB Honey (ABC 397387)	MISR BB Shiloh (ABC 386155)	BB Y Scorch (ABC 338996)	4 years 6 months	YES	All tests came back normal. MRI, spinal tap, and bloodwork all normal. The neurologist diagnosed her with idiopathic epilepsy	YES	N/A	Suspected triggers: Unsure of any triggers. Medication: She was just put on Zonisamide 100mg in the am and 50mg in the pm. Details: She has had 4 grand mal seizures at night only. They started in Jan 2020 at 3 months apart, then once they got to a month apart, the neurologist put her on medication. She convulses, foams at mouth, eyes roll back, she loses consciousness and I am not able to snap her out of it. She used to run around the room right before she started seizing, but after doing this twice, I started crating her at night in a soft crate. Her seizures last a little over a minute, and she takes on average 3 minutes before she is completely conscious. She gets monthly chiropractic and acupuncture. I get a wellness check with fur sample done and it gave me a list of foods she is sensitive to. I have created her home cooked meals ensuring she only eats foods that she should. I have added MCT oil, B complex vitamins, omegas and do a monthly liver cleanse.	OWNER

29-11-19	31-03-20	Gwynfair Marc My Words	Not known	Not known	BC - UK KC Pedigree	19-Dec-11	UK	Dog	Wildblue It's The Business	AM CH Kybota Wildblue Rhythm	Wildblue Eternal Dream	Trevellis She's A Gem at Gwynfair	Alicia Shady Blue	Dentelle of Sunloch Valley	2 years 2 months	YES	Vet confirmed as Epilepsy	NO	3 years 5 months. He had another severe seizure during the night which left him paralysed from the shoulders. We then made the decision that he should be put. 1st June 2020	Medication: Initially Pexion, after 6 weeks Libromide was added. This combination was satisfactory for a while but then fits resumed, if anything worse than previously, he then had Epiphen and also Diazepam. Neutered after onset of fits. From the outset his fits were severe and caused significant memory loss and required a lot of restraining etc. We had a honeymoon period when we thought that the medication was going to control the seizures but when they resumed each time he had one it was severe and effectively wiped his memory and character. He was very close to death but pulled through. We taught him to walk etc again and after 6 weeks he was basically ok. He was a different dog but he liked us and was content in his life. UPDATE ONLY OK. 31/03/2020 - Update to Registration Type.	DATA TRANSFER FROM LYN NORTON Added: 25.08.15 UPDATE BY OWNER 31.01.20
29-11-19		Gwynfair You Were Made For Me	Not known	Not known	WSD	22-Feb-05	UK	Dog	Fenom Full 'O' Fun	Summertime Sweep	Majacabus Oso Tricky	Tyzmade Maggie May of Gwynfair	Whaknow Rockin Symphony	Gwynfair 'Catch Me If You Can	1 year 10 months	YES	Vet confirmed as Epilepsy	NO	6 years 10 months. Dog is no longer alive. He went into a cluster fit episode that could not be stopped with medication and it was felt that he had suffered enough and had had his last fit.	Medication: He was initially prescribed just Epiphen, but over the next 5 years his medication was gradually increased to try to control his fitting. From his first fit, he didn't have another for 18 months then the frequency increased until roughly every 3 weeks by this time he was on 120mg Epiphen at 8am and 8pm, 300mg Gabapentin at 8am, 2pm and 8pm, 500mg Kepra at 8am and 8pm, and 250mg at 2pm. He was on Autarky at the onset of the fits but as the intensity increased, he was moved to a completely natural diet of cereals and vegetables. Much research was carried out into the ingredients of manufactured dog foods, and it was found that certain things can be a trigger factor to epilepsy so knowing what was in his food was important. He had cluster fits over 2 days on the first occasion and was given medication to try to stop the cluster, it was then 18 months before his next cluster fit. His next fit was then 3 months later, after which the frequency increased from around the age of 4 until the fits were happening every 30th weeks. It was often a cluster of 3 or 4 fits over a couple of hours, but he needed veterinary assistance on 2 occasions where he was anaesthetised to stop the fitting as the episodes had continued over 24 hours or more. NDI neutered as the vet advised against him being operated on because of the risks with his epilepsy.	DATA TRANSFER FROM LYN NORTON Added: 10.09.13

Details: Neutered. One to two minutes fits up to 45 minutes to recover. Normally happens when asleep. Put a flea collar on in May and have wormed three times a year.	OWNER
28-02-22		Harry	N/A	N/A	Non UK Unregistered (Border Collie)	08-May-19	SOUTH AFRICA	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 6 months	YES	After first fit we visited the vet and by eliminating other potential causes it was determined that Harry has idiopathic epilepsy, which was confirmed by subsequent fits	YES	N/A	Medication: Harry is not on any medication for epilepsy yet, I have an appointment with my vet to discuss our options next week. I do have ampules of Valium, which I carry with me at all times, so I can administer it in case he has a fit. Details: Harry was neutered at 15 months. He has had 7 fits to date, the first 5 were roughly 2 weeks apart and the last 2 happened on the same day, about 10 mins apart (although I think this was triggered when he saw me packing, which caused some additional stress). This was 2 weeks ago, he has not had another fit since then.	OWNER
28-02-21		Hästläggs Exx (REGV011/2012)	N/A	N/A	Non UK Registered (Border Collie)	30-Nov-11	SWEDEN	Dog	Taddymoor Joe (REGV1775/2008 Sweden & ISDS 272153)	Highgate Joe (ISDS 245242)	Cati (ISDS 236444)	Ever on Nice (V1249/2006 Sweden)	Glen (ISDS 244489)	Ty Nant Flash (V1172/2004 Sweden)	13 months	YES	With blood tests that eliminated anything else, both with my vet and a specialist canine neurologist	YES	N/A	Suspected triggers: He has had more seizures in the spring and I think that's because everything starts up again with training and so on. Medications: Fenemal 5mg twice daily. Before medication he had 2 seizures, one after another but when he started Pexion the second seizure stopped. He still had seizures every 3 months so we started on Fenemal instead and it went down to one seizure a year. Details: He got a castrating chip a year ago due to prostate problems and after that he has calmed down and his seizure are very far apart now. Not neutered. There are 3 more dogs from the same father on the Swedish list of epileptic dogs. There are also some other dogs that have the same relatives as the mother of Exx.	DATA TRANSFER & UPDATE BY OWNER
19-07-19		Heathgate Rimmel Gold - Rimmel	AG0901044	280543	BC - Dual Registered UK KC & ISDS	28-Aug-05	UK	Bitch	Heathgate Alf (ISDS 263106)	Don (ISDS 201564)	Queen (ISDS 231407)	Rose (ISDS 264347)	Ben (ISDS 257902)	Meg (ISDS 264106)	2 years	YES	Vet confirmed as Epilepsy	NO	She became very ill and was put at almost 7 years, as she was fading rapidly	Suspected triggers: No known triggers. Medication: Phendibarbital/Epiphen and Kepra 3 times a day. Tried Potassium Bromide and Gabapentin unsuccessfully. The Kepra helped control the fits. Details: Severe.	OWNER
28-02-21		Herda Ruemour	K147364	N/A	WSD - UK KC Activity Register	24-Feb-14	UK	Dog	Ken	Unknown	Unknown	Dot	Unknown	Unknown	6 years 4 months	NO	N/A	YES	N/A	Suspected triggers: Thyroid issues, Neogard wormer, car travel, tiredness, excitement. Medication: Thyforon (Levothyroxine sodium) for lack of thyroid function. After 6 months of changing levels and a cerebrospinal fluid sample which reduced the pressure, he seems better. No fits for 6 weeks. Pexion - No change noticed. May have reduced fit frequency. Details: Neutered at 2 years. Fits were occurring randomly up to a weekly. MRI scan showed no abnormality. Cerebrospinal fluid showed inflammation. Dog is extremely nervous and was lying on the ground shaking on hearing a drone or gunshot, even if it is a long way away. Nerves were worse on higher dose of Thyforon. Not sure whether these were a type of fit. Start in a similar way with apparent visual disturbances.	OWNER
19-07-19		Here Comes Milley Moo Moo - Casey	Not known	N/A	WSD - UK KC Activity Register	19-Sep-11	UK	Bitch	Coolvale Dark Stranger	Wintercloud Blue Thunder over Gimpylands	Fall From Grace at Coolvale (ISDS 267497)	Here Come Mitsy Moo Moo (Activity Register)	Unknown	Unknown	11 months	YES	Blood tests, Urine Tests, Bile Acid Stimulated, Scans, Vet confirmed as Idiopathic Epilepsy	YES	N/A	Suspected triggers: Seizures seem to occur when over tired or stressed but no real pattern or definite trigger. Medication: Started on Pexion but after 18 months fits got worse and started to cluster. Changed medication to Epiphen 60mg every 12 hours. After a couple of increases of Epiphen Casey liver started to struggle. Added Bromide and reduced Epiphen. Now on 300mg Epiphen BID and 1 x 325mg Libromide. Reduced Epiphen because liver was damaged as a result of using Epiphen. Details: Neutered. Had MMRs in 2016. Was fit on James Wellbeloved, now on on Millies Wolfheart. Nothing unusual happened prior to onset. She has Grand Mal seizures and has done from the start.	OWNER

Most of her fits have been whilst exercising, rather than at rest although she has had both. She is fed Pedigree Chum all one and Pedigree Chum triumph. Good results since prescribed Pexion and after the tablets got into her system. She was already spayed before the fits started.	DATA TRANSFER FROM LYNN NORTON Added 23.03.14
30-09-21	31-10-21	Jack	N/A	N/A	Unregistered - UK	17-Aug-20	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	11 months	YES	Vet diagnosis. Bloods tested to rule out other causes.	NO	12 months old - severe cluster fits never recovered and had to take heartbreaking decision to give him sleep.	Suspected triggers: No known triggers. Medication: Epiphen. 60mg twice per day Details: Neutered. Smaller focal seizures progressed to general seizures and cluster seizures. Parentage both BC - Sire BC ISDS Fen. UPDATE ADDED 31/10/2021 - I worked closely with the vet but Jack had regular and very severe cluster fits and rarely recovered inbetween. The medication (Epiphen) was unable to make any difference. I do believe that Jack may have had Idiopathic Epilepsy for longer than we knew before diagnosis. Now I have learnt much more about this disease, I think there were earlier signs. I had to take the heartbreaking decision and he was euthanised.	OWNER Updated 31.10.21
31-05-20		Jack	N/A	00/355613	BC - ISDS	21-Sep-17	UK	Dog	Felisdash (ISDS 00/315780)	Killebrae Laddie (ISDS 262753)	Killebrae Jet (ISDS 283073)	Meg (ISDS 00/316242)	Spot (ISDS 258972)	Neil (ISDS 274798)	2 years 1 month	YES	Vet	YES	N/A	Suspected triggers: Possibly stress. Medication: Epiphen and Libromide. Details: Intact Male. Seizure approx every 2-6weeks. Seizure length average 45seconds. We got Jack when he was 14 months old, he had his first seizure about 1 month after his 2nd birthday (late Oct 2019). I phoned the vet and they gave me some great advice on how to monitor and what to do during a seizure, unfortunately a couple hours later he began to cluster so was rushed off to our emergency vet for sedation. We discussed the options for meds and agreed that we would not medicate at this point. 2 months later he had his next seizure, so an appointment was made to check his bloods again, this time the vet suggested we put him on Epiphen. After a while with only the sporadic minor seizures he began to cluster again (5 in 2hours) he was kept at the vet that day and was started on Libromide and we were given emergency meds for future clusters. Since then Jack has been only having small seizures roughly once every 2 months. We continue to medicate with the Epiphen and Libromide and record any seizures in his diary or on film when we can. Jack is the most loving, happy dog and wants to be friends with everyone he meets. We love Jack dearly and wouldn't be without him.	OWNER

Fits have not changed in severity or frequency since onset. Spayed.	DATA TRANSFER FROM LYNN NORTON Added 09.09.13
21-08-19		Jess	N/A	N/A	Unregistered - UK	27-Jun-03	UK	Bitch	Flp (ISDS 250011)	Glen (ISDS 198708)	Fran (ISDS 219858)	Floss (Not registered)	Ben (Not registered)	Jill (ISDS 25588)	2 years	YES	Blood tests and other family members fitting	NO	Died aged 11 in Status Epilepticus	Suspected triggers: No known triggers. Epileptic cousins. Medication: Initially Epiphen then Libromide added and finally Keppra. Details: Spayed before onset. Cluster fits showing signs of brain damage. Jess had refractory epilepsy. Despite increase in doses of Epiphen and addition of Libromide followed by Keppra she continued to have cluster fits admitted to vets on several occasions to try and stop the clusters. The only time she was fit free was on large doses of Epiphen which eventually caused her liver to have problems metabolising the drug and she started to fall over eventually being unable to walk. At this stage she was referred to a neurologist and put through MRI scans, spinal tap, blood tests etc. The result was that she was being poisoned by the Epiphen which her liver wasn't metabolising. Her dose of Epiphen was reduced and she was put on a liver supplement. With the reduction of Epiphen she went back to cluster fitting every three months till she died 3 years later in status epilepticus.	OWNER
31-10-20		Jess	N/A	N/A	Unregistered - UK	10-Mar-14	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	7 to 8 months	YES	Monitoring fits and keeping record of everything that happened	YES	N/A	Suspected triggers: None known. Medication: Pexion 600mg a day. Details: Rarely happens but occasional cluster fits, longest fit lasted 13 minutes usually last about 4 minutes. Can be months/weeks between fits since being on medication.	OWNER
31-03-21		Jess	N/A	N/A	Unregistered - UK	20-Jun-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	About 18 months	YES	After videos we had taken and being tested at Fitzpatrick's. They started her on medication, which caused her to fit more	YES	N/A	Suspected triggers: Extreme exercise, stress, heat in the summer. Medication: Phenobarbital and Pexion which she is being weaned off. Getting ready to start Potassium Bromide once Pexion has finished. Details: Jess has been spayed. She is a very anxious dog who is upset by any noise. Her fits are like petit mal at times but also grand mal fits where her nose and bottom jaw, her eyes roll up, then she starts to shake. They can last from between 30secs and 8mins. She also has episodes where she lays in her Dad's arms and flops her head on the sofa and can sleep for up to 30 mins. You can say psychotic, squirrel, demented, name of a visitors and she doesn't move. All the time there, her limbs don't move and when she gets off she has left a small mark on his trousers. The last two fits she has been incontinent and wet the bed. Occasionally she can be aggressive, but normally a very placid girl. She has changed, doesn't like her harness on or collar, seems worried to go to my husband.	OWNER
21-08-19		Jez - Jazzy	K141585 (activity register)	00/313905	BC - ISDS	03-Apr-11	UK	Dog	Lad (ISDS 267484)	Roy (ISDS 245540)	Jan (ISDS 237155)	Tess (ISDS 00/361628)	Uwynnarn Nap (ISDS 252871)	Killbrae Sky (ISDS 274792)	2 years 2 months	YES	MRI	YES	N/A	Suspected triggers: Possible glancing adder bite - he had a puncture wound in his nose and swollen face for 4 weeks, frontline 4 days before. Medication: Epiphen, Potassium Bromide, Keppra and Diazepam to try to stop clusters. CBD oil plus herbal products. Everything has worked well initially but then has become less effective. He has just been prescribed Pexion to use for a few days after seizure to try to stop the cluster. Details: Jazz is entire. He fathered a litter before his seizures started - his son started having seizures at 15 months and was pitted at under 2 years due to uncontrollable seizures. Jez' sister started fitting a year after him and she lost her battle in May this year. Jez always has GMS and always clusters. They have become progressively longer - will often be unconscious for up to 6 mins. We are very fortunate that Jez has a VNS implant. Langford vet hospital is doing a trial with Bristol Children's Hospital and Jez is the 4th dog to have the implant in June 2017. I am convinced that he would not still be alive if he hadn't had this. He is very active and 3 years ago started Rally Obedience and is now working at the top 2 levels.	OWNER
22-12-19		Jilly	N/A	N/A	Unregistered - UK	05-Jan-15	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 6 months	NO	N/A	YES	N/A	Suspected triggers: Totally unknown, just happened one night. Taken to vet after first fit. Then continued monthly, always about 2am. Medication: Vet recommended not going on meds as they didn't last long and were so spread out just monitoring her and if anything changes consulting vet. Have rectal Diazepam in case she has another. Details: She had one large fit about 6 months ago followed by some smaller ones. Was left with a twitch but vet put her on diazepam for a week and twitch cleared. All her fits are over in a couple of minutes and doesn't seem to be a pattern to them apart from monthly and always about 2am. She has had fits monthly up until 14th of September, but nothing since then (21.12.19). She is spayed.	OWNER

Medication: Soliphen and Libramide. Fits have got more frequent over time. He is on liver supplements which make him process the drugs very quickly so the fits are unpredictable. Details: Fits last 20-40 seconds. Neutered just before 3 years old. I think fits caused by flea collar with him playing with other dog and mouthing flea collar.	OWNER
29-09-19		Kingsfarm Lady In Red - Indi	K127121	N/A	WSD - UK KC Activity Register	22-Feb-08	UK	Bitch	Borderfair King Of Swing	SH CH Brooksbid Country Classic	Borderfair Pink Fizz	Merrymash Dress To Kill Of Kingsfarm	Tenita Black Magic At Kingsfarm	Faith In Merrymash	9 years	YES	Blood Tests	YES	N/A	No suspected triggers. Medication: 200mg Pexion twice daily. No change noted as put on 2nd time she fitted when she fitted 3 times in 3 days which coincided with having vitamin tablets. Put on Purina Neurocare dog food which made a big difference in her recovery after a fit. When taken off this I started on Coconut Oil since when the time between fits has gone from roughly every 2 months to over 6 months.	OWNER
21-08-19		Kingsfarm Maid of Honor	K139324	N/A	BC - UK KC Pedigree	08-Nov-11	UK	Bitch	Tamerlyne Celtic Laird	Bellarivie Highlander CDeux Udeux	Tamerlyne The Ferrari	Kingsfarm Dress To Impress	Borderfair King Of Swing	Merrymash Dress To Kill Of Kingsfarm	5 years 5 months	YES	Vet said it was because she had now had 4 episodes	YES	N/A	In vets during first one - stress? 2nd one it was a very hot day and had eaten cheese? Medication: Epiphen 1x twice a day, Eptaur 500, Milk Thistle & CBD Oil. She has remained fit free since. Spayed in 2012. Her last fit was the worse - much more intense and longer (lasted about 3 minutes) and she took longer to come out of it. In April 2017 Macey had a routine dental examination. In waiting room afterwards I noticed her mouth was twitching and started to foam. The vet took her in side room where she was fitting on the floor. They kept her in vet observation for a few hours. Vet thought as she was stressed this was probably the reason. No medication given to me as they said they only medicate when they have had 3 all ok and fit free until June 2018. Around 10am Macey was resting in kitchen and started to fit. No vet appointment until 4pm that day. No tablets given but was told to administer rectal diazepam if she had another. 2 hours after being home she had 2 more - more severe than before - rectal diazepam given. Called emergency vets as I couldn't cope with seeing her like it. They agreed to have her in overnight to observe. Got a call 3 hours later saying she was so stressed and would be better at home. Epiphen was prescribed 1 tablet twice a day. I also give her Eptaur 500, Milk Thistle (to help liver on Epiphen) & CBD Oil. She has remained seizure free since. The day of her first fit at home it was a very hot day she had also just eaten some cheese (which is now off the menu).	OWNER
19-07-19		Kobi	N/A	N/A	Unregistered - UK	15-Jun-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 8 months	YES	Confirmed by vet	YES	N/A	Suspected triggers are stress and also air pressure (thunder weather), bright lights. As Kobi is deaf and also almost blind he bumps into objects which stresses him. He can't go to vets surgery as stress causes seizures. Medication: Vets have tried almost all meds over the last four years. He still has seizures but they are 1-2 a month now. At the moment his meds are: Epiphen, Libramide, Levitraacetam and Sodium Valproate. Diazepam for cluster seizures. He has recently been diagnosed with diabetes too so is now on insulin too. We have struggled for four years to get him to this point and tried so many different meds. Have also had advice from a neurologist who diagnosed textbook Epilepsy. Kobi has blood tests regularly to check his meds. He is a blue Merle, totally deaf, almost blind and now diabetic aged 6 yrs old. While trying to get the right balance of his meds he was having clusters every other day. As his meds are now he will have 1-2 seizures which leave him completely exhausted and wobbly for days. His seizures are 1-2 a month at present. Neutered. Rescue dog from Border Collie Trust GB.	OWNER

He had two failed infusions, couldn't stop the seizures	No suspected triggers. Medication: he had a VNS implant, was on epiphen, pregabalin, keppra and cortisone. I&B made him crazy and then unresponsive, we even had a VNS implant inside him to try help. CBD did nothing.	OWNER
29-09-19		Lacey	N/A	N/A	Non UK Unregistered (Border Collie)	10-May-19	SOUTH AFRICA	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	Blood tests MRI scans Diagnosed idiopathic Epilepsy	YES	N/A	Suspected triggers: Bravecto tick and flea treatment. Light sensitivity. Extreme change of routine. Medication: Phenobarbital. This has helped control the seizures and we went 8 months seizure free as a stage. She seemed to develop resistance to it and due to her liver enzyme levels we added Keppra. Valium is used as a rescue medication. Lacey is spayed. Behaviorally she is very active, not just border collie active (we have two) she has endless amounts of energy and it seems as though she rarely switches off. She chases shadows and light reflections endlessly and like them mainly on floors and walls. She also seems very sensitive and reacts to seemingly normal activities she has a barking fit/strut when you shower, take off your shirt, use squeeze bottles etc. It's as though she doesn't like you doing it and even gets worked up before you begin to do it for example if she sees you take clothes out to shower she starts barking. 2017 May 1 seizure, July 1 seizure, August September, November and October (partial seizures one each month), December 1 seizure. 2018 January 2 seizures increased phenobarbital med, April 1 seizure. 2019 February 1 seizure, March 1 seizure, June 1 seizure, July 1 seizure added Keppra. Partial seizure it seems as though a seizure is starting and she comes and asks for help but then there is no seizure only excessive snout or teeth chattering. Lacey's seizures are usually just over a minute and she urinates during her seizures.	OWNER

28-02-22		Lili Marienne - Lili	K133675	N/A	BC - UK KC Pedigree	01-Jan-10	UK	Bitch	Amprions Infinity (Registered BC)	SH CH Clavier Boogie 'n' Snudge (Registered BC)	Amprions Andromeda at Falconmoor (Registered BC)	Delicious Ellie Brooks (Registered BC)	Caristan One for the road to Blyara (Registered BC)	Shipale Wild Rose (Registered BC)	3 years 6 months	YES	Bloods, then idiopathic epilepsy by exclusion	YES	N/A	Suspected triggers: None provided. Medication: Pexion initially (ineffective), Pheno since 2013, generic Keppra since 2018. Details: Spayed at 18months. 370 odd fits in total (80 before pheno), gradual downward frequency, 5 in 2021. All Grand Mal, all around a minute. Lili Marienne's breeder was banned and not allowed to register BC status, although previous identical litter were registered as BC's.	OWNER
29-10-19		Little Ozzie	Died before being able to be registered	N/A	Unregistered - UK	08-Mar-07	UK	Dog	OB CH Whatnow Razmatatz (WSD)	Rockin Rapid	Forever Magic Fantasia	Croftmist Megan (BC)	Tanamerye Krismoos	Mainline Mist (BC)	45 days	NO	N/A	NO	46 days old. See fitting details for more information	Suspected triggers: The vet suggested that he may have had worms but it was not the case. Medication: No medication for fitting but AB's and Anti-inflams as below. Details: At 43 days he became quiet and stopped interacting with his siblings. At 44 days he started seeking out dark places. Taken to the vet and was given antibiotics and anti-inflammatory injection. At 45 days he was again searching for dark places. He was very distressed when travelling back to the vets and fitted badly within minutes of arriving. At 46 days old he began fitting and was taken back to the emergency vet. He resembled a clockwork toy and was very rigid in his mobility. He seemed to have stopped growing. The vet blood tested for a liver-shunt which came back negative. As the vet examined him, Ozzie became very distressed when his head was held and was obviously in a great deal of pain. The vet diagnosed inflammation of the meningeal (tissue surrounding the brain). The vet and I agreed that euthanasia was the only option. Two other pups from the litter also fitted at later intervals and both have died. The rest of the litter were registered with my 'Croftmist' affix. Megan was spayed after. The two other dogs from the litter, that fitted, were put to sleep at young ages due to the fitting. Ozzie was unregistered but the rest of the litter were KC registered.	OWNER/ BREEDER

28-12-20		Loki Shewbridge	N/A	N/A	Unregistered - UK	25-Dec-17	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 2 days	YES	Vet diagnosed. Loki had liver blood test and they said he had idiopathic Epilepsy. This was after the 2nd seizure.	YES	N/A	Suspected triggers: I currently am under the belief it's food related. Possibly grain but without testing I can't be sure. Medication: Loki started taking 1.5 x 30mg tablets twice daily. Because of his recent seizures medication has now increased to 2 x 30mg tablets twice daily. Loki was neutered at 10 months. Details: Loki's seizures before meds lasted approximately 1 minute (convulsions) it took him about 15 minutes to recover/recognise me. Since medication the last 3 seizures have been much shorter and he has not urinated. He takes about 5 to 10 minutes to recognise me.	OWNER

29-02-20		Mandy Patrick	N/A	N/A	Unregistered - UK	18-Jun-05	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	By the vet as she went on quickly to have a series of fits stopped only by being given an anaesthetic.	NO	Age 11. Death was related. Mandy went into a state of conscious shaking and her body shuddered as if she was unable to move over a period of days	Suspected triggers: All vaccines, flea and tick treatments, loud noises and stress eg: visit to vet, agility class, being left alone. Medication: Started on Epiphen, added Libromide, added Keppra as each drug became less effective. Also had rectal diazepam to bring her out of seizures. Extra Keppra used as preventative before a stressful event and after fitting to prevent recurrence. Spayed age one. Mandy had fits, often in a short space of time, around once a month once we got medication settled. We added more meds as they became more frequent each time. To begin with she was very unstable as vet wanted to introduce meds gradually. Several visits to emergency vet. Eight fits after vaccination when she was four. Always fitted five days after flea and tick treatment. Diagnosed as tonic clonic epilepsy. In her last few months she did not fit until last major episode. A beautiful girl who took it all in her stride and remained gentle and loving and full of life through it all. Major meds over nine years did not impact liver and kidneys which was one of our big concerns.	OWNER
30-04-21		Marky	N/A	N/A	Unregistered - UK	27-Jan-15	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 4 months	YES	Blood tests after change of vets	YES	N/A	Suspected triggers: Weather and pressure Medication: Epiphen 45mg x 2 daily Details: Neutered. Fits last up to 2 mins and about 10 mins recovery. Marly was bought from working farm at 4 weeks old... was not the first to leave the farm and was the smallest.	OWNER
29-02-20		Marley	N/A	N/A	Unregistered - UK	2011 approx	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	YES	Blood tests excluded anything else, vet said most likely idiopathic epilepsy	YES	N/A	Triggers unknown, although previous owner mistreated him and was convicted of animal cruelty after kicking Marley repeatedly on numerous occasions. He had a broken tail. Could have had injuries to head maybe? Medication: He has had far less fits since starting a raw diet with coconut oil and CBD oil. Once a seizure starts, we give CBD drops immediately and the fits subside quickly and he recovers far better. Before CBD he would have cluster fits and twice had status epilepticus where the seizure continued for nearly an hour. With CBD they last only a minute or two and are very mild. Neutered at approx. 4 years old. Very dominant male, pushy with other male dogs. We think Marley is a Welsh collie. He is sable and white, herds upright and is loose eyed. Contacted the Welsh Sheepdog society who said epilepsy is very rare and practically unknown in registered Welsh Sheepdogs, although common in border collies. They suggested Marley is therefore most likely a Welsh Sheepdog/BC cross, or if he's a pure Welsh, his epilepsy is probably injury related rather than inherited.	OWNER
29-11-19		Marshonelle Nowdylicious	Not known	Not known	BC	05-Nov-12	UK	Dog	Rosmarinus The Chocolater	Rosmarinus Jaffa	Rosmarinus Demerara	Marshonelle Izzie	Rosmarinus The Rainmaker	Amazin Gracie	1 year 1 month	YES	Vet confirmed Idiopathic Epilepsy. All possible tests done, including an MRI scan and spinal fluid tap	Not known	Not known	Medication: 40mg of Pexion twice a day. He was flea treated a week before, to which he was stressed at time of doing so and was off colour from that point up to first fit. He was fed on mainly raw with some dry food. Had an allergy test done and he is allergic to chicken, duck, wheat and gluten. Changed to pure BMBF diet minus the chicken and duck. In himself he became brighter when food was changed, he started to grow again, coat became fuller. His fits have become less frequent but this may coincide with having all possible tests done, including an MRI scan and spinal fluid tap, to diagnose epilepsy and being put on the right medication. When they first started he had several in a week, once food changed these decreased and since medication started they have decreased further. Longest between fits has been 31 days. 19-07-19		Marshonelle Switch N On	AP0428501	N/A	BC - UK KC Pedigree	05-Nov-12	UK	Dog	Rosmarinus The Chocolateur	Rosmarinus Jaffa	Rosmarinus Demerara	Marshonelle Izzie	Rosmarinus The Rainmaker	Amazin Gracie	7 months	YES	Vet confirmed as Idiopathic Epilepsy	NO	Major seizure	Suspected triggers: No triggers identified. Time frame was too short to collate information. Medication: Peixon 400mg twice daily. One small fit on 28.06.13 whilst asleep on sofa lasting less than a minute, recovered within 10 mins. No further fits until 9th July, when found fitting in the morning. Rectal Diazepam given. Fitted again same day at 3pm, same treatment, but 4 further fits, taken to vet, kept overnight and stabilised. Home on the 10th but fitting again between 11am and 2pm so back to vet and again kept in overnight and sedated. Phenobarbitone and on a drip. Progress was poor at this time. Brought home on the 13th July, Peixon 400mg twice daily. Details: Recovery seemed unlikely but daily improvements noted - motor function, spatial awareness, vision, recognition. Following 22 days charted phenomenal progress in physical and mental capabilities, by 1st Aug he was at 95% of his previous levels of Obedience training. On 2nd August he had another brief fit at 10pm (similar to his first) with the same outcome. At some time between 3am and 4am on the 4th Aug he suffered a major seizure, rectal diazepam x 3 was administered but to no avail, and he passed away shortly afterwards before the vet arrived. Vet hazarded a guess at major haemorrhage as cause of death. Neutered.	OWNER

29-02-20		Molly	N/A	N/A	Unregistered - UK	17-Aug-19	UK	Bitch	Unknown	Unknown	Unknown	Shadwell Sophie (ISDS 350782)	Jock (ISDS 327212)	Adelph Ember (ISDS 321991)	6 months	YES	All blood tests done and no underlying issues	YES	N/A	Suspected trigger: Stress may be a trigger. Medication: Peixon - this did not work in my opinion made it worse. Epilphen - immediately calmer and fitting stopped. Molly had what we thought were panic attacks from when we brought her home. I now believe that these were partial seizures (Psychomotor), which evolved into full seizures. These stopped when Epilphen was introduced. She is also very anxious and hyper sensitive to certain sounds (cutlery, tin fall, running water). Epilphen has also helped with this.	OWNER
29-10-19		Moose	N/A	N/A	Unregistered - UK	15-Jan-19	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Moose took his first fit at 6 months, from which I took him to the vet and blood tests were conducted. Since Moose was a male BC the vet believed it was a high probability that Moose was suffering from Idiopathic Epilepsy	NO	Passed away at 8 months old. Began fitting, fits were lasting around 4 minutes give or take. Was taken into vets where he was sedated. As he came out of the sedation he took a fit which he did not come out of	No suspected triggers. Medication: Started on Peixon and went two weeks without fitting. However had to be placed on Kepra as well due to him still fitting. After 3 weeks on Kepra and Peixon, Moose took a cluster of 7 fits within 18 hours and then was placed on Epilphen and Kepra. This allowed him to be fit free for 1 month until vets decided to lower the dosage of Kepra, the Kepra was dropped to half a tablet and then Moose took his final fit and eventually passed away. Due to the level of medication Moose was on, his focus and concentration were terrible. I have recently read an article stating that the trainability of dogs suffering from epilepsy drops after their first fit and I can back this up from what I've seen with my boy.	OWNER

30-09-20		Ozzy Bear - Bear	N/A	N/A	Unregistered - UK	31-Jan-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 9 months	YES	Specialist confirmed as Epilepsy, MRI & Spinal Tap clear	NO	3 years - Passed to bridge 30th May 2017	Medication: none noted. Currently on Epiphen 180mg + Lormetazepam 650mg and 10mg of Diazepam with each seizure. From young age had bad reactions to spot on flea treatment. MRI & Spinal Tap clear. Fits: 1 Grand Mal weekly, after meds began ~1/3 month. Fit free in 2008, began again 2009 increased frequency/intensity, now Grand Mal every 3-4 weeks & 2 within 15mins. Spayed after onset. Data from 31.01.2016. Suspected triggers: I've kept a diary since his first fit which was in October 2015 and at first we thought it was a supplement oil we put on his food. We stopped it but found the fits carried on regularly until he clustered and we had to put him on meds. They were 3 weeks apart within a day each time, then he had 2 in 3 hours. Medication: He started on Epiphen 45mg twice daily. He had blood tests every 3 weeks and after each blood test his dosage was increased by half a tablet each dose. As at the above date he was on 75mg twice daily. He also has Diazepam in case of severe fitting of 5 minutes. Details: Bears first seizure was at 6.30am, he'd last eaten at 3.30pm the evening before. He is fed Nature's Diet which is cooked, he has that with Pedigree Chum mixer for large dogs. Most fits are between 4.30am and 6.30am when asleep. Since he started his meds he has not fitted, though after blood tests they have kept increasing his dosage. He has now been 6 weeks fit free. Bear is a very large cobby weighing around 34kg. He came from a working farm in Wales as did his brother who is coming up to 3 with no signs of the same. He was neutered at 9 months old and had not fitted until October 2015. UPDATE ADDED 30/09/2020 to: Date of Birth/Registration Type/How epilepsy diagnosed/is dog alive/Age & Cause of Death.	DATA TRANSFER & UPDATE BY OWNER
29-11-19		Paddy	N/A	N/A	Unregistered - UK	12-Oct-17	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	Vet tested for all other possible conditions which were clear, this left us with idiopathic epilepsy	YES	N/A	Not sure as very early stages of any suspected triggers, only had first seizure on 12/10/19. Possibly stress related? Medication: Initially given Pexion 400mg half a tablet twice a day, 12 hours apart. On 18th November began fitting again. First one was as all the others, he was sleeping then began a cluster, Diazepam administered but continued to fit the morning after, on another trip to the vets they issued more Diazepam & introduced Epiphen, he had a loading dose for 24 hours (6 tabs) along with the Pexion then reverted to 2 tabs 12 hours apart plus Pexion for 24 hours, another vet trip booked for 18/11/19 to discuss future medication. Neutered at months old. Seizures initially were when sleeping but in last 24 hours they have been when awake. Fits are never very long at the moment, around 30-45 seconds. Some seizures have appeared to be caused by one of the other dogs growling at him.	OWNER

31-01-22		Puppichino	N/A	N/A	Non UK Unregistered	22-Oct-15	INDIAN born, export to UK	Dog	Johny	Unknown	Unknown	Unknown street dog	Unknown	Unknown	1 year	YES	Vet examination and blood tests	YES	N/A	Suspected Triggers: Originally triggered by rabies vaccine batch (suspected). His brother and my other (non-border collie dog) were also vaccinated but had another batch. Medication: Pexion 400 mg - 1.5 tablets twice daily, Levacetam 750 mg - 1 tablet thrice daily, Epiphen 60 mg - 1 tablet twice daily. Details: Puppichino was born in New Delhi, India as a stray dog and was neutered at 9 months old. We relocated him to the UK in 2017 July and he had shown no signs of epilepsy. Puppichino is now 6 years old and has been epileptic since he was a year old. He had only a few attacks each year until December 2020, we didn't put him on medication. But in December 2020 he started having cluster seizures and was initially put on Pexion, he is now on 3 drugs (Pexion, Leve and Epiphen). He had a very severe attack of almost 90 minutes in October 2021 and had to be rushed to an emergency vet. It was triggered when the vet tried reducing his dosage of Levacetam. Fortunately since then he has cluster free till last night 3 Jan 2022, then he had a single attack yesterday. This is an improvement from the 6 or so he would have each month.	OWNER

31-03-22		Quidstep (NHSB 2106612)	N/A	N/A	Non UK Registered (Border Collie)	10-Mar-98	Netherlands	Dog	Maks (NHSB 1824452)	Rex (NHSB Bfl. G 2 132996)	Berrie (NHSB 1611999)	Donna (NHSB 1956472)	Vic (NHSB 1394952)	Bobby (NHSB 1756146)	3 years	YES	Diagnosed by a vet	NO	Quidstep was pps at the age of 12 1/2 years. He had enough seizures, his body couldn't take anymore	Suspected triggers: Triggers were stress from other dogs, hormones, full moon and especially super moons. Medication: As there was only Phenobarbital and Potassium Bromide in those days as far as I know, he was on the max of both. Details: He still had a Grand Mal every month at a full moon at 03:30 at night. The Grand Mal took about 6-10 minutes. After his Grand Mal he was screaming for 2 hours and pacing, trying to hide behind anything and after that came 2 hours of walking and panting before he came to his normal self. And then he slept for 24 hours. He was the same every month. Only just before he was pps he started to have cluster seizures. Then I knew it was enough. Quidstep was an intact dog, so the hormones were a problem with other dogs. He was bred without any health tests from the parents and got a Dutch pedigree. He was out of Working Sheepdog Lines, only a few generations in the Netherlands. He also got supplements like herbs and the food was changed from kibble to meat which helped a lot. As was normal in those days he had his vaccines and deworming on a regular base. Quidstep was pps at the age of 12 1/2 years. He had had enough seizures, his body couldn't take anymore. So it was the only humane thing to do, to give him peace. He had a very active life with walks to the horses and playing with a football and doing lots of things but only with us, no other dog except the ones he knew before the seizures started!	OWNER

29-11-19		Remajak Somerset Morn	Not known	Not known	BC	11-Jun-13	UK	Dog	Altricia Double Dare To Arrondare	Altricia Mister Consistant	Altricia Lady Madge	Borderbeau Blithe Spirit At Remajak	Locheil Traveller's Locheil To Borderbeau JW 3Hcm	Locheil First To Finish At Borderbeau	1 year 4 months	NO	N/A	Not known	Not known	Medication: see below. First fit 28.10.14 - seizure in the afternoon, followed by a slow but full recovery to normal state. Second fit 29.10.14 at 7am. Seen by the vet after each seizure and blood tests undertaken. Vet advised diagnosis of Idiopathic Epilepsy at this stage but as yet no MRI or spinal tap has been carried out. He was otherwise fit and well with no further seizures as of 2.12.14. Initial course of Diazepam for approximately one week, treated with Epilphen twice daily from day of second fit for four weeks. Bloods have been sent to Epilphen to assess viability of phasing out medication. 24.9.14 castration under general anaesthetic; vet treated with Advantage for possible fleas same week. 1.10.14 first year vaccination; 25.10.14 routine worming with Panacur. He is otherwise fit and healthy. All breeders/owners directly connected were informed immediately with sire/dam owners agreeing to wait for completion of initial four week treatment plan before submitting to database; dam & littermates will never henceforth be bred from. DNA to be submitted in due course. Fed James Wellbeloved Turkey & Rice; no change before or after seizures. Neutered on 24th September, before onset of fits. UPDATE 01.05.15 - Bryn suffered a seizure at 10.30pm. Recovery time was quicker than the initial two seizures last October but he lost vision for 15 minutes. 25 minutes after the seizure he took his ball to his owners to ask for a game. At the time of the seizure, his owners report that his Epilphen dose had been reduced gradually to 1/4 tablet each day (as he had suffered no further fits after the initial two) with the plan to take him off meds altogether in another week. However, their vet has now advised that the dosage should be returned to 1/2 tablet each day.	DATA TRANSFER FROM LYN NORTON Updated 01.05.15

30-09-21		Rusty	N/A	N/A	Unregistered - UK	01-Apr-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years	NO	N/A	YES	N/A	Suspected triggers: Low blood sugar (not eating often enough). Medication: Diazepam (in case of fits that last longer than 5 minutes) Details: Neutered. Frequency of fits: 1 every year (any time between March and June). Length of fits: 1 min for aura, 1 min during grand mal phase, 10 min aftermath (temporary blindness and unable to walk properly). Vaccinated with yearly boosters. Vet-prescribed flea and deworm medication, as standard. Food is pedigree wet jelly (dog does not tolerate dry food well - causes bloating and chronic flatulence). Several pedigree chesee and beef mini treats throughout the day and 1 pedigree dentalstick per evening. Since identifying the potential trigger no fits have occurred, as the dog is now fed at exact timings each day.	OWNER
19-07-19		Ryans Mirk V4072 (VSDWA)	N/A	N/A	Non UK Registered	19-Mar-07	AUSTRALIA	Dog	Princes Dooley V2955	Braiston Don V2203	Princes Zoe N0102	Allandale Gypsy Q3536	Dan (ISDS 220972)	Crowsdale Cindy Sarah Q2789	10 months	YES	All usual testing was undertaken to rule out other causes (not MRI)	NO	Euthanased (17 months) after bad weekend and seizure on the Monday morning - very restless, whiny, regular salivum to settle. Seizures getting worse, developed into cluster seizures preceded by running without purpose including into fences/walls.	Suspected triggers: No triggers identified. Medication: Phenobarb and Kbr. Increasing dosages but seizures got worse. Details: Went on elimination diet, then natural diet only (Hestic vet advised). Thyroid panel showed normal range.	OWNER
29-11-19		Sam	N/A	N/A	Unregistered - UK	30-Mar-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	YES	Multiple fits leading to seeing a neurologist. He has had numerous blood tests and an MRI to eliminate tumours etc	YES	N/A	Suspected trigger is pollen as he is worse throughout the summer period. He is on a hypoallergenic diet. Fully vaccinated. Up to date on flea and worming. Medication: He started on Pexion which made clusters worse. He moved to Epiphen which was a lot better but still having them often. He has just started on Bromide and after 4 months, we are going to start reducing the Epiphen. He is neutered. He was fitting every 2 weeks but currently 33 days seizure free from starting Bromide. His fits go on for approx 5 mins and they are all grand mal. I have not noticed him have a focal seizure nor does he just tingle. If he has a fit, it's always a big one. He starts his fit by turning his head all the way around and basically looks behind him. His eyes go wide and he starts to fit. He always pees and foams at the mouth. Sometimes he bares his tongue ending up in bloody sput being thrashed around.	OWNER
29-11-19		Sam	Not known	Not known	BC	01-May-07	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years	YES	MRI and Lumbar Puncture. Bath Vet hospital confirmed as Epilepsy	NO	Died May 2013 aged 6 years. He fitted off and on for just over a week in clusters. We arrived home one evening to find that he had died. The vet said it was a grand mal seizure that only instant medication could have saved him and he would not have known what was going on	DATA TRANSFER FROM LYN NORTON Added 21.06.14	
30-06-21		Scalpie Gem - Gem	N/A	00/754423	BC - ISDS	15-Sep-17	NETHERLANDS	Bitch	Skiid(SDS 297208)	Bill (SDS 249411)	Mig (SDS 253243)	Fae (SDS 333930)	Hank From Shepherds Oam (SDS 312500) [Deu]	Kine (SDS 325501)	2 years	YES	By a vet	NO	3 years 8 months. She passed away on the 25th of May 2021 as she did not come out of a epileptic attack and we had to put her down	Suspected triggers: No specific triggers lead to the attacks. Medication: She was given Pexion at first, but had Phenoral at least the last 3 months. The periods between the attacks became longer. From once a week to the maximum of a little over 3 weeks. Details: The length of the fits were about 1 to 2 minutes, after that she needed a little time to recover, maybe 5 - 10 minutes. Then she was her normal, happy self again. Gem was not neutered.	OWNER
29-11-19		Seve	Not known	Not known	WSD - Unregistered	approx 02-Nov-07	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	Vet confirmed as Epilepsy	Not known	Not known	Suspected triggers: On keeping a diary fits always on around spot on flea treatment - stopped using and fits a lot less severe and less frequent, plus have changed his diet to part raw and don't give any vet meds unless very necessary (use alternative and herbal) and ALWAYS check they are suitable for dogs with seizures. Medication: None. Fits always in a morning after a deep sleep but have been able to halt them when I see and hear the signs (snooring noise and lip licking) and talk to him and stroke him gently. Now fed part raw/ part JWb kibble. Did read an article about giving frozen vanilla ice cream immediately after a fit. Have only tried this once but was AMAZING at bringing him round very quickly. Fits have gone from every 3 to 4 months to every 5 to 6 months (last time was 5 months 22 days) and are less severe lasting less than 1 min and recovery time afterwards a lot quicker (due to ice cream?). Dog came from a rescue and was neutered before owner got him.	DATA TRANSFER FROM LYN NORTON Added 11.09.13 Updated 20.10.13

28-02-21		Skye	N/A	N/A	Unregistered - UK	05-Jun-17	UK	Bitch	Scottish Farm dog	Unknown	Unknown	Scottish Farm dog	Unknown	Unknown	3 years 3 months	YES	Several identical seizures. Vet feels as they started around 3 years old, otherwise extremely healthy fit bitch, epilepsy likely cause	YES	N/A	Suspected triggers: No known triggers at present, still documenting seizures to find any pattern or link. Medication: Treated with Phenobarbital twice daily (under dress), initially 60mg, halved to 30mg by me as behaviour badly subdued by dose. All ok at present, hopeful of stopping or reducing meds after spaying and hormonal fluctuations taken out of equation. Using EFT tapping, calming and enjoyable, also Reiki. Very doped, poor soul could barely walk. Have discussed with vet who agrees the treatment shouldn't be worse than the condition! Details: First fit at 4 am, jaw chattering woke me, foaming, twitching and urinary incontinence, having worked with kids/seizures was aware of how scary it looks, and to time fit. Around 1.5 mins, four long barks and jumped up like nothing happened. Vet did urine test in morning, slightly elevated white count so treated with antibiotic in case of infection. All other fits (5 more) have been identical, only shorter in every case. Differing times, no real common denominator. One thing I am monitoring is we use a calor heater in sunroom topping up heat in autumn/winter. Most recent seizure Skye had spent half a day with me there doing a Zoom course online. It is well ventilated and has a CO alarm, but wonder if she is affected by this? Just grasping at anything I can change to remove meds etc.	OWNER

29-11-19		Smudge	Not known	Not known	Collie	19-Oct-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 1 month	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Epiphen increased to 2 twice daily 60mg. After 4 months given Libromide, which only made him lethargic and not acting like his usual self. Now on Epiphen and Levetiracetam which we used to give him now and then before a fit, but not on one every 8 hours. Fits started off as around 8 or 9 clusters every 21 days, this increased to 11, his last one being 16 clusters from 2pm to 7 am the next day. Some last 30 to 40 seconds, some 2 or 3. There is usually 15 minutes in between but now a few minutes. Clenches jaw, then jaw wide, outstretched legs, urinates sometimes and a slaver from mouth and the smell is awful. Then he will pace, used to pace for 20 minutes and could not see us. Now he paces and tends not to bang into objects, seems to manoeuvre around them a little better. Before a fit, he howls at the moon, tries to escape, but now he tends to approach me to cuddle and follow me everywhere I go. You can see in his eyes that he is due to fit, his personality changes. The fits had increased to double the amount, but more often between them. Neutered before fits started. He had been neutered only 4 weeks before. He had trauma to his leg when only 5 months. And we had a collie out when he seized the following week.	DATA TRANSFER FROM LYNN NORTON Added 16.07.15

Focal seizures affecting back right leg, also screaming and throwing himself at walls or furniture during seizure. After being very healthy, started suffering tonic seizures in 2018 after moving home, became strict with diet again and have so far stopped. Entire.	OWNER
19-07-19	29-09-19	Tartan Ticking Time Bomb	K157865	N/A	Collie Cross - UK KC Activity Register	15-Jan-16	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 11 months	YES	MRI and blood test	NO	3 years 7 months. Cluster fits see Fitting Details for more information	No suspected triggers. Medication: Currently on Pexion, Keppra and Bromide. Epiphen serious side effects and cannot be used - hospitalised for twice. Neutered. UPDATE ADDED 29/09/19 - Update on Tartan Ticking Time Bomb - devastated to say she was put to sleep on 20th August after cluster fits that went on over 55 hours and nothing could stop them (she was on double dose Keppra, also given in liquid form at start of cluster, Bromide and Pexion). Phenobarb tried again but made her lose her mind and didn't know who she was, and had no ability to switch off and stop.	OWNER Updated 29.09.19
29-09-19		Ted	N/A	N/A	Unregistered - UK	01-Jun-15	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	By Cambridge University Veterinary Hospital	YES	N/A	Suspected triggers: Initially overheating, exercise (ball chasing). Gets overexcited/anxious. Now mostly happens at rest. Medication: Acupuncture (I'm an acupuncturist) helps to stop it. CUWH happy for me to use acupuncture to monitor it. For this last year CBD stops it quickly. Although always a nervous collie, wary of some men for no reason, quickly forgetting if they moved or came back in room, fits started after he was neutered. Something went wrong with operation, he got abscess and took long time to heal, initially they were 6 weekly, but now can't be longer between or gets a lot at once. Just had 3 bad ones in 24 hours. No triggers. Without acupuncture or CBD, fits become very strong, full body tension/taught/trembling, head banging, drooling. Purchased as an 11 1/2 week old puppy from farm in Swineshead, Boston, Lincolnshire.	OWNER

29-09-19		Tess	N/A	00/325720	BC - ISDS	23-Jan-13	UK	Bitch	Dewi Tweed (ISDS 278783)	Lad (ISDS 254796)	Cammen Gem (ISDS 271779)	Meg (ISDS 301667)	Mac (ISDS 276484)	Del (ISDS 266631)	3 years 11 months	YES	Vet	NO	Put to sleep at 3 yrs 11 months due to cluster fits and too much damage to dog neurologically.	Suspected triggers: No idea other than routine booster vaccine given 3 weeks previously. Medication: Tess was in vet hospital for 2 days to try to stabilise. Just so frustrating to see Tess like this. Had a Labrador years ago who fitted every few months but not cluster fits like this. The poor dog didn't know where she was, who we weren't couldn't walk - horrendous experience.	OWNER
29-02-20		Tess	N/A	N/A	Unregistered - UK	02-Feb-11	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	8 years	YES	Consultation with specialist neurologist at Langford vets in Bristol, who diagnosed Idiopathic Epilepsy	YES	N/A	It is ironic because she has a knowledge of although we have changed diet to a hypoallergenic one since her seizures started. She is on both hypoallergenic dry kibble & Nature hypoallergenic meat. Medication: Tess was started on high dose Phenytoin (Epilepsin) after her appointment at Langford in March 2013, however her fit frequency and continuation of her back end for about a fortnight but gradually side effects wore off. The age was not ideal for a neurologist but over a few months until she was 22 months. She still fitted on medication, roughly once every 4 weeks. However, she developed intermittent fits to increased (3 or 4 fits) and excessive drooling, so we introduced Phen 200mg every 12 hours and we weaned her off Epiphen gradually over 2 months. Three days after her last Epiphen September 2016, she had her seizure in a 24 hour period (previously only ever had one fit at a time) and was hospitalised overnight. She was started back on the Epiphen initially but on maintenance amount, so to have the same amount as mentioned previously and hasn't fitted since September 2016. Tess is a spoiled bitch that we returned from the Border Collie Trust at 2 1/2 (already spayed when we got her). There was no medical history or evidence of seizure before we got her. Tess used to sleep September in our previous house. A year after we moved to our current house in 2017, Tess started sleeping upstairs and in 2018 she started sleeping in March 2020. She only seizures in the middle of the night when she is asleep and as far as we know, she is unaware of them and when they are going to happen. They last around 10 sec. She wets and salivates excessively which is why we believe the owner had seizures before she started sleeping upstairs because we would have felt the wet urine on her face in the morning (8 hours hours to dry). During the seizure, her eyes roll, she stops breathing, her head is flung back and her body is stiff. She paddles with her feet before going stiff and rolls, breathing heavily and then panting before she comes round. She is very disorientated for about 30-60 mins and then goes back to sleep and wakes up 'normal'. Exercise exercise and stress don't seem to have any effect. If the hypoallergenic diet has made a difference as she has always been food sensitive and used to be very fussy with food (not eating, throwing up food in the morning after eating). She loves the raw diet and her stools are great. She is definitely more better on the medication.	OWNER

28-02-22		Trickster of Mischief - Luki	K150380	N/A	Collie Cross - UK KC Activity Register	30-Dec-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	MRI Brain scan and CSF tap	NO	5 years. Medication induced severe pancreatitis.	Suspected triggers: We had no clue as to his triggers. We eliminated certain foods, he still fitted so re-introduced them. We didn't think it was food related, although he was raw fed from diagnosis. He was chemically castrated 6 months before fits started. 3 months after chemical implant we had him surgically castrated. We wonder if that had an impact on the start of his seizures or not. Medication: Initially started on Levetiracetam 250mg TDS. Seizures increased so drug was increased to 500mg. Christmas Day 2017 he suffered 4 seizures within 12 hours - instructed by specialist to load dose him over 5 days and meds increased to 750mg TDS. By June 2018 we had to introduce Pheno, this was increased at least twice. 2019 he started on Potassium Bromide. It made him extremely unstable, we had to use one of the Help Them Up Harnesses to help him get up as sometimes he couldn't manage. On a vet visit with one of our other dogs, my vet cried when she saw how uncoordinated he was, even though we had told his neurologist. She immediately got on to them and they reduced the drug. He did improve but still had little issues at times. Unfortunately I don't know the sire or dam, even though we met mum. However, I waked my brains this morning and remembered that we got him from Bam Bam Border Collies in Stafford (or near there) and the chaps name was Ed (Edward). One thing we did do with Luki (our epileptic) was enrol him and his bestie (my wifes boy Darcy) onto the RVC's IDEAS study. They went for the day taking part in different trials and having fur and stool samples taken. That was pre Potassium Bromide. Details: We wondered if weather pressure changes can set seizures off as well, maybe environmental things. We have overhead electricity cables where we live but who knows. Castrated, seizures started 3 months after this.	DATA TRANSFER & UPDATE BY OWNER

29-11-19		Wildblue Intuition	Not known	Not known	BC	16-Jul-09	USA	Bitch	AKC CH Kybota Wildblue Rhythim	AUS CH Devondene Kiva Legend CD	AUS CH Kybota City Rhythim	Wildblue Eternal Dream [USA]	AKC CH Wildblue Eternity	AKC CH Wildblue In A Dream	4 years	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: None. The fits are very mild and she is at this time being treated holistically. Her first fit was on a hot day when the dogs were out running and we thought that might have triggered it, however after her second one we took her to a vet to have it confirmed where several tests were done. She continues to fit regularly on an average one to two times a month. Originally fed on Diamond High Energy at the onset but it was recommended that we place her in a less physical home so that her protein and fat content could be lowered. She is now in a pet home on an adult formula by Diamond. The fits are more frequent now but also more mild. Spayed.	DATA TRANSFER FROM LYN NORTON Added 14.10.14
21-08-19		Willow	N/A	N/A	Unregistered - UK	05-Jul-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	14 weeks	YES	By a brain scan. They couldn't find any problems with her brain. So the conclusion was Idiopathic Epilepsy.	YES	N/A	No triggers known. Tends to have seizures only when sleeping. Medication: Started at 45mg of epilphen twice a day. Now currently on 60mg twice a day. Disapapan rectal tubes are given during or just after a seizure to help calm her down. Levitinestam 500mg tablets are given to break up any clusters. 1 tablet after 2nd seizure and half a tablet every 8 hours until 48 hours after 2nd seizure. Since starting on 60mg of epilphen twice a day, Willow went 20 weeks without having a seizure. Before that she was having them every few weeks. I had Willow from a local rescue centre when she was 10 weeks old. I have no background information of her at all. Willow has always been clumsy. She's not your typical bright intelligent border collie. She tends to trip over her own feet, bump into things etc. At first I thought maybe it was just because she was a puppy getting used to her new surroundings but as she was getting older she was still the same. At 14 weeks she had a massive cluster where she had 9 before I even got her to the vets. They had to put her under anaesthetic 4 times to bring her out of the cluster. I don't know if this affected her brain but sometimes she's very uncoordinated.	OWNER

Medication: Phenobarbitone 60mg x 2 daily controlled fits from 6 weeks to around a year. At 6 years I took him to see holistic Christopher Day and gave a very detailed diary of events. He had fitted every 6 weeks prior to meds and now fitted around 3 times a year. He prescribed a homeopathic remedy which I gave daily. At 8 years I started to start to reduce the pheno as had not fitted since visit to Mr Day. I reduced over 6 months to 0 pheno and Try never fitted again.	OWNER
30-04-21		When You Have It Flaunt It - Wren	K158363	N/A	WSD - UK KC Activity Register	21-Oct-16	UK	Bitch	Klamingogue Old King Cole	Klamingoues That's Daz's Tri	Detania Golden Girl	Stella	Cookvale Dark Stranger	Lucy	4 years 2 months	YES	Had blood tests after the second fit. Vet said it's probably 'idiopathic Epilepsy'.	YES	N/A	Suspected triggers: No suspected triggers. No accidents or illness prior to the fits. When only has had puppy vaccinations and I do not use chemical treatments on her. Medication: Since the fits she has been on MCT oil and has not had a seizure since. Details: Wren has been raw fed since a puppy. She had a lap spay after her third season at the age of 7. She is a fit healthy dog and has never had any accidents or illness prior to the two fits. Wren had her first fit on Saturday 5th December 2020 at 6:45am. I heard a knocking downstairs and I found her collapsed having a generalised seizure which lasted under one minute. She made paddling movements, drooled/frothed and urinated. She came round quickly, being wobbly for 2-3 minutes. After that she was back to normal like nothing had happened. Her second fit was on Monday 14th December at 2:30am. She had got up in the night wanting to go outside. This is not unusual for her as she often gets up at this time to go toilet. As I opened the patio door she collapsed to the left and started fitting. Exactly the same as the time before. Quick recovery and within a few minutes she ran back upstairs back to bed and went to sleep.	OWNER

Euthanised July 1992 when fit frequency increased to less than 1 week between clusters and the drugs were affecting his liver. His personality also changed and he lost the ability to remember simple commands	Medication: Initially Valium and Phenobarbitone. Then Potassium Bromide and Epilim added after specialist advice. Doses systematically increased which increased the space between fits but did not reduce the intensity when the cluster fits happened. These required large doses of IV Valium and Phenobarbitone for 12 hours. IV examethasone was given the following day and subcutaneously the next 2 days. No changes made to diet. First few were single fits then every fit was a cluster fit. Response to increased medication doses was to increase the time between fits. There were no fits between Feb and June 1992 then the intensity got increasingly worse. Neutered on Vets advice, but made no impact on fits.	DATA TRANSFER FROM LYN NORTON Added 11.09.13

Stress doesn't help. Medication: Epilphen, Liriodamide, Levitinestam, Zonisamide. All help but have had to be added over time (in the order as written. Dosage tweaked over time too). Details: Neutered before 8 months old at The Dogs Trust. He cluster seizures and has worsened over time. Seizures usually last less than 1 minute, but had 1 spell last month of status epilepticus. The post ictal period varies in length although doesn't usually last more than 5 to 10 minutes. He is now on a Neuro diet. I also use extra levitinestam as pulse therapy as soon as he's able to swallow after a seizure.	OWNER

19-07-19		Zak	N/A	N/A	Unregistered - UK	15-Jun-12	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	8 months	YES	Blood tests	YES	N/A	Suspected trigger: exposure to Ivermectin based cattle and sheep products. He was badly abused by a farm labourer which resulted in a head injury. Medication: Phenoleptil. 50mg x twice daily. Zak was neutered at 2 yrs old. He hasn't had a seizure since leaving the farm and starting medication. The longest seizure I witnessed was around 5 mins, on that day he had 7 in total with the others lasting around 2 mins. I don't know anything about Zak's breeding. All I know is that he was bought from a shopkeeper in the Glenkyrie area who has a constant stream of pups. He took part in the Newmarket Canine Health study a couple of years ago.	OWNER
