Died after choking on his own vomit	Suspected triggers: None noted. Medication: None noted. Details: The fits started completely out of the blue just as he was approaching his 4th birthday. He had one fit in the early hours of the morning. Checks were done at local vets and they couldn't agree what had caused it, a week later another fit followed by his body starting to shut down, laboured breathing and no energy. Taken to Potters Bar with hospital, kept in for a week, one small fit whilst he was there, they said sudden onset epilepsy, brought him home as they said he might not fit again. He had been home from Potters Bar for 2 weeks with no fits, then had a major fit in his crate whilst we were out and died after choking on his own vomit. Roughly 8 weeks after his first fit. He was neutered at least two years before the fits started.	DATA TRANSFER FROM LYN NORTON Added 29.05.14

Medication: Epilphen & Libromide Levetiracetam as and when to stop clusters. Details: First fit occurred as Age UK cold alarm went off just before, as a cold morning after having clusters of fits for days every few weeks, up to 8 a day. Has been free for 5 months after starting Libromide (potassium bromide) Dog entire.	DATA TRANSFER FROM LYN HORTON Added 07.12.12 Updated 19.03.13
31/11/2021		Ballee	N/A	N/A	Unregistered - UK	07-Apr-16	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	By vet after second fit	YES	N/A	Suspected triggers: Reaction to spot on flea treatment very negative - but not quite a fit. I can't identify a particular trigger as fits are now very regular, every few weeks. They seem cumulative rather than a reaction to any external influence, as far as I can see. The first fit came soon after puppy vaccinations, but may be a coincidence. Medication: Libromide 500mg, Epilphen 240mg, Diazepam 10 mg. Hepato support. Medication the seizures regular and reduced number considerably. Details: Neutered. Tricolour. Very, very active dog with more stamina than in most collies, and very intelligent. Food intake changes dramatically after a fit, will not eat meat and after a seizure varies from binge eating to eating very little. After a fit he is not good in the house and seems depressed, but outside he exercises generally normally.	OWNER
31-05-2022		Balley	N/A	N/A	Unregistered - UK	23-Jan-10	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	5 years	YES	Confirmed at RVC with MRI	YES	N/A	Suspected triggers: No triggers provided. Medication: 1 x 400mg Pexion, 4 x 60mg Soliphen, 2 x 500mg Levetiracetam. When her first fit occurred Phenytoin (subsequently Epilphen, now Soliphen), he was very wobbly on his feet. Details: Balley is neutered and was having seizures every seven weeks but we have up'd his medication and currently he has been 11 weeks without one. Normally he has on average three grand mal seizures.	OWNER
31-01-2021		Balley Lyness	N/A	N/A	Unregistered - UK	02-Oct-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Glasgow Vet School and hospital	YES	N/A	Suspected triggers: Have not been able to confirm a reason so far. Medication: Epilphen 120mg twice daily, Libromide 1.5 tablets a.m. and 1 tablet p.m., Coganon 120mg twice daily, Keppra 500mg 2 tablets 3 times a day after each cluster fit for 7 days, Dextrol 150mg tablets twice daily, 30mg CBD capsule at night. Details: Balley is neutered and he has fits every 2 to 4 weeks generally although at the moment they are weekly. He has generally 3 cluster fits a time that last 2 to 3 minutes but yesterday he had 7 fits over a 6-hour period. It is so stressful as it is hard to keep Balley quiet after the fits as it takes him around an hour to come round and see properly as well as regain his balance. We have bought a child's playpen to keep him in so as he can't get out and hurt himself as the dog pens he was able to escape from. Typically Collie.	OWNER

Medication: Pexion 100mg first. Changed to Pexion and Levetiracetam. Then changed to Pexion, Levetiracetam and Phenytoin. Details: Not spayed yet, due to be spaying in March. Cluster seizures - has had up to 11 seizures in 24 hours all lasting 1-2mins - every 2 weeks.	OWNER
29-11-2019		Beckins Double Tonic	Not known	Not known	WSD	01-Oct-08	UK	Dog	Forever Magic Phantom	Changol Dizzy	Forever Magic Moon Madness	Gypton Just a Breeze	Quitters Startled Surprise	Iatka Sugar N Spice	2 years 7 months	YES	Vet confirmed as Epilepsy	Not known	Not known	Suspected triggers: None noted. Medication: Initially Homeopathic, then Epilphen 30mg twice daily. Details: First fit happened a few days after Advocate applied. 3 months later 6 fits in 10 days went to homeopathic vet got them under control until firework night when he had 10 over 2 weeks. My usual vet prescribed Epilphen 30mg twice daily for 13 months clear until new years eve fire works. Epilphen increased to one & half twice daily. He has been clear for 18 months but for the firework weeks (put an Adaptil collar on Tonic, he was very stressed before putting it on him, it was like magic 2 minutes after putting it on him he got a toy to play with then went in his bed and slept for the evening. Fed on raw food, fits improved since medication began. Neutered since fits were controlled.	DATA TRANSFER FROM LYN HORTON Added 05.07.14 Updated 15.07.14
21-08-2019		Beckins Surprise - Vito	K136870	N/A	WSD - UK KC Activity Register	05-Dec-10	UK	Dog	Forever Magic Phantom	Changol Dizzy	Forever Magic Moon Madness	Gypton Just A Breeze	Quitters Startled Surprise	Iatka Sugar N Spice	7 years 5 months	NO	N/A	YES	N/A	Medication: Epitaur 3 x 1 caps per day, CBD oil 1 drop AM and 2 drops PM, Melatonin 1 mg PM. No more fits for now. Details: Really high cholesterol, all other blood test ok. Low fat raw meat diet which lowered cholesterol. High cholesterol according to vet doesn't give fits. Vito had fits 2 weeks between fits. Always during the night, hence the melatonin. Grand mal's lasting about 4 to 5 min (from start to fully recovered). Have put Vito on low fat raw meat diet which lowered his cholesterol. Not given any traditional meds yet. Had all relevant blood tests done but no MRI. Vito is neutered.	OWNER

YES	N/A	<p>Suspected triggers: No known triggers. It happened while playing, usually while sleeping. She had another set of seizures 4 months later, no correlation with deworming or other medication.</p> <p>Medication: She is doing well on 45 mg Phenytoin twice a day. Initial dose was 30 mg, but she started having focal seizures, so we increased it. She seems to be fine on the meds. She is also on Fron 7 mg 1 daily and OCS 5mg qll twice a week.</p> <p>Details: Seizure history - First seizure was 20th July 2021, 2 minute seizure in her sleep. The next day chemistry profile and a CBC test were done, everything was normal. Second seizure was on 18th on 18th August 2021, she had a 1 minute seizure while playing. Third seizure 3am on 6th August 2021, 2 minute seizure while sleeping. A thorough vet check was done on 6th August 2021, everything was fine. Started her on Phenytoin. The initial dose was 90 mg 2/day that was decreased to 45 mg 2/day two weeks later, and then decreased to 30 mg 2/day at the beginning of September. Phenytoin blood level was checked on 5th December 2021, it was 15 g/ml. Increasing the dosage in under consideration since she is having 2 second seizures while playing fetch. She had two more 2 minute seizures in her sleep in January 2022 so meds were increased to 45 mg.</p> <p>UPDATE ADDED 31/03/2022: Registration numbers added to Registered name of Dog also to Dam and (D)G.Dam. Country of Registration changed to Hungary.</p>	OWNER Updated 31/03/2022
29-03-2020		Blodwen	N/A	N/A	Unregistered - UK	28-Feb-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Neurology assessment	YES	N/A	<p>Suspected triggers: No known triggers.</p> <p>Medication: Started with CBD aged 6 months which kept symptoms under control until she was one year old. They became significantly worse and unmanageable so she was started on phenobarbital and levetiracetam - starting doses were steadily increased to maintain her her weight and we also increased CBD oil and finally introduced Epilaur.</p> <p>Details: Blodwen is a Double Merle collie from a breeder but to me via an informal rescue. She has focal seizures - her MRI was clear so the seizures are not related to brain trauma or disease. Over a six month period her seizure related behaviour gradually diminished from jolting awake every few minutes all through the night, circling, twitching and being aggressive) and she now sleeps for up to 11 hours through the night with no issues and is markedly more settled in the day. She was spayed at 6 months old but the focal seizure symptoms had already begun (leg twitching, staring with head tilted, circling). The restering didn't appear to make it worse. I have come to understand Blodwen, her symptoms and treatment requirements through close observation, asking for help from a Double Merle Facebook group and researching this genetic problem. We have a regular border collie from a farm litter who has displayed no health problems. Had no knowledge of merle or double merle collies when we rescued Blodwen and this was not mentioned by the person we rescued her from.</p>	OWNER

31-03-2020		Boston	N/A	N/A	Unregistered - UK	23-Jun-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years 6 months	YES	After initial seizure followed a couple of months later by a focal seizure and clusters diagnosed with idiopathic epilepsy. After MRI eliminated any brain issues	NO	Feb 4th 2020 - aged 5 years and 8 months, PTS as diagnosed with chronic liver failure due to Phenobarbital	Suspected triggers: Severe, over tiredness and had would appear to be triggers. Stress from being bullied by her other collies, or going to the vet. Medication: Initially given Phenobarbital. This then moved to Phenytoin, then added Potassium Bromide. Keppra was given as an emergency protocol. Diagnostics did not appear to work. Details: Boston had his first seizure on 4th Dec 2017. From then till he died on Feb 4th 2020 he had approximately 60 seizures lasting on average 60 seconds with some on cluster seizures. When he first started seizing it was shorter and he recovered relatively quickly. He never lost bladder control when he seized. The clinical picture given was in September 2018 when he went into focal seizure mode and had to go to ICU. This followed another ICU episode in December 2018 where we thought we would lose him. The neurologists worked with us to find the right medication level. There were times we pushed back on the suggested medication levels and discussed it with the neurologists. I think it is important that owners who know that dogs best and have to manage the dog everyday feel confident to add their experience worth in. On hindsight we saw three issues: (1) the length of time it takes a medication level to work through and to assess impact means it is several weeks from each medication change before you see if it has had any impact in controlling the seizures; (2) the vets are highly dependent on blood lab results to ascertain the medication levels and in our case, there were blood results that were inaccurate/misread and thus unreliable. We queried this and new bloods were taken but each time there was an episode, this delayed the possibility of accurate blood work and (3) neurologists are focused on controlling the seizures but need to work hand in hand with liver experts so any increase in PB should be done only after a check on the state of the liver. It should not be automatic. It is our belief that we might have been able to reverse the liver failure had Boston's PB not been raised after summer 2019. Though the seizures were better controlled, his liver was damaged beyond repair. On the other hand if the PB was tapered down in summer 2019 and only Bromide used (or possibly in tandem with Keppra), would he have succumbed to some grand mal seizure - we will never know. Ultimately, epilepsy is life limiting, that we do realise.	OWNER	
31-08-2022		Breac	N/A	N/A	Unregistered - UK	13-Aug-20	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 8 months	YES	Clinical presentation, I refused full investigations	YES	N/A	Suspected triggers: No known triggers Medication: Epiphen 50mg twice daily started 3 months after first seizure. Lethargy and ataxic back legs noted. Details: Seizure every 4 weeks, last around 1 minute. Usually single but had two this seizure one month. Started on Neurocare food after 2nd seizure and CBD Oil (vet) after 3rd seizure. Dose increased gradually. Also started Milk Thistle once Epiphen started 2 weeks ago. Neutered at 7 months.	OWNER

Medication: Initially Levetiracetam 3 times a day but as it did not control the fits Epilphen was included twice a day. Full blown fit at lunchtime by my feet. Went on for a minute from which he got up and walked slightly wobbly into the garden. Up until then perfectly healthy, happy young dog. Fit on MRI scan. Seizures are now under control. He was castrated at almost 3 yrs old but prior to that he was chemically castrated twice. He is currently well controlled on meds.	OWNER
31-07-2022		Cilla	N/A	N/A	Unregistered - UK	06-Jun-15	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 years	YES	The vet told me she likely has epilepsy after the ran tests.	YES	N/A	Suspected triggers: She eats a lot when on walks and I think certain things trigger her. I muzzle her on walks now. Medication: Not on meds. Details: Had two in the same day then went 2 months before she had a single one. Fits don't last long but she's very disoriented after.	OWNER
28-02-2021		Cloudy	N/A	N/A	Unregistered - UK	28-Aug-16	UK	Dog	Unknown	Unknown	Unknown	Misty	Unknown	Unknown	1 year 7 months	YES		YES	N/A	Suspected triggers: He definitely has epilepsy but the condition could have been triggered, or exacerbated, by the original liver problem. Medication: Clonidine responds very successfully to a regimen of (KBr, l-bromide), Levetiracetam (Keppra) and Phenytoin (Epilphen) and has almost no fitting, with the occasional 'petit mal' seizures. He has very occasional full tonic-clonic seizures when his medication has been compromised e.g. missed dose or after activated charcoal treatment for ingestion of toxin. Details: Has epilepsy and liver chunt. He started fitting regularly at 18 months in February 2018 and responded well to Phenytoin. Went into status in May, probably due to hepatic encephalopathy. Routine blood analysis showed a liver anomaly and it was found he had a hepatic chunt after scanning. Surgery was carried out in June with 100% success, but the fitting continued. He is still taking regular medication at 4+ years of age with occasional recurrence of fitting especially if medication is compromised, even though his liver is perfectly healthy and functioning. No indication of food relating to seizures but he is now on a hepatic diet see the thread .	DATA TRANSFER & UPDATE BY OWNER
22-12-2019		Clover	N/A	N/A	Unregistered - UK	10-Jun-07	UK	Bitch	Unknown	Unknown	Unknown	Nell	Unknown	Unknown	10 years	YES	Only by tests ruling out other possible causes	YES	N/A	Fits are infrequent. Three or four over a year. ALWAYS within a narrow time slot 7.30am to 9am. Not sure if this is to do with length of time since feeding or hormonal fluctuation. Seems to be an association with warming. Last fit the morning after treatment with Milpro. I have discontinued all routine medication. Clover is spayed and in excellent health generally. She has had about 10fits in total. Approx 2 to 3 mins duration. Her mother had no history of fits though she died relatively young of oral cancer.	OWNER

28-02-2021		Easterdale's Fleet O'Foot	K134734	N/A	WSD - UK KC Activity Register	07-Jan-10	UK	Dog	Easterdale's Prince Rory	Rock	Kim	Just the Tonic	Robbie	Tess	3 years 9 months	YES	Diagnosed by my vets and confirmed by specialist	NO	Age 8 years 4 months. Fitted on 30 May 2018 following several hours of continuous fitting	<p>Suspected triggers: None mentioned</p> <p>Medication: Started on Peonin December 2015 with Diazepam when needed. Changed to Libromed, with Kepra when needed and Diazepam for immediate treatment of fits.</p> <p>Details: Fits fit at 3 yrs 9 mths at 4am, grand mal. 9 fits over next 2 years, very short, all grand mal, all around 5am. On no medication then in December 2015 had a severe fit lasting 5 minutes and put on Peonin. 3 further fits and dose increased in Aug 2016 so last fit was 6 mins and required Diazepam. Severity seemed to increase but frequency varied from 4 weeks to 9 months. Then Fleet's fits sadly increased in frequency and severity and he eventually began to cluster fit. His meds were changed, but things continued to decline. He saw a specialist who advised the meds he was on were what he would recommend but to try changing the timing of meds. His fits continued to lengthen and he had several emergency trips to the vet in the middle of the night, when Diazepam did not bring him out. At the end of the vet fitting during the day as well as at night-time and the fits were taking a terrible toll on him. He was pts in my house following a night of almost continuous cluster fitting. Neutered at 12 months, well before fits started. On cereal free Salmon and Potato mix. Food did not seem to be a factor.</p>	DATA TRANSFER FROM LYNN NORTON Added 29.11.21

31-03-2021		Ellen-Vannin Millie	A50902157	00/132956	KC - Dual Registered UK KC & ISDS	18-May-14	UK	Bitch	Ellen-Vannin Kirk (ISDS 00/311443)	Joe	Breeze	Ellen-Vannin Mia (ISDS 00/314110)	Spot	Bliss	2 years	YES	Bloods, head scans etc all normal but clinical diagnosis based on the episodes, seemingly brought on by touch, was one of a rare type of seizure / rage syndrome.	NO	Age 4. Due to the escalating frequency and intensity of the episodes which were very distressing for her and us, we sadly decided trying all we could, had her PTS	<p>Suspected triggers: Millie was a very loving girl who used to be for hours next to the heating and sunny rays so this is all the harder to explain. Every 6 weeks a sudden explosive episode of rage with no warning. We didn't understand at first but there became a pattern to it and so the 2 year journey of trying to manage her seizures safely began. Before an episode she became increasingly sensitive to light and noise, afterwards she would hide and sleep it off.</p> <p>Medication: Prozac was tried but made no difference so was stopped. We tried all different types of epilepsy medicine.</p> <p>Details: Prozac was from about every 6 weeks until Christmas 2017 when the starter frequency after the initial setting of the cluster episode the following seizure were more frequent with no pattern and each one was for a longer period of time. Food was not a trigger although at awake as much non natural things in her diet as possible, we changed her to a raw diet and although it did help her seizures, she did very well at it. Millie was neutered but it made no difference, she was spayed before the onset of the seizures. Due to the severity and type of seizures Millie had, we could no longer manage her safely. Just to say that Millie would come to us probably feeling unwell for a couple and it was always as we would touch her that the seizure would happen. She would usually have been alone beforehand. Never happened at play or with strong touch/rough outside only ever gentle stroke, episode lasted 5 seconds but near the end more like 10 seconds and we just couldn't manage her safely and the most traumatic thing was we could no longer cuddle her as she or we would have wanted the seizure along with disc degeneration was also aging her quality too) on the heart breaking decision was made to say goodbye. It was truly a traumatic journey for and with her.</p>	DATA TRANSFER FROM LYN NORTON Added 05.02.23 Updated 05.07.14

31-08-2022		Evy	N/A	N/A	Non UK Livingstone (Border Collie)	24-Apr-19	THE NETHERLANDS	Bitch	Maison	Unknown	Unknown	Noa	Unknown	Unknown	2 years 6 months	YES	Epilepsy was diagnosed based on my observations.	YES	N/A	Suspected triggers: Evy suffers from primary epilepsy, no triggers. Medication: 150 mg of Phenoina a day in case of fits in the next 6 weeks Potassium Bromide will be added. During fits give 10 mg of Diazepam rectally. Details: Evy is spayed. She suffers from clustering epilepsy. Usually her fits start in the morning and she'll have 4-6 fits within the first 1.5 hours. We give Diazepam during the first or second fit. After that it stays calm all day and there is a big chance she has another fit about 12-14 hours later. We give another dose of Diazepam when that happens. Fits don't usually last long, 1-5 minutes tops. They follow each other up very quickly so we need to be on top of things immediately. The current frequency between days is 3-7 weeks. We're hoping to bring that up to 12 weeks. Evy comes from an unaffected breeder. The spoman just wanted to have a nest of puppies once. There is no family tree available. Both parents are carriers of the SH gene. 2 pups from the nest suffered the illness and died before their first birthday. Evy is a carrier too.	OWNER

NO	3 years old. Cluster seizure/status epilepticus	Suspected triggers: No triggers. Full investigations completed at ANI - other medical/traumatic causes ruled out. Medication: Tried Phenytoin, Potassium Bromide, Agrippa, plus several other trial drugs (no positive changes except Agrippa given as a 'honeymoon period' - made it 3 to 5 weeks without seizures but then they were back to heavy clusters again, worsening over the 2 years we had with him. Details: Neuroised. Cluster seizures lasting several minutes between weekly - 4 weekly prominently. For 2 yrs until we had to let him go.	OWNER
30-09-2021		Glenisk Glen	K164560	N/A	WSD - UK KC Activity Register	17-May-16	UK	Dog	Glen (ISDS 00/31103)	INT SUP & WORLD CH Dour Tweed (ISDS 278763)	Mog (ISDS 257552)	Gwen (ISDS 00/31402)	INT SUP & WORLD CH Roy (ISDS 266416)	Bet (ISDS 00/294932)	5 years	NO	I am very familiar with epilepsy, as I have previously had animals who had grand mal fits, so have no doubt this is what he has. At this stage I don't want to put him thru the trauma MRI testing etc.	YES	N/A	Suspected triggers: 18.07.21 - 15 days prior to 1st seizure he ate mystery substance at fishing lake 13.21. Following day very lethargic and not eating or drinking. Emergency vet visit required. General anaesthetic given. Oesophagus, trachea etc massively swollen. Vet prescribed a large dose of the steroid Dexamethasone and follow up with Fraxon to alleviate swelling. Almost immediate improvement, but seizures for 4 days. 21.21. On day 3 after consumption of unknown substance, he had a full grand mal type seizure. 24.7.21. This was repeated - approx the same time the following day 6.30 am when being let out to garden. A time of excitement. Medication: Immediately after the first seizure I gave a drop of CBD Brothers Silver Edition Indica CBD Oil and another drop that night. A single drop was given the following morning immediately before he went outside, but he had another seizure at approx the same time and place and under the same circumstances. I believe because the Silver Oil had not yet been absorbed. I now give CBD Brothers Silver Edition Indica Oil 1 Single drop 3 x daily. Organic MCT Oil 1 level teaspoon 3 x daily. Capriole Capsules 3 per day with food. Details: He has several small meals during the day now, instead of just one meal in the evening (as before). He is fed almost exclusively a raw keto diet. So far he has had no further seizures, but it is obviously very early days. He was neuroised 3 weeks prior to the first seizure. Both grand mal type fits lasted between 10 and 15 seconds. He was unconscious, but eyes wide open and glazed. He was paddling and foaming at the mouth. He recovered pretty much back to normal within 2 to 3 minutes. I now understand that there is a history of seizures in his breed. His litter sister started fitting at 2.5 years of age, initially under similar circumstances (excitement), but has continued to fit both while excited and at times of rest and has needed her veterinary meds increased over time.	OWNER
21-07-2022		Graham	N/A	N/A	Collie Cross Unregistered UK	25-Sep-20	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	11 months	YES	Discussed with Vet	YES	N/A	Suspected triggers: Not found any possible triggers - vet determined as generalised seizures. Medication: On Epiphen initially and then added Libromide as still having seizures frequently but not severe. Details: Currently seizures are about 7-10 days apart and last about 40 seconds max then recover quite quickly. As well as having a careful diet he is on MCT oil and gelatin powder and CBD oil to help naturally. Graham is a collie/Apringer cross but I don't know if any of his siblings are affected as was not aware of epilepsy in collies when we bought him. He's neutered.	OWNER
29-11-2019		Grenaby Sheel Ghazal	Not known	Not known	BC	15-Sep-11	UK	Dog	Ludgate Red Laser	Woodmoor Spectre AW	Firelyxa Jumanji at Ludgate	Grenaby Editors Choice	Grenaby Tucker	Nunemy Kim At Grenaby (ISDS 232139)	1 year 6 months	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Poison 400mg twice daily. Initially fed on 5inners kibble then once the fitting started a home prepared diet of brown rice, potatoes and vegetables with raw meat (to try and reduce gluten, corn, soy and casein as per the GARD diet). This seemed to help for a while, with improving gaps between fits until last week, when he had several fits and he became critically ill on the weekend with cluster fitting. Fits have changed in frequency. We had got him up to 17 days between fits, and had wanted to try and manage it naturally (without drugs) but that all changed last week as described above and the treatment was necessary to save his life. After we got him, we heard that the dog (not the bitch) in the previous litter had all started to fit. So we opted for an early castration at 5 months. We are very lucky that he is still with us, but it was devastating to see him so poorly. He was in intensive care for 3 days and has been home for 3 days now, improving visibly by the hour. I can provide you with any additional information, please do not hesitate to chat.	DATA TRANSFER FROM LYN NORTON AGOOD 10.09.13
31-08-2020		Gwen	N/A	N/A	Unregistered - UK	01-May-99	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	Veterinary observation	NO	16 years. Euthanasia after uncontrolled fitting	Suspected triggers: No known triggers. Medication: Phenobarbital given initially with limited success. Potassium Bromide controlled the epilepsy completely until aged 16 when digestive problems made the medication unusable. Details: Spayed before 1yr by rhusic charity. Survived Parvovirus virus aged 8 months. Fits became progressively longer and uncontrollable. She had to be sedated for up to two days to stop the fitting. Fits ceased immediately once potassium bromide was given (in solution twice daily with food).	OWNER
21-08-2020		Gwyneth (ABC 421786)	N/A	N/A	Non UK Registered (Border Collie)	02-Jun-15	USA	Bitch	Yosemite Gold (Flash) (ABC 320861)	Race (ABC 145723)	Bella Jewel (ABC 239542)	BB Honey (ABC 397387)	MISR BB Shish (ABC 338265)	BB's Sorch (ABC 338296)	4 years 6 months	YES	All tests came back normal. MRI, spinal tap, and bloodwork all normal. The neurologist diagnosed her with idiopathic epilepsy	YES	N/A	Suspected triggers: Onions of any trigger. Medication: She was just put on Zonisamide 100mg in the am and 50mg in the pm. Details: She has had 4 grand mal seizures at night only. They started in Jan 2020 at 3 months apart, then once they got to a month apart, the neurologist put her on medication. She convulses, foams at mouth, eyes roll back, she loses consciousness and is not able to snap her out of it. She used to run around the room right before she started seizing, but after doing this twice, I started crating her in a soft crate. Her seizures last a little over a minute, and she takes an average 3 minutes before she is completely conscious. She gets monthly chiropractic and acupuncture. I get a wellness check weekly with fur sample done, and I get her a list of foods she is sensitive to. I have created her home cooked meals ensuring the only cats foods that she should. I have added MCT oil, 8 complex vitamins, omegas and do a monthly liver cleanse.	OWNER
29-11-2019	31-03-20	Gwynfair Mac's My Words	Not known	Not known	BC - UK KC Pedigree	19-Oct-11	UK	Dog	Wildblue It's The Business	AM CH Kybotta Wildblue Rhythm	Wildblue Eternal Dream	Trevellis She's A Gem at Gwynfair	Atricia Shady Blue	Dentelle of Sunloch Valley	2 years 2 months	YES	Vet confirmed as Epilepsy	NO	3 years 3 months. He had another severe seizure during the night which left him paralysed from the shoulders. We then made the decision that he should be pit, 1st June 2020	Medication: Initially Pexon, after 6 weeks Libromide was added. This combination was satisfactory for a while but then fits resumed, if anything worse than previously, so then had Epiphen and also Diazepam. Neuroised after onset of fits. From the outset his fits were severe and caused significant memory loss and required a lot of retraining etc. We had a honeymoon period when we thought that the medication was going to control the seizures but when they resumed each time he had one it was severe and the recuperation period took longer. He had a very severe cluster of fits which effectively wiped his memory and character. He was very close to death but pulled through. We taught him to walk on again and after 6 weeks he was basically ok. He was a different dog but he liked us and was content in his life. UPDATE ADDED 25/08/20 Update to Registration Type	DATA TRANSFER FROM LYN NORTON AGOOD 25.08.15 UPDATE BY OWNER 31.03.20
29-11-2019		Gwynfair/ You Were Made For Me	Not known	Not known	WSD	22-Feb-05	UK	Dog	Fenlon Full 'O' Fun	Sunmerline Sweep	Mojacabus Oso Tricky	Tyzemade Maggie May of Gwynfair	Wharndon Rockin Symphony	Gwynfair Catch Me If You Can	1 year 10 months	YES	Vet confirmed as Epilepsy	NO	6 years 10 months. Dog is no longer alive. He went into a cluster fit episode that could not be stopped with medication and it was felt that he had suffered enough and had had his last fit.	Medication: He was initially prescribed just Epiphen, but over the next 2 years his medication was gradually increased to try to control his fitting. From his first fit, he didn't have another for 18 months then the frequency increased until roughly every 3 weeks by this time he was on 120mg Epiphen at 8am and 8pm, 300mg Gabapentin at 8am, 2pm and 8pm, 500mg Keppra at 8am and 8pm, and 250mg at 2pm. He was on Autunty at the onset of the fits but as the intensity increased, he was moved to a completely natural diet of chicken and vegetables. Much research was carried out into the ingredients of manufactured dog foods, and it was found that certain things can be a trigger factor to epilepsy as knowing what was in his food was important. He had cluster fits over 2 days on the first occasion and was given medication to try to stop the cluster. It was then 18 months before his next cluster fit. His next fit was then 3 months later, after which the frequency increased from around the age of 4 and the fits were happening every 30h weeks. It was often a cluster of 3 or 4 fits over a couple of hours. But he needed veterinary assistance on 2 occasions when he was unresponsive to stop the fitting as the episodes had continued over 24 hours or more. NOT neuroised as the vet advised against him being operated on because of the risks with his epilepsy.	DATA TRANSFER FROM LYN NORTON AGOOD 15.09.13

30-04-2022		Harley Quinn	N/A	N/A	Unregistered - UK	16-Jan-16	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	Had cluster fits over 24 hours and medication prescribed worked	YES	N/A	Suspected triggers: Harley had a litter of pups which went great but when she went for her flea and tick treatment within an hour she had her first episode. Now if she gets over excited by going to the seaside or seeing lots of family in one go it results in an episode. Medication: We have been on several different medications over the years but now we are on Epiphen 50mg and Levetiracetam 250mg. Until recently Libramide 250mg was being taken but a bout of pancreatitis hit and the vet believes this drug may have had a part in the problem. Details: Harley was spayed after having a single litter of seven, although one was still born. The first fit was a one off then we went around 18 months with nothing before the cluster fits on 31st Dec 2020. After this it was almost monthly with the odd extended break until August 2022 when we were episode free until March 2022. The March episode was part of the becoming ill with pancreatitis where she was taken into hospital for five nights. Thankfully got on the mend now.	OWNER
31-01-2021		Harry	N/A	N/A	Unregistered - UK	20-Mar-16	UK	Dog	Banjo	Unknown	Unknown	Unknown	Unknown	Unknown	4 years 6 months	YES	Blood tests	YES	N/A	Suspected triggers: Working Medication: Epiphen 1.5 tablets two times a day and Levetiracetam 1 tablet two times a day. Details: Neutered. One to two minutes fits up to 45 minutes to recover. Normally happen when asleep. Put a flea collar on in May and have worn three times a day.	OWNER
28-02-2022		Harry	N/A	N/A	Non UK Unregistered (Border Collie)	08-May-19	SOUTH AFRICA	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 6 months	YES	After first fit we visited the vet and by eliminating other potential causes it was determined that Harry has idiopathic epilepsy, which was confirmed by subsequent fits	YES	N/A	Suspected triggers: It is still early to say as Harry only had his first fit two months ago I suspect that his anti flea/medicine might have contributed (although my other BC has been on it for longer and has no health issues). Another suspected cause is the dam on the farm where we walk every day as his last two fits have been within 24 hours after swimming/drinking from the dam, so we are now avoiding the dam to see if it makes any difference. Since starting to have fits I have stopped feeding my dog dry food (kibble) and moved him to a raw food diet. It is still too early to tell whether this is making any difference. Medication: Harry is not on any medication for epilepsy yet. I have an appointment with my vet to discuss our options next week. I do have ampules of Valium, which I carry with me at all times, so I can administer it in case he has a fit. Details: Harry was neutered at 13 months. He has had 7 fits to date, the first 5 were roughly 2 weeks apart and the last 2 happened on the same day, about 10 mins apart (although I think this was triggered when he saw me packing, which caused some additional stress). This was 2 weeks ago, he has not had another fit since then.	OWNER
28-02-2021		HillBugs Exa (REGV1011/2012)	N/A	N/A	Non UK Registered (Border Collie)	30-Nov-11	SWEDEN	Dog	Taddynoon Joe (REGV1775/2008 Sweden & ISDS 277151)	Highgate Joe (ISDS 245242)	Calli (ISDS 236444)	Ever on Nice (V1249/2006 Sweden)	Glen (ISDS 244489)	Ty Nant Flash (V1272/2004 Sweden)	13 months	YES	With blood tests that eliminated anything else, both with my vet and a specialist canine neurologist.	YES	N/A	Suspected triggers: He has had more seizures in the spring and I think that's because everything starts up again with training and so on. Medication: Fenelam 75mg twice daily. Before medication he had 2 seizures, one after another but when he started Fenelam the second seizure stopped. He still had seizures every 6 months so we started on Fenelam instead and he went down to one seizure a year. Details: He got a castrating chip a year ago due to prostate problems and after that he has calmed down and his seizure are very far apart now. Not neutered. There are 3 more dogs from the same father on the Swedish list of epileptic dogs. There are also some other dogs that have the same relatives as the mother of Exa.	DATA TRANSFER & UPDATE BY OWNER

NO	12 months old - severe cluster fits never recovered and had to take heartbreaking decision to give him sleep.	OWNER Updated 31.10.21	
31-05-2020		Jack	N/A	00/355613	BC - ISDS	21-Sep-17	UK	Dog	Felldale Dash (ISDS 00131390)	Kilbrack Ladlie (ISDS 262751)	Kilbrack Jet (ISDS 238078)	Mig (ISDS 00181242)	Spot (ISDS 238072)	Nell (ISDS 274798)	2 years 1 month	YES	Vet	YES	N/A	Suspected triggers: Possibly stress. Medication: Epilphen and Libromide. Details: Insect Males. Seizure approx every 2 weeks. Seizure length average 45 seconds. We got Jack when he was 14 months old, he had his first seizure about 1 month after his 2nd birthday (late 2019) - phoned the vet and they gave me some great advice on how to monitor and what to do during a seizure, unfortunately a couple hours later he began to cluster so was rushed off to our emergency vet for sedation. We discussed the options for meds and agreed that we would not medicate at this point. 2 months later he had his next seizure, so an appointment was made to check his bloods again, this time the vet suggested we put him on Epilphen. After a while with only the sporadic minor seizures he began to cluster again in 2 hours he was kept at the vet that day and was started on Libromide and we were given emergency meds for future clusters. Since then Jack has been only having small seizures roughly once every 2 months. We continue to medicate with the Epilphen and Libromide and record any seizures in his diary or on film when we can. Jack is the most loving, happy dog and wants to be friends with everyone he meets. We love Jack dearly and wouldn't be without him.	OWNER
19-07-2019		Jackscroffer Sapphire - Saffie	A02281107	N/A	BC - UK KC Pedigree	27-May-09	UK	Bitch	Bekkis Virtuoso	Grandover Master Copi	Bekkis Rhapsody	Jackscroffer Gravelign Charmel	Rosmarinus The Weyman	Greatign Lettiss	4 years 11 months	YES	Blood tests	YES	N/A	Suspected triggers: excitement, anxiety. Medication: Started on Pevion 100mg twice daily which seemed to work reasonably well for about 12 months then fitting became more regular, after having nine fits in three months I told my vet I wanted to take her off Pevion and try Epilphen. She has been on Epilphen 30mg for four years and has been free for that time. Details: Spayed at about 18 months after being told by her breeder that a litter brother was having fits. Saffie has been able to live a full and active life.	OWNER

Epileptic cousins. Medication: Initially Epilphen then Libromide added and finally Kappra. Details: Spayed before onset. Cluster fits showing signs of brain damage. After her reoperation. Despite increase in doses of Epilphen and addition of Libromide followed by Kappra she continued to have cluster fits, admitted to vets on several occasions to try and stop the clusters. The only time she was fit free was on large doses of Epilphen which eventually caused her liver to have problems metabolising the drug and she started to fall over eventually being unable to walk. At this stage she was referred to a neurologist and put through MRI scan, spinal tap, blood tests etc. The result was that she was being poisoned by the Epilphen which her liver wasn't metabolising. Her dose of Epilphen was reduced and she was put on a liver supplement. With the reduction of Epilphen she went back to cluster fitting every three months till she died 2 years later in status epilepticus.	OWNER
31-10-2020		Jess	N/A	N/A	Unregistered - UK	10-Mar-14	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	7 to 8 months	YES	Monitoring fits and keeping record of everything that happened	YES	N/A	Suspected triggers: None known. Medication: Pevion 100mg a day. Details: Rarely happens but occasional cluster fits, longest fit lasted 13 minutes usually last about 4 minutes. Can be monthly/weekly between fits since being on medication.	OWNER
31-03-2021		Jess	N/A	N/A	Unregistered - UK	20-Jun-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	About 18 months	YES	After videos we had taken and being tested at Fitzpatrick. They started her on medication, which caused her to fit more	YES	N/A	Suspected triggers: Extreme exercise, stress, heat in the summer. Medication: Phenobarbital and Pevion which she is being weaned off. Getting ready to start Potassium Bromide once Pevion has finished. Details: Jess has been spayed. She is a very anxious dog who is upset by any noise. Her fits are like petit mal at times but also grand mal fits where her nose and bottom jaw, her eyes roll up, then she starts to shake. They can last from between 30secs and 5mins. She also has episodes where she lays her head on her front paws and her head on the sofa and can sleep for up to 30 mins. You can say pussycat, squirrel, dinner, name of a wotter and she doesn't move. All the time there, her limbs don't move and when she gets off she has left a small mark on his trousers. The last two fits she has been incontinent and wet the bed. Occasionally she can be aggressive, but normally a very placid girl. She has changed, doesn't like her harness or collar, seems worried to go to my husband.	OWNER

Medication: Epiphen, Potassium Bromide, Keppra and Diazepam to try to stop clusters. CBD oil plus herbal products. Everything has worked well initially but then has become less effective. He has just been prescribed Fenofen to see for the day after seizures to try to stop the cluster. Details: Jax is entire. He fainted a little before his seizures started - his son started having seizures at 15 months and was ptt at under 2 years due to uncontrollable seizures. Jax' sister started fitting a year after him and she lost her battle in May this year - Jax always has ODs and always clusters. They have become progressively longer will often be unconscious for up to 6 mins. We are very fortunate that Jax has a VNS implant. Langford vet hospital is doing a trial with Bristol Children's Hospital and Jax is the 4th dog to have the implant in June 2017. I am convinced that he would not still be alive if he hadn't had this. He is very active and 3 years ago started Rally Obeyclass and is now working at the top 2 levels.	OWNER
22-12-2019		Jilly	N/A	N/A	Unregistered - UK	05-Jan-15	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 6 months	NO	N/A	YES	N/A	Suspected triggers: Totally unknown, just happened one night. Taken to vet after first fit. Then continued monthly, always about 2am. Medication: Vet recommended not going on meds as they didn't last long and were so spread out just monitoring her and if anything changes consulting vet. Have rec'd Diazepam in case she has another. Details: She had one large fit about 6 months ago followed by some smaller ones. Was left with a twitch but vet put her on diazepam for a week and twitch cleared. All her fits are over in a couple of minutes and doesn't seem to be a pattern to them apart from monthly and always about 2am. She has had fits monthly up until Sept of September, but nothing since (now 07/12/19). She is spayed.	OWNER

21-08-2019		Kingfarm Maid of Honor	K139324	N/A	BC - UK KC Pedigree	08-Nov-11	UK	Bitch	Tameryne Celtic Laird	Tameryne The Ferrari	Kingfarm Dress To Impress	Borderlair King Of Swing	Merrymarsh Dress To Kill Of Kingfarm	5 years 5 months	YES	Vet said it was because she had now had 4 episodes	YES	N/A	Suspected triggers: In vets during first one - stress? 2nd one it was a very hot day and had eaten cheese? Medication: Epiphen (1x twice a day), Epitaur 500, Milk Thistle & CBD Oil. She has remained fit free since. Details: Spayed in 2012. Her last fit was the worse - much more intense and longer (lasted about 3 minutes) and she took longer to come out of it. In April 2022 Macey had a routine dental examination. In waiting room afterwards I noticed her mouth was twitching and started to foam. The vet took her in side room where she was fitting on the floor. They kept her in observation for a few hours. Vet thought as she was stressed this was probably the reason. No medication given as they said they only medicate when they have had 3. All ok and fit the until June 2018. Around 15mm Macey was resting in kitchen and started to fit. No vet appointment until Aug that day. No tablets given but was told to administer rectal diazepam if she had another 2 hours after being home she had 2 more - more severe than before rectal diazepam given. Called emergency vets as I couldn't cope with seeing her like it. They agreed to have her in overnight to observe. Got a call 3 hours later saying she was so stressed and would be better at home. Medication: Epiphen was prescribed 1 tablet twice a day. I also give her Epitaur 500, Milk Thistle (to help liver on Epiphen) & CBD Oil. She has remained seizure free since the day of her first fit at home it was a very hot day she had also just eaten some cheese (which is now off the menu).	OWNER	
19-07-2019		Kobi	N/A	N/A	Unregistered - UK	15-Jun-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 8 months	YES	Confirmed by vet	YES	N/A	Suspected triggers: Stress and also air pressure (hundry weather), bright lights. As Kobi is deaf and also almost blind he bumps into objects which stresses him. He can't go to vets surgery as stress causes seizures. Medication: Vets have tried almost all meds over the last four years. He still has seizures but they are 1-2 a month now. At the moment his meds are: Epiphen, Lithorimide, Levacetastam and Sodium Valproate. Diazepam for cluster seizures. He has recently been diagnosed with diabetes too so is now on Insulin too. We have struggled for four years to get him to this point and tried so many different meds. Details: He has had advice from a neurologist who diagnosed tonic-clonic epilepsy. Kobi has blood tests regularly to tweak his meds. He is a blue Merle, totally deaf, almost blind and now diabetic aged 6yrs old. While trying to get the right balance of his meds he was having clusters every other day. As his meds are now he will have 1-2 seizures which leave him completely exhausted and wobbly for days. His seizures are 1-2 a month at present. Neutered. Rescue dog from Border Collie Trust GB.	OWNER

YES	N/A	No apparent trigger. Medication: None. Thankfully only happened twice and not since. Random seizures. Only had two in space of that month. Monitored and not happened since. Lasted around 10 mins each.	OWNER
21-08-2019		Koopa	N/A	N/A	Unregistered - UK	22-Feb-14	UK	Dog	Gwynion Paddy	Unknown	Unknown	Gwynion Gwen	Unknown	Unknown	2 years	YES	MRI	NO	5 years. He had 2 failed infusions, couldn't stop the seizures	Suspected triggers: None. Medication: He had a VNS implant, was on Epiphen, Pregabalin, Keppra and Zonisamide. KBR made him crazy and then unresponsive, we even had a VNS implant made him to to help. CBD did nothing.	OWNER
29-09-2019		Lacey	N/A	N/A	Non UK Living/stered (Border Collie)	10-May-19	SOUTH AFRICA	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	Blood tests MRI scans Diagnosed idiopathic epilepsy	YES	N/A	Suspected triggers: Bravecto tics and flea treatment. Light sensitivity. Extreme change of routine. Medication: Phenobarbital. This has helped control the seizures and we went 9 months seizure free from a stage. She seemed to develop resistance to it and due to her liver enzyme levels we added Keppra. Valium is used as a rescue medication. Lacey is spayed. Behaviorally she is very active, not just border collie active (we have two) she has endless amounts of energy and it seems as though she rarely switches off. She chases shadows and gets reflections endorphily and licks them mainly on floors and walls. She also seems very sensitive and reacts to seemingly normal activities she has a barking fit/fitting if you shower, take off your shirt, use equester bottles etc. It's as though she doesn't like you doing it and even gets worked up before you begin to do it for example if she sees you take clothes out to show she starts taking 2017 May 1 seizure, July 1 seizure, August September, November and October (partial) seizures one each month, December 1 seizure, 2018 January 2 seizures increased phenobarbital med, April 1 seizure, 2019 February 1 seizure, March 1 seizure, June 1 seizure, July 1 seizure added keppra. Partial seizure 1 seems as though a seizure is starting and she comes and asks for help but then there is no seizure only excessive drool or teeth chattering. Lacey's seizures are usually just over a minute and she urinates during her seizures.	OWNER
19-07-2019		Lachna Like A Rocket - Sam	Not known	N/A	BC - UK KC Pedigree	10-Apr-11	UK	Dog	Romani Dapple Dandy	Cohen Baz (ISDS 251246)	Romanarius Rising Star	Romanarius Gin Soda	AG CH ForHer Turbo Diesel	Romanarius Pimms	9 months	YES	Vet and consultant neurologist	NO	Sam died at 15 months old from cluster fits.	Suspected triggers: No triggers known. Medication: Phenytoin, Keppra, Brondil - no improvement seen. Details: Fits started 1 week. Cluster fits up to 10 in an hour started after 2 months, sometimes only 3 days between clusters. Sam fitted almost constantly in his last 24 hours and had to be PTS because he fitted every time anyone went near him. A horrendous death as the chemicals to PTS made him fit more. Entire.	OWNER

She was vaccinated 4 weeks prior to onset. Initially fed on James Wellbeloved. Changed to raw after onset fits considerably reduced. Initially fits were one a month for the 4 months and then settled. The following year at the same time she had two in 3 months and that has been the pattern since 2011 but less in time and intensity. Seized 4 months.	DATA TRANSFER FROM LYN HORTON ADDED 05.09.24
30-10-2021		Lana of Kaa No Ale JKC-RL-00695/17	N/A	N/A	Non UK Registered (Border Collie)	14-May-16	JAPAN	Bitch	Nesbakkens Sweec NKK.N052441/14	Nesbakkens Hillbilly Deluac N060831/1	Spottie N048366/12	Azra Muka UK KC Reg No-AM091467	Brook (ISDS 244333)	Bet (ISDS 282400)	4 years	YES	MRI and CT scans	YES	N/A	Suspected triggers: I can't think of any, she was very healthy. Medication: Lana weighs 1 kg. First, Zonisamide 100mg 0.5 tablets twice daily. Change to 1 tablet twice a day. Change to 1.5 tablets twice a day. Phenobarbital 30mg 1 tablet added twice daily. Changed to 1.5 tablets Phenobarbital. Gabapentin 300mg 1 tablet added 3 times a day. Levetiracetam 250mg 1.5 tablets 3 times a day (cluster busters). Gabapentin was changed to Pregabalin. Discontinued Zonisamide and Pregabalin. Currently, Levetiracetam 50mg 1 tablet twice daily. Levetiracetam 250mg 1.5 tablets 3 times a day. Phenobarbital 30mg 1.5 tablets twice daily. Medication made administration at the time of seizure. Details: I can't find anything that seems to be related. The first seizure was 16/5/2020 10 major seizures to date. In total there are several small seizures. 1 can be a cluster (2 to 8 times) or a single one. It stops in 1 to 2 minutes. Excitement continues after the seizure. She's very hungry. She tries to eat anything, tissue paper, electric cords, carpets, etc. - No aggression. Many of the seizures when sleeping. She underwent contraceptive surgery in August 2019. There is little information on border collie epilepsy in Japan. I think there are many Border Collies who have epilepsy, but they are not public. People may be aware of breeders. Thank you letting me join this group. I will do my best positively.	OWNER

29-10-2019		Little Ozie		N/A	Unregistered - UK	09-Mar-07	UK	Dog	OB CH Whistnow Razumatazi (WSD)	Rodkin Rapid	Forever Magic Fantasia	Croftmist Megan (BC)	Taraneyne Kronos	Mainline Mit (BC)	45 days	NO	N/A	NO	46 days old. See Fitting details for more information	At 46 days old he began fitting and was taken back to the emergency vet. He remained at a cackwork pace and was very rigid in his mobility. He seemed to have stopped growing. The vet blood tested for a liver-cholec which came back negative. As the vet examined him, Ozie became very distressed when his head was held and was obviously in a great deal of pain. The vet diagnosed inflammation of the meninges (tissue surrounding the brain). The vet and I agreed that euthanasia was the only option. Two other pups from the litter also fitted at later intervals and both have died. The rest of the litter were registered with my Croftmist after. Megan was spared after. The two other dogs from the litter, that fitted, were put to sleep at young ages due to the fitting. Ozie was unregistered but the rest of the litter were KC registered.	OWNER/BREEDER

30-06-2022		Logan Green	N/A	N/A	Unregistered - UK	25-Jul-20	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Veterinary tests - bloods.	YES	N/A	Suspected triggers: None known to date. Medication: Epilepsin 50mg x 2 daily, Lioresin 2 daily, Levacetazolam 0.5 daily. Only meds that appear to give some sort of stability is the Levacetazolam. No improvement on the other 2 meds. Details: Since Jan 2022 when he started clustering over the month has gotten progressively worse. Hence the long term use of Levacetazolam, but he can never go past 2 wks without an episode. Recently has had a few occasions where he has gone blind following a seizure.	OWNER
28-12-2020		Loki Shewbridge	N/A	N/A	Unregistered - UK	25-Oct-17	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 2 days	YES	Vet diagnosed. Loki had liver blood test and they said he had Idiopathic Epilepsy. This was after the 2nd seizure.	YES	N/A	Suspected triggers: I currently am under the belief it's food related. Possibly grain but without testing I can't be sure. Medication: Loki started taking 1.5 x 30mg tablets twice daily. Because of his recent seizures medication has now increased to a 2 x 30mg tablets twice daily. Loki was neutered at 10 months. Details: Loki's seizures before meds lasted approximately 1 minute (convulsions) it took him about 15 minutes to recover/recognise me. Since medication the last 3 seizures have been much shorter and he has not urinated. He takes about 5 to 10 minutes to recognise me.	OWNER
28-03-2021		Lola	N/A	N/A	Unregistered - UK	10-May-16	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	5 years	YES	Idiopathic epilepsy confirmed by vet after monitoring and blood tests.	YES	N/A	Suspected triggers: No identifiable trigger. Medication: Sprong 2 daily Epilim. Diazepam to be administered during seizure. Details: Fits started August 2021. Initially monthly then increased in frequency. Neutered aged 12 months.	OWNER
31-07-2022		Lord Liquorice Rock - Barney	N/A	N/A	Unregistered - UK	16-Aug-16	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 6 months	YES	Extensive tests/vet diagnosis.	NO	He died at 5 years 7 months old. Status Epilepticus.	Suspected triggers: Potassium Bromide caused pancreatitis which started all his troubles, we had his seizures very well controlled. Medication: Keppra, Epilim, Zonisamide (brilliant) and we went to mths fit free on this drug. We stopped Potassium Bromide. Details: Neutered at 16 months old, didn't effect fits. His main prob was the Potassium Bromide causing the pancreatitis, this was the beginning of all his troubles. He had peritonitis too and had surgery, he only lived to be 5.5 years old. He died on 4th April 2022 due to a lot of seizures that we couldn't stop, he had a huge fit and we've tried everything to save him but we had to make the decision because he'd fitted for so long. We believe his epi meds stopped working due to a pancreatic flare and infection of the tum (yet again). He'd been very poorly. We miss him a lot.	OWNER

29-02-2020		Mandy Patrick	N/A	N/A	Unregistered - UK	18-Jun-05	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	By the vet as she went on quickly to have a series of fits stopped only by being given an anaesthetic.	NO	Age 11. Death was related to massive shaking and her body shut down and she was unable to move over a period of days.	OWNER	
30-06-2022		Mara	N/A	N/A	Unregistered - UK	11-Sep-11	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	10 years	YES	By vets Idiopathic Epilepsy	YES	N/A	Suspected triggers: initially caused by contracting kennel cough. Medication: Epilphen and Epilone. Still settling the doses to best level, meds have reduced grand mal section of seizure but overall length of time for full event is same. Attacks varies from not much to wobbly, to very wobbly. Assumed from meds rather than brain injury. Details: Grand mal fits usually 2 mins grand mal then 3 mins recovery, usually brings self out of activity. Medication reduced grandmal section but while seizure usually lasts 4 - 5 minutes. Has had 1 set of cluster seizures since start of the 2022, meds increased each time. Spayed.	OWNER
30-04-2021		Marky	N/A	N/A	Unregistered - UK	27-Jan-15	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 4 months	YES	Blood tests after change of vets	YES	N/A	Suspected triggers: Weather and pressure. Medication: Epilphen 45mg x 2 daily. Details: Neutered. Fits last up to 2 mins and about 10 mins recovery. Marky was brought from working farm at 4 weeks old... was not the first to leave the farm and was the smallest.	OWNER
29-02-2020		Marley	N/A	N/A	Unregistered - UK	2011 approx	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	Not known (rescue dog owned since 5 years old, had fits before being adopted)	YES	Blood tests excluded anything else, vet said most likely Idiopathic Epilepsy	YES	N/A	Triggers unknown, although previous owner mentioned him and was concerned of animal cruelty after kicking Marley repeatedly on numerous occasions. He had a broken tail. Could have had injuries to head maybe? Medication: He has had far less fits since starting a diet with coconut oil and CBD oil. Once a seizure starts, we give CBD drops immediately and the fits subside quickly and he recovers far better. Before CBD he would have cluster fits and twice had status epilepticus where the seizure continued for nearly an hour. With CBD they last only a minute or two and are very mild. Neutered at approx. 4 years old. Very dominant male, pushy with other male dogs. We think Marley is a Welsh collie. He is sable and white, herds upright and is loose eyed. Contacted the Welsh Sheepdog society who said epilepsy is very rare and practically unknown in registered Welsh Sheepdogs, although common in border collies. They suggested Marley is therefore most likely a Welsh Sheepdog/Cross, or if he's a pure Welsh, his epilepsy is probably injury related rather than inherited.	OWNER
30-06-2022		Marley	N/A	N/A	Unregistered - UK	28-Aug-15	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	YES	Blood test at vets	YES	N/A	Suspected triggers: There were no triggers at first, but we noticed after he had been put on medication he had a fit when he was anxious at the groomers. Medication: Marley is on Epilphen tablets. He has been OK apart from the groomers incident so far. Details: No other detail available.	OWNER
29-11-2019		Marshallone Howdylicious	Not known	Not known	BC	05-Nov-12	UK	Dog	Rosmarinus The Chocolater	Rosmarinus Jaffa	Rosmarinus Demerara	Marshallone Izze	Rosmarinus The Rainmaker	Amazin Grace	1 year 1 month	YES	Vet confirmed Idiopathic Epilepsy. All possible tests done, including an MRI scan and spinal fluid tap.	Not known	Not known	Medication: 40mg of Pexion twice a day. He was flea treated a week before, to which he was stressed at time of doing so and was off colour from that point up to first fit. He was fed on mainly raw with some dry food. Had an allergy test done and he is allergic to chicken, duck, wheat and gluten. Changed to pure BARF diet minus the chicken and duck. In himself he became brighter when food was changed, he started to grow again, coat became fuller. His fits have become less frequent but they may coincide with having all possible test done, including an MRI scan and spinal fluid tap, to diagnose epilepsy and being put on the right medication. When they first started he had several in a week, once food changed these decreased and since medication started they have decreased further. Longest between fits has been 31 days. 19-07-2019		Marshallone Switch N' It On	AF04298502	N/A	BC - UK KC Pedigree	05-Nov-12	UK	Dog	Rosmarinus The Chocolater	Rosmarinus Jaffa	Rosmarinus Demerara	Marshallone Izze	Rosmarinus The Rainmaker	Amazin Grace	7 months	YES	Vet confirmed as Idiopathic Epilepsy	NO	Major seizure	Suspected triggers: No triggers identified. Time frame was too short to collate information. Medication: Pexion 400mg twice daily. One small fit on 28.06.13 whilst asleep on sofa lasting less than a minute, recovered within 10 mins. No further fits until 09th July, when found fitting in the morning. Rectal Diazepam given. Fitted again same day at 10pm, same treatment, but 4 further fits, taken to vet, kept overnight and stabilised. None on the 20th but fitting again between 11pm and 2pm so back to vet and again kept in overnight and sedated. Phenobarbitone and on a drip. Prognosis was poor at this time. Brought home on the 13th July, Pexion 400mg twice daily. Details: Recovered seemingly well but impairments noted: motor function, spatial awareness, vision, recognition. Following 27 days charred phenomenal progress in physical and mental capabilities, 1st Aug he was at 95% of his previous levels of obedience training. On 2nd August he had another brief fit at 10pm (similar to his first with the same outcome. At some time between Sam and 4am on the 4th Aug he suffered a major seizure, rectal diazepam x 3 was administered but no avail, and he passed away shortly afterwards before the vet arrived. Vet hazarded a guess at major haemorrhage as cause of death. Neutered.	OWNER

Details: First seizure - 21st February 2021, second - 5th March, Third - 12th March, Fourth - 15th March. Started medication on or before the 25th March. No subsequent seizures as of one year later.	BREEDER AND THE OWNER
29-10-2019		Moose	N/A	N/A	Unregistered - UK	15-Jan-19	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	NO	Passed away at 8 months old.	No suspected triggers. Medication: Started on Phenoin and went two weeks without fitting. However had to be placed on Keppra as well due to him still fitting. After 3 weeks on Keppra and Phenoin, Moose took a cluster of 7 fits within 18 hours and then was placed on Epiphen and Keppra. This allowed him to fit free for 3 months until vets decided to lower the dosage of Keppra, the Keppra was stopped to half a tablet and then Moose took his final fits and eventually passed away. Due to the level of the medication Moose was on, his focus and concentration were terrible. I have recently read an article stating that the trainability of dogs suffering from epilepsy drops after their first fit and I can back this up from what I've seen with my boy.	OWNER

Spayed after 12 months. Fit 2: unknown. Fit 3: in 2008, began again 2009 increased frequency/intensity; now Grand Mal every 3-4 weeks & 2 within 15mins. Swelled after 2010. Date from 31.01.2016. Suspected triggers: I've kept a diary since his first fit which was in October 2015 and as first we thought I was a supplement we put on his food. We stopped but found the fits carried on regularly until he clustered and we had to put him on meds. They were 3 weeks apart within a day each time, then he had 2 in 3 hours. Medication: He started on Epiphen 60mg twice daily. He had blood tests every 3 weeks and after each blood test his dosage was increased by half a tablet each dose. As at the above date he was on 75mg twice daily. He also has Diazepam in case of severe fitting of 5 minutes. Details: Bests first seizure was at 6.30am, he'd last eaten at 5.30pm the evening before. He had features that which is called, that what the Pedigree Chart mean for large dogs. Most fits are between 4.30am and 6.30am when asleep. Since he started his meds he has not fitted, though after blood tests they have kept increasing his dosage. He has now been 6 weeks fit free. Bear is a very large collie weighing around 34kg. He came from a working farm in Wales as did his brother who is coming up to 3 with no signs of the same. He was neutered at 9 months old and had not fitted until October 2015. UPDATE ADDED 30/09/2020 No. Date of birth/Registration Type/How epilepsy diagnosed/Is also registered & Cause of Death.	DATA TRANSFER & OWNER BY	
29-11-2019		Paddy	N/A	N/A	Unregistered - UK	12-Oct-17	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	Vet tested for all other possible conditions which were clear, this left us with Idiopathic Epilepsy	YES	N/A	Not sure as very early stages of any suspected triggers, only had first seizure on 1/10/19. Possibly stress related? Medication: Initially given Phenoin 400mg half a tablet twice a day, 12 hours apart. On 15th November began fitting again, first one was as all the others. He was diagnosed then began a Cluster. Diazepam administered but continued to fit the morning after, on another trip to the vets they issued more Diazepam & introduced Epiphen. He had a loading dose for 2 hours (4 tabs) along with the Phenoin then reverted to 2 tabs 12 hours apart plus Phenoin for 4 hours, another vet trip booked for 18/11/19 to discuss future medication. Neutered at month old. Seizures initially were when sleeping but in last 24 hours they have been when awake. Fits are never very long at the moment, around 30-45 seconds. Some seizures have appeared to be caused by one of the other dogs growling at him.	OWNER

31-01-2022		Puppichino	N/A	N/A	Non UK Unregistered	22-Oct-15	INDIAN born, export to UK	Dog	Johny	Unknown	Unknown	Unknown street dog	Unknown	Unknown	1 year	YES	Vet examination and blood tests	YES	N/A	Suspected Triggers: Originally triggered by rabies vaccine batch (suspected). His brother and my other (non-border collie dog) were also vaccinated but had another batch. Medication: Phenoin 400 mg - 15 tablets twice daily, Levetiracetam 750 mg - 1 tablet three times daily, Epiphen 40 - 1 tablet twice daily. Details: Puppichino was born in New Delhi, India as a stray dog and was neutered at 6 months old. We relocated him to the UK in 2017 and he had shown no signs of epilepsy. Puppichino is now 6 years old and has been epileptic since he was a year old. He had only a few attacks each year until December 2020, we didn't put him on medication. But in December 2020 he started having cluster seizures and was initially put on Phenoin, he is now on 3 drugs (Phenoin, Leve and Epiphen). He had a very severe attack of almost 90 minutes in October 2021 and had to be rushed to an emergency vet. It was triggered when the vet tried reducing his dosage of Levetiracetam. Fortunately since then he was cluster free till last night 3 Jan 2022, then he had a single attack yesterday. This is an improvement from the 6 or so he would have each month.	OWNER

29-11-2019		Remajak Somerset Morn	Not known	Not known	BC	11-Jun-13	UK	Dog	Atricia Double Dare to Amorewe	Atricia Mister Constant	Atricia Lady Madge	Bordeauwe Bithie Spirit at Remajak	Lochell Traveller South to Bourdeauwe JW GCM	Lochell First To Finish At Bourdeauwe	1 year 4 months	NO	N/A	Not known	Not known	Medication: see below. First fit 28.10.14 seizure in the afternoon, followed by a slow but full recovery to normal state. Second fit 29.10.14 at 7am. Seen by the vet after each seizure and blood tests undertaken. Vet advised diagnosis of idiopathic Epilepsy at this stage but as yet no MRI or spinal tap has been carried out. He was otherwise fit and well with no further seizures as of 2.12.14. Initial course of Diazepam for approximately one week, treated with Epilphen twice daily from day of second fit for four weeks. Bloods have been sent to Epilphen to assess stability of phasing out medication. 24.14 castration under general anaesthetic, vet treated with Advantage for possible fleas same week, 1.10.14 first year vaccination; 25.10.14 routine worming with Panacur. He is otherwise fit and healthy. All breeders/owners directly contacted were informed immediately with sire/dam owners agreeing to wait for completion of initial four week treatment plan before submitting to database; dam & littermates will never henceforth be bred from. DNA to be submitted in due course. Feed James Wellbeloved Turkey & Rice; no change before or after seizures. Neutered on 24th September, before onset of fits. UPDATE 01.05.15 Bryn suffered a seizure at 10.30pm. Recovery time was quicker than the initial two seizures last October but he lost vision for 15 minutes. 25 minutes after the seizure he took his ball to his owners to ask for a game. At the time of the seizure, his owners report that his Epilphen dose had been reduced gradually to 1/4 tablet each day (as he had suffered no further fits after the initial two) with the plan to take him off med altogether in another week. However, their vet has now advised that the dosage should be returned to 1/2 tablet each day.	DATA TRANSFER FROM LYN NORTON Added 04.12.14 Update 01.05.15

30-09-2021		Rusty	N/A	N/A	Unregistered - UK	01-Apr-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years	NO	N/A	YES	N/A	Suspected triggers: Low blood sugar (not eating often enough). Medication: Disopram (in case of fits that last longer than 5 minutes). Details: Neutered. Frequency of fits: 1 every year (any time between March and June). Length of fits: 1 min for aura, 1 min during grand mal phase, 10 min afterwards (temporary blindness and unable to walk properly). Vaccinated with yearly boosters. Vet prescribed de flea and de worm medication, as standard. Food is pedigree wet jelly (dog does not tolerate dry food well - causes bloating and chronic flatulence). Several pedigrees cheese and beef mini treats throughout the day and 1 pedigree detastick per evening. Since identifying the potential trigger no fits have occurred, as the dog is now fed at exact timings each day.	OWNER
19-07-2019		Ryans Mira W027 (YSOWA)	N/A	N/A	Non UK Registered	19-Mar-07	AUSTRALIA	Dog	Princes Dooley V2955	Braiston Don V2203	Princes Zoe N0102	Altandale Gypsy Q2536	Dan (ISDS 210971)	Crowdale Cindy Sarah Q2789	10 months	YES	All usual testing was undertaken to rule out other causes (not MRI)	NO	Euthanased (17 months) after bad weekend and seizure on the Monday morning - very restless, whiny, regular vomit to settle. Seizures getting worse, developed into cluster seizures preceded by running without purpose including into fences/leis.	Suspected triggers: No triggers identified. Medication: Phenobarb and KBr. Increased dosages but seizures got worse. Details: Went on elimination diet, then natural diet only (poistic vet advice). Thyroid panel showed normal range.	OWNER
29-11-2019		Sam	N/A	N/A	Unregistered - UK	30-Mar-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	YES	Multiple fits leading to seeing a neurologist. He has had numerous blood tests and an MRI to eliminate tumours etc	YES	N/A	Suspected trigger is pollen as he is worse throughout the summer period. He is on a hypoallergenic diet. Fully vaccinated. Up to date on flea and worming. Medication: He started on Fenoin which made cluster worse. He moved to Epiphen which was a lot better but still having them often. He has just started on Bromide and after 4 months, we are going to start reducing the Epiphen. He is neutered. He was fitting every 2 weeks but currently 33 days seizure free from starting Bromide. His fits go on for approx 1 min and then are all grand mal. I have not noticed him have a focal seizure nor does he just topple. If he has a fit, it's always a big one. He starts his fit by turning his head all the way around and basically looks behind him. His eyes go wide and he starts to fit, he always goes and flails at the mouth. Sometimes he bites his tongue ending up in bloody gort being thrashed around.	OWNER	
29-11-2019		Sam	Not known	Not known	BC	01-May-07	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	3 years	YES	MRI and Lumbar Puncture, Bath Vet hospital confirmed as Epilepsy	NO	Did May 2019 aged 6 years. He tried out and on for just over a week in clusters. We arrived home one evening to find that he had died. The vet said it was a grand mal seizure that only instant medication could have saved him and he would not have known what was going on	Medication: Epiphen. Nothing unusual happened that I can think of did notice it initially happened after he had been out and we got caught in the rain. Like he had caught a chill, it happened often after a soaking. The vet said it wasn't connected, I'm not a sure. After diagnosis at Bath Vet hospital where he had an MRI and I think a lumbar puncture he was certainly given just Epiphen, strength and dose varied. He also given Libramide when fits continued, can't remember strength. The fits did change even though he was on medication. The fits didn't last as long and couldn't tell when he was about to have one, or if he had had one when he was home alone. Usually when he was sleeping then he would wake, his head would shake he would fall over and his back legs would move as if he were running his front legs would be stiff. Was fed on Bakers complete. A lighter diet was offered after fits although he was usually starving when he came around. He gained weight so we were advised to give him a weight control food, there was no change in fits. He was neutered before the fits began.	DATA TRANSFER FROM LYN HORTON Added 21.05.14

30-06-2021		Scalpie Gem - Gem	N/A	00/95423	BC - ISDS	15-Sep-17	NETHERLANDS	Bitch	Skiz (ISDS 297208)	Bill (ISDS 249411)	Mig (ISDS 235243)	Fae (ISDS 333930)	Hank From Shepherds Own (ISDS 312500) [Dau]	Kite (ISDS 325501)	2 years	YES	By a vet	NO	3 years 8 months. She passed away on the 23rd of May 2021, as she did not come out of a epileptic attack and we had to put her down	Medication: She was given Fenoin at first, but had Phenoin at least the last 3 months. The periods between the attacks became longer. From once a week to the maximum of a little over 3 weeks. Details: The length of the fits were about 1 to 2 minutes, after that she needed a little time to recover, maybe 5 - 10 minutes. Then she was her normal, happy self again. Gem was not neutered.	OWNER
29-11-2019		Seve	Not known	Not known	WSD - Unregistered	approx 02-Nov-07	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	Vet confirmed as Epilepsy	Not known	Not known	Suspected triggers: On keeping a diary fits always on around spot on flea treatment stopped using and fits a lot less severe and less frequent, plus have changed his diet to part raw and don't give any vet meds unless very necessary (use alternative and herbal) and ALWAYS check there are suitable for dogs with seizures. Medication: None. Fits always in a morning after a deep sleep but have been able to halt them when I see and hear the signs (snooring noise and foisting) and talk to him and stroke him gently. Now fed part raw/ part IWB kibbles. Did read an article about giving frozen vanilla ice cream immediately after a fit. Have only tried this once but was AMAZING in bringing him round very quickly. Fits have gone from every 3 to a month to every 5 to 6 months (last time was 5 months 22 days) and are less severe lasting less than 1 min and recovery time afterwards is lot quicker (due to ice cream!). Dog came from a rescue and was neutered before owner got him.	DATA TRANSFER FROM LYN HORTON Added 11.09.13 Updated 20.10.18

29-11-2019		Slye	Not known	Not known	BC - Unregistered	09-Jul-10	UK	Bitch	Blue	Ted	Mig	Dot	Glen	Neil	3 years	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Epiphen 80mg twice a day and Fenoin 400mg half twice a day. It was a really hot day in July 2012 late afternoon evening, was going to take Slye in the car to park. It happened outside, then again at the same time on the next day while taking her in the car and the following week the same happened. Then was diagnosed as epileptic. To start they were every 21 days and not that intense but the last couple of months they have become more intense and not regularly. The last week she had cluster fits more and more so medication was changed to Fenoin and was asked if Epiphen but that did not work she was put back on Epiphen and Fenoin and so far it is working well. Fed on Bakers complete and Cesar. Intire.	DATA TRANSFER FROM LYN HORTON Added 12.05.14

28.02.2021		Skye	N/A	N/A	Unregistered - UK	05-Jun-17	UK	Bitch	Scottish Farm dog	Unknown	Unknown	Scottish Farm dog	Unknown	Unknown	3 years 3 months	YES	Several identified seizures. Vet feels as they started around 3 years old, otherwise extremely healthy fit bitch, epilepsy likely cause	YES	N/A	Suspected triggers: No known triggers at present, still documenting seizures to find any pattern or link. Medication: Treated with Phenobarbital twice daily (under duress), initially 60mg, halved to 30mg by me as behaviour badly subdued by dose. All ok at present. Hopeful of stopping or reducing meds after spaying and hormonal fluctuations taken out of equation. Using FFT tagging, calming and enjoyable, also Reiki. Very dooped, poor stool could barely walk. Have discussed with vet who agrees the treatment shouldn't be worse than the condition! Details: First fit 4.4 am, jaw clattering woke me, bawling, twitching and urinary incontinence, thrashing worked with hydrocortisone was aware of how scary it took, and to time it) Around 3.5 mins, four long bouts and jumped up like nothing happened, vet did urine test in morning, slightly elevated white count so treated with antibiotic in case of infection. All other fits (5 more) have been identical, only shorter in every case. Differing times, no real common denominator. One thing I am monitoring is we use a calor heater in sunroom trapping up heat in autumn/winter. Most recent seizure Skye had spent half a day with me there doing a Zoom course online. It is well ventilated and has a CO alarm, but wonder if she is affected by this? Just grasping at anything can change to remove meds.	OWNER

YES	N/A	No triggers identified. Medication: Epiphen started 3 weeks ago. No seizures since. Fits are normally 2-4 weeks apart. Mostly grand mal. 3 waves lasting 5-6 mins.	OWNER
29.10.2019		Smudge	N/A	N/A	Unregistered - UK	16-Jun-99	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	9 years	NO	N/A	NO	PTS following a significant seizure at 17.5 years. Vet concluded this seizure had caused brain damage and a high probability of a recurrence within a few days.	OWNER	
29.11.2019		Smudge	Not known	Not known	Collie	19-Oct-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 1 month	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Epiphen increased to 2 twice daily 60mg. After 4 months given Libromide, which only made him lethargic and not acting like his usual self. Now on Epiphen and Levotiroxin which we used to give him now and then before a fit, but not on one every 8 hours. Fits started off as around 8 or 9 clusters every 21 days, this increased to 11. His last one being 34 clusters from 2pm to 7 am the next day. Some last 10-30 seconds, some 2-3. There is usually 15 minutes in between but now a few minutes. Clenches jaw, then jaw wide, outstretched legs, urinates sometimes and a slaver from mouth and the smell is awful. Then he will pace, used to pace for 20 minutes and could not see us. Now he paces and tends not to bang into objects, seems to manoeuvre around them a little better. Before a fit, he howls at the moon, tries to escape, but now he tends to approach me to cuddle and follow me everywhere I go. You can see his eyes that he is due to fit, his personality changes. The fits had increased to double the amount, but more often between them. Incurred before fits started. He had been receiving only 4 weeks before. He had trauma to his leg when only 5 months. And we had a collie out when he seized the following week.	DATA TRANSFER FROM LYNN HORTON Added 16.07.25

Medication: Level1 acetate 500mg three times daily. Eprispres 60mg quarter tablet in morning, half tablet in evening. Details: Lengthy seizures often resulting in administration of rectal diazepam 10mg x one or two.	OWNER
28-02-2022		Tickstater of Mischief - Lusi	K130380	N/A	Collie Cross - UK KC Activity Register	30-Dec-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	MRI Brain scan and CSF tap	NO	5 years. Medication induced severe pancreatitis.	Suspected triggers: We had no clue as to his triggers. We eliminated certain foods, he still tried to re-introduce them. We don't think it was food related, although he was raw fed from diagnosis. He was chemically castrated 6 months before fits started. 3 months after chemical implant we had him surgically castrated. We wonder if that had an impact on the start of his seizures or not. Medication: Initially started on Levetiracetam 250mg TDS. Seizures increased so drug was increased to 500mg. Christmas Day 2017 he suffered 4 seizures within 12 hours, instructed by specialist to load dose him for 5 days and meds increased to 750mg TDS. By June 2018 we had to introduce Pheno, this was increased at least twice. 2019 he started on Potassium Bromide. It made him extremely unstable, we had to use one of the Help Them Up Harnesses to help him get up as sometimes he couldn't manage. On a vet visit with one of our other dogs, my vet cried when she saw how uncontrolled he was, even though we had had his meningitis. She immediately got on to them and they reduced the drug. He did improve but still had little issues at times. Unfortunately I don't know the sire or dam, even though we met mum. However, I visited my brain this morning and remembered that we got him from Barn Farm Border Collies in Stafford (or near there) and the chaps name was Ed (Edward). One thing we did do with Lusi (our epileptic) was error him and his bestie (my ally) by Enry onto the PUCV's OCSA study. They went for the day taking part in different trials and having fur and stool samples taken. That was pre Potassium Bromide. Details: We wondered if weather pressure changes can set seizures off as well, maybe environmental things. We have overhead electricity cables where we live but who knows. Castrated, seizures stopped 3 months after this.	DATA TRANSFER & UPDATE BY OWNER

29-11-2019		Wildblue Intuition	Not known	Not known	BC	16-Jul-09	USA	Bitch	AAC CH Kybota Wildblue Rhythm	AUS CH Devondene Kiwi Legend CD	AUS CH Kybota City Rhythm	Wildblue Eternal Dream [USA]	AAC CH Wildblue Eternity	AAC CH Wildblue In A Dream	4 years	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: None. The fits are very mild and she is at this time being treated holistically. Her first fit was on a hot day when the dogs were out running and we thought that might have triggered it, however after her second one we took her to a vet to have it confirmed where several tests were done. She continues to fit regularly on average one to two times a month. Originally fed on Diamond High Energy at the start but it was recommended that we place her in a less physical home so that her protein and fat content could be lowered. She is now in a pet home on an adult formula by Diamond. The fits are more frequent now but also more mild. Spayed.	DATA TRANSFER FROM LYN NORTON Added 14.10.14
21-08-2019		Willow	N/A	N/A	Unregistered - UK	05-Jul-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	14 weeks	YES	By a brain scan. They couldn't find any problems with her brain. So the conclusion was idiopathic epilepsy.	YES	N/A	No triggers known. Tends to have seizures only when sleeping. Medication: Started at 4mg of epiphen twice a day. Now currently on 60mg twice a day. Diazepam rectal tubes are given during or just after a seizure to help calm her down. Levitracetam 100mg tablets are given to break up any clusters. 1 tablet after 2nd seizure and half a tablet every 8 hours until 4th hours after 2nd seizure. Since starting on 60mg of epiphen twice a day, Willow went 20 weeks without having a seizure. Before that she was having them every few weeks. Had Willow from a local rescue centre when she was 10 weeks old. Have no background information of her at all. Willow has always been clumsy. She's not your typical bright intelligent border collie. She tends to trip over her own feet, bump into things etc. At first I thought maybe it was just because she was a puppy getting used to her new surroundings but as she was getting older she was still the same. At 14 weeks she had a massive cluster where she had 9 before I even got her to the vets. They had to put her under anaesthetic & come to bring her out of the cluster. I don't know if this affected her brain but sometimes she's very uncoordinated.	OWNER

Medication: Phenoobarbitone 60mg x 2 daily controlled fits from 6 weekly to around 3 a year. At 4 years I took him to use holistic vet Christopher Day and gave a very detailed diary of events, he had fitted every 6 weeks prior to meds and now fitted around 3 times a year. He prescribed a homeopathic remedy which I gave daily. 8 years I decided to start to reduce the pheno as had not fitted since visit to Mr Day. I reduced over 6 months to 6 pheno and Trv never fitted again.	OWNER
30-04-2021		Wren You Have It Flound'r - Wren	K1S8363	N/A	WSD - UK KC Activity Register	21-Oct-16	UK	Bitch	Klamingque Old King Cole	Klamingque That's Daz's Tri	Detania Golden Girl	Stella	Cookvale Dark Stranger	Lucy	4 years 2 months	YES	Had blood tests after the second fit. Vet said it's probably 'idiopathic epilepsy'.	YES	N/A	When only has had puppy vaccinations and I do not use chemical treatments on her. Medication: Since the fits she has been on MCT oil and has not had a seizure since. Details: Wren has been re fed since a puppy. She had a top eye after her third season at the age of two. She is a fit healthy dog and has never had any accidents or illness prior to the two fits. Wren had her first fit on Saturday 5th December 2020 at 6:45am. Heard a knocking downstairs and I found her collapsed having a generalised seizure which lasted under one minute. She made paddling movements, drooled/northed and urinated. She came round quickly, being wobbly for 2-3 minutes. After that she was back to normal like nothing had happened. Her second fit was on Monday 14th December at 2:30pm. She had got up in the night wanting to go outside. This is not unusual for her as she often gets up at this time to go toilet. As I opened the patio door she collapsed to the left and started fitting. Exactly the same as the time before. Quick recovery and within a few minutes she ran back upstairs back to bed and went to sleep.	OWNER
29-11-2019		Wynedon Maurice Traveller	Not known	Not known	WSD	03-Dec-90	UK	Dog	Monkfield Minstral JW	SH CH Whinway Janta of Monkfield (ISDS 122121)	Caristan Charisma	SH CH Caristan Captain (ISDS 160585)	Rossare Joanna of Mobeila		8 months	YES	Vet confirmed as Epilepsy	NO	1 year 7 months. Euthanased in July 1992 when fit frequency increased to less than 1 week between clusters and the dogs were affecting his own personality also changed and he lost the ability to remember simple commands	Medication: Initially Valium and Phenoobarbitone. Then Potassium Bromide and Epilin added after specialist advice. Doses systematically increased which increased the space between fits but did not reduce the intensity when the cluster fits happened. These required large doses of IV Valium and Phenoobarbitone for 12 hours. IV deworming was given the following day and subcutaneous the next 2 days. No changes made to diet. First few were single fits then every fit was a cluster fit. Response to increased medication doses was to increase the time between fits. There were no fits between Feb and June 1992 then the intensity got increasingly worse. Neurotend on Vets advice, but made no impact on fits.	DATA TRANSFER FROM LYN NORTON Added 11.09.13
