Died after choking on his own vomit	Medication: None noted. Details: The fit started completely out of the blue just as he was approaching his 4th birthday. He had one fit in the early hours of the morning, checks were done at local vets and they couldn't agree what had caused it, a week later another fit followed by his body starting to shut down, laboured breathing and no energy. Taken to Rotters Sudey vet hospital, kept for a week, one small white fit was there, they said sudden onset epilepsy, bought him home as they said he might not fit again. He had been home from Rotters Bar for 2 weeks with no fits, then had a major fit in his crate whilst we were out and died after choking on his own vomit. Roughly 8 weeks after his first fit. He was neutered at least two years before the fits started.	DATA TRANSFER FROM LYNN NORTON Added 29.05.14

31/11/2021		Balee	N/A	N/A	Unregistered - UK	07-Apr-16	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	By vet after second fit	YES	N/A	Suspected triggers: Reaction to spot on flea treatment very negative - but not quite a fit. I can't identify a particular trigger as fits are now very regular, every five weeks. They seem cumulative rather than a reaction to any external influence, as far as I can see. The first fit came soon after puppy vaccinations, but may be a coincidence. Medication: Libromide 50mg, Epilaph 240mg, Diazepam 10 mg. Hepato support. Meas made the seizures regular and reduced number considerably. Details: Neutered. Tricolour. Very, very active dog with more stamina than in most collies, and very intelligent. Food tastes changes dramatically after a fit, will not eat meat and after a seizure vomits from being eating to eating very little. After a fit he is not good in the house and seems depressed, but outside he exercises generally normally.	OWNER
31-05-22		Bailey	N/A	N/A	Unregistered - UK	23-Jan-10	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	5 years	YES	Confirmed at RVC with MRI	YES	N/A	Suspected triggers: No triggers provided. Medication: 1 x 400mg Fenoxin, 4 x 60mg Soliphen, 2 x 500mg Levacetarlam. When we first introduced Phenobarbital (subsequently Epilaph, now Soliphen), he was very wobbly on his feet. Details: Bailey is neutered and was having seizures every seven weeks but we have up to his medication and currently he has been 11 weeks without one. Normally he has an average three grand mal seizures.	OWNER
31-01-21		Bailey Lyness	N/A	N/A	Unregistered - UK	02-Oct-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Glasgow Vet School and Hospital	YES	N/A	Suspected triggers: Have not been able to confirm a reason so far. Medication: Epilaph 120mg twice daily, Libromide 1.5 tablets a.m. and 1 tablet p.m., Zonigran 100mg twice daily, Keppra 500mg 2 tablets 3 times a day after each cluster fit for 7 days, Deprolit 150mg tablets twice daily, 30mg CBD capsule at night. Details: Bailey is neutered and has fits every 3 to 4 weeks generally although at the moment they are weekly. He has generally 3 cluster fits at a time that last 2 to 3 minutes but yesterday he had 7 fits over a 6 hour period. It is so stressful as it is hard to keep Bailey quiet after the fits as it takes him around an hour to come round and see properly as well as regain his balance. We have bought a child's playpen to keep him in as as he can't get out and hurt himself as the dog pens he was able to escape from. Typically Collie.	OWNER

Medication: Pexion tried first. Changed to Pexion and Levacetarlam. Then changed to Pexion, Levacetarlam and Phenobarbital. Details: Not covered yet, due to be spaying in March. Cluster seizures - has had up to 11 seizures in 24 hours all lasting 1-2 mins - every 2 weeks.	OWNER
29-11-19		Beckin Double Tonic	Not known	Not known	WSD	01-Oct-08	UK	Dog	Forever Magic Phantom	Changol Dizy	Forever Magic Moon Madness	Gypton Just a Breeze	Quitters Starryed Surprise	latka Sugar N Spice	2 years 7 months	YES	Vet confirmed as Epilepsy	Not known	Not known	Suspected triggers: None noted. Medication: Initially Homocysteine, then Epilaph 30mg twice daily. Details: First fit happened a few days after Advocate applied. 3 months later 6 fits in 10 days went to homocysteine; vet got them under control until firework night when he had 10 over 3 weeks. My usual vet prescribed Epilaph 30mg twice daily he went 13 months clear until new years eve fire works, Epilaph increased to one & half twice daily, he has been clear for 18 months but for the firework weeks. I put an Adrenal color on Toni, he was very stressed before putting it on him, it was like magic 2 minutes after putting it on him he got a toy to play with then went in his bed and slept for the evening. Fed on raw food, fits improved since medication began. Neutered one fit was controlled.	DATA TRANSFER FROM LYNN NORTON Added 05.07.14 Updated 10.07.14
21-08-19		Beckin Surprise Surprise - Vito	K136870	N/A	WSD - UK KC Activity Register	05-Dec-10	UK	Dog	Forever Magic Phantom	Changol Dizy	Forever Magic Moon Madness	Gypton Just A Breeze	Quitters Starryed Surprise	latka Sugar N Spice	7 years 5 months	NO	N/A	YES	N/A	Medication: Epilaph 3 x 1 Caps per day, CBD oil 1 drop AM and 2 drops PM, Melatonin 3 mg PM. No more fits for now. Details: Really high cholesterol, all other blood test ok. Low fat raw meat diet which lowered cholesterol. High cholesterol according to vet doesn't give fits. Vito had 3 fits 2 weeks between fits. Always during the night, hence the midnight. Grand mal's lasting about 4 to 5 min (from start to fully recovered). Have put Vito on low fat raw meat diet which lowered his cholesterol. Not given any traditional meds yet. Had all relevant blood tests done but no MRI. Vito is neutered.	OWNER

YES	N/A	Suspected triggers: No known triggers, it happened while playing, usually while sleeping. She had another set of seizures 4 months later, no correlation with desorming or other medication. Medication: She is doing well on 45 mg Phenobarbital twice a day, initial dose was 30 mg, but she started having focal seizures, so we increased it. She seems to be fine on the meds. She is also on Proin 72 mg x 1/2tbl and DES 1mg pill twice a week. Details: Seizure history - First seizure was 20th July 2021, 2-minute seizure in her sleep. The next day chemistry profile and a CBC test were done, everything was normal. Second seizure was on 20pm on 5th August 2021, she had a 1 minute seizure while playing. Third seizure 3am on 5th August 2021, 2 minute seizure while sleeping. A thorough vet check was done on 6th August 2021, everything was fine. Started her on Phenobarbital. The initial dose was 30 mg x 2/day that was decreased to 45 mg x 2/day two weeks later, and then decreased to 30 mg x2 at the beginning of September. Phenobarbital blood level was checked on 5th December 2021, it was 15 g/L. Increasing the dosage is under consideration since she is having 2-3 second seizures while playing fetch. She had two more 2 minute seizures in her sleep in January 2022 so meds were increased to 45 mg. Neutered. UPDATE ADDED 31/03/2022: Registration numbers added to Registered name of Dog also to Dam and (D)G.Dam. Country of Registration changed to Hungary.	OWNER Updated 31/03/2022
29-02-20		Blodwen	N/A	N/A	Unregistered - UK	26-Feb-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Neurology assessment	YES	N/A	Suspected triggers: No known triggers. Medication: Started with CBD aged 6 months which kept symptoms under control until she was one year old. They became significantly worse and unmanageable so she was started on phenobarbital and levetiracetam - starting doses were steadily increased to maximum for her weight and we also increased CBD and finally introduced Epiphen. Details: Blodwen is a Double Merle collie from a breeder but to me via an informal rescue. She has focal seizures - her MRI was clear so the seizures are not related to brain trauma or disease. Over a six month period her seizure related behaviour gradually diminished (from jerking awake every few minutes all through the night, crying, twitching and being aggressive) and she now sleeps for up to 11 hours through the night with no issues and is markedly more settled in the daytime. She was spayed at 6 months old but the focal seizure symptoms had already started (leg twitching, starting with head tilted, circling). The neutering didn't appear to make it worse. I have come to understand Blodwen, her symptoms and treatment requirements through close observation, asking for help from a Double Merle Facebook group and researching this genetic problem. We have a regular border collie from a farm litter who has displayed no health problems, had no knowledge of merle or double merle collies when we rescued Blodwen and this was not mentioned in the rescue we rescued her from. 31-03-20		Boston	N/A	N/A	Unregistered - UK	23-Jun-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years 6 months	YES	After initial seizure followed a couple of months later by a focal seizure and cluster diagnosed with chronic liver epilepsy after MRI eliminated any brain issues	NO	Feb 4th 2020 - aged 5 years and 8 months. PTS as diagnosed with chronic liver failure due to Phenobarbital	<p>Suspected triggers: Stress, over tiredness and heat would appear to be triggers. Stress from being bullied in our other colony, or going to the vet. Medication: Initially given Phenobarbital. Then moved to Phenytoin, then added Potassium Bromide. Kepra was given as an emergency protocol. Diazepam did not appear to work.</p> <p>Details: Boston had his first seizure on 4th Dec 2017. From then till he died on Feb 4th 2020 he had approximately 80 seizures lasting on average 60 seconds with some as cluster seizures. When he first started taking it was shorter and he recovered relatively quickly. He never lost bladder control when he seized. The critical turning point was in September 2018 when he went into focal seizure mode and had to go to ICU. This followed another ICU episode in December 2018 where we thought we would lose him. The neurologists worked with us to find the right medication level. There were times we pushed back on the suggested medication levels and discussed with the neurologist. I think it is important that owners who know their dogs best and have to manage the dog everyday feel confident to add their experience worth in. On hindsight we saw three issues: (1) the length of time it takes a medication to work through and to assess impact means it is several weeks from each medication change before you see if it has had any impact in controlling the seizures, (2) the vets are highly dependent on blood lab results to ascertain the medication levels and in our case, there were blood tests that were inaccurate/inconsistent and thus unreliable. We queried this and new bloods were taken but each time there was an episode, the delayed the possibility of accurate blood work and (3) neurologists are focussed on controlling the seizures but need to work hand in hand with liver experts so any increase in PB should be done only after a check on the state of the liver, it should not be automatic. It is our belief that we might have been able to reverse the liver failure had Boston's PB not been raised after summer 2019. Though the seizures were better controlled, his liver was damaged beyond repair. On the other hand if the PB was tapered down in summer 2019 and only Bromide used (or possibly in tandem with Kepra), would he have succumbed to some grand mal seizure - we will never know. Ultimately, epilepsy is life long - that we do realize.</p>	OWNER

Final Demand	Sarkam Destiny's Dream	3 years	YES	Referred to vets, blood tests, then MRI scan	YES	N/A	Suspected triggers: No reason he went to door just stood looking outside then went stiff and started fitting. Medication: Jack has Epiphen 1 x 60 mg twice a day and we just started him on Trasdolone. Details: Vet started Jack on Epiphen 1 x 60 mg twice a day and had occasional fits, tried higher dose but he was worse so put him back on lower dose. He still has a few fits a year and focal ones. Went from a quiet dog to being very noisy. Not neutered. His fits are a few mins, he takes a while to come round. Last one last year, he could not see and panicked, he took a while to recover.	OWNER	
29-10-19		Choytstan Wykes Pippin - Murphy	A50067402	N/A	BC - UK KC Pedigree	24-Jan-15	UK	Dog	Jackcrofter Silverbirch over Choytstan	SH CH Littlehorn Galaxy	Jackcrofter Greatglen Be My Girl	Sarkam Life Imitation In Choytstan	Teranos. Final Demand	Sarkam Destiny's Dream	2 years 2 months	YES	Referred to Willows at Solihull, who examined & did an MRI scan	YES	N/A	No reason for fitting as far as I am aware. Medication: Initially Levetiracetam 3 times a day but as it did not control the fits Epiphen was included twice a day. Full blown fit at lunchtime by my feet. Went for a minute from which he got up and walked slightly wobbly into the garden. Up until then perfectly healthy, happy young dog. Fed on Millers Kibble. Seizures are now under control. He was castrated at almost 3 yrs old but prior to that he was chemically castrated twice. He is currently well controlled on meds.	OWNER	
28-02-21		Cloudy	N/A	N/A	Unregistered - UK	28-Aug-16	UK	Dog	Unknown	Unknown	Unknown	Misty	Unknown	Unknown	1 year 7 months	YES		YES	N/A	Suspected triggers: He definitely has epilepsy but the condition could have been triggered, or exacerbated, by the original liver problem. Medication: Cloudy responds very successfully to a regimen of KBr (Lithorimed), Levetiracetam (Kepra) and Phenobarbital (Epiphen) and has almost no fitting, with the occasional 'petit mal' seizures. He has very occasional full tonic-clonic seizures when his medication has been compromised e.g. missed dose or after activated charcoal treatment for ingestion of toxins. Details: His epilepsy and liver shut. He started fitting regularly at 18 months in February 2018 and responded well to Phenobarbital. Went into seizure in May, probably due to hepatic encephalopathy. Routine blood analysis showed a liver anomaly and it was found he had a hepatic shunt after scanning. Surgery was carried out in June with 100% success, but the fitting continued. He is still taking regular medication at 4+ years of age with occasional recurrence of fitting especially if medication is compromised, even though his liver is perfectly healthy and functioning. No indication of food relating to seizures but he is now on a hepatic diet due to the shunt .	DATA TRANSFER & UPDATE BY OWNER

Lived until she was 14 years.	Suspected triggers: None provided. Medication: Del was never given any medications as my vet thought they would cause more damage than the fits themselves. Details: Del used to fit every 6 months, 3 fits and then none for approximately 6 months. This continued until I moved, then she stopped. Full bloods were done annually until towards the end of her life, there were no abnormalities thrown up. I moved when she was approximately 11. Once I moved there were no more fits. Spayed.	OWNER	
31-05-20		Delanor Phiball Wizard - Why	A03743806	N/A	BC - UK KC Pedigree	22-Jun-08	UK	Dog	AG CH FortVox Turbo Diesel	Woodborrel Red Wine	Tri Fly	Delanor Waggett A Lot	Romanthus The Werrman	Delanor Kirri	5 years	YES	Various consultations and investigations with vet. Blood tests etc for other causes (nothing found). No scan was done.	NO	Who died in status when he was 7 years, 3 months. He started fitting early morning on Sept 19th 2013. He did not come out of the fits as he usually did and we were unable to stop it. After speaking to the emergency vet we managed to carry him to the car. Sadly he died on the way to the vets.	Suspected triggers: None known. I spent two years looking for triggers and did wonder if swimming in the sea was a trigger for Why (just ???) but the day he died he hadn't been to the sea for two weeks. Medication: He was on Epiphen 30mg twice a day. This had kept him relatively stable until the last day. Details: Why was neutered 15 months. I do not believe this had any effect as he did not start fitting until he was five. He had cluster fits, usually two or three lasting less than a minute with about half an hour between. He only had five groups of fits over an eighteen month period. He was, however, hospitalised overnight in July 2015 when he fitted six times over five hours. The vets gave him rectal valium.	OWNER	
29-11-19		Detania Glistening Pride	Not known	Not known	BC	29-Jun-97	UK	Bitch	Detania Cosworth	Detania Singing The Blues	Detania Keira	Detania Faith Moves	Detania Arzz (ISDS 162879)	Detania Lady Lucy Lockett	4 to 5 years old	Not known	Not known	NO	10 ¹⁰ years old. Megan actually contracted Bone Cancer in her shoulder which sadly ended her life.	She started having epilepsy at around the age of 4 or 5 I think, with one fit which lasted probably less than a minute. They never actually lasted more than a minute I would guess, just seemed a long time at the time. They gradually increased until about 18 months - 2 years, months later when she had 3 in one day, the vets then put her on medication - Phenobarbital believe. This stopped the fits until the dosage needed correcting. Megan had to have regular check ups every 6 months (I think) and the medication did gradually increase. That's about all the information I can give you I'm afraid... hope it helps in some way.	DATA TRANSFER FROM LYN HORTON Added 25.07.14

Cluster seizure/status epilepticus	Medication: Tried Phenobarbitone, Potassium Bromide, Keppra, plus several other drugs (no positive changes) except Keppra gave us a "honeymoon period" - made it to 5 weeks without seizures but then they were back to heavy clusters again, worsening over the 2 years we had with him. Details: Neutered. Cluster seizures lasting several minutes between weekly - weekly intermittently. For 2 yrs until we had to let him go.	OWNER
30-09-21		Glemie Glen	K164560	N/A	WSD - UK KC Activity Register	17-May-16	UK	Dog	Glen (ISDS 00/11103)	INT SUP & WORLD CH Dew Tweed (ISDS 278793)	Mag (ISDS 257352)	Gwen (ISDS 00/14102)	INT SUP & WORLD CH Roy (ISDS 264416)	Ret (ISDS 00/294932)	5 years	NO	I am very familiar with epilepsy, as I have previously had animals who had grand mal fits, so have no doubt this is what he has. At this stage I don't want to put him through the trauma MRI testing etc.	YES	N/A	Medication: Immediately after the first seizure I gave a drop of CBD Brothers Silver Edition (10% CBD Oil and another drop that night. A single drop was given the following morning immediately before he went outside, but had another seizure at approx the same time and under the same circumstances. I believe because the silver Oil had not yet been absorbed. I now give CBD Brothers Silver Edition 10% Oil 5mg twice a day. Organic MCT Oil 1 level teaspoon 3 x daily. Estarim Capsules 3 per day with food. Details: He has several small fits during the day now, instead of just one meal in the evening (as before). He is fed almost exclusively a raw keto diet. So far he has had no further seizures, but it is obviously very early days. He was neutered 3.5 weeks prior to the first seizure. Both grand mal type fits lasted between 10-15 seconds. He was unresponsive, but eyes wide open and glazed. He was paddling and foaming at the mouth. He recovered pretty much back to normal within 2-3 minutes. I now understand that there is a history of seizures in his line. His litter sister started fitting at 2.5 years of age, initially under similar circumstances (environment), but has continued to fit, both while excited and at times of rest and has needed her veterinary medical increased over time.	OWNER
29-11-19		Grenaby Skeel Gralh	Not known	Not known	BC	15-Sep-11	UK	Dog	Ludgate Red Laser	Woodcroft Spectre AW	Firelyne Jurnaji at Ludgate	Grenaby Editors Choice	Grenaby Tucker	Nunery Kim At Grenaby (ISDS 231219)	1 year 6 months	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Pexion 400mg twice daily. Initially fed on Skimmers kibbles then once the fitting started, a home prepared diet of brown rice, potatoes and vegetables with raw meat (to try and reduce gluten, corn, soy and grains) to get the GALT fixed. This seemed to help for a while, with improving gaps between fits until last week, when he had several fits and he became critically ill at the weekend with cluster fitting. Fits have change in frequency. We had got him up to 17 days between fits, and had wanted to try and manage it naturally (without drugs) but that all changed last week as described above and the treatment was necessary to save his life. After we got him, we heard that the dogs (not the bitch) in the previous litter had all started to fit. So we opted for an early castration at 5 months. We are very lucky that he is still with us, but it was devastating to see him so poorly. He was in intensive care for 3 days and has been home for 3 days now, improving visibly by the hour. If I can provide you with any additional information, please do not hesitate to shout.	DATA TRANSFER FROM LYNN NORTON ADDED 11.01.13
31-08-20		Gwen	N/A	N/A	Unregistered - UK	01-May-99	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	Veterinary observation	NO	16 years. Euthanasia after uncontrolled fitting	Medication: Phenobarbital given initially with limited success. Potassium Bromide controlled the epilepsy completely until aged 16 when digestive problems made the medication unusable. Details: Savored before by a rescue charity, Sanivied Parvovirus virus aged 6 months. Fits became progressively longer and uncontrollable. She had to be sedated for up to two days to stop the fitting. Fits ceased immediately once potassium bromide was given (in solution daily with food).	OWNER
31-08-20		Gwennith (ABC 421786)	N/A	N/A	Non UK Registered (Border Collie)	02-Jun-15	USA	Bitch	Yosemite Gold (Flash) (ABC 320881)	Race (ABC 145723)	Bella Jewel (ABC 239542)	BB Honey (ABC 397887)	MISB BB Shiah (ABC 386155)	BB's Scorch (ABC 338096)	4 years 6 months	YES	All tests came back normal. MRI, spinal tap, and bloodwork all normal. The neurologist diagnosed her with idiopathic epilepsy	YES	N/A	Medication: She was just put on Zonisamide 100mg in the am and 50mg in the pm. Details: She has had 4 grand mal seizures at night only. They started in 2020 at 3 months apart, then once they got to a month apart, the neurologist put her on medication. She convulses, foams at mouth, eyes roll back, she loses consciousness and I am not able to snap her out of it. She used to run around the room right before she started seizing, but after doing this twice, I started crating her at night in a soft crate. Her seizures last a little over a minute, and she takes on average 3 minutes before she is completely conscious. She gets monthly chiropractic and acupuncture. I got a wellness check swab with fur sample done and it gave me a list of foods she is sensitive to. I have created her home cooked meals ensuring she only eats foods that she should. I have added MCT oil, B complex vitamins, omegas and do a monthly liver cleanse.	OWNER
29-11-19	31-03-20	Gwynfair Marc My Words	Not known	Not known	BC - UK KC Pedigree	19-Dec-11	UK	Dog	Wildblue It's The Business	AM CH Kybata Wildblue Rhythem	Wildblue Dream	Trevellis She's A Gem at Gwynfair	Alicrice Shadley Blue	Demille of Sunloch Valley	2 years 2 months	YES	Vet confirmed as Epilepsy	NO	3 years 5 months. He had another severe seizure during the night which left him paralysed from the shoulders. We then made the decision that he should be put. 1st June 2016	Medication: Initially Pexion, after 6 weeks Libromide was added. This combination was satisfactory for a while but then fits resumed, if anything worse than previously, he then had Epiphon and also Diazepam. Neutered after onset of fits. From the outset his fits were severe and caused significant memory loss and required a lot of retraining etc. We had a honeymoon period when we thought that the medication was going to control the seizures but when they resumed each time he had one it was severe and the re-education period longer. He had a very severe cluster of fits which effectively wiped his memory and character. He was very close to death but pulled through. We taught to walk etc. again and after 6 weeks he was back to ok. He was a different dog but he liked us and was content in his life. UPDATE ADDED 31/03/2020 - Update to Registration Type.	DATA TRANSFER FROM LYNN NORTON ADDED 25.08.15 UPDATE BY OWNER 01.03.20
29-11-19		Gwynfair You Were Made For Me	Not known	Not known	WSD	22-Feb-05	UK	Dog	Fenom Full 'O' Fun	Summertime Sweep	Majacabus Ois Tricky	Tymeaded Maggie May of Gwynfair	Wharknow Rockin Symphony	Gwynfair Catch Me If You Can	1 year 10 months	YES	Vet confirmed as Epilepsy	NO	6 years 10 months. Dog is no longer alive. He went into a cluster fit episode that could not be stopped with medication and it was felt that he had suffered enough and had had his last fit.	Medication: He was initially prescribed best Epiphon, but over the next 5 years his medication was gradually increased to try to control his fitting. From his first fit, he didn't have another for 18 months then the frequency increased until roughly every 3 weeks by this time he was 120mg Epiphon at 8am and 8pm, 300mg Gabapentin at 8pm, 2pm and 8pm, 500mg Keppra at 8am and 8pm, and 250mg at 2pm. He was on Autarky at the onset of the fits but as the intensity increased, he was moved to a completely natural diet of chicken and vegetables. Much research was carried out into the ingredients of manufactured dog foods, and it was found that certain things can be a trigger factor to epilepsy so knowing what was in his food was important. He had cluster fits over 2 days the first occasion and was given medication to try to stop the cluster. It was then 18 months before his next cluster fit. His next fit was then 3 months later, after which the frequency increased from around the age of 4 until the fits were happening every 3rd week. It was often a cluster of 3 or 4 fits over a couple of hours, but he needed veterinary assistance on 2 occasions where he was anaesthetised to stop the fitting as the episodes had continued over 24 hours or more. NOT neutered as the vet advised against him being operated on because of the risks with his condition.	DATA TRANSFER FROM LYNN NORTON ADDED 13.01.13

Until recently Libromide 325mg was being taken but a bout of pancreatitis hit and the vet believes this drug may have had a part in the problem. Details: Harley was spayed after having a single litter of seven, although one was still born. The first fit was a one off then we went around 18 months with nothing before the cluster fits on 31st Dec 2019. After this it was almost monthly with the aid extended break until August 2021 when we were episode free until March 2022. The March episode was part of the becoming ill with pancreatitis where she was taken into hospital for five weeks. This fits all on the med we are on.	OWNER
31-01-21		Harry	N/A	N/A	Unregistered - UK	20-Mar-16	UK	Dog	Barjo	Unknown	Unknown	Unknown	Unknown	Unknown	4 years 6 months	YES	Blood tests	YES	N/A	Suspected triggers: Worming Medication: Epiphen 1.5 tablets two times a day and Levetiracetam 1 tablet two times a day. Details: Neutered. One to two minutes fits up to 45 minutes to recover. Normally happen when asleep. Put a flea collar on in May and have wormed three times a year.	OWNER
28-02-22		Harry	N/A	N/A	Non UK Unregistered (Border Collie)	08-May-19	SOUTH AFRICA	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 6 months	YES	After first fit we visited the vet and by eliminating other potential causes it was determined that Harry has idiopathic epilepsy, which was confirmed by subsequent fits	YES	N/A	Suspected triggers: It is still early to say as Harry only had his first fit two months ago. I suspect that his anti tick/flea medicine might have contributed (although my other BC has been on it for longer and has no health issues). Another suspected cause is the dam on the farm where we walk every day as his last two fits have been within 24 hours after swimming in/drinking from the dam, so we are now avoiding the dam to see if it makes any difference. Since starting to have fits I have stopped feeding my dog dry food (binabe) and moved him to a raw food diet (it is still to early to tell whether this is making any difference). Medication: Harry is not on any medication for epilepsy yet. I have an appointment with my vet to discuss our options next week. I do have ampules of Valium, which I carry with me at all times, so I can administer it in case he has a fit. Details: Harry was neutered at 12 months. He has had 7 fits to date, the first 5 were roughly 2 weeks apart and the last 2 happened on the same day, about 10 mins apart (although I think this was triggered when he saw me packing, which caused some additional stress). This was 2 weeks ago, he has not had another fit since then.	OWNER
28-02-21		Hestigo Cox (REVI011/2012)	N/A	N/A	Non UK Registered (Border Collie)	30-Nov-11	SWEDEN	Dog	Teddymoor Joe (REGN 1775/2008 Sweden & ISDS 272151)	Hightgate Joe (ISDS 245242)	Call (ISDS 236444)	Sier on Nizz (N1249/2006 Sweden)	Glen (ISDS 244489)	Ty Hunt Flash (N1172/2004 Sweden)	13 months	YES	With blood tests that eliminated anything else, both with my vet and a specialist canine neurologist	YES	N/A	Suspected triggers: He has had more seizures in the spring and I think that's because everything starts up again with training and so on. Medication: Fenofen 75mg twice daily. Before medication he had 2 seizures, one after another but when he started Fenofen the second seizure stopped. He still had seizures over 3 months so we started on Fenofen instead and he went down to one seizure a year. Details: He got a castrating chip a year ago due to prostate problems and after that he has calmed down and his seizure are very far apart now. Not neutered. There are 3 more dogs from the same father on the Swedish list of epileptic dogs. There are also some other dogs that have the same relatives as the mother of Joe.	DATA TRANSFER & UPDATE BY OWNER
19-07-19		Heathgate Rimmel Gold - Rimmel	AG091044	280543	BC - Dual Registered UK KC & ISDS	28-Aug-05	UK	Bitch	Heathgate Alf (ISDS 263106)	Don (ISDS 201564)	Queen (ISDS 231407)	Rose (ISDS 264347)	Ben (ISDS 257902)	Meg (ISDS 264106)	2 years	YES	Vet confirmed as Epilepsy	NO	She became very ill and was fit at almost 7 years, as she was fading rapidly	Medication: Phenobarbital/Epiphen and Keppra 3 times a day. Tried Potassium Bromide and Gabapentin unsuccessfully. The Keppra helped control the fits. Details: Suspect triggers: No known triggers.	OWNER
28-02-21		Herba Ruemour	R147364	N/A	WSD - UK KC Activity Register	24-Feb-14	UK	Dog	Ren	Unknown	Unknown	Dot	Unknown	Unknown	6 years 4 months	NO	N/A	YES	N/A	Suspected triggers: Thyroid issues, Neogard wormer, car travel, tiredness, excitement. Medication: Thyronor (Levothyroxine sodium) for lack of thyroid function. After 6 months of changing levels and a cerebrospinal fluid sample which reduced the pressure, he seems better. No fits for 6 weeks. Fenofen - No change noticed. May have reduced fit frequency. Details: Neutered at 2 years. Fits were occurring randomly up to weekly, MRI scan showed no abnormality. Cerebrospinal fluid showed inflammation. Dog is extremely nervous and was lying on the ground shaking on hearing a siren or gunshot, even if it is a long way away. Nerves were worse on higher doses of Thyronor. Not sure whether these were a type of fit. Start in a similar way with apparent visual disturbances.	OWNER
19-07-19		Here Comes Miley Moo Moo - Casey	Not known	N/A	WSD - UK KC Activity Register	19-Sep-11	UK	Bitch	Cookvale Dark Stranger	Winterlood Blue Thunder over Glenjayside	Fall from Grace at Cookvale (ISDS 267497)	Here Comes Miley Moo Moo (Activity Register)	Unknown	Unknown	11 months	YES	Blood tests, Urine Tests, Bile Acid Simulation, Scans. Vet confirmed as Idiopathic Epilepsy	YES	N/A	Suspected triggers: Seizures seem to occur when over tired or stressed but no real pattern or definite trigger. Medication: Started on Fenofen but after 18 months fits got worse and started to cluster. Changed medication to Epiphen 60mg every 12 hours. After a couple of increases of Epiphen Casey here started to struggle. Added Bromide and reduced Epiphen. Now on 30mg Epiphen BID and 1 x 325mg Libromide. Reduced Epiphen because liver was damaged as a result of using Epiphen. Details: Neutered. Had MMR in 2016. Was fed on James Wellbeloved, now on on Millies Wolfheart. Nothing unusual happened prior to onset. She has Grand Mal seizures and has done from the start.	OWNER

29-11-19		Its Jaro's Calypso at Kallies	Not known	Not known	WSD	27-Nov-10	UK	Bitch	Forever Magic Xrated	Waggenland Mister Jake	Daneway Double Delight of Forever Magic	Janjiny Mistak of Jaro	Janjiny Red Storm	Jarros New Release	2 years 6 months	YES	Vet confirmed as Epilepsy	Not known	Not known	Suspected triggers: No known triggers. Medication: Epiphen, 1x tablet per day Details: Neutered. Smaller focal seizures progressed to general seizures and cluster seizures. Forwage both BC. She BC ISDS Test. UPDATE ADDID 21/09/2021: I worried closely with the vets but Jack had regular and very severe cluster fits and rarely recovered inbetween. The medication (Epiphen) was unable to make any difference. I do believe that Jack may have had Idiopathic Epilepsy for longer than we knew before diagnosis. Now I have learnt much more about this disease, I think there were earlier signs. I had to take the heartbreaking decision and he was euthanased. Suspected triggers: Possibly stress. Medication: Epiphen and Libromide. Details: Intact Male. Seizure approx every 2-6 weeks. Seizure length average 45 seconds. We got Jack when he was 14 months old, he had his first seizure about 1 month after his 2nd birthday (late Oct 2019). I phoned the vet and they gave me some great advice on how to monitor and what to do during a seizure, unfortunately a couple hours later he began to cluster so was rushed off to our emergency vet for sedation. We discussed the options for meds and agreed that we would not medicate at this point. 2 months later he had his next seizure, so an appointment was made to check his bloods again, this time the vet suggested we put him on Epiphen. After a while with only the sporadic minor seizures he began to cluster again (5 in 2 hours) he was kept at the vet that day and was started on Libromide and we were given emergency meds for future clusters. Since then Jack has been only having small seizures roughly once every 2 months. We continue to medicate with the Epiphen and Libromide and record any seizures in his diary or on film when we can. Jack is the most loving, happy dog and wants to be friends with everyone he meets. We love Jack dearly and would miss him terribly. Suspected triggers: excitement, anxiety Medication: Started on Pexion 100mg twice daily which seemed to work reasonably well for about 12 months then fitting became more regular, after having nine fits in three months I told my vet I wanted to take her off Pexion and try Epiphen. She has been on Epiphen 30mg for four years and has been free for that time. Details: Spayed at about 18 months after being told by her breeder that a litter brother was having fits. Saffie has been able to live a full and active life.	DATA TRANSFER FROM LYN NORTON Added 23.03.14

31-01-22		Jasper	N/A	N/A	Unregistered - UK	21-May-17	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	MRI scan, signal fluid test, blood tests etc.	YES	N/A	Suspected triggers: No triggers as far as we know. Medication: Currently on Epiphen and Keppra, Diazepam given after seizure. Details: Jasper has been neutered. Seizures normally last 2 minutes max. First seizure was March 2020, then no more until March 2021, but quite a few since then. Last seizure was 7th December 2021. Epiphen dose was increased to 2x50mg per day at end of December 2021. No suspected triggers known to us. Medication: CBD oil was recommended by info page about dogs with epilepsy, but fits became more frequent, so vet prescribed phenobarbital 30 mg to start, now on 50mg daily can go 8 weeks without a fit, but unsure if meds make a difference!! Fits last about 3 mins, can happen anytime of day or night in the house mostly, but has happened a couple of times while out walking. Never had cluster fits. Usually always sees during fit, but no poo. Always staring when he comes out of fit. Medication: He was medicated with low dose Phenobarbitone from 2.5 yrs old until his death. Details: Jazz was a gentle dog who couldn't cope with stressful situations and was noise sensitive. Especially high pitched noises like drills or even insects. He would run out of a room if he heard whistles, lawnmowers etc. There was no aggression, ear food, vaccines, worming etc ever contributed to his fits. He was neutered. His fits lessened as he got older. At the onset they were around one a fortnight. By the end of his life probably only one or two a year.	OWNER

21-08-19		Jess	N/A	N/A	Unregistered - UK	27-Jun-03	UK	Bitch	Rip (ISDS 250011)	Glen (ISDS 198708)	Fran (ISDS 219858)	Ross (Not registered)	Ben (Not registered)	Jill (ISDS 225588)	2 years	YES	Blood tests and other family members fitting	NO	Died aged 11 in status epilepticus	Suspected triggers: No known triggers. Epileptic cousin. Medication: Initially Epiphen then Libromide added and finally Keppra. Details: Spayed before onset. Cluster fits showing signs of brain damage. Jess had refractory epilepsy. Despite increase in doses of Epiphen and addition of Libromide followed by Keppra she continued to have cluster fits. admitted to vets on several occasions to try and stop the clusters. The only time she was fit free was on large doses of Epiphen which eventually caused her liver to have problems resulting in her liver becoming started to fail over eventually being unable to walk. At this stage she was referred to a neurologist and put through MRI scan, signal tap, blood tests etc. The result was that she was being poisoned by the Epiphen which her liver wasn't metabolising. Her dose of Epiphen was reduced and she was put on a liver supplement. With the reduction of Epiphen she went back to cluster fitting every three months till she died 2 years later in status epilepticus.	OWNER
31-10-20		Jess	N/A	N/A	Unregistered - UK	10-Mar-14	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	7 to 8 months	YES	Monitoring fits and keeping record of everything that happened	YES	N/A	Suspected triggers: None known. Medication: Pexion 600mg a day. Details: Rarely happens but occasional cluster fits, longest fit lasted 13 minutes usually last about 4 minutes. Can be month/weeks between fits since being on medication.	OWNER
31-03-21		Jess	N/A	N/A	Unregistered - UK	20-Jun-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	About 18 months	YES	After videos we had taken and being tested at Fitzpatrick. They started her on medication, which caused her to fit more	YES	N/A	Suspected triggers: Extreme exercise, stress, heat in the summer. Medication: Phenobarbital and Pexion which she is being weaned off. Getting ready to start Potassium Bromide once Pexion has finished. Details: Jess has been spayed. She is a very anxious dog who is upset by any noise. Her fits are the pett mal at times but also grand mal fits where her nose and bottom jaw, her eyes roll up, then she starts to shake. They can last from between 30secs and 6mins. She has episodes where she lays in her Dad's arms and flops her head on the sofa and can sleep for up to 30 mins. You can say pugsy, squirrel, dinner, name of a visitors and she doesn't move. All the time there, her limbs don't move and when she gets off she has a small mark on his trousers. The last two fits she has been incontinent and wet the bed. Occasionally she can be aggressive, but normally a very placid girl. She has changed, doesn't like her harness on collar, seems worried to go to the yard. Suspected triggers: Possible glancing at deer bite - he had a puncture wound in his nose and swollen face for 4 weeks, frontline 4 days before. Medication: Epiphen, Potassium Bromide, Keppra and Diazepam to try to stop clusters. CBD oil plus herbal products. Everything has worked well initially but then has become less effective. He has just been prescribed Pexion to use for a few days after seizures to try to stop the cluster. Details: Jazz is entire. He fathered a litter before his seizures started. His son started having seizures at 15 months and was ptt at under 2 years due to uncontrollable seizures. Jazz sister started fitting a year after him and she lost her battle in May this year. Jess always has GMS and always clusters. They have become progressively longer - will often be unconscious for up to 6 mins. We are very fortunate that Jess has a FMS implant. Lingford vet hospital is doing a trial with Bristol Children's Hospital and Jess is the 4th dog to have the implant in June 2022. I am convinced that he would not still be alive if he hadn't had this. He is very active and 3 years ago started Rally Obedience and is now working at the top 2 level.	OWNER

He has just been prescribed Pexion to use for a few days after seizures to try to stop the cluster. Details: Jazz is entire. He fathered a litter before his seizures started. His son started having seizures at 15 months and was ptt at under 2 years due to uncontrollable seizures. Jazz sister started fitting a year after him and she lost her battle in May this year. Jess always has GMS and always clusters. They have become progressively longer - will often be unconscious for up to 6 mins. We are very fortunate that Jess has a FMS implant. Lingford vet hospital is doing a trial with Bristol Children's Hospital and Jess is the 4th dog to have the implant in June 2022. I am convinced that he would not still be alive if he hadn't had this. He is very active and 3 years ago started Rally Obedience and is now working at the top 2 level.	OWNER

22-12-19		Jilly	N/A	N/A	Unregistered - UK	05-Jan-15	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 6 months	NO	N/A	YES	N/A	Suspected triggers: Totally unknown, just happened one night. Taken to vet after first fit. Then continued monthly, always about 2am. Medication: Vet recommended not going on meds as they didn't last long and were so spread out just monitoring her and if anything changes consulting vet. Have rectal Diazepam in case she has another. Details: She had one large fit about 6 months ago followed by some smaller ones. Was left with a twitch but vet put her on diazepam for a week and twitch cleared. All her fits are over in a couple of minutes and doesn't seem to be a pattern to them apart from monthly and always about 2am. She has had fits monthly up until 14th of September, but nothing since (now 02/17/19). She is spayed.	OWNER

Medication: Soliphen and Libramide. Fits have got more frequent over time. He is on liver supplements which make him process the drugs very quickly so the fits are unpredictable. Details: Fits last 20-40 seconds. Neutered just before 3 years old. I think fits caused by flea collar with him playing with other dogs and mouthing flea collar.	OWNER
29-09-19	30-06-22	Kingfarm Lady in Red - Indi	K127121	N/A	WSD - UK KC Activity Register	22-Feb-08	UK	Bitch	Borderline King Of Swing	SH CH Brooksbid Country Classic	Borderline Pink Fizz	Merrymarsh Dress To Kill Of Kingfarm	Tennis Black Magic At Kingfarm	Faith in Merrymarsh	9 years	YES	Blood Tests	NO	13 years 9 months Cluster fitting	No suspected triggers. Medication: 200mg Pevion twice daily. No change noted as put on 2nd time she fitted when she fitted 3 times in 3 days which coincided with having 4 wormer tablets. Put on Purina Neurocare dog food which made a big difference in her recovery after a fit. When taken off this started on Coconut Oil since when the time between fits has gone from roughly every 2 months to over 6 months. UPDATE 30/09/2022 - Age and cause of death.	OWNER
21-08-19		Kingfarm Maid of Honour	K139324	N/A	BC - UK KC Pedigree	08-Nov-11	UK	Bitch	Tamerye Celtic Lady	Bellaire Highlander CDeu Udoe	Tamerye The Ferrari	Kingfarm Dress To Impress	Borderline King Of Swing	Merrymarsh Dress To Kill of Kingfarm	5 years 5 months	YES	Vet said it was because she had now had 4 episodes	YES	N/A	Suspected triggers: In vets during first one - stress? 2nd one it was a very hot day and had eaten cheese! Medication: Epiphen 11 x twice a day, Eptaur 500, Milk Thistle & CBD Oil. She has remained fit free since. Details: Spayed in 2012. Her last fit was the worse - much more intense and longer (lasted about 3 minutes) and she took longer to come out of it. In April 2017 Mervy had a routine dental examination. In waiting room afterwards I noticed her mouth was twitching and started to foam. The vet took her in side room where she was fitting on the floor. They kept her in for observation for a few hours. Vet thought she was stressed this was probably the reason. No medication given to me as they said they only medicate when they have had 3. All ok and fit free until June 2018. Around 12pm Mervy was resting in kitchen and started to fit. Her vet appointment until 4pm that day. No tablets given but was told to administer rectal diazepam if she had another. 2 hours after being home she had 2 more - more severe than before. rectal diazepam given. Called emergency vet as I couldn't cope with seeing her like this. They agreed to have her in overnight to observe. Got a call 3 hours later saying she was so stressed and would be better at home. Medication: Epiphen was prescribed 3 tablets twice a day. I also give her Eptaur 500, Milk Thistle (to help Liver on Epiphen) & CBD Oil. She has remained seizure free since the day of her first fit at home it was a very hot day she had also just eaten some cheese (which is now off the menu).	OWNER

19-07-19		Kobi	N/A	N/A	Unregistered - UK	15-Jun-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 8 months	YES	Confirmed by vet	YES	N/A	Suspected triggers: Stress and also air pressure (thunder weather), bright lights. As Kobi is deaf and also almost blind he bumps into objects which stresses him. He can't go to vets surgery as stress causes seizures. Medication: Vets have tried almost all meds over the last four years. He still has seizures but they are 1-2 a month now. At the moment his meds are: Epilphen, Libromide, Levacetam and Sodium Valproate. Diazepam for cluster seizures. He has recently been diagnosed with diabetes too so is now on insulin too. We have struggled for four years to get him to this point and tried so many different meds. Details: Have also had advice from a neurologist who diagnosed textbook Epilepsy. Kobi has blood tests regularly to tweak his meds. He is a blue Merle, totally deaf, almost blind and now diabetic - aged 6 yrs old. While trying to get the right balance of his meds he was having clusters every other day. As his meds are now he will have 1-2 seizures which leave him completely exhausted and wobbly for days. His seizures are 1-2 a month at present. Neutered. Rescue dog from Border Collie Trust GB.	OWNER
29-02-20		Kooki	N/A	N/A	Unregistered - UK	01-Feb-16	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 6 months	YES	Filmed event. Explained to vet. Examinations.	YES	N/A	No apparent trigger. Medication: None. Thankfully it only happened twice and not since. Random seizures. Only had two in space of that month. Monitored and not happened since. Lasted around 10 mins each.	OWNER
21-08-19		Koopa	N/A	N/A	Unregistered - UK	22-Feb-14	UK	Dog	Gwynion Paddy	Unknown	Unknown	Gwynion Gwen	Unknown	Unknown	2 years	YES	MRI	NO	5 years. He had two failed infusions, couldn't stop the seizures.	Suspected triggers: None. Medication: He had a VNS implant, was on Epilphen, Pregabalin, Kepra and Zonisamide. KBR made him crazy and then unresponsive, we even had a VNS implant made him to try and help. He had a seizure and flea treatment, light sensitivity. Extreme change of routine. Medication: Phenobarbital. This has helped control the seizures and we went 9 months seizure free at a stage. She seemed to develop resistance to it and due to her liver enzyme levels we added Kepra. Valium is used as a rescue medication. Lacey is spayed. Behaviorally she is very active, not just border collie active (we have two) she has endless amounts of energy and it seems as though she rarely switches off. She chases shadows and light reflections endlessly and licks them mainly on floors and walls. She also seems very sensitive and reacts to seemingly normal activities she has a barking fit/arrum if you shower, take off your shirt, use incense bottles etc. It is as though she doesn't like you doing it and gets worked up before you begin to do it for example if she sees you take clothes out to shower she starts barking. 2017 May 1 seizure, July 1 seizure, August September, November and October (partial seizures one each month), December 1 seizure. 2018 January 2 seizures increased phenobarbital med, April 1 seizure, 2019 February 1 seizure, March 1 seizure, June 1 seizure, July 1 seizure added Kepra. Partial seizure it seems as though a seizure is starting and she comes and asks for help but then there is no seizure only excessive drool or teeth chattering. Lacey's seizures are usually just over a minute and she urinates during her seizures.	OWNER

See Fitting details for more information.	Suspected triggers: The vet suggested that he may have had worms but it was not the case. Medication: No medication for fitting but AB's and Anti-Inflams as below. Details: At 45 days he became quiet and stopped interacting with his siblings. At 44 days he started seeking out dark places. Taken to the vet and was given antibiotics and anti-inflammatory injection. At 45 days he was again searching for dark places. He was very distressed when travelling back to the vets and fitted badly within minutes of arriving. At 46 days old he began fitting and was taken back to the emergency vet. He remained a cloudwork by and was very rigid in his mobility. He seemed to have stopped growing. The vet blood tested for a liver-shunt which came back negative. As the vet examined him, Ozle became very distressed when his head was held and was obviously in a great deal of pain. The vet diagnosed inflammation of the meningeal (tissue surrounding the brain). The vet and I agreed that euthanasia was the only option. Two other pups from the litter also fitted at later intervals and both have died. The rest of the litter were registered with my 'Croffmist' office. Megan was spayed after. The two other dogs from the litter, that fitted, were put to sleep at young ages due to the fitting. Ozle was unregistered but the rest of the litter were KC registered.	OWNER/BREEDER

NO	Mandy 11. Death was related. Mandy went into a state of conscious shaking and her body shut down and she was unable to move over a period of days	Age 11. Death was related. Mandy went into a state of conscious shaking and her body shut down and she was unable to move over a period of days	OWNER	
30-06-22		Mara	N/A	N/A	Unregistered - UK	11-Sep-11	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	10 years	YES	By vets Idiopathic Epilepsy	YES	N/A	Suspected triggers: All vaccines, flea and tick treatments, loud noises and stress appear to be, quality class, being left alone. Medication: Started on Epilopin, added Libromba, added Kepra as each drug became less effective. Also had rectal diazepam to bring her out of seizures. Extra Kepra used as preventative before a stressful event and after fitting to prevent recurrence. Spayed age one. Mandy had fits, often two in a short space of time, around once a month once a month once medication settled. We added more meds as they became more frequent each time. To begin with she was very unstable as we wanted to introduce meds gradually. Several visits to emergency vet. Eight fits after vaccination when she was four. Always fitted five days after flea and tick treatment. Diagnosed as tonic clonic epilepsy. In her last few months she did not fit until last major episode. A beautiful girl who took all in her stride and remained gentle and loving and full of life through it all. Major meds over nine years did not impact her and kidneys which was one of our big concerns.	Medication: Epilopin and Epilease. Still settling the doses to best levels, meds have reduced grand mal section of seizure but overall length of time for full event is same. Azaxia varies from not much to wobbly, to very wobbly. Assumed from meds rather than brain injury. Details: Grand mal fits usually 2 mins grand mal then 3 mins recovery, usually bring self out of activity. Medication reduced Grandmal section but whole sequence usually lasts 4 - 5 minutes. Has had 3 sets of cluster seizures since start of Dec 2021, meds increased post time. Neutered.	OWNER
30-04-21		Marky	N/A	N/A	Unregistered - UK	27-Jan-15	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 4 months	YES	Blood tests after change of vets.	YES	N/A	Suspected triggers: Weather and pressure. Medication: Epilopin 45mg x 2 daily Details: Neutered. Fits last up to 2 mins and about 10 mins recovery. Marky was brought from working farm at 4 weeks old, was not the first to leave the farm and was the smallest.	OWNER	
29-03-20		Marley	N/A	N/A	Unregistered - UK	2011 approx	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	Not known (rescue dog, owned since 5 years old, had fits before being adopted)	YES	Blood tests excluded anything else, vet said most likely Idiopathic Epilepsy	YES	N/A	Triggers unknown, although previous owner mistreated him and was convicted of animal cruelty after kicking Marley repeatedly on numerous occasions. He had a broken tail. Could have had injuries to head maybe? Medication: He has had far less fits since starting a raw diet with coconut oil and CBD oil. Once a seizure starts, we give CBD drops immediately and the fits subside quickly and he recovers far better. Before CBD he would have cluster fits and twice had status epilepticus where the seizure continued for nearly an hour. With CBD they last only a minute or two and are very mild. Neutered at approx. 4 years old. Very dominant male, pushy with other male dogs. We think Marley is a Welsh colle. He is stable and white, herds upright and is loose eyed. Contacted the Welsh Sheepdog society who said epilepsy is very rare and practically unknown in registered Welsh Sheepdogs, although common in border collies. They suggested Marley is therefore most likely a Welsh Sheepdog/BC cross, or if he's a pure Welsh, his epilepsy is probably injury related rather than inherited.	Medication: Epilopin 45mg x 2 daily. Very dominant male, pushy with other male dogs. We think Marley is a Welsh colle. He is stable and white, herds upright and is loose eyed. Contacted the Welsh Sheepdog society who said epilepsy is very rare and practically unknown in registered Welsh Sheepdogs, although common in border collies. Cannot be verified as not registered with UK KC. Medication: Epilphen 120mg bid. Keppra for clusters. No fits since I've increased epilphen to top of therapeutic dose.	DATA TRANSFER FROM LYN NORTON Added 02.07.14
19-07-19	31-07-20	Mojo Back at Robate	Not disclosed	341808	BC - Dual Registered UK KC & ISDS	07-Dec-15	UK	Dog	Gipping Valley Troy	Bob (ISDS 290097)	Bess (ISDS 300896)	Marchup Midge (ISDS 314458)	Ray (ISDS 306164)	Calderdale Sue (ISDS 305475)	2 years	YES	Diagnosed at vets and later RVC	NO	4 years 5 months - status epilepticus	Medication: 400mg Peixon/day. Nothing unusual happened before fitting began. He is on fresh food, no grains, even before the fitting started. November 2013 it got worse, despite Peixon. Since beginning of this year we increased medication so now frequency of fitting can be different from every 2 weeks till once in 6 or 7 weeks. Error. This dog was born in Germany", living in Belgium (***) owner states that sire of this dog has produced 8 litters/43 puppies & Dam of this dog has produced 4 litters/72 puppies. Cannot be verified as not registered with UK KC. Medication: Epilphen 120mg bid. Keppra for clusters. No fits since I've increased epilphen to top of therapeutic dose. UPDATE ADDED 11.07.2020: Since November 2019 Mojo was on Phenobarb 150mg twice daily, Potassium Bromide 500mg once daily & 300mg Kepra twice daily. He had Diazepam after every bad fit by injection. Was having worsening fits weekly. He was euthanased on 11th Dec 2020 after fits. Suspected trigger: Stress may be a trigger. Medication: Peixon - this did not work in my opinion made it worse. Epilphen - immediately calmer and fitting stopped. Molly had what we thought were panic attacks from when we brought her home. I now believe that these were partial seizures (Psychomotor), which evolved into full seizures. These stopped when Epilphen was introduced. She is also very anxious and hyper sensitive to certain sounds (cutlery, tin foil, running water). Epilphen has also helped with this.	OWNER Updated 11.07.20

31-01-22		Puppichino	N/A	N/A	Non UK Unregistered	22-Oct-15	INDIAN born, export to UK	Dog	Johny	Unknown	Unknown	Unknown street dog	Unknown	Unknown	1 year	YES	Vet examination and blood tests	YES	N/A	Suspected Triggers: Originally triggered by rabies vaccine batch (suspected). His brother and my other (non-border collie dog) were also vaccinated but had another batch. Medication: Phenon 400 mg - 1.5 tablets twice daily, Levitracetam 750 mg - 1 tablet twice daily, Epiphen 60 mg - 1 tablet twice daily. Details: Puppichino was born in New Delhi, India as a stray dog and was neutered at 9 month old. We relocated him to the UK in 2017 July and he had shown no signs of epilepsy. Puppichino is now 6 years old and has been epileptic since he was a year old. He had only a few attacks each year until December 2020, we didn't put him on medication. But in December 2020 he started having cluster seizures and was initially put on Pheno, he is now on 3 drugs (Pheno, Leve and Epiphen). He had a very severe attack of almost 90 minutes in October 2021 and had to be rushed to an emergency vet. It was triggered when the vet tried reducing his dosage of Levitracetam. Fortunately since then he was cluster free till last night 3 Jan 2022, then he had a single attack yesterday. This is an improvement from the 6 or so he would have each month.	OWNER

(Bloods, Spinal Tap, Imaging etc)	YES	N/A	It is Idiopathic Epilepsy, I have not noticed any triggers. Medication: Epiphen, changed August/September 2018 to Libromide 325mg & Levetiracetam 500mg. Marnie is spayed & seizures usually occur early morning & last a few minutes. Medication changed August / Sept 2018 after she was admitted to A&I with liver failure, one of the possible causes could have been a reaction to Epiphen but this was never confirmed. There were 6 puppies in Marnie's litter, 3 of which (including Marnie) have been secured, one died at approx 12-18 months, the other is still alive.	OWNER
19-07-19		Rosmak Fortune Seeker - Bilbo Baggins	AP02543903	N/A	BC - UK KC Pedigree	16-May-12	UK	Dog	Rosmarinus Gin Cooler	AG CH ForbyFor Turbo Diesel	Rosmarinus Pimms	Rosmarinus Eclipse	Rosmarinus The Werrymen	Rosmarinus Logberry	3 years	YES	He had several tests carried out, bloods, spinal fluid and other tests. These were to check for any other condition, which he didn't have. So he was diagnosed as having Idiopathic epilepsy.	YES	N/A	Suspected triggers: Don't know trigger point. Medication: 325mg Libromide and 75mg Epiphen twice daily. Details: Testicles didn't drop so had operation to find and remove. Has had 21 seizures since Mar 17.	OWNER
29-11-19		Rosmak Fortune Teller	Not known	Not known	BC	16-May-12	UK	Dog	Rosmarinus Gin Cooler	AG CH ForbyFor Turbo Diesel	Rosmarinus Pimms	Rosmarinus Eclipse	Rosmarinus The Werrymen	Rosmarinus Logberry	12 months	NO	N/A	NO	See Fitting Details	He had had puppy vaccinations but not old enough to have needed booster yet. No injuries or changes to diet, not recently had flea or worm treatments. Entire. He was his usual happy, lively self when left the house, drove to a show and was acting 'off' when we arrived. He had good hanging from his mouth and seemed a little vacant. Took him for a walk, he seemed spooked which wasn't his personality, went to put him on lead and he fell to the floor fitting. Lasted approx 8-10 minutes. No help available at show, phoned vet who recommended taking him in, said as it was his first fit it would be highly unlikely to have another straight away. Travelled in van with myself, he didn't return to his usual self and started fitting again within minutes. Had a vet on speakerphone, the fits were huge and he was struggling to breathe, followed directions and tried to resuscitate. He very sadly died. Not confirmed as epilepsy as didn't wait a postmortem but the vet said it was highly likely due to his physical appearance.	DATA TRANSFER FROM LYN NORTON Added 18.07.14

Medication: Phenobarbital, Keppra, Potassium Bromide, Nasal midazolam rescue, Diazepam preventative and rescue. Intact male, monthly fits clusters but stops after midazolam.	OWNER
30-09-20		Rusha Bright Little One - Noll	Not disclosed	N/A	WSD - UK KC Activity Register	10-Apr-15	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	YES	By the vet after having three in one morning	YES	N/A	No known triggers: Medication: Soliphen 90mg a day. Neutered. 1 year apart the fits. Suspected triggers: Low blood sugar (not eating often enough). Medication: Diazepam (in case of fits that last longer than 5 minutes). Details: Neutered. Frequency of fits: 1 every year (same time between March and June). Length of fits: 1 min for aura, 1 min during grand mal phase, 10 min afterwards (temporary blindness and unable to walk properly). Vaccinated with yearly boosters. Vet prescribed flea and deworm medication, as standard. Food is pedigree wet jelly (dog does not tolerate dry food well - causes bloating and chronic flatulence). Several pedigree chews and beef min treats throughout the day and 1 pedigree dentalstick per evening. Since identifying the potential trigger no fits have occurred, as the dog is now fed at exact timings each day.	OWNER
30-09-21		Rusty	N/A	N/A	Unregistered - UK	01-Apr-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years	NO	N/A	YES	N/A	Medication: None. Details: Fits were always pretty short - seemed ages at time but I don't think they were longer than 30-60 secs. I also regularly took him to a MCTimoney nurse after the fits started and I still believe this helped more than the medication. Wizard was registered.	OWNER
19-07-19		Ryanx Mink V407Z (VSDWA)	N/A	N/A	Non UK Registered	19-Mar-07	AUSTRALIA	Dog	Princes Doolily V2955	Brailston Dan V2203	Princes Zoe N0102	Atlandale Gypsy Q3536	Dan (S05 220972)	Gowdsdale Cindy Sarah Q2789	10 months	YES	All usual testing was undertaken to rule out other causes (see MRI)	NO	Euthanased (17 months) after had weekend and seizure on the Monday morning - very restless, whiny, regular valium to settle. Seizures getting worse, developed into cluster seizures preceded by running without purpose including into fences/balls	Suspected triggers: No triggers identified. Medication: Phenobarb and KBr. Increasing dosages but seizures got worse. Details: Went on elimination diet, then natural diet only (Holistic vet advice) Thyroid panel showed normal range.	OWNER
29-11-19		Sam	N/A	N/A	Unregistered - UK	30-Mar-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	YES	Multiple fits leading to seeing a neurologist. He has had numerous blood tests and an MRI to eliminate tumours etc	YES	N/A	Suspected trigger: Epiphen is pollen as he is worse throughout the summer period. He is on a hypoallergenic diet. Fully vaccinated. Up to date on flea and worming. Medication: He started on Pexion which made clusters worse. He moved to Epiphen which was a lot better but still having them often. He has just started on Bromide and after 4 months, we are going to start reducing the Epiphen. He is neutered. He was fitting every 2 weeks but currently 33 days seizure free from starting Bromide. His fits go on for approx 6 mins and they are all grand mal. I have not noticed him have a focal seizure nor does he just tingle. If he has a fit, it's always a big one. He starts his fit by turning his head all the way around and basically looks behind him. His eyes go wide and he starts to fit. He always pees and foams at the mouth. Sometimes he bites his tongue ending up in bloody sput being thrashed around.	OWNER
29-11-19		Sam	Not known	Not known	BC	01-May-07	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years	YES	MRI and Lumbar Puncture Bath Vet confirmed as Epilepsy	NO	Died May 2013 aged 6 years. He fitted off and on for just over a week in clusters. We arrived home one evening to find that he had died. The vet said it was a grand mal seizure that only instant medication could have saved him and he would not have known what was going on	Medication: Epiphen. Nothing unusual happened that I can think of I did notice it initially happened after we had been out and we got caught in the rain. Like he had caught a chill, it happened often after a soaking. The vet said it wasn't connected, I'm not so sure. After diagnosis at Barn Vet hospital where he had an MRI and I think a lumbar puncture was initially given just Epiphen, strength and dose varied, then also given Libromide when fits continued, can't remember strength. The fits did change even though he was on medication. The fits don't last as long and I could tell when he was about to have one, or if he had had one when he was home alone. Usually when he was sleeping then he would wake, his head would shake he would fall over and his back legs would move as if he were running his front legs would be usually starting when he came around. He gained weight so we were advised to give him a weight control food, there was no change in fits. He was neutered before the fits began.	DATA TRANSFER FROM LYNN HORTON Added: 21.06.14
30-06-21		Scalpie Gem - Gem	N/A	00/354423	BC - ISDS	15-Sep-17	NETHERLANDS	Bitch	Ski(S05 297208)	Bill (S05 349411)	Meg (S05 253243)	Fae (S05 333930)	Hank From Shepherds Own (S05 312500) (Dau)	Kite (S05 235501)	2 years	YES	By a vet	NO	3 years 8 months. She passed away on the 25th of May 2021	Suspected triggers: No specific triggers lead to the attacks. Medication: She was given Pexion at first, but had Phenoral at least the last 3 months. The periods between the attacks became longer. From once a week to the maximum of a little over 3 weeks. Details: The length of the fits were about 1 to 2 minutes, after that she needed a little time to recover, maybe 5 - 10 minutes. That she was her normal, happy self again. Gem was not neutered.	OWNER
29-11-19		Seve	Not known	Not known	WSD - Unregistered	approx 02-Nov-07	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	Vet confirmed as Epilepsy	Not known	Not known	Suspected triggers: On keeping a diary fits always on around spot on flea treatment - stopped using and fits a lot less severe and less frequent, plus have changed his diet to part raw and don't give any vet meds unless very necessary (use alternative and herbal) and ALWAYS check they are suitable for dogs with seizures. Medication: None. Fits always in a morning after a deep sleep but have been able to halt them when I see and hear the signs (vomiting noise and lip licking) and talk to him and stroke him gently. Now red net part raw/ part raw kibbles. Did read an article about giving frozen vanilla ice cream immediately after a fit. Have only tried this once but was AMAZING at bringing him round very quickly. Fits have gone from every 3 to 4 months to every 5 to 6 months (last time was 5 months 12 days) and are less severe (last time less than 1 min and recovery time afterwards a lot quicker (due to ice cream)). Dog came from a rescue and was neutered before owner got him.	DATA TRANSFER FROM LYNN HORTON Added: 11.08.13 Updated: 20.10.13

28-02-21		Skye	N/A	N/A	Unregistered - UK	05-Jun-17	UK	Bitch	Scottish Farm dog	Unknown	Unknown	Scottish Farm dog	Unknown	Unknown	3 years 3 months	YES	Several identical seizures. Vet feels as they started around 3 years old, otherwise extremely healthy fit bitch, epilepsy likely cause	YES	N/A	Suspected triggers: No known triggers at present, still documenting seizures to find any pattern or link. Medication: Treated with Phenobarbital twice daily (luncheon dures), initially 50mg, halved to 30mg by me as behaviour badly subdued by dose. All ok at present, hopeful of stopping or reducing meds after spaying and hormonal fluctuations taken out of equation. Using EP Tapping, calming and enjoyable, also Reiki. Very doped, poor soul could barely walk. Have discussed with vet who agrees the treatment shouldn't be worse than the condition! Details: First fit at 4 am, jaw chattering woke me, foaming, twitching and urinary incontinence, (having worked with kids/seizures was aware of how scary it looks, and to time it). Around 3.5 mins, four long bouts and jumped up like nothing happened. Vet did urine test in morning, slightly elevated white count so treated with antibiotic in case of infection. All other fits (3 more) have been identical, only shorter in every case. Differing times, no real common denominator. One thing I am monitoring is we use a calor heater in sunroom tapping up heat in autumn/winter. Most recent seizure Skye had spent half a day with me there doing a Zoom course online. It is well ventilated and has a CO alarm, but wonder if she is affected by this? Just grasping at anything I can change to remove meds.	OWNER

YES	N/A	No triggers identified. Medication: Epilphen started 3 weeks ago. No seizures since. Fits are normally 2-4 weeks apart. Mostly grand mal, 3 weeks lasting 5-6 mins.	OWNER
29-10-19		Smudge	N/A	N/A	Unregistered - UK	16-Jun-99	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	9 years	NO	N/A	NO	PTS following a significant seizure at 17.5 years. Vet concluded this last seizure had caused brain damage and a high probability of a recurrence within a few days.	Suspected triggers: Over activity was definitely suspected as fits generally occurred outside of the home after ball chasing or similar. There was one event after a clash of heads whilst running for a ball with our other dog. Fits were infrequent, possibly once or twice a year but reduced as his age increased and his activity levels decreased. Medication: No medication recommended by vet due to infrequency. Although he was 9 when we first realised he was fitting, with hindsight we realised there may have been earlier occasions where we had not recognised the symptoms from around 2 years of age. Registration status not known. He was full Border Collie but adopted from Border Collie Trust at approx. 10 weeks old. DOB added in approximate.	OWNER
29-11-19		Smudge	Not known	Not known	Collie	19-Oct-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 1 month	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Epilphen increased to 2 twice daily 60mg. After 4 months given Ubricid, which only made him lethargic and not acting like his usual self. Now on Epilphen and Levetiracetam which we used to give him now and then before a fit, but not on one every 4 hours. Fits started off at around 8 or 9 clusters every 21 days, this increased to 11, in last one being 16 clusters from 2pm to 7 am the next day. Some last 30 to 40 seconds, some 2 or 3. There is usually 15 minutes in between but now a few minutes. Clenches jaw, then jaw wide, outstretched legs, urinates sometimes and a shiver from moon and then he is small. Then he will pace, used to pace for 20 minutes and could not see us. Now he paces and tends not to bang into objects, seems to manoeuvre around them a little better. Before a fit, he howls at the moon, tries to escape, but now he tends to approach me to cuddle and follow me everywhere go. You can see in his eyes that he is due to fit, his personality changes. The fits had increased to double the amount, but more often between them. Neutered before fits started, he had been neutered only 4 weeks before. He had trauma to his leg when only 5 months. And we had a collie out when he seized the following year.	DATA TRANSFER FROM LYNN NORTON Added 16.07.15

19-07-19		Talwood Tri Star - Jay	K109344	N/A	WSD - UK KC Activity Register	10-Dec-02	UK	Dog	Zigant Jezza at Talwood	Greatglen Hawatha	Zigant Zest	Jarno's Exclusive Edition	OB CH Daleman Red Razal	Trajan Jumpin' Jiff	4 years 7 months	YES	Animal Health Trust did all elimination tests necessary MRI brain scan, cerebral fluid spinal top, ultrasound of all organs, proprioception tests and blood/urine etc. Confirmed as idiopathic epilepsy	NO	12 years old. Jay starting fitting around breakfast time, not his normal time. After 3 fits we rushed him to vets as we always did at that stage, he never really came out of one before going into another. After all day in vets being treated we had to let him go. He died in Status Epilepticus.	Suspected triggers: Triggers we worked out over time were household cleaners especially air freshener sprays, plug ins and scented candles. We had to clean when he was out of house and have windows open. Stress was also a big factor, he didn't look stressed but didn't like changes, like one of us parking to go away. Also had to pack cases and load car so he didn't see or he would cluster. Medication: Initially given Epilim 60mg x 2 daily. Continued to cluster fit so medication increased to 180mg 2x daily and Potassium Bromide (KBr) 97mg once daily added. The KBr soon caused severe disorientated mental status, very wobbly and occasional falling while standing or walking. AHT said KBr was causing toxicity, once it was withdrawn he was back to his normal alert self. Changed to 180mg of Epilim 2x daily, 300mg 3x daily of Gabapentin. When he fitted was given rectal diazepam and an ice pack applied to his neck/back area. Since meds changed, fits approx every 10-15 weeks and generally only has one fit instead of 4/5 fits clusters within the space of 1-4 hours that he was having every 4-6 weeks. Details: We bred Jay, he always fitted in the early hours of the morning. Clusters reduced when on meds that suited him. We had to stop doing agility as it's a coporation wasn't good enough to continue. Castrated after being diagnosed with idiopathic epilepsy, made no difference to the pattern of his fitting. His Dam was ignored and owners of his litter brother/sisters advised to neuter, which they all did. Our dog is the only one from the 2 litters of this parentage that has fitted out of the 11 puppies. They were all healthy to a grand age.	OWNER

29-09-19		Tess	N/A	00/357520	BC - ISDS	23-Jan-13	UK	Bitch	Deal Tweed (ISDS 278783)	Lad (ISDS 254796)	Cammen Gem (ISDS 271739)	Meg (ISDS 301667)	Mac (ISDS 276484)	Del (ISDS 286631)	3 years 11 months	YES	Vet	NO	Put to sleep at 3 yrs 11 months due to cluster fits and too much damage done to dog neurologically.	Suspected triggers: No idea other than routine booster vaccine given 3 weeks previously. Medication: Tess was in vet hospital for 2 days to try to stabilise. Just so devastating to see Tess like this. I had a Labrador 9 years ago who fitted every few months but cluster fits like this. The poor dog didn't know who she was, who we were, couldn't walk - horrendous experience. No specific trigger that we know of although we have changed diet to hypoallergenic once over her seizure. She's on fish supplements, 4x daily 6 hours hyperimmune med. Medication: Tess was on a high dose of Phenobarbitone (200mg) after her appointment on 14th March 2019 which made her drive very slow and coordination of her legs not as good as normal but gradual side effects were off. She dosage we reduced to maintenance level over a 4 week period on 1st week on 20mg every 12 hours. She still fitted on medication. Finally over every 4-6 weeks. However, she developed acute pancreatitis so we got advice on diet and seizure driving. In our vet referral from 2009 every 12 hours and we reduced her vet referral gradually over 2 months. Three days after her last Epilim (September 2015), she had her convulsion and 24 hour grand convulsion only ever had one fit at a time and was hospitalised overnight. She was started back on Epilim immediately but convulsions returned, this time on the same amount as normal previously and I don't think I had since September 2015. Tess is a sweet bitch who was released from the border club. Four of 1/2 litters were spared when we got her. There was no medical history or evidence of fits before we got her. She used to have convulsions in her previous home. As after we moved to our current home in 2017, she started having convulsions. Next fit in 2018. She started having fits in March 2019. She only seems to be epileptic at night when she is asleep and for a few weeks, she is unaware of them and when they are waking to begin. The fits are unusual epileptic because we would have felt the vet take her to her in the morning if she had to go. During the seizure, her eyes roll, she does breathing, her head is tilted back and her body stiff. She paddles with her feet before going off and stiff, breathing heavily and then passing before she comes back. She is very docile for about 20-30 mins and then goes back to sleep and back on normal diet and exercise and she doesn't seem to have any effect. I wonder if the hypoallergenic diet has made a difference as she always been food sensitive and used to be very finicky with food eating. Drinking up lots in the morning after waking. She loves the new diet and her stools are good. She is definitely more hungry on S.A. meals.	OWNER

She was 200 at 14 years old. We've kept a medical diary. If Tess didn't have spinal and hip dysplasia problems now I would suspect that she would still be enjoying a reasonably active life. As it is she doesn't want to play, go for short walks and as she nears her 14th birthday, the epilepsy has aged us rather than the dog! I would always advise working in partnership with the vet and insurance company and we have been blessed with all the support we have received. UPDATE ADDED 28/02/2020: We regret to report that Tess died on Thursday 23rd January 2020. She was quite peacefully as her spinal problems had spread considerably and she did not want her to get to a state of distress. Having been warned by the vet who diagnosed her epilepsy that she doubted she would reach the age of two we feel blessed to have had her in our lives for over 14 years. 28-02-22		Trickster of Mischief - Loki	K150380	N/A	Collie Cross - UK KC Activity Register	30-Dec-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	MRI Brain scan and CSF tap	NO	5 years. Medication induced severe pancreatitis.	Suspected Triggers: We had no clue as to his triggers. We eliminated certain foods, he still fitted so re-introduced them. We didn't think it was food related, although he was raw fed from diagnosis. He was chemically castrated 6 months before fits started, 3 months after chemical implant he had his surgically castrated. We wonder if that had an impact on the start of his seizures or not. Medication: Initially started on Levetiracetam 500mg TDS. Seizures increased so dose was increased to 500mg. Christmas Day 2017 he suffered 4 seizures within 12 hours, instructed by specialist to load dose him over 5 days and meds increased to 750mg TDS. By June 2018 we had to introduce Pheno, this was increased at least twice. 2019 he started on Potassium Bromide. It made him extremely unstable, we had to use one of the Help Them Up harnesses to help him get up as sometimes he couldn't manage. On a vet visit with one of our other dogs, my vet cried when she saw how uncoordinated he was, even though we had told his neurologist. She immediately got on to them and they reduced the drug. He did improve but still had little issues at times. Unfortunately I don't know the sire or dam, even though we met mum. However, I wracked my brains this morning and remembered that we got him from Barn Farm Border Collies in Stafford (or near there) and the chags name was Ed (Edward). One thing we did do with Loki (our epileptic) was enrol him and his bestie (my wife's boy Darcy) onto the RVC's IDEAS study. They went for the day taking part in different trials and having fur and stool samples taken. That was pre Potassium Bromide. Details: We wondered if weather pressure changes can set seizures off as well, maybe environmental things. We have overhead electricity cables where we live but who knows. Castrated, seizures started 5 months after this.	DATA TRANSFER & UPDATE BY OWNER

The fits are very mild and she is at this time being treated holistically. Her first fit was on a hot day when the dogs were out running and we thought that might have triggered it, however after her second one we took her to a vet to have a confirmed where several tests were done. She continues to fit regularly on average one to two times a month. Originally fed on Diamond High Energy at the onset but it was recommended that we place her in a less physical home so that her protein and fat content could be lowered. She is now in a pet home on an adult formula by Diamond. The fits are more frequent now but also more mild. Spayed.	DATA TRANSFER FROM LYNN NORTON Added 14.10.14
21-08-19		Willow	N/A	N/A	Unregistered - UK	05-Jul-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	14 weeks	YES	By a brain scan. They couldn't find any problems with her brain. So the conclusion was idiopathic Epilepsy.	YES	N/A	No triggers known. Tends to have seizures only when sleeping. Medication: Started at 45mg of epiphen twice a day. Now currently on 60mg twice a day. Diazepam rectal tubes are given during or just after a seizure to help calm her down. Levitracetam 500mg tablets are given to break up any clusters. 1 tablet after 2nd seizure and half a tablet every 8 hours until 48 hours after 2nd seizure. Since starting on 60mg of epiphen twice a day, Willow went 20 weeks without having a seizure. Before that she was having them every few weeks. I had Willow from a local rescue centre when she was 10 weeks old. I have no background information of her at all. Willow has always been clumsy. She's not your typical bright intelligent border collie. She tends to trip over her own feet, bump into things etc. At first I thought maybe it was just because she was a puppy getting used to her new surroundings but as she was getting older she was still the same. At 14 weeks she had a massive cluster where she had 8 before even got her to the vets. They had to put her under anaesthetic 4 times to bring her out of the cluster. I don't know if this affected her brain but sometimes she's very uncoordinated.	OWNER

Vet said it's probably 'Idiopathic Epilepsy'.	YES	N/A	Suspected triggers: No suspected triggers. No accidents or illness prior to the fits. When only has had puppy vaccinations and I do not use chemical treatments on her. Medication: Since the fits she has been on MCT oil and has not had a seizure since. Details: Wren has been raw fed since a puppy. She had a lap spay after her third season at the age of two. She is a fit healthy dog and has never had any accidents or illness prior to the two fits. Wren had her first fit on Saturday 5th December 2020 at 6:45am. I heard a knocking downstairs and I found her collapsed having a generalised seizure which lasted under one minute. She made paddling movements, stretched/frothed and urinated. She came round quickly, being wobbly for 2-3 minutes. After that she was back to normal like nothing had happened. Her second fit was on Monday 14th December at 2:30am. She had got up in the night wanting to go outside. This is not unusual for her as she often gets up at this time to go toilet. As I opened the patio door she collapsed to the left and started fitting. Exactly the same as the time before. Quick recovery and within a few minutes she ran back upstairs back to bed and went to sleep.	OWNER
