After having clusters of fits for days every few weeks, up to 8 a day, has been free for 3 months after starting Libromide (potassium bromide). Dog entire.	DATA TRANSFER FROM LYNN NORTON Added 07.12.12 Updated 19.03.13
31/11/2021		Balbe	N/A	N/A	Unregistered - UK	07-Apr-16	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	By vet after second fit	YES	N/A	Suspected triggers: Reaction to spot on flea treatment very negative - but not quite a fit. Can't identify a particular trigger as fits are now very regular, every few weeks. They seem cumulative rather than a reaction to any external influence, as far as I can see. The first fit came soon after puppy vaccinations, but may be a coincidence. Medication: Libromide 150mg's, Epilphen 240mg, Diazepam 10 mg, Hepate support. Meds made the seizures regular and reduced number considerably. Details: Neutered. Tricolour. Very, very active dog with more stamina than in most collies, and very intelligent. Food taste changes dramatically after a fit. Will not eat meat and after a seizure varies from binge eating to eating very little. After a fit he is not good in the house and seems depressed, but outside he exercises generally normally.	OWNER
31-05-22		Bailey	N/A	N/A	Unregistered - UK	23-Jan-10	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	5 years	YES	Confirmed at RVC with MRI	YES	N/A	Suspected triggers: No triggers provided. Medication: 1 x 400mg Pexion, 4 x 60mg Soliphen, 2 x 500mg Levacetastam. When we first introduced Phenobarbital (subsequently Epilphen, now Soliphen), he was very wobbly on his feet. Details: Bailey is neutered and has having seizures every seven weeks but we have up to his medication and currently he has been 11 weeks without one. Normally he has on average three grand mal seizures.	OWNER
11-10-22		Bailey	N/A	N/A	Unregistered - UK	15-May-17	UK	Dog	Unknown Border Collie	Unknown	Unknown	Unknown	Unknown	Unknown	5 years	YES	Confirmed after 2 seizures within 24 hours. Bloods normal	YES	N/A	Suspected triggers: No suspected triggers Medication: Phenobarbital, recently started. Details: Neutered at 7 month old.	OWNER
31-01-21		Bailey Lyness	N/A	N/A	Unregistered - UK	02-Oct-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Glasgow Vet School and Hospital	YES	N/A	Suspected triggers: Have not been able to confirm a reason so far. Medication: Epilphen 120mg twice daily, Libromide 1.5 tablets a.m. and 1 tablet p.m., Diazepam 100mg twice daily, Kppers 500mg 2 tablets 3 times a day after each cluster fit for 7 days, Dextolite 150mg tablets twice daily, 10mg CBD capsule at night. Details: Bailey is neutered and he has fits every 3 to 4 weeks generally although at the moment they are weekly. He has generally 2 cluster fits at a time that last 2 to 3 minutes but yesterday he had 7 fits over a 6 hour period. It is so stressful as it is hard to keep Bailey quiet after the fits as it takes him around an hour to come round and see properly as well as regain his balance. We have bought a child's playpen to keep him in so as he can't get out and hurt himself as the dog pens he was able to escape from. Typically Collie.	OWNER

Medication: Diazepam given to use if Barney has another seizure. If this does happen then further medication will be given. Details: Barney is an intact dog. He has had three seizures. His first was when he collided with our other collie and was knocked unconscious in October 2021. Second and third were in March and June this year 2022.	OWNER
31-10-22		Barney	N/A	N/A	Unregistered - UK	10-Aug-19	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 4 months	NO	Vet diagnosis initially then also following cluster seizure.	NO	None	Barney was 2 years nine months, had one seizure, vet said could be nothing and might not happen again but to document it. Then one evening he started cluster seizures which the emergency vet couldn't save him from. Suspected triggers: Unknown. Medication: N/A Details: He wasn't neutered. He was active on our smallholding and always busy, but not particularly anxious - very loving and well adjusted.	OWNER
29-09-19		Barr ram ewe	K159876	N/A	WSD - UK KC Activity Register	29-May-16	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 5 months	YES	He has had blood tests but no MRI, the vet has said it's Epilepsy	YES	N/A	Suspected triggers: Have found no triggers, it seems to be after a full moon but on one occasion he had 3 seizures within 24 hrs which I put down to the stress of my daughter getting a puppy. Medication: He is on 90mg Epilphen twice a day and Libromide. He was quite unbalanced when the Libromide was added but since the dose has been split to getting half twice a day instead of once once a day he seems better. Details: No further information provided.	OWNER

19-07-19		Bewitched Over Pendle - Zara	K136807	N/A	WSD - UK KC Activity Register	25-Dec-10	UK	Bitch	Unknown	Unknown	Unknown	Jaci (ISDS no. not known)	Unknown	Unknown	6 years	YES	While in emergency vets, while in epileptic status	NO	6 years 2 months. Went downhill very quickly after another emergency admission to vet on Thursday 9th March 2017, collected her Friday evening seemed her normal self but not long after we arrived home she had another fit, spoke to vet who advised 3 days of Keppra, went rapidly downhill over the weekend to the point Zara seemed like she was in a coma, made the decision on Monday morning 13th March 2017 to PTS	Suspected triggers: No triggers that I was aware of. Medication: Seizures at emergency vet for epileptic status on January 5th 2017, then given IV Keppra and IV Phenytoin. Came home 3 days later and was on Phenytoin 12 hourly, very quiet and disorientated at first but got better and more her normal self over the following weeks, told by vet to give Keppra after fits to prevent clusters. Details: Had massive fit lasting 7 minutes. I text timer on my phone when I realised what was happening, this was her first fit to my knowledge, got her to vets within half an hour, seen by vet sent home and was told it was possibly a one off. Booked in for confirm blood tests 2 days later, went into epileptic status same night with a trip to emergency vets, was stabilised and returned home on medication. Small fits occurred every couple of weeks, with 2 lots of clusters, went rapidly downhill after final 2 fits on 10th March 2017, one while still in vets and one at home but never seemed to fully come around from the last. Zara was a local farm bred Collie. I contacted breeder to ask if there was any history of Epilepsy within her breeding, wouldn't answer me and then blocked my tel number. Zara was PTS 12th March 2017 to avoid my girl any further suffering. Zara was spayed at 12 months.	OWNER

28-02-22	31-03-22	Blessed Borders Sooner or Later - Mia MET.Border Col.1594/17	N/A	N/A	Non UK Registered (Border Collie)	08-Oct-16	HUNGARY	Bitch	Astra Maverick (ISDS 249679)	Astra Hawk (ISDS 249679)	Astra Kita (ISDS 00/307117)	Blessed Borders Nothing Compares (Burd) (MET.Border Col.3223/13)	Brave Clyde (ISDS 00/299850)	Elter Of Maranos Home (Bel) (MET.Border Col.1133/06)	4 years 6 months	YES	She had multiple full-body seizures.	YES	N/A	Suspected triggers: No known triggers, it happened while playing, usually while sleeping. She had another set of seizures 4 months later, no correlation with deworming or other medication. Medication: She is doing well on 45 mg Phenytoin twice a day, initial dose was 30 mg, but she started having focal seizures, so we increased it. She seems to be fine on the meds. She is also on Proin 72 mg x 1/day and DES 1mg pill twice a week. Details: Seizure history - First seizure was 20th July 2021, 2-minute seizure in her sleep. The next day chemistry profile revealed a CBC not done, everything was normal. Second seizure was on 10pm on 5th August 2021, she had a 1 minute seizure while playing. Third seizure 3am on 6th August 2021, 2 minute seizure while sleeping. A thorough vet check was done on 6th August 2021, everything was fine. Started her on Phenytoin. The initial dose was 90 mg x 2/day that was decreased to 45 mg x 2/day two weeks later, and then decreased to 30 mg x 2/day at the beginning of September. Phenytoin blood level was checked on 5th December 2021, it was 15 g/ml. Increasing the dosage is under consideration since she is having 1-2 second seizures while playing fetch. She had two more 2 minute seizures in her sleep in January 2022 so meds were increased to 45 mg. Neutered. 29-02-20		Blodwen	N/A	N/A	Unregistered - UK	28-Feb-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Neurology assessment	YES	N/A	<p>Suspected triggers: No known triggers.</p> <p>Medication: Started with CBD aged 6 months which kept symptoms under control until she was one year old. They became significantly worse and unmanageable so she was started on phenobarbital and levetiracetam - starting doses were steadily increased to maximum for her weight and we also increased CBD oil and finally introduced Epilaur.</p> <p>Details: Blodwen is a Double Merle collie from a breeder but to me via an informal rescue. She has focal seizures - her MRI was clear so the seizures are not related to brain trauma or disease. Over a six month period her seizure related behaviour gradually diminished (from jerking awake every few minutes all through the night, circling, twitching and being aggressive) and she now sleeps for up to 11 hours through the night with no issues and is markedly more settled in the daytime. She was saved at 6 month old but the focal seizure symptoms had already started (eg twitching, staring with head tilted, circling). The neutering didn't appear to make it worse. I have come to understand Blodwen, her symptoms and treatment requirements through close observation, asking for help from a Double Merle Facebook group and researching this genetic problem. We have a regular border collie from a farm litter who has displayed no health problems, I had no knowledge of merle or double merle collies when we rescued Blodwen and this was not mentioned by the person we were and her from.</p>	OWNER

31-03-20		Boston	N/A	N/A	Unregistered - UK	23-Jun-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years 6 months	YES	After initial seizure followed a couple of months later by a focal seizure and clusters diagnosed with idiopathic epilepsy after MRI eliminated any brain issues	NO	Feb 4th 2020 - aged 5 years and 8 months PTS	<p>Suspected triggers: Stress, over tiredness and heat would appear to be triggers. Stress from being bullied by our other collies, or going to the vet. Medication: Initially given Fosin - no impact. Then moved to Phenobarbital, then added Potassium Bromide. Keppra was given as an emergency protocol. Diazepam did not appear to work.</p> <p>Details: Boston had his first seizure on 4th Dec 2017. From then till he died on Feb 4th 2020 - he had approximately 80+ seizures lasting on average 60 seconds with some as cluster seizures. When he first started seizing it was shorter and he recovered relatively quickly. He never lost bladder control when he seized. The critical turning point was in September 2018 when he went into focal seizure mode and had to go to ICU. This followed another ICU episode in December 2018 where we thought we would lose him. The neurologist worked with us to find the right medication level. There were times we pushed back on the suggested medication levels and discussed with the neurologist. I think it is important that owners who lose their dogs best and have to manage the dog everyday feel confident to add their experience to work in. On hindsight I saw three issues: (1) the length of time it takes a medication level to work through and to assess impact means it is several weeks from each medication change before you see if it has had any impact in controlling the seizures; (2) the vets are highly dependent on blood lab results to ascertain the medication levels and in our case, there were blood results that were inaccurate/incorrect and thus unreliable. We queried this and new bloods were taken but each time there was an episode, this delayed the possibility of accurate blood works and (3) neurologists are focussed on controlling the seizures but need to work hand in hand with liver experts so any increase in PB should be done only after a check on the state of the liver, it should not be automatic. It is our belief that we might have been able to reverse the liver failure had Boston's PB not been raised after summer 2019. Though the seizures were better controlled, his liver was damaged beyond repair. On the other hand if PB was tapered down in summer 2019 and only Bromide used (or possibly in tandem with Keppra), would he have succumbed to some grand mal seizure - we will never know. Ultimately, epilepsy is a life limiting - that we do realise.</p>	OWNER

It started with a seizure then around four months later he had a cluster, put on keppra for a week, then just a few months ago he was having one every two weeks that's when the vet upped his meds. We now also give him CBD oil, fingers crossed he has not had one in about 4 weeks. Details: Stopped giving him worming and flea and tick medication looking at alternatives as there is a lot of people saying it can bring on a seizure through the dog collar/walk. Suspected triggers: Nothing we can think of yet. Only had her first fit till 11 January. Medication: She was already on Amitriptyline for high blood pressure & a monthly Librium jab for arthritis. She has been prescribed Epilphen 30mg (one tablet twice daily) today. Details: Cally was neutered at 11 months of age. She has only had the one fit, which was today. It lasted about three minutes and was a grand mal seizure.	OWNER

28-02-21		Cloudy	N/A	N/A	Unregistered - UK	28-Aug-16	UK	Dog	Unknown	Unknown	Unknown	Misty	Unknown	Unknown	1 year 7 months	YES		YES	N/A	Suspected triggers: He definitely has epilepsy but the condition could have been triggered, or exacerbated, by the original liver problem. Medication: Cloudy responds very successfully to a regimen of KBR (Lidormide), Levetiracetam (Keppra) and Phenytoin (Epilexin) and has almost no fitting, with the occasional 'petit mal' seizures. He has very occasional full tonic-clonic seizures when his medication has been compromised e.g. missed dose or after activated charcoal treatment for ingestion of bones. Details: Has epilepsy and liver shunt. He started fitting regularly at 18 months in February 2018 and responded well to Phenytoin. Went into status in May, probably due to hepatic encephalopathy. Routine blood analysis showed a liver anomaly and it was found he had a hepatic shunt after scanning. Surgery was carried out in June with 100% success, but the fitting continued. He is still taking regular medication at 4+ years of age with occasional recurrence of fitting especially if medication is compromised, even though his liver is perfectly healthy and functioning. No indication of food relating to seizures but he is now on a hepatic diet due to his shunt.	DATA TRANSFER & UPDATE BY OWNER
22-12-19		Clover	N/A	N/A	Unregistered - UK	10-Jun-07	UK	Bitch	Unknown	Unknown	Unknown	Neil	Unknown	Unknown	10 years	YES	Only by tests ruling out other possible causes	YES	N/A	Fits are infrequent. Three or four over a year. ALWAYS within a narrow time slot: 7.30am to 8am. Not sure if this is to do with length of time since feeding or hormonal fluctuation. Seems to be an association with morning. Last fit the morning after treatment with Milpro: I have disconnected all routine medication. Clover is spayed and in excellent health generally. She has had about 10fits in total. Approx 2 to 3 mins duration. Her mother had no history of fits though she died relatively young of oral cancer.	OWNER

Lived until she was 14 years	Suspected triggers: None provided. Medication: Del was never given any medications as my vet thought they would cause more damage than the fits themselves. Details: Del used to fit every 6 months, 3 fits and then none for next approximately 6 months. This continued until I moved, then she stopped. Full baths, there were no abnormalities thrown up. I moved when she was approximately 11. Once I moved there were no more fits. Spayed.	OWNER
31-05-20		Delanor Pinball Wizard - Whiz	A033743806	N/A	BC - UK KC Pedigree	22-Jun-08	UK	Dog	AG CH Folyfor Turbo Diesel	Woodisorel Red Wine	Tri Fly	Delanor Waggit A Lot	Rosmarinus The Weyman	Delanor Kimi	5 years	YES	Various consultations and investigations with vet. Blood tests etc for other causes (nothing found). No scan was done.	NO	Whiz died in status when he was 7 years, 3 months. He started fitting early morning on Sept 19th 2015. He did not come out of the fit as he usually did and we were unable to stop it. After speaking to the emergency vet we managed to carry him to the car. Sadly he died on the way to the vets	Suspected triggers: None known. I spent two years looking for triggers and did wonder if swimming in the sea was a trigger for Whiz (salt ???) but the day he died he hadn't been to the sea for two weeks. Medication: He was on Epiphen 30mg twice a day. This had kept him relatively stable until the last day. Details: Whiz was neutered at 15 months. I do not believe this had any effect as he did not start fitting until he was five. He had cluster fits, usually two or three lasting less than a minute with about half an hour between. He only had five groups of fits over an eighteen month period. He was, however, hospitalised overnight in July 2015 when he fitted six times over five hours. The vets gave him rectal valium.	OWNER
29-11-19		Detania Glistening Pride	Not known	Not known	BC	29-Jun-97	UK	Bitch	Detania Cosworth	Detania Singing The Blues	Detania Kara	Detania Faith Moves	Detania Araz (SDS 162979)	Detania Lady Lucy Lockett	4 to 5 years old	Not known	Not known	NO	10 1/2 years old. Megan actually contracted Bone Cancer in her shoulder which sadly ended her life. Details: She started having epilepsy at around the age of 4 or 5 I think, with one fit which lasted probably less than a minute. They never actually lasted more than a minute would guess, just seems a long time at the time. They gradually increased until about 18 months - 2 years, months later when she had 5 in one day, the vets then put her on medication - Phenytoin? I believe. This stopped the fits until the dosage needed correcting. Megan had to have regular check ups every 6 months (I think) and the medication did gradually increase. That's about all the information I can give you I'm afraid - hope it helps in some way.	DATA TRANSFER FROM LYN NORTON Added 25-07-14

28-02-22		Eevee	N/A	N/A	Unregistered - UK	02-Dec-16	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	NO	We're under investigation, however the vet has said it is epilepsy, just can't afford the rebarred scans as they're not covered by insurance	YES	N/A	Suspected triggers: Only trigger we have found and confirmed is hunger vomiting. Medication: Phenobarbital, but was stopped due to potential damage on kidneys. Details: Seizures are usually between 20-40 seconds, the shorter the seizure the longer the recovery. Our recent seizure was just under 20 seconds and the recovery was around an hour. Not spayed.	OWNER
11-03-21		Elian-Vannin Millie	AS0902157	00/332956	BC - Dual Registered UK KC & ISDS	18-May-14	UK	Bitch	Elian-Vannin Kirk (ISDS 00311443)	Joe	Breeze	Elian-Vannin Mia 90205 00/314110	Spot	Bliss	2 years	YES	Bloods, head scans etc all normal but clinical diagnosis based on the episodes, seemingly brought on by touch, was one of a rare type of seizure / rage syndrome.	NO	Age 4. Due to the escalating frequency and intensity of the episodes which were very distressing for her and us, we sadly despite trying all we could, had her PTS	Suspected triggers: Millie was a very loving girl who used to lay for hours next to me having cuddles and tummy rubs on this at the border in England. Every six weeks or so I would experience episodes of rage with no warning. We didn't understand at first but there became a pattern to it and so the 2 year journey of trying to manage her seizures safely began. Before an episode she became increasingly sensitive to light and noise, afterwards she would hide and sleep it off. Medication: Pevion to start then stopped. Followed by a combination of Epilphen and Kepra. Pevion was also tried but made no difference so was stopped. We tried all different types of epilepsy medicine. Details: Frequently was from about every 6 weeks until Christmas 2021 when she started clustering. After the initial settling of the cluster episode the following seizures were more frequent and severe and she was for a longer period of time. Food was not a trigger although to alleviate as much non natural things in her diet as possible, we changed her to a raw diet and although it did not help her seizures, she did very well on it. Millie was rebarred but it made no difference, she was spayed before the onset of the seizures. Due to the severity and type of seizures Millie had, we could no longer manage her safely. Just to say that Millie would come to us probably feeling unwell but a cuddle and it was always as we would touch her that the seizure would happen. She would usually have been asleep beforehand, never happened at play or with strong touch though cuddles only ever gentle strokes, always lasted 5 seconds but near the end more like 10 seconds and we just couldn't manage her safely and the most traumatic thing was we could no longer cuddle her as she or we would have wanted the seizure along with our desperation was also seeing her quality too, so the heart breaking decision was made to say goodbye. It was truly a traumatic journey for and with her.	DATA TRANSFER & UPDATE BY OWNER OWNER 31.03.21

30-04-22		Gigha	N/A	N/A	Unregistered - UK	08-Jan-16	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	By taking her to the vet repeatedly and eventually taking her to different vets for alternative opinions as our first vet advised us to euthanise her. It came after a year of increasingly regular fits during which Gigha was anxious and this led to her driven aggressive behaviour. It took reaching this stage for her to be diagnosed.	YES	N/A	Suspected triggers: We are unsure of triggers. Medication: Epilphen, her dosage has been changed three times since she was first prescribed. It changed her life, she is a happy energetic collie now. Details: She still has a fit once a year or so and the build up to a fit is still noticeable but the Epilphen has made a huge difference. She has her bloods checked regularly at the vets. Fit lengths vary, they are on average 5 mins long.	OWNER
19-07-19		Glenalka Jack - Captain Jack Sparrow	N/A	296305	BC - ISDS	11-Apr-08	UK	Dog	Kilcreen Fox (ISDS 276619)	INT. SUP. CH CRAIG (ISDS 249897)	Kilcreen Midge (ISDS 262307)	Nellie (ISDS 285347)	Ben Of Killiebrae (ISDS 220939)	Molly (ISDS 268821)	12 months	YES	Sparrow's idiopathic epilepsy was diagnosed following a full work up at the AHT Newcastle, including spinal tap, full U&Es, FBC, CT Scan, Acid base test	NO	3 years old. Cluster seizures/status epilepticus	Suspected triggers: No triggers. Full investigations completed at AHT - other medical/traumatic causes ruled out. Medication: Treated Phenytoin, Potassium Bromide, Keppra, plus several other trial drugs (no positive changes) except Keppra gave us a 'honeymoon period' - made it to 5 weeks without seizures but then they were back to heavy clusters again, worsening over the 2 years we had with him. Details: Neutered. Cluster seizures lasting several minutes between weekly - 4 weekly prominently. For 2 yrs until we had to let him go.	OWNER
30-09-21		Glenie Glen	K364560	N/A	WSD - UK KC Activity Register	17-May-16	UK	Dog	Glen (ISDS 00/311303)	INT SUP & WORLD CH Dewey Tuxed (ISDS 270761)	Meg (ISDS 257352)	Gwen (ISDS 00/314102)	INT SUP & WORLD CH Roy (ISDS 264416)	Bet (ISDS 00/294932)	5 years	NO	I am very familiar with epilepsy, as I have previously had animals who had grand mal fits, so have no doubt this is what he has. At this stage I don't want to get into the trauma MRI testing etc.	YES	N/A	Suspected triggers: 18.07.21 - 5 days prior to last seizure he ate mystery substance at fishing lake. 18.7.21 - Following day very lethargic and not eating or drinking. Emergency vet visit required. General anaesthetic given. Oesophagus, trachea etc massively swollen. Vet prescribed a large dose of the steroid Dexamethasone and follow up with to alleviate swelling. Almost immediate improvement, but diarrhoea for 4 days. 23.7.21 - On day 5 after consumption of unknown substance, he had a full grand mal type seizure. 24.7.21 - This was repeated approx the same time the following day at 6.30 am when being let out to garden. 4 times of excitement. Medication: Immediately after the first seizure I gave a drop of CBD Brothers Silver Edition Indica CBD Oil and another drop that night. A single drop was given the following morning immediately before he went outside, but he had another seizure at approx the same time and place and under the same circumstances. I believe because the Silver Oil had not yet been absorbed. I now give CBD Brothers Silver Edition Indica Oil 1 single drop 3 x daily. Omega MCT Oil 1 level spoon 3 x daily. Epistar Capsules 3 per day with food. Details: He has several small meals during the day, instead of just one meal in the evening (as before). He is fed almost exclusively a raw keto diet. So far he has had no further seizures, but it is obviously very early days. He was neutered 3.5 weeks prior to the first seizure. Both grand mal type fits lasted between 10 and 15 seconds. He was unconscious, but eyes wide open and glazed. He was paddling and foaming at the mouth. He recovered pretty much back to normal within 7 to 8 minutes. I now understand that there is a history of seizures in his lines. His litter started fitting at 2.5 years of age, initially under similar circumstances (excitement), but has continued to fit, both while excited and at times of rest and has needed her veterinary meds increased over time.	OWNER
31-07-22		Graham	N/A	N/A	Collie Cross Unregistered - UK	25-Sep-20	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	11 months	YES	Discussed with Vet	YES	N/A	Suspected triggers: Not found any possible triggers - vet determined as generalised seizures. Medication: On Epilphen initially and then added Libromide as still having seizures frequently but not severe. Details: Currently seizures are about 7-10 days apart and last about 40 seconds max then recovers quite quickly. As well as having a careful diet he is on MCT oil and protein powder and CBD oil to help naturally. Graham is a collie/pringer cross but don't know if any of his siblings are affected as was not aware of epilepsy in collies when we bought him. He's neutered. Medication: Prozac 400mg twice daily	OWNER
29-11-19		Grenaby Skeed Graih	Not known	Not known	BC	15-Sep-11	UK	Dog	Ludgate Red Laser	Firefly/Jumanji at Ludgate	Grenaby Editors Choice	Grenaby Tucker	Nunery Kim At Grenaby (ISDS 231210)		1 year 6 months	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Initially Fen on skinners kibble then once the fitting started, a home prepared diet of brown rice, potatoes and vegetables with raw meat (to try and reduce gluten, corn, soy and cases as per GAD diet). This seemed to help for a while, with improving gaps between fits until last week, when he had several fits and he became critically ill at the weekend with cluster fitting. Fits have changed in frequency. We had got him up to 17 days between fits, and had wanted to try and manage it naturally (without drugs) but that all changed last week as described above and the treatment was necessary to save his life. After we got him, we heard that the dogs (not the bitch) in the previous litter had started to fit. So we opted for an early castration at 5 months. We are very lucky that he is still with us, but it was devastating to see him so poorly. He was in intensive care for 3 days and has been home for 3 days now, improving slowly by the hour. If I can provide you with any additional information, please do not hesitate to advise. Suspected triggers: No known triggers. Medication: Phenytoin given initially with limited success. Potassium Bromide controlled the epilepsy completely until aged 16 when digestive problems made the medication unusable. Details: Spayed before 1yr by rescue charity. Survived Panovirus age 8 months. Fits became progressively longer and uncontrollable. She had to be sedated for up to two days to stop the fitting. Fits ceased immediately once potassium bromide was given (in solution twice daily with food). Suspected triggers: Unsure of any triggers. Medication: She was just put on Zonisamide 100mg in the am and 50mg in the pm. Details: She has had 4 grand mal seizures at night only. They started in Jan 2020 at 3 months apart, then once they got to a month apart, the neurologist put her on medication. She convulses, foams at mouth, eyes roll back, she loses consciousness and I am not able to snap her out of it. She used to run around the room right before she started seizing, but after doing this twice, I started crating her at night in a soft crate. Her seizures last a little over a minute, and she takes on average 3 minutes before she is completely conscious. She gets monthly chiropractic and acupuncture. I got a wellness check with fur sample done and it gave me a list of foods she is sensitive to. I have created her home cooked meals ensuring she only eats foods that she should. I have added MCT oil, 8 complex vitamins, omegas and do a monthly liver cleanse.	DATA TRANSFER FROM LYN NORTON ADDED 11.09.13
31-08-20		Owen	N/A	N/A	Unregistered - UK	01-May-99	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	Veterinary observation	NO	16 years. Euthanasia after uncontrolled fitting	Medication: Initially Fenon, after 6 weeks Libromide was added. This combination was satisfactory for a while but fits resumed, if anything worse than previously, he then had Epilphen and also Diazepam. Details: Neutered after onset of fits. From the outset his fits were severe and caused him significant memory loss and required a lot of retaining etc. We had a honeymoon period when we thought that the medication was going to control the seizures but when they resumed each time he had one it was severe and the recuperation period took longer. He had a very severe cluster of fits which effectively wiped his memory and character. He was very close to death but pulled through. We taught him to walk etc again and after a weeks he was basically ok. He was a different dog but he lived us was content in his life. UPDATE ADDED 31/09/2020 - Update to Registration Type. Medication: He was initially prescribed just Epilphen, but over the next 5 years his medication was gradually increased to try to control his fitting. From his first fit, he didn't have another for 18 months then the frequency increased until roughly every 3 weeks by this time he was on 120mg Epilphen at 8am and 8pm, 300mg Gabapentin at 8am, 2pm and 8pm, 500mg Keppra at 8am and 8pm, and 50mg at 2pm. Details: He was on Autary at the onset of the fits but as the intensity increased, he was moved to a completely natural diet of chicken and vegetables. Much research was carried out into the ingredients of manufactured dog foods, and it was found that certain things can be a trigger factor to epilepsy so knowing what was in his food was important. He had cluster fits over 2 days on the first occasion and was given medication to try to stop the cluster, it was then 18 months before his next cluster fit. His next fit was then 3 months later, after which the frequency increased from around the age of 4 until the fits were happening every 3ish weeks. It was often a cluster of 3 or 4 fits over a couple of hours, but he needed veterinary assistance on 2 occasions where he was anaesthetised to stop the fitting as the episodes had continued over 24 hours or more. NOT neutered as the vet advised against him being operated on because of the risks with his epilepsy.	OWNER

31-10-22		Hamish	N/A	N/A	Unregistered - UK	14-Nov-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	8 years	YES	By vet, exclusion tests of other conditions.	YES	N/A	Suspected triggers: None, however has seizures approx. 1 week after stressful events now (like fireworks). Medication: Epipress - changes in behaviour digging in garden, more intense herding traits, less tolerant of other dog. Details: Neutered aged 1. Length of fit bout 1-2 minutes, 5 minute blackout afterwards where doesn't recognise surroundings, people etc. - approx 1 per 2 months in last 8 months (4 fits in 8 months) - vet increased medication after blood tests.	OWNER
30-06-22		Harley	N/A	N/A	Unregistered - UK	12-Nov-21	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	7 months	YES	Blood tests	YES	N/A	Suspected triggers: None provided. Medication: Fenoin. Details: No more detail provided.	OWNER
30-04-22		Harley Quinn	N/A	N/A	Unregistered - UK	16-Jan-16	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	Had cluster fits over 24 hours and medication prescribed worked	YES	N/A	Suspected triggers: Harley had a litter of pups which went great but when she went for her fits and ICD treatment within an hour she had her first episode. Now if she gets over excited by going to the seaside or seeing lots of family in one go it results in an episode. Medication: We have been on several different medications over the years but now we are on Epiphen 60mg and Levetiracetam 250mg. Until recently Liriodamide 525mg was being taken but a bout of pancreatitis hit and the vet believes this drug may have had a part in the problem. Details: Harley was spayed after having a single litter of seven, although one was still born. The first fit was a one off then we went around 18 months with nothing before the cluster fits on 31st Dec 2019. After this it was almost monthly with the odd extended break until August 2021 when we were episode free until March 2022. The March episode was part of the becoming ill with pancreatitis where she was taken into hospital for five weeks. Thankfully, all ran the merrily now.	OWNER
31-01-21		Harry	N/A	N/A	Unregistered - UK	20-Mar-16	UK	Dog	Banjo	Unknown	Unknown	Unknown	Unknown	Unknown	4 years 6 months	YES	Blood tests	YES	N/A	Suspected triggers: Worming Medication: Epiphen 1.5 tablets two times a day and Levetiracetam 1 tablet two times a day. Details: Neutered. One to two minutes fits up to 45 minutes to recover. Normally happen when asleep. Put a flea collar on in May and have wormed three times a year.	OWNER
28-02-22		Harry	N/A	N/A	Non UK Unregistered (Border Collie)	08-May-19	SOUTH AFRICA	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 6 months	YES	After first fit we visited the vet and by eliminating other potential causes it was determined that Harry has idiopathic epilepsy, which was confirmed by subsequent fits	YES	N/A	Suspected triggers: It is still early to say as Harry only had his first fit two months ago. I suspect that his anti-fit medicine might have contributed (although my other BC has been on it for longer and has no health issues). Another suspected cause is the dam on the farm where we work every day as his last two fits have been within 24 hours after swimming in/drinking from the dam, so we are now avoiding the dam to see if it makes any difference. Since starting to have fits I have stopped feeding my dog dry food (kibble) and moved him to a raw food diet (it's still to early to tell whether this is making any difference). Medication: Harry is not on any medication for epilepsy yet. I have an appointment with my vet to discuss our options next week. I do have ampules of Valium, which I carry with me at all times, so I can administer it in case he has a fit. Details: Harry was neutered at 13 months. He has had 7 fits to date, the first 5 were roughly 2 weeks apart and the last 2 happened on the same day, about 10 mins apart (although I think this was triggered when he saw me packing, which caused some additional stress). This was 2 weeks ago, he has not had another fit since then.	OWNER
31-10-22		Harry	N/A	N/A	Unregistered - UK	19-Jul-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	7 years	YES	Had an MRI and various bloods/spinal tap at Rowe Referrals. Nothing found so diagnosed Idiopathic Epilepsy.	YES	N/A	Suspected triggers: Stress. 2 out 3 seizures have been when showering him. Medication: covee recall Disopram after last seizure, no changes. Details: Neutered, fits less than 2 minutes. Had 3 seizures in 3 months.	OWNER
28-02-21		Hästliggs Eks (REGV1011/2014)	N/A	N/A	Non UK Registered (Border Collie)	30-Nov-11	SWEDEN	Dog	Taddymoor Joe (REGV1775/2008 Sweden & ISDS 27151)	Hightgate Joe (ISDS 245242)	Call (ISDS 236444)	Ever on Nice (V1249/2006 Sweden)	Glen (ISDS 144489)	Ty Horn Flash (V1172/2004 Sweden)	13 months	YES	With blood tests that eliminated anything else, both with my vet and a specialist canine neurologist	YES	N/A	Suspected triggers: He has had more seizures in the spring and I think that's because everything starts up again with training and so on. Medication: Fenofenol 5mg twice daily. Before medication he had 3 seizures, one after another but when he started Fenofenol the second seizure stopped. He still had seizures every 3 months so we started on Fenofenol and it went down to one seizure a year. Details: He got a castrating chip a year ago due to prostate problems and after that he has calmed down and his seizure are very far apart now. Not neutered. There are 3 more dogs from the same father on the Swedish list of epileptic dogs. There are also some other dogs that have the same problem as the mother of Eks.	DATA TRANSFER & UPDATE BY OWNER
19-07-19		Heathgate Rimmel Gold - Rimmel	AG0901044	280543	BC - Dual Registered UK KC & ISDS	28-Aug-05	UK	Bitch	Heathgate Alf (ISDS 263106)	Don (ISDS 201564)	Queen (ISDS 231407)	Rose (ISDS 264347)	Ben (ISDS 257902)	Mag (ISDS 264106)	2 years	YES	Vet confirmed as Epilepsy	NO	She became very ill and was PTS at almost 7 years, as she was fading rapidly	Suspected triggers: No known triggers. Medication: Phenytoin/Epiphen and Kepra 3 times a day. Tried Potassium Bromide and Gabapentin unsuccessfully. The Kepra helped control the fits. Details: Deceased.	OWNER
28-02-21		Herda Ruemour	K147364	N/A	WSD - UK KC Activity Register	24-Feb-14	UK	Dog	Ken	Unknown	Unknown	Dot	Unknown	Unknown	6 years 4 months	NO	N/A	YES	N/A	Suspected triggers: Thyroid issues, Newgard wormer, car travel, tiredness, excitement. Medication: Thyforon (Levothyroxine sodium) for lack of thyroid function. After 6 months of changing levels and a cerebrospinal fluid sample which reduced the pressure, he seems better. No fits for 6 weeks. Fenofenol - No change noticed. May have reduced fit frequency. Details: Neutered at 2 years. Fits were occurring randomly up to weekly. MRI scan showed no abnormality. Cerebrospinal fluid showed inflammation. Dog is extremely nervous and was lying on the ground shaking on hearing a drone or gunshot, even if it is a long way away. Nerves were worse on higher dose of Thyforon. Not sure whether these were a type of fit. Start in a similar way with apparent visual disturbance.	OWNER
19-07-19		Here Comes Milky Moo Moo - Owey	Not known	N/A	WSD - UK KC Activity Register	19-Sep-11	UK	Bitch	Cookvale Dark Stranger	Wenterkloof Blue Thunder over Gimnylands	Fall From Grace at Cookvale (ISDS 267497)	Here Comes Milky Moo Moo (Activity Register)	Unknown	Unknown	11 months	YES	Blood tests, Urine Tests, Bile Acid Stimulation, Scans. Vet confirmed as idiopathic Epilepsy	YES	N/A	Suspected triggers: Seizures seem to occur when over tired or stressed but no real pattern or definite trigger. Medication: Started on Fenofenol but after 18 months fits got worse and started to cluster. Changed medication to Epiphen 60mg every 12 hours. After a couple of increases of Epiphen Caray's liver started to struggle. Added Bromide and reduced Epiphen. Now on 30mg Epiphen 60 and 1 x 325mg Bromide. Reduced Epiphen because liver was damaged as a result of using Epiphen. Details: Neutered. Had IMHA in 2016. Was fed on James Wellbeloved, now on on Hill's Wolfhound. Nothing unusual happened prior to onset. She has Grand Mal seizures and has done from the start.	OWNER
31-12-21		HF Delveth ABCA 471778	N/A	N/A	Non UK Registered (Border Collie)	25-Sep-18	USA	Bitch	Hard Rock Neal	Kyle	Spice	Imp. BAW Lass	Gary	Karven Bracken	1 year 8 months	YES	Veterinarian gave diagnosis of idiopathic epilepsy due to repetitive seizures that stabilized by using phenobarbital	YES	N/A	Suspected triggers: Seizures started after she was given Lepto & Rabies on the same day. Medication: Initially tried CBD chews - no change - daily seizures. Always at night or first thing in the am. Started phenobarbital on 11/05/2020. She is currently on 2 Phenobarbital tablets 64.8 mg per day (am & pm). She is now seen by a holistic vet & is on 2 different Chinese herb compounds - Di Tan Tang & Tian Ma Plus II. Details: Del was spayed in November of 2020. Her last seizure was on 06/07/2021. All of her seizures have been very short in duration - less than 2 minutes. She comes out of the seizure easily & quickly with seemingly no lasting effect. In total she has had 28 seizures.	OWNER

29-11-19		Iatka Special Star - Tarnie	K125803	N/A	WSD - UK KC ACTIVITY Register	06-Nov-07	UK	Dog	Bellariv's Highlander	Black Robin Highlander	Bellariv's of Terwih	Iatka Star Quality	Taf'Son at Goldwatts	Iatka Zinglong Ziggy	3 years	NO	N/A	YES	N/A	Suspected triggers: Suspected trigger was stress. Medication: Epiphen and Libronide, longer time before fitting when Libronide increased. Details: Neutered. Fits usually last 2-3 minutes.	OWNER
19-07-19		Indeed of Bungee Borders A7/A41023 (ONCR/BORC 4153)	N/A	N/A	Non UK Registered	27-Jul-15	AUSTRIA	Bitch	Joe Of Baw (ISDS 328775)	Craig (ISDS 286599)	Skye (ISDS 320366)	Gate Of Bungee Borders (ISDS 327172)	Ballygass Taff (ISDS 352462)	Armer Of Bungee Borders (ISDS 286329)	3 years	YES	Not disclosed	YES	N/A	Medication: Phenolgel 100 mg Q 12/15/30/75 (tablets). Frequency of all fits were around 10 minutes. Starts on 10/18 with her first fit (10 min). Then other fits in a frequency of around 2-3 days, sometimes 2 fits a day. Starting with homeopathy, but there was no effect but the fits where shorter and the rehabilitation was faster. But the decision from 2 vets was to give her Phenolgel starting with a half tablet in the morning and evening. After 9 weeks she had a fit again, so there was a new blood test and in case of the low phenolgel value in blood the vet decided to give her a quarter tablet more in the morning and evening. Details: The last fit was 1 week ago (29.06.2019), between this fit and the last fit: week 3 months.	OWNER
30-04-22		Indiana	N/A	N/A	Unregistered - UK	28-Dec-19	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Vet diagnosis (bloods)	YES	N/A	Suspected triggers: Over tired. They happen when in a deep sleep. Medication: Epiphen, 1 tablet twice a day. Details: Seizures started 48 hours after he'd been neutered. Had cluster fits that week (6 months old), then nothing until he was 2 years old. Had 4 seizures in space of 3 weeks. Fits usually only last under 1 minute.	OWNER
31-07-22		Indy	N/A	N/A	Unregistered - UK	03-Mar-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years	YES	MRI and specialist vet in Winchester.	YES	N/A	Suspected triggers: I suspect stress is her main trigger and over tiredness. I also have changed her diet to low glutamate which I believe has helped a lot. Medication: 30mg Epiphen twice a day, 12 hrs apart. Yes definite changes, she didn't have a seizure for nearly 6 months and it was only a small one when she did. Details: Has had three fits so far. First one was over 5 mins and a big grand mal. Second was 2 fits back to back but not so long which was weeks later. Then she went on meds and her last one at nearly 6 months later, was only a minute long and nowhere near as intense. Spayed.	OWNER

Details: Most of her fits have been whilst exercising, rather than at rest although she has had both. She is fed Pedigree Chum all in one and Pedigree Chum topped. Good results since prescribed Pexion and after the tablets got into her system. She was already spayed before the fits started.	DATA TRANSFER FROM LYN NORTON Added 21.03.14
30-09-21	31-10-21	Jack	N/A	N/A	Unregistered - UK	17-Aug-20	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	11 months	YES	Vet diagnosis. Bloods tested to rule out other causes.	NO	12 months old - severe cluster fits never recovered and had to take heartbreaking decision to give him sleep.	Suspected triggers: No known triggers. Medication: Epiphen, 60mg twice per day Details: Neutered. Smaller focal seizures progressed to general seizures and cluster seizures. Parentage both BC - Sire BC ISDS 'real'. UPDATE ADDED 31/10/2021 - I worked closely with the vets but Jack had regular and very severe cluster fits and rarely recovered between. The medication (epiphen) was unable to make any difference. I do believe that Jack may have had idiopathic Epilepsy for longer than we knew before diagnosis. Now I have learnt much more about this disease, I think there were earlier signs, I had to take the heartbreaking decision and he was euthanised.	OWNER Updated 31.10.21
31-05-20		Jack	N/A	00/355613	BC - ISDS	21-Sep-17	UK	Dog	Felidae Dash (ISDS 00/315780)	Killibrose Laddie (ISDS 262753)	Killibrose Jet (ISDS 280978)	Mog (ISDS 00/316242)	Spot (ISDS 258972)	Nell (ISDS 274798)	2 years 1 Month	YES	Vet	YES	N/A	Suspected triggers: Possibly stress. Medication: Epiphen and Libronide. Details: Intact Male. Seizure approx every 2-3 weeks. Seizure length average 4-5 seconds. We got Jack when he was 14 months old, he had his first seizure about 1 month after his 2nd birthday (late Oct 2018). I ignored the vet and they gave me some great advice on how to monitor and what to do during a seizure, unfortunately a couple hours later he began to cluster so was rushed off to our emergency vet for sedation. We discussed the options for meds and agreed that we would not medicate at this point. 2 months later he had his next seizure, so an appointment was made to check his bloods again, this time the vet suggested we put him on Epiphen. After a while with only the sporadic minor seizures he began to cluster again (9 to 2 hours) he was kept at the vet that day and was started on Libronide and we were given emergency meds for future clusters. Since then Jack has been only having small seizures roughly once every 2 months. We continue to medicate with the Epiphen and Libronide and record any seizures in his diary or on film when we can. Jack is the most loving, happy dog and wants to be friends with everyone he meets. We love Jack dearly and would do anything for him.	OWNER
19-07-19		Jacksroffer Sapphire - Saffie	AK02831107	N/A	BC - UK KC Pedigree	27-May-09	UK	Bitch	Bekkis Virtuoso	Grandver Master Copy	Bekkis Rhapsody	Jacksroffer Greatleg Charmant	Rosmarinus The Weyman	Greatleg Lettia	4 years 11 months	YES	Blood tests	YES	N/A	Suspected triggers: excitement, anxiety. Medication: Started on Pexion 100mg twice daily which seemed to work reasonably well for about 12 months then fitting became more regular, after having one fit in three months I told my vet I wanted to take her off Pexion and try Epiphen. She has been on Epiphen 30mg for four years and has been fit free for that time. Details: Spayed at about 18 months after being told by her breeder that a litter brother was having fits. Saffie has been able to live a full and active life.	OWNER

Fits have not changed in severity or frequency since onset. Details: Spayed.	DATA TRANSFER FROM LYNN NORTON Added 09.05.13
21-08-19		Jess	N/A	N/A	Unregistered - UK	27-Jun-03	UK	Bitch	Rip (ISDS 250011)	Glen (ISDS 198708)	Fran (ISDS 219858)	Floss (Not registered)	Ben (Not registered)	Jill (ISDS 225588)	2 years	YES	Blood tests and other family members fitting	NO	Died aged 11 in Status Epilepticus	Suspected triggers: No known triggers. Epileptic cousin. Medications: Initially Epilopin then Libromide added and finally Kepra. Details: Spayed before onset. Cluster fits showing signs of brain damage. Jess had refractory epilepsy. Despite increase in doses of Epilopin and addition of Libromide followed by Kepra she continued to have cluster fits. admitted to vets on several occasions to only stop the clusters. The only time she was fit free was on large doses of Epilopin which eventually caused her liver to have problems metabolising the drug and she started to fall over eventually being unable to walk. At this stage she was referred to a neurologist and put through MRI scan, spinal tap, blood tests etc. The result was that she was being poisoned by the Epilopin which her liver wasn't metabolising. Her dose of Epilopin was reduced and she was put on a liver supplement. With the reduction of Epilopin she went back to cluster fitting every three months till she died 2 years later in status epilepticus.	OWNER
11-10-20		Jess	N/A	N/A	Unregistered - UK	10-Mar-14	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	7 to 8 months	YES	Monitoring fits and keeping record of everything that happened	YES	N/A	Suspected triggers: None known. Medication: Pexion 600mg a day. Details: Family happens but occasional cluster fits, longest fit lasted 13 minutes usually last about 4 minutes. Can be months/weeks between fits since being on medication. Suspected triggers: Extreme exercise, stress, heat in the summer. Medication: Phenytoin and Pexion which she is being weaned off. Getting ready to start Potassium Bromide once Pexion has finished. Details: Jess has been spayed. She is a very anxious dog who is upset by any noise. Her fits are like pett mal at times but also grand mal fits where her nose and bottom jaw, her eyes roll up, then she starts to shake. They can last from between 30secs and 2mins. She also has episodes where she lays in her Dad's arms and frogs her head on the sofa and can sleep for up to 30 mins. You can say pussycat, squirrel, dinner, name of a visitor and she doesn't move. All the time there, her limbs don't move and when she gets off she has left a small mark on his trousers. The last two fits she has been incontinent and wet the bed. Occasionally she can be aggressive, but normally a very placid girl. She has changed, doesn't like her harness on or collar, seems worried to go to the bathroom.	OWNER
31-03-21		Jess	N/A	N/A	Unregistered - UK	20-Jun-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	About 18 months	YES	After videos we had taken and being tested at Fitzpatrick, they started her on medication, which caused her to fit more	YES	N/A	Suspected triggers: Possible glancing adder bite - he had a puncture wound in his nose and swollen face for 4 weeks, frontlines 4 days before. Medication: Epilopin, Potassium Bromide, Kepra and Diazepam to try to stop clusters. CBD oil plus herbal products. Everything has worked well initially but then has become less effective. He has just been prescribed Pexion to use for a few days after seizures to try to stop the cluster. Details: Jazz is neuter. He fathered a litter before his seizures started. His son started having seizures at 15 months and was pts at under 2 years due to uncontrollable seizures. Jez' sister started fitting a year after him and she lost her battle in May this year. Jez always has GMS and always clusters. They have become progressively longer - will often be unconscious for up to 6 mins. We are very fortunate that Jez has a VNS implant. Langford vet hospital is doing a trial with Bristol Children's hospital and Jez is the 4th dog to have the implant in June 2017. I am convinced that he would not still be alive if he hadn't had this. He is very active and 3 years ago started Rally Obedience and is now working at the top 2 levels.	OWNER

Taken to vet after first fit. Then continued monthly, always about 2am. Medication: Vet recommended not going on meds as they didn't last long and were so spread out just monitoring her and if anything changes consulting vet. Have rectal Diazepam in case she has another. Details: She had her last fit about 6 months ago, followed by some smaller ones. Was left with a twitch but vet put her on diazepam for a week and twitch cleared. All her fits are over in a couple of minutes and doesn't seem to be a pattern to them apart from monthly and always about 2am. She has had fits monthly up until 3rd of September, but nothing since (now 07/12/19). She is spayed. Medication: Began in May 2007 on 60mg Epilopin daily. 19.07 started on Potassium Bromide 2 x 125mg & Epilopin upped to 3 x 60 mg daily. 10.07 had a bad episode of fitting and was given liquid Diazepam and Potassium Bromide upped to 3 x 250mg daily. 2.08 Epilopin upped to 4.5 x 60mg tablets daily. 26.08 started on Gabapentin 900mg daily. 25.09 Potassium Bromide upped to 4 x 250mg daily and Epilopin was reduced to 380mg daily but Levitracetam upped to 2 x 500mg twice a day. 15.12.09 reduced Potassium Bromide to 3 x 250mg a day. Current daily meds: for epilepsy (halved and given twice a day) 900mg Gabapentin, 1000mg Levitracetam, 1000mg Epilopin (Btbl), 380mg Epilopin. He has 10mg Diazepam rectal tube after he has a fit. Details: No answers to fits. Neutered.	OWNER

21-08-19		Kingfarm Maid of Honor	K139324	N/A	BC - UK KC Podgreen	08-Nov-11	UK	Bitch	Tameryrie Celtic Laird	Belatrix Highlander CDex Lidee	Tameryrie The Ferrari	Kingfarm Dress To Impress	Borderfair King Of Swing	Merrymarsh Dress To Kill Of Kingfarm	5 years 5 months	YES	Vet said it was because she had now had 4 episodes	YES	N/A	Suspected triggers: In vets during first one - stress? 2nd one it was a very hot day and had eaten cheese? Medication: Epiphen was prescribed 1 tablet twice a day. I also give her Epiphen 500, Milk Thistle (to help liver on Epiphen) & CBD Oil. She has remained seizure free since. Details: The day of her first fit at home it was a very hot day she had also just eaten some cheese (which is now off the menu). Spayed in 2012. Her last fit was the worst much more intense and longer (lasted about 3 minutes) and she took longer to come out of it. In April 2017 Macy had a routine dental examination. In waiting room afterwards I noticed her mouth was twitching and started to foam. The vet took her in side room where she was fitting on the floor. They kept her in for observation for a few hours. Vet thought as she was stressed this was probably the reason. No medication given to me as they said they only medicate when they have had 3. All ok and fit free until June 2018. Around 10am Macy was resting in kitchen and started to fit. No vet appointment until April that day. No tablets given but was told to administer rectal diazepam if she had another. 2 hours after being home she had 2 more - more severe than before - rectal diazepam given. Called emergency vets as I couldn't cope with seeing her like it. They agreed to have her in overnight to observe. Got a call 3 hours later saying she was so stressed and would be better at home.	OWNER
19-07-19		Kobi	N/A	N/A	Unregistered - UK	15-Jun-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 8 months	YES	Confirmed by vet	YES	N/A	Suspected triggers: Stress and also air pressure (thunder weather), bright lights. As Kobi is deaf and also almost blind he bumps into objects which stresses him. He can't go to vets surgery as stress causes seizures. Medication: Vets have tried almost all meds over the last four years. He still has seizures but they are 1-2 a month now. At the moment his meds are: Epiphen, Libramide, Levotetracain and Sodium Valproate. Diazepam for cluster seizures. He has recently been diagnosed with diabetes too so is now on insulin too. We have struggled for four years to get him to this point and tried so many different meds. Details: Have also had advice from a neurologist who diagnosed textbook Epilepsy. Kobi has blood tests regularly to tweak his meds. He is a blue Merle, totally deaf, almost blind and now diabetic aged 6yrs old. While trying to get the right balance of his meds he was having clusters every other day. As his meds are now he will have 1-2 seizures which leave him completely exhausted and wobbly for days. His seizures are 1-2 a month at present. Neutered. Rescue dog from Border Collie Trust GB.	OWNER

29-09-19		Lacey	N/A	N/A	Non UK Unregistered (Border Collie)	10-May-19	SOUTH AFRICA	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	Blood tests MRI scans Diagnosed Idiopathic Epilepsy	YES	N/A	Suspected triggers: Bravecto tick and flea treatment. Light sensitivity. Extreme change of routine. Medication: Phenobarbital. This has helped control the seizures and we went 9 months seizure free at a stage. She seemed to develop resistance to it and due to her liver enzyme levels we added Keppra. Valium is used as a rescue medication. Details: Lacey is spayed. Behaviorally she is very active, not just border collie active (we have two) she has endless amounts of energy and it seems as though she rarely switches off. She chases shadows and light reflections endlessly and licks them mainly on floors and walls. She also seems very sensitive and reacts to seemingly normal activities she has a barking fit/attum if you shower, take off your shirt, use squeeze bottles etc. It's as though the dog isn't the you doing it and even gets worked up before you begin to do it for example if she sees you take clothes out to shower she starts barking. 2017 May 1 seizure, July 1 seizure, August September, November and October (partial seizures one each month), December 1 seizure, 2018 January 2 seizures increased phenobarbital med, April 1 seizure, 2019 February 1 seizure, March 1 seizure, June 1 seizure, July 1 seizure added Keppra. Partial seizure it seems as though a seizure is starting and the cones and asks for help but then there is no seizure only excessive drool or teeth chattering. Lacey's seizures are usually just over 1 minute and she urinates during her seizures. Suspected triggers: No triggers known.	OWNER
19-07-19		Ladinka Like A Rocket - Sam	Not known	N/A	BC - UK KC Pedigree	10-Apr-11	UK	Dog	Rosmak Dapple Dandy	Canen Baz (ISDS 231245)	Rosmarinus Rising Star	Rosmarinus Gin Soda	AG CH ForByFor Turbo Ozeal	Rosmarinus Pleims	9 months	YES	Vet and consultant neurologist	NO	Sam died at 15 months old from cluster fits.	Details: Fits started 3 a week. Cluster fits of up to 6 in an hour started after 2 months, sometimes only 3 days between clusters. Sam fitted almost constantly in his last 24 hours and had to be PTS because he fitted every time anyone went near him. A horrendous death as the chemicals to PTS made him fit more. Entire. Suspected triggers: No known triggers. Medication: Phenobarbitone, Keppra, Bromide - no improvement seen.	OWNER

Details: She was vaccinated 6 weeks prior to onset. Initially fed on James Wellbeloved. Changed to raw after onset fits considerably reduced. Initially the fits were one a month for the 4 months and then settled. The following year at the same time she had two in 3 months and that has been the pattern since 2013 but in time and intensity. Spayed at 9 months.	DATA TRANSFER FROM LYNN NORTON Added 05.07.14
11-12-21		Lana of Kaa No Ale JK-BC-0695/17	N/A	N/A	Non UK Registered (Border Collie)	14-May-16	JAPAN	Bitch	Nesbakkers Sweep NKX-NDS2441/14	Nesbakkers Hillbilly Deluxe NO0833/11	Spotte NO48366/12	Astra Muka UK KC Reg No: AM0901467	Brock (ISDS 264333)	Bet (ISDS 282400)	4 years	YES	MRI and CT scans	YES	N/A	Suspected triggers: I can't think of any, she was very healthy. Medication: Lams weights 1 kg. First, Zonisamide 100mg q's tablets twice daily. Change to 1 tablet twice a day. Change to 1.5 tablets twice a day. Phenobarbital 30mg 1 tablet added twice daily. Changed to 1.5 tablets of Phenobarbital. Gabapentin 300mg 1 tablet added 3 times a day. Levacetarlam 200mg 1.5 tablets 2 times a day (cluster buster). Gabapentin was changed to Pregabalin. Discontinued Zonisamide and Pregabalin. Currently, Lacosamide 50mg 1 tablet twice daily. Levacetarlam 200mg 1.5 tablets 3 times a day. Phenobarbital 30mg 1.5 tablets twice daily. Midazolam nasal administration at the time of seizure. Details: I can't find anything that seems to be related. The first seizure was 14/02/20. 70 major seizures to date. In addition, there are several small seizures, it can be a cluster (2 to 8 times) or a single one. It stops in 1 to 2 minutes. Excitement continues after the seizure. She's very hungry. She tries to eat anything, tissue paper, electric cords, carpets, etc. No aggression. Many of the seizures when sleeping. She underwent contraceptive surgery in August 2019. There is little information on Border Collie epilepsy in Japan. I think there are many Border Collies who have epilepsy, but they are not public. People may be aware of breeders. Thank you letting me join this group. I will do my best positively.	OWNER

29-10-19		Little Ozlie	Died before being able to be registered	N/A	Unregistered - UK	08-Mar-07	UK	Dog	OB CH Whitknow Raintonstone (WSD)	Rockin Rapid	Forever Magic Fantasia	Croftmist Megan (BC)	Tanymerye Krimoss	Mainline Mist (BC)	45 days	NO	N/A	NO	46 days old. See fitting details for more information	Suspected triggers: The vet suggested that he may have had worms but it was not the case. Medication: No medication for fitting but AB's and Anti-Infams as below. Details: At 43 days he became quiet and stopped interacting with his siblings. At 44 days he started seeking out dark places. Taken to the vet and was given antibiotics and anti-inflammatory injection. At 45 days he was again searching for dark places. He was very distressed when travelling back to the vets and fitted barely within minutes of arriving. At 46 days old he began fitting and was taken back to the emergency vet. He resembled a clockwork toy and was very rigid in his mobility. He seemed to have stopped growing. The vet blood tested for a liver chunt which came back negative. As the vet examined him, Ozlie became very distressed when his head was held and was obviously in a great deal of pain. The vet diagnosed inflammation of the meninges (tissue surrounding the brain). The vet and I agreed that euthanasia was the only option. Two other pups from the litter also fitted at later intervals and both have died. The rest of the litter were registered with my 'Croftmist' alias. Megan was spayed after. The two other dogs from the litter, that fitted, were put to sleep at young ages due to the fitting. Ozlie was unregistered but the rest of the litter were KC registered.	OWNER/ BREEDER

28-12-20		Loki Shewbridge	N/A	N/A	Unregistered - UK	25-Dec-17	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 2 days	YES	Vet diagnosed. Loki had liver blood test and they said he had Idiopathic Epilepsy. This was after the 2nd seizure.	YES	N/A	Suspected triggers: I currently am under the belief it's food related. Possibly grain but without testing I can't be sure. Medication: Loki started taking 1.5 x 30mg tablets twice daily. Because of his recent seizures medication has now increased to 2 x 30mg tablets twice daily. Loki was neutered at 10 months. Details: Loki's seizures before meds lasted approximately 1 minute (convulsions) it took him about 15 minutes to recover/recognise me. Since medication the last 3 seizures have been much shorter and he has not urinated. He takes about 5 to 10 minutes to recognise me.	OWNER
28-02-22		Lola	N/A	N/A	Unregistered - UK	10-May-14	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	5 years	YES	Idiopathic epilepsy confirmed by vet after monitoring and blood tests.	YES	N/A	Suspected triggers: No identifiable trigger. Medication: 60mg x 2 daily Epiphen, Diazepam to be administered during seizure. Details: Fits started August 2021. Initially monthly then increased in frequency. Neutered aged 32 months.	OWNER
31-07-22		Lord Liquorice Rock - Barney	N/A	N/A	Unregistered - UK	16-Aug-16	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 6 months	YES	Extensive tests/vet diagnosis.	NO	He died at 5 years 7 months old. Status Epilepticus.	Suspected triggers: Potassium Bromide caused pancreatitis which started all his troubles, we had his seizures very well controlled. Medication: Keppra, Epiphen, Zonisamide (Zonisamide) and we went 6 months fit free on this drug. We stopped Potassium Bromide. Details: Neutered at 16 months old, didn't effect fits. His main prob was the Potassium Bromide causing the pancreatic flares, this was the beginning of all his troubles. He had peritonitis too and had surgery, he only lived to be 5 years old. He died on 4th April 2022 due to a lot of seizures that we couldn't stop, he had a huge fit and we tried everything to save him but we had to make the decision because he'd fitted for so long. We believe his epi meds stopped working due to a pancreatic flare and infection of the tum (yet again). He'd been very poorly. We miss him a lot.	OWNER
31-07-20		Lukas Best Friend - Merrick	K360192	N/A	WSD - UK KC Activity Register	12-Sep-18	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	Not known	NO	Not yet confirmed, only had one fit	YES	N/A	Suspected triggers: Triggers unknown. Medication: Blood tests taken, steroid injection given, shaking subsided. Details: This dog also has Diabetes Insipidus, was fed raw but now changed to Canagan dry, blood test showed low sodium. Dog covered in lice as a pup. Had garda as a pup. Had terrible girth, now better.	OWNER

29-11-19		Luphoora Tasmanian Devil - Taz	Not known	N/A	WSD - UK KC Activity Register	03-Mar-09	UK	Dog	Pied Pike (ISDS 254417)	Ben (ISDS 235217)	Bet (ISDS 230544)	OB CH Collewold Candy Girl	WT CH Waggonland Fizz	Forest Sprite Psyche	2 years 10 months	YES	Referred to Animal Health Trust Newcastle for MRI & Spinal Tap (both clear)	NO	6 years 1 month. His liver was grossly enlarged and he could not breathe as he had fluid in his lungs. Extensive organ collapse and brain damage due to drugs and cluster fits. FTS 22.04.15	Suspected triggers: Never could find a trigger. First fits 2 weeks apart. Medication: He was on Phenobarbital, Lorazepam and another drug I can't remember the name of. Fit free for 8 months until Sept 2014, we struggled and could not get them better than one every 7-10 days. Had to increase his meds several times, this impacted on his body. Details: He had a period of seven months, during the twelve months before he died, when we thought we had him stable and no fits. Then they came back and we just could not get any control at all. At the end he was having constant Petit Mal seizures between the Grand and Mal ones, the drugs just didn't work anymore. Also rec'd Valium to stop the fits once they started. During his last three months he had some Prodromes. Taz was not neutered. His fits were, right from the start, five to eight minutes long and extremely violent. They occurred mostly when he was asleep or resting. Frequency two to four weeks apart but he might have two or three fits at a time. Pied Pike has since other dogs that have fitted. Unfortunately none of them had started to fit before he was neutered.	DATA TRANSFER & UPDATE BY OWNER

At age 12 weeks, was given Milbemax v/j. Bam, then a Flea/Tick spot on at 12 noon. Fitting began at 5.30pm. Medication: Keppra & Fenofibrate B12 injections. Keppra phased out, 5 weeks later massive cluster fit & euthanised. Dam and all surviving puppies in litter neutered.	DATA TRANSFER FROM LYN NORTON Added 07.12.12 Updated 20.03.13
29-02-20		Mandy Patrick	N/A	N/A	Unregistered - UK	18-Jun-05	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	By the vet as she went on quickly to have a series of fits stopped only by being given an anaesthetic.	NO	Age 11. Death was related. Mandy went into a state of conscious shaking and her body shut down and she was unable to move over a period of days.	Suspected triggers: All vaccines, flea and tick treatments, loud noises and stress eg visit to vet, agility class, being left alone. Medication: Started on Epiphen, added Libromide, added Keppra as each drug became less effective. Also had rectal diazepam to bring her out of seizures. Extra Keppra used as preventative before a stressful event and after fitting to prevent recurrence. Spayed age one. Mandy had fits, often two in a short space of time, around once a month once we got medication settled. We added more meds as they became more frequent each time. To begin with she was very unstable as vet wanted to introduce meds gradually. Several visits to emergency vet. Eight fits after vaccination when she was four. Always fitted five days after flea and tick treatment. Diagnosed as tonic clonic epilepsy. In the few months she did not fit until last major episode. A beautiful girl who took it all in her stride and remained gentle and loving and full of life through it all. Major meds over nine years. Did not impact liver and kidney which was one of our big concerns.	OWNER
30-06-22		Mara	N/A	N/A	Unregistered - UK	11-Sep-11	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	10 years	YES	By vets Idiopathic Epilepsy	YES	N/A	Suspected triggers: Initially caused by contracting kennel cough. Medication: Epiphen and Epilase. Still settling the doses to best levels, meds have reduced grand mal sections of seizure but overall length of time for full event to come. Ataxia varies from not much to wobbly, to very wobbly. Assumed from meds rather than brain injury. Details: Grand mal fits usually 2 mins grand mal then 3 mins recovery, usually brings self out of activity. Medication reduced Grandmal section but whole sequence usually lasts 4 - 5 minutes. Has had 3 sets of cluster seizures since start of Dec 2021, meds increased each time. Spayed.	OWNER
30-04-21		Marly	N/A	N/A	Unregistered - UK	27-Jan-15	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 4 months	YES	Blood tests after change of vets	YES	N/A	Suspected triggers: Weather and pressure Medication: Epiphen 45mg x 2 daily Details: Neutered. Fits last up to 2 mins and about 10 mins recovery. Marly was bought from working farm at 4 weeks old... was not the first to leave the farm and was the smallest.	OWNER

29-02-20		Marley	N/A	N/A	Unregistered - UK	2011 approx	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	Not known (rescue dog, owned since 5 years old, had fits before being adopted)	YES	Blood tests excluded anything else, vet said most likely idiopathic Epilepsy	YES	N/A	Triggers unknown, although previous owner mistreated him and was convicted of animal cruelty after kicking Marley repeatedly on numerous occasions. He had a broken tail. Could have had injuries to head maybe? Medication: He has had far less fits since starting a raw diet with coconut oil and CBD oil. Once a seizure starts, we give CBD drops immediately and the fits subside quickly and he recovers far better. Before CBD he would have cluster fits and twice had status epilepticus where the seizure continued for nearly an hour. With CBD they last only a minute or two and are very mild. Neutered at approx 4 years old. Very dominant male, pushy with other male dogs. We think Marley is a Welsh collie. He is sable and white, herds upright and is loose eyed. Contacted the Welsh Sheepdog society who said epilepsy is very rare and practically unknown in registered Welsh Sheepdogs, although common in border collies. They suggested Marley is therefore most likely a Welsh Sheepdog/ BC cross, or if he's a pure Welsh, his epilepsy is probably injury related rather than inherited.	OWNER
30-06-22		Marley	N/A	N/A	Unregistered - UK	28-Aug-15	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	YES	Blood test at vets	YES	N/A	Suspected triggers: There were no triggers at first, but we noticed after he had been put on medication he had a fit when he was anxious at the groomers. Medication: Marley is on Epiphen tablets. He has been OK apart from the groomers incident so far. Details: No more detail provided.	OWNER
29-11-19		Marshallie Hoodyficious	Not known	Not known	BC	05-Nov-12	UK	Dog	Rosmarinus The Chocolatier	Rosmarinus Jaffa	Rosmarinus Demerara	Marshallie Izze	Rosmarinus The Rainmaker	Amazon Grace	1 year 1 month	YES	Vet confirmed Idiopathic Epilepsy. All possible tests done, including an MRI scan and spinal fluid tap	Not known	Not known	Medication: 40mg of Peixon twice a day. He was fit treated a week before, to which he was stressed at time of doing so and was off colour from that point up to first fit. He was fit on mainly raw with some dry food, had an allergy test done and he is allergic to chicken, duck, wheat and gluten. Changed to pure BARF diet minus the chicken and duck. In himself he became brighter when food was changed, he started to grow again, coat became fuller. His fits have become less frequent but this may coincide with having all possible tests done, including an MRI scan and spinal fluid tap, to diagnose epilepsy and being put on the right medication. When the first started he had several in a week, once food changed these decreased and since medication started they have decreased further. Longest between fits has been 31 days.	DATA TRANSFER FROM LYN NORTON Added 30.04.14
19-07-19		Marshallie Switch N It On	AP04298501	N/A	BC - UK KC Pedigree	05-Nov-12	UK	Dog	Rosmarinus The Chocolatier	Rosmarinus Jaffa	Rosmarinus Demerara	Marshallie Izze	Rosmarinus The Rainmaker	Amazon Grace	7 months	YES	Vet confirmed as Idiopathic Epilepsy	NO	Major seizure	Suspected triggers: No triggers identified. Time frame was too short to collate information. Medication: Peixon 400mg twice daily. One small fit on 28.06.13 whilst asleep on sofa lasting less than a minute, recovered within 10 mins. No further fits until 9th July, when found fitting in the morning. Rectal Diazepam given. Fitted again same day at 3pm, same treatment, but 4 further fits, taken to vet, kept overnight and stabilised. Home on the 10th but fitting again between 11am and 2pm so back to vet and again kept in overnight and sedated. Phenytoinone and a diaz. Prognosis was poor at this time. Brought home on the 13th July, Peixon 400mg twice daily. Details: Recovery seemed unlikely but daily improvements noted - motor function, spatial awareness, vision, recognition. Following 22 days charted phenomenal progress in physical and mental capabilities. By 1st Aug he was at 95% of his previous levels of Obedience training. On 2nd August he had another brief fit 15pm (similar to his first) with the same outcome. At some time between 3am and 4am on the 4th Aug he suffered a major seizure, rectal diazepam x 3 was administered but to no avail, and he passed away shortly afterwards before the vet arrived. Vet hazarded a guess at major haemorrhage as cause of death. Neutered.	OWNER

29-10-19		Moose	N/A	N/A	Unregistered - UK	15-Jan-19	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Moose took his first fit at 6 months, from which I took him to the vet and blood tests were conducted. Since Moose was a male BC the vet believed it was a high probability that Moose was suffering from idiopathic Epilepsy	NO	Passed away at 8 months old. Began fitting, fits were lasting around 4 minutes give or take. Was taken into vet where he was sedated. As he came out of the sedation he took a fit which he did not come out of	Suspected triggers: No suspected triggers. Medication: Started on Keppra and went two weeks without fitting. However had to be placed on Keppra as well due to him still fitting. After 3 weeks on Keppra and Keppra, Moose took a cluster of 7 fits within 18 hours and then was placed on Epilphen and Keppra. This allowed him to be fit free for 1 month until vets decided to lower the dosage of Keppra, the Keppra was dropped to half a tablet and then Moose took his final fits and eventually passed away. Due to the level of medication Moose was on, his focus and concentration were terrible. Details: I have recently read an article stating that the transibility of dogs suffering from epilepsy drops after their first fit and I can back this up from what I've seen with him.	OWNER

21-08-19		Phoenix	N/A	N/A	Non UK Unregistered (Border Collie)	30-Jan-14	CANADA	Dog	Etrick Moss (CICA 7385)	Imp Jake (ABC 174412)	Etrick Fait (ABC 184189)	Tess (Unregistered)	Quill	Reba (CICA Reg)	4 years	YES	Toxoplasmosis Titre	YES	N/A	Suspected triggers: It's only been a year and we are looking for triggers. Neurologist suspects seasonal pollen. Medication: Koppra, Topiramate, Zonisamide. Seizures stopped after the addition of Zonisamide. All three meds are taken three times a day. Details: Seizures stopped all winter and started up again in May. One in May, one in June, one in July. Peanut butter and potato chips might be a trigger. Neutered at 11 months, seizure average 2 mins. My dog is healthy, fit and competes in Rally Obedience trials. His personality has changed and he barks more, will often lack focus and will only obey half of the time now. He has started whining and is completely shut out. Sire registered CICA, Dam not registered. Phoenix is the only dog out of two Moss/Tess breedings (18 pups) with a seizure disorder. Phoenix's seizures are from Toxoplasmosis. It might be good to allow others connected to him through genetics to know that it is not an inherited disorder.	OWNER

31-01-22		Pupichino	N/A	N/A	Non UK Unregistered	22-Oct-15	INDIAN born, report to UK	Dog	Johnny	Unknown	Unknown	Unknown street dog	Unknown	Unknown	1 year	YES	Vet examination and blood tests	YES	N/A	Suspected Triggers: Originally triggered by rabies vaccine batch (suspected). His brother and my other (non-border collie dog) were also vaccinated but had another batch. Medication: Pexion 400 mg - 1.5 tablets twice daily, Levitraacetam 750 mg - 1 tablet thrice daily, Epiphen 60 mg - 1 tablet twice daily. Details: Puppichino was born in New Delhi, India as a stray dog and was neutered at 9 month old. We relocated him to the UK in 2017 July and he had shown no signs of epilepsy. Puppichino is now 9 years old and has been epileptic since he was a year old. He had only a few attacks early in year until December 2020, we didn't get him on medication. But in December 2020 he started having cluster seizures and was initially put on Pexion. He is now on 3 drugs (Pexion, Levs and Epiphen). He had a very severe attack of almost 90 minutes in October 2021 and had to be rushed to an emergency vet. It was triggered when the vet tried reducing his dosage of Levitraacetam. Fortunately since then he has cluster free till last night 3 Jan 2022, then he had a single attack yesterday. This is an improvement from the 6 or so he would have each month.	OWNER

31-03-22		Quickstep NHSB 2180612	N/A	N/A	Non UK Registered (Border Collie)	10-Mar-98	NETHERLANDS	Dog	Maks (NHSB 1824452)	Rex (NHSB Bil. G-2 1323996)	Berrie (NHSB 1611999)	Donna (NHSB 1956472)	Vic (NHSB 1394952)	Bobby (NHSB 1756146)	3 years	YES	Diagnosed by a vet	NO	Quickstep was pts at the age of 12/12 years. He had enough seizures, his body couldn't take anymore	Suspected triggers: Triggers were stress from other dogs, hormones, full moon and especially super moons. Medication: As there was only Phenobarbital and Potassium Bromide in those days as far as I know, he was on the max of both. Details: He still had a Grand Mal every month at a full moon at 03:30 at night. The Grand Mal took about 6 - 10 minutes. After his Grand Mal he was screaming for 2 hours and pacing, trying to hobble behind anything and after that came 7 hours of walking and panting before he came to his normal self. And then he slept for 24 hours. It was the same every month. Only just before we was pts he started to have cluster seizures. Then I knew it was enough. Quickstep was an intact dog, thus the hormones were a problem with other dogs. He was bred without any health tests from the parents and got a Dutch pedigree. He was out of Working Sheepdog Lines, only a few generations in the Netherlands. He also got supplements like herbs and the feed was changed from kibbles to meat which helped a lot. As we returned in those days he had his vaccines and deworming on a regular base. Quickstep was pts at the age of 12/12 years. He had had enough seizures, his body couldn't take anymore. So it was the only humane thing to do, to give him peace. He had a very active life with walks to the horses and playing with a football and doing lots of things but only with us, no other dogs except the ones he knew before the seizures started.	OWNER
30-06-22		Quinn	N/A	N/A	Unregistered - UK	21-Oct-16	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	5 years	NO	N/A	YES	N/A	Suspected triggers: Currently unknown. Medication: Pheno 60 twice a day Details: First fit around 1 minute. 2nd 5 weeks later, small one during night then one the next morning lasting around 2 minutes. Started meds after this cluster. Currently 50 days past that at 12/06/2022. Neutered at 1 year old.	OWNER
29-11-19	28-02-20	Quorles Buddy AW(G)	N/A	308023	BC - ISDS	01-Jun-10	UK	Dog	Snowmere Tarn JW AW (IDS 236436)	Kittenspool Campbell (IDS 182009)	Snowmere Jess (IDS 205613)	Canen Elsie At Corres (IDS 285796)	Eryll Roy at Canen (IDS 249362)	Canen Titch Puzzle (IDS 236878)	3 years 11 months	YES	Vet confirmed as Epilepsy	YES	N/A	Medication: Pexion 550mg twice daily which have not appeared to control them so changed over to Epiphen, currently at 50mg twice daily. Fed on Omigro Lamb and Rice. Fed Royal Canine as a pup. Fits vary in frequency, never been to a regular rhythm, 2 weeks to 8 weeks variation. Very short fit duration around 60 secs and back to normal within 5 minutes. Unintoxic every time. No multiple fits. Neutered before started fitting. I wondered if this had been a trigger but assured no by vets. UPDATE ADDED 28/02/2020 - Just to let you know so you can update your database. He is now Quorles Buddy AW(G) and still alive. Current medication is Levitraacetam (1 x 150MG three times daily) This has been the most positive medication he has taken for his condition. YES	N/A	Suspected triggers: Head trauma 10 months prior to first fit (running after a ball head first into a bench. Required stitches and teeth removed). Also given Nexgard Spectra 3 months prior to first fit. Medication: Not currently medicated. We have rescue Diazepam which we have used twice and now been prescribed Gabapentin to relax following fit. No preventative medications started. We recently started him on CBD oil. Details: One fit every two - three months. Lasting 3 minutes but prolonged post-ictal period lasting most of the day where he is very distressed. Seem to be caused by stress and vomiting. One fit he was in the shower, the other three were after vomiting which stresses him.	OWNER
29-11-19		Remajak Somerset Morn	Not known	Not known	BC	11-Jun-13	UK	Dog	Alicia Double Dare To Amordare	Alicia Mister Consistent	Alicia Lady Madge	Bordebeau Blithe Spirit At Remajak	Lochell Travell' South To Borderbeau JW SHCm	Lochell First To Finish At Borderbeau	1 year 4 months	NO	N/A	Not known	Not known	Medication: see below. First fit 28.10.14 - seizure in the afternoon, followed by a slow but full recovery to normal state. Second fit 29.10.14 at 7am. Seen by the vet after each seizure and blood tests undertaken. Vet advised diagnosis of idiopathic epilepsy at this stage but as yet no MRI or spinal tap has been carried out. He was otherwise fit and well with no further seizures as of 2.12.14. Initial course of Diazepam for approximately one week, treated with Epiphen twice daily from day of second fit for four weeks. Bloods have been sent to Epiphen to assess viability of phasing out medication. 24.3.14 castration under general anaesthetic, vet treated with Advantage for possible fleas same week. 1.10.14 first year vaccination. 25.10.14 routine worming with Panacur. He is otherwise fit and healthy. All breeders/owners directly contacted were informed immediately with s/n/dam owners agreeing to wait for completion of initial four week treatment plan before submitting to database. Dam & littermates will never henceforth be bred from. DNA to be submitted in due course. Fed James Wellbeloved Turkey & Rice, no change before or after seizure. Neutered on 24th September, before onset of fits UPDATE 03.05.15: Ryan suffered a seizure at 10.30pm. Recovery time was quicker than the initial two seizures last October but he lost vision for 15 minutes. 25 minutes after the seizure he took his ball to his owners to ask for a game. At the time of the seizure, his owners report that his Epiphen dose had been reduced gradually to 1/4 tablet each day (as he had suffered no further fits after the initial level with the plan to take him off med altogether in another week. However, their vet has now advised that the dosage should be returned to 1/2 tablet each day.	DATA TRANSFER FROM LYN NORTON Address 04.12.14 Update 01.05.15

No injuries or changes to diet, not recently had flea or worm treatments. Entire. He was his usual happy, lively self when we left the house, drove to a show and was acting 'odd' when we arrived. He had drool hanging from his mouth and seemed a little vacant. Took him for a walk, he seemed spooked which wasn't his personality, went to him on lead and he fell to the floor fitting. Lasted approx 8-10 minutes. No help available at show, phoned vets who recommended taking him in, said as it was his first fit would be highly unlikely to have another straight away. Travelled to van with myself, he didn't return to his usual self and started fitting again within minutes. I had a vet on speakerphone, the fits were huge and he was struggling to breathe, followed directions and tried to resuscitate. He very sadly died. Not confirmed as epilepsy as didn't want a postmortem but the vet said it was highly likely due to his physical appearance.	DATA TRANSFER FROM LYN NORTON Added 18.07.24

30-09-20		Rusha Bright Little One - Nell	Not disclosed	N/A	WSD - UK KC Activity Register	10-Apr-15	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	YES	By the vet after having three in one morning	YES	N/A	Suspected triggers: Low blood sugar (not eating often enough). Medication: Diazepam (in case of fits that last longer than 5 minutes). Details: Neutered. Frequency of fits: 1 every year (one time between March and June). Length of fits: 1 min for aura, 1 min during grand mal phase, 10 min afterwards (temporary blindness and unable to walk properly). Vaccinated with yearly boosters. Vet prescribed de-flea and de-worm medication, as standard. Food is pedigree wet jelly (dog does not tolerate dry food well - causes bloating and chronic flatulence). Several pedigree cheese and beef mini treats throughout the day and 1 pedigree dentalstick per evening. Since identifying the potential trigger no fits have occurred, as the dog is now fed at exact timings each day.	OWNER
19-07-19		Ryans Mark V027 (VSDWA)	N/A	N/A	Non UK Registered	19-Mar-07	AUSTRALIA	Dog	Princes Doolley V025	Braiston Don V223	Princes Zoe H022	Allandale Gypsy Q238	Dan (ISDS 22072)	Crowdsdale Emily Sarah Q7789	10 months	YES	All usual testing was undertaken to rule out other causes (not MRI)	NO	Euthanased (17 months) after bad weekend and seizure on the Monday morning - very restless, whiny, regular vomit to settle. Seizures getting worse, developed into cluster seizures preceded by running without purpose including into fences/gallies.	Suspected triggers: No triggers identified. Medication: Phenobarb and KB. Increasing dosages but seizures got worse. Details: Neut on elimination diet, then natural diet only (holistic vet advised). Thyroid panel showed normal range.	OWNER
30-09-22		Sadie	N/A	N/A	Unregistered - UK	26-Dec-20	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 9 months	NO	Not yet diagnosed, first fit today but we confirm.	YES	N/A	Suspected triggers: Suspected trigger is pollen as he is worse throughout the summer period. He is on a hypoallergenic diet. Fully vaccinated. Up to date on flea and worming. Medication: He started on Pexion which made clusters worse. He moved to Epiphen which was a lot better but still having them often. He has just started on Bromide and after 4 months, we are going to start reducing the Epiphen. Details: He is neutered. He was fitting every 2 weeks but currently 33 days seizure free from starting Bromide. His fits go for approx 5 mins and they are all grand mal. I have not noticed him have a focal seizure nor does he just tittle. If he has a fit, it's always a big one. He starts his fits by turning his head all the way around and basically looks behind him. His eyes go wide and he starts to fit. He always pees and foams at the mouth. Sometimes he bites his tongue ending up in bloody spit being thrashed around.	OWNER
29-11-19		Sam	N/A	N/A	Unregistered - UK	30-Mar-13	UK	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	YES	Multiple fits leading to seeing a neurologist. He had had numerous blood tests and an MRI to eliminate tumours etc.	YES	N/A	Medication: Epiphen. Nothing unusual happened that I can think of I did notice it initially happened after we had been out and we got caught in the rain. Like he had caught a chill, it happened often after a soaking. The vet said it wasn't connected, I'm not to sure. After diagnosis at Bath Vet hospital where he had an MRI and I think a lumbar puncture he was initially given just Epiphen, strength and dose varied, then also given Libramide when fits continued, can't remember strength. The fits did change even though he was on medication. The fits didn't last as long and I could tell when he was about to have one, or if he had had one when he was home alone. Usually when he was sleeping then he would wake, his head would shake he would fall over and his back legs would move as if he were running his front legs would be stiff. Was fed on Bakers complete. A lighter diet was offered after fits although he was usually starving when he came around. He gained weight so we were advised to give him a weight control food, there was no change in fits. He was neutered before the fits began.	DATA TRANSFER FROM LYN NORTON Added 21.06.14
29-11-19		Sam	Not known	Not known	BC	01-May-07	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years	YES	MRI and Lumbar Puncture. Both Vet hospital confirmed as Epilepsy	NO	Died May 2013 aged 6 years. He fitted off and on for just over a week in clusters. We arrived home one evening to find that he had died. 29-11-19		Seve	Not known	Not known	WSD - Unregistered	09/09/02-Nov-07	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	Vet confirmed as Epilepsy	Not known	Not known	Suspected triggers: On keeping a diary fits always on around spot on flea treatment - stopped using and fits a lot less severe and less frequent, plus have changed his diet to part raw and don't give any vet meds unless very necessary (see alternative and herbal) and ALWAYS check they are suitable for dogs with seizures. Medication: None. Fits always in a morning after a deep sleep but have been able to halt them when I see and near the signs, vomiting noise and his kicking and fall to the floor and stroke him gently. Now feed part raw / part F/W kibbles. Did read an article about giving frozen vanilla ice cream immediately after a fit. Have only tried this once but was AMAZING at bringing him round very quickly. Fits have gone from every 3 to 4 months to every 5 to 6 months (last time was 5 months 22 days) and are less severe lasting less than 1 min and recovery time afterwards a lot quicker (due to ice cream?). Dog came from a rescue and was neutered before owner got him.	DATA TRANSFER FROM LYN NORTON Added 11.09.13 Updated 20.10.13

29-11-19		Skye	Not known	Not known	BC - Unregistered	09-Jul-10	UK	Bitch	Blue	Ted	Meg	Dot	Glen	Nell	3 years	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Epiphen 60mg twice a day and Peixon 400mg half twice a day. It was a really hot day in July 2013 late afternoon evening, was going to take Skye in the car to park. It happened outside, then again at the same time on the next day while talking her to the car and the following week then came happened. Then was diagnosed as epileptic. To start they were every 21 days and not that intense but the last couple of months they have become more intense and not regularly. The last week she had cluster fits more and more so medication was changed to Peixon and weaned off Epiphen but that did not work she was put back on Epiphen and Peixon and so far it is working well. Fed on Bakers complete and Cesar. Entire.	DATA TRANSFER FROM LYN NORTON Added 12.05.14
28-02-21		Skye	N/A	N/A	Unregistered - UK	05-Jun-17	UK	Bitch	Scottish Farm dog	Unknown	Unknown	Scottish Farm dog	Unknown	Unknown	3 years 3 months	YES	Several identical seizures. Vet feels as they started around 3 years old, otherwise extremely healthy fit back, epilepsy likely cause	YES	N/A	Suspected triggers: No known triggers at present, still documenting seizures to find any pattern or link. Medication: Treated with Phenobarbital twice daily (under duress), initially 60mg, halved to 30mg by me as behaviour badly subdued by dose. All ok at present, hopeful of stopping or reducing meds after spaying and hormonal fluctuations taken out of equation. Using EFT tapping, calming and enjoyable, also Reiki. Very dopest, poor soul could barely walk. Have discussed with vet who agrees the treatment shouldn't be worse than the condition! Details: First fit at 4 am, jaw chattering woke me, foaming, twitching and urinary incontinence, (having worked with kids/seizures was aware of how scary it looks, and to me it is. Around 3.5 mins. Four long bouts and jumped so like nothing happened. Vet did urine test in morning, slightly elevated white count so treated with antibiotic in case of infection. All other fits (5 months) have been identical, only shorter in every case. Differing times, no real common denominator. One thing I am monitoring is we use a calor heater in sunroom topping up heat in autumn/winter. Most recent seizure Skye had spent half a day with me there doing a Zoom course online. It is well ventilated and has a CO alarm, but wonder if she is affected by this? Just gripping at anything I can change to remove meds etc.	OWNER

YES	N/A	Suspected triggers: No triggers identified. Medication: Epiphen started 2 weeks ago. No seizures since. Details: Fits are normally 2-4 weeks apart. Mostly grand mal. 3 waves lasting 5-6 mins.	OWNER
29-10-19		Smudge	N/A	N/A	Unregistered - UK	16-Jun-99	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	9 years	NO	N/A	NO	PTS following a significant seizure at 17.5 years. Vet concluded this last seizure had caused brain damage and a high probability of a recurrence within a few days	Suspected triggers: Over activity was definitely suspected as fits generally occurred outside of the home after ball chasing or similar. There was one event after a clash of heads whilst running for a ball with our other dog. Medication: No medication recommended by vet due to infrequency. Details: Fits were infrequent, possibly once or twice a year but reduced as his age increased and his activity levels decreased. Although he was 9 when we first realised he was fitting, with hindsight we realised there may have been earlier occasions where we had not recognised the symptoms from around 2 years of age. Registration status not known. He was full Border Collie but adopted from Border Collie Trust at approx. 10 weeks old. DOB added as approximately.	OWNER
29-11-19		Smudge	Not known	Not known	Collie	19-Oct-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 1 month	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Epiphen increased to 2 twice daily 60mg. After 4 months given (bramitex, which only made him lethargic and not acting like his usual self. Now on Epiphen and Levetacetam which we used to give him now and then before a fit, but not on one every 8 hours. Fits started off as around 8 or 9 clusters every 21 days, this increased to 12, his last one being 16 clusters from 2pm to 7 am the next day. Some last 30 to 40 seconds, some 2 or 3. There is usually 15 minutes in between but not a few minutes. Clenches jaw, then jaw wide, outstretched legs, urinates sometimes and a slaver from mouth and the smell is awful. Then he will pace, used to pace for 20 minutes and could not see us. Now he paces and tends not to bang into objects, seems to manoeuvre around them a little better. Before a fit, he howls at the moon, tries to escape, but now he tends to approach me to cuddle and follow me everywhere I go. You can see in his eyes that he is due to fit, his personality changes. The fits had increased to double the amount, but more often between them. Neutered before fits started. He had been neutered only 4 weeks before. He had trauma to his leg when only 5 months. And we had a collie out when he seized the following week.	DATA TRANSFER FROM LYN NORTON Added 16.07.15

Suspected triggers: No idea other than routine booster vaccine given 3 weeks previously. Medication: Tess was in vet hospital for 2 days to try stabilise. Just so devastating to us Tess has this. Details: I had a Labrador years ago who fitted every few months but not cluster fits like this. The poor dog didn't know where she was, who we were, couldn't walk - horrendous experience.	OWNER
29-02-20		Tess	N/A	N/A	Unregistered - UK	02-Feb-11	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	8 years	YES	Consultation with specialist neurologist at Langford Vale in Bristol, who diagnosed Idiopathic Epilepsy	YES	N/A	No specific trigger that we know of although we have changed diets to a hypoallergenic one since her seizure started. She is 10th generation from 3 Bitches & 1 male's pedigree. Her Mother Tess was sired by a high class of Phoenician (Epilph) her grandparents at Langford in March 2010 which made her a cross and her granddad of the back and the other's brought her back to the family side effects were off. The dog was reduced to a maintenance level over a few months until she was on 15mg every 12 hours. She still fitted on medication, roughly once every 4-6 weeks. However, she developed resistance due to increased blood glucose effect and excessive drinking, so we set introduced Proton 300mg every 12 hours and we weaned her off Epitaur gradually over 1 month. Three days after she had Epitaur October 2019, she had her seizure as a 2 hour period (previously only over her own flat at a time) and was hospitalized overnight. She was started back on the Epitaur (usually 15mg maintenance) and we tried to keep the same amount as we started previously and haven't fitted since September 2020. This is a quiet bitch that we rehomed from the Border Collie Trust at 2 1/2 already spayed when we got her. There was no medical history or evidence of seizures before we got her. Tess used to sleep downstairs in our previous house. A year after we moved to our current house in 2017, Tess started sleeping upstairs in our previous house. She started seizing in March 2018. She only seizure to the middle of the night when she is asleep and as far as we know, she is unaware of them and when they are going to happen. Tess has around 30 fits. She was and is stable occasionally which is why we believe the issue had arisen before she started sleeping upstairs because we would have felt the wet on her face in the morning (it takes hours to dry). During the seizure, her eyes roll, she starts breathing her head to the back and her body will stiff. She paddles with her front feet before going stiff and still, breathing heavily and then passing before she comes round. She is very disorientated for about 30-45 mins and then goes back to sleep or wakes up normally. Excessive exercise and stress don't seem to have any effect. I wonder if the hypoallergenic diet has made a difference as she has always been food sensitive and used to be very picky but had not eating through a lead in the morning (after eating). She loves the new diet and her stools are good. She is definitely more hungry and obedient.	OWNER
21-08-19	28/01/2020 & 28/02/2020	Tess O'Broonleaw	AH0901331	278780	BC - Dual Registered UK KC & ISDS	14-Aug-05	UK	Bitch	Moss (ISDS 263829)	Mac (ISDS 224692)	Lymwood Nell (ISDS 234979)	Jen (ISDS 267609)	Glen (ISDS 243997)	Nell (ISDS 234113)	2 years 2 months	YES	Blood tests taken at same time as vet affirmed that description of seizures couldn't be anything else	NO	Tess died on Thursday 23rd January 2020 at 14 years old. She was pts quite peacefully as her spinal problems had spread considerably and we did not want her to get to a state of distress.	Suspected triggers: Certain paint smells, nervous excitement, illness, once we suspected a vaccine, vet certain it's bank holidays too as she always has a cluster when they are off duty! Medication: Currently on Epilepsin, Potassium Bromide, Levetiracetam and Sulficap & Valerian also has Gabapentin but that is now amongst drugs prescribed for spinal problems. She has been more stable on the Koppa than ever before. History of drugs tried en route available. Details: Spayed 13/3/06. Heard of others from the sire also diagnosed epileptic. Although we have occasional solitary fits they usually come in clusters (largest cluster was 27 over a Christmas holiday. Now I would suspect that she would still be enjoying a reasonably active life, as it's the still wants to play, go for short walks and put on the near her 14th birthday. The epilepsy has aged us rather than the dog! I would always advise working in partnership with the vet and insurance company and we have been blessed with all the support we have received. UPDATE ADDED 28/02/2020 - We regret to report that Tess died on Thursday 23rd January 2020. She was pts quite peacefully as her spinal problems had spread considerably and we did not want her to get to a state of distress. Having been warned by the vet who diagnosed her epilepsy that he doubted she would reach the age of two we feel blessed to have had her in our lives for over 14 years. She had grand mal seizures at rest, work (Obedience) and from running so no particular trigger. Medication: She was on Phenobarbitone and regular blood tests from 2003 when diagnosed, until about 2006 when no more fits. Drug free for 3 years. Then started petit mal again and put on low dose of Phenobarbitone which controlled fits. Details: She then developed convulsion. She was spayed at approx. 18 months. Did not throw through fits but went completely rigid and tremored. Lasted about 3-4 minutes, then with cooing came round and had a cold drink to bring her temperature down, then back to normal. Had Diazepam to administer rectally if did not come out of fit but never had to use it. In total probably had about 6 grand mal and several petit mal which were not too noticeable. Thought at first to have heatstroke, then due to raised calcium levels thought to be a problem with parathyroid gland. Believe other puppies sired by Detania Summeram to have developed epilepsy but had retired from stud when found.	OWNER

28-02-22		Trickster of Mischief - Luke	K150380	N/A	Collie Cross - UK KC Activity Register	30-Dec-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	MRI Brain scan and CSF tap	NO	5 years. Medication induced severe pancreatitis.	Details: lengthy seizure after resulting in administration of rectal diazepam 10mg x one or two. Suspected triggers: We had no new as to his triggers. We administered certain foods, he still fitted so re-introduced them. We didn't think it was food related, although he was raw fed from diagnosis. He was chemically castrated 6 months before fits started, 3 months after chemical implant we had him surgically castrated. We wonder if that had an impact on the start of his seizures or not. Medication: Initially started on Levetiracetam 250mg TDS. Seizures increased so drug was increased to 500mg. Christmas Day 2017 he suffered 4 seizures within 12 hours, instructed by specialist to load dose him over 5 days and meds increased to 750mg TDS. By June 2018 we had to introduce Pheno, this was increased at least twice. 2019 he started on Potassium Bromide. It made him extremely unstable, we had to use one of the Help Them Up Harnesses to help him get up as sometimes he couldn't manage. On a vet visit with one of our other dogs, my vet cried when she saw how uncoordinated he was, even though we had told his neurologist. She immediately got on to them and they reduced the drug. He did improve but still had little issues at times. Unfortunately I don't know the sire or dam, even though we met mum. However, I watched my brain this morning and remembered that we got him from Barn Farm Border Collies in Stafford (or near there) and the chaps name was Ed (Edward). One thing we did do with Luke (our epileptic) was enroll him and his bestie (my wife's boy Darcy) onto the P.V.C.'S IDEAS study. They went for the day taking part in different trials and having fur and stool samples taken. That was Potassium Bromide. Details: We wondered if weather pressure changes can set seizures off as well, maybe environmental things. We have overhead electricity cables where we live but we know. Castrated, seizures started 3 months after this.	DATA TRANSFER & UPDATE BY OWNER

The fits are very mild and she is at this time being treated holistically. Her first fit was on a day when the dog was out running and we thought that might have triggered it, however after her second one we took her to a vet to have it confirmed where several tests were done. She continues to fit irregularly on average one to two times a month. Originally from Diamond High Energy but she is not and it was recommended that we place her in a less physical home so that her protein and fat content could be lowered. She is now in a pet home on an adult formula by Diamond. The fits are more frequent now but also more mild. Spayed.	DATA TRANSFER FROM LYN NORTON Added 14.10.14
21-08-19		Willow	N/A	N/A	Unregistered - UK	05-Jul-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	14 weeks	YES	By a brain scan. They couldn't find any problems with her brain. So the conclusion was Idiopathic Epilepsy.	YES	N/A	Suspected triggers: No triggers known. Tends to have seizures only when sleeping. Medication: Started at 60mg of epiphen twice a day. Now currently on 60mg twice a day. Diazepam rectal tubes are given during or just after a seizure to help calm her down. Levetiracetam 500mg tablets are given to break up any clusters. 1 tablet after 2nd seizure and half a tablet every 8 hours until 48 hours after 3rd seizure. Since starting on 60mg of epiphen twice a day, Willow went 20 weeks without having a seizure. Before that she was having them every few weeks. Details: Had Willow from a local rescue centre when she was 10 weeks old. I have no background information of her at all. Willow has always been clumsy, she's not your typical bright intelligent border collie. She tends to trip over her own feet, bump into things. At first I thought maybe it was just because she was a puppy getting used to her new surroundings but as she was getting older she was still the same. At 14 weeks she had a massive cluster where she had 9 before I even got her to the vets. They had to put her under anaesthetic 4 times to bring her out of the cluster. I don't know if this affected her brain but sometimes she's very uncoordinated.	OWNER

Nothing unusual happened that might have caused fitting to start. She was being fed on dry food, none on Chappie. Fits are happening more often and are more severe. Neutered, but didn't make any difference to the fits.	DATA TRANSFER FROM LYNN MORTON Added 25.07.14
21-08-19		Woughstock Wattsdas - Try	KCDD045443	N/A	WSD - UK KC Activity Register	27-Dec-92	UK	Dog	OB CH Bisquet Dan	OB CH Chalkwell Greywood Danny	Ailreze Sea Spangle	Woughstock Wyesdesyne	Master Key of Kipose	Woughstock Wonder	4 years	YES	By vet and process of elimination	NO	15 years - age related	Suspected triggers: Sudden excitement would always trigger a fit but also fitted in his sleep. Medication: Phenobarbitone 50mg x 2 daily controlled fits from 6 weeks to around 3 a year. Details: At 6 years I took him to see holistic vet Christopher Day and gave a very detailed diary of events. He had fitted every 6 weeks prior to meds being introduced around 3 times a year. He prescribed a homeopathic remedy which I gave daily. At 8 years I started to start to reduce the pheno as had not fitted since visit to Mr Day. I reduced over 4 months to 0 pheno and Try never fitted again.	OWNER
30-04-21		Wren You Have It Flaunt It - Wren	K158363	N/A	WSD - UK KC Activity Register	21-Oct-16	UK	Bitch	Klaminogue Old King Cole	Klaminogues That's Daz's Tii	Detania Golden Girl	Stella	Cookvale Dark Stranger	Lucy	4 years 2 months	YES	Had blood tests after the second fit. Vet said it's probably 'Idiopathic Epilepsy'.	YES	N/A	Suspected triggers: No suspected triggers. No accidents or illness prior to the fits. When only has had puppy vaccinations and I do not use chemical treatments on her. Medication: Since the fits she has been on MCT oil and has not had a seizure since. Details: Wren has been raw fed since a puppy. She had a hip spay after her third season at the age of two. She is a fit healthy dog and has never had any accidents or illness prior to the two fits. Wren had her first fit on Saturday 5th December 2020 at 8:45am. Heard a knocking downstairs and I found her collapsed having a generalized seizure which lasted under one minute. She made paddling movements, drooled/frothed and urinated. She came round quickly, being wobbly for 2-3 minutes. After that she was back to normal like nothing had happened. Her second fit was on Monday 14th December at 2.30am. She had got up in the night wanting to go outside. This is not unusual for her as she often gets up at this time to go toilet. As I opened the patio door she collapsed to the left and started fitting. Exactly the same as the time before. Quick recovery and within a few minutes she ran back upstairs back to bed and went to sleep.	OWNER
29-11-19		Windsend Maurice Traveller	Not known	Not known	WSD	03-Dec-90	UK	Dog	Monkfield Minstral JW	SH CH Melodior Flint at Dymalar	SH CH Whemway Janita of Monkfield (ISDS 123211)	Caristan Charisma	SH CH Caristan Captain (ISDS 105985)	Rossaro Isabella of Mabella	8 months	YES	Vet confirmed as Epilepsy	NO	1 year 7 months. Euthanased in July 1992 when fit frequency increased to less than 1 week between clusters and the fits were affecting his liver. His personality also changed and he lost the ability to remember simple commands	Medication: Initially Valium and Phenobarbitone. Then Potassium Bromide and Epilim added after specialist advice. Doses systematically increased which increased the space between fits but did not reduce the intensity when the cluster fits happened. These required large doses of IV Valium and Phenobarbitone for 12 hours. IV dexmethasone was given the following day and subcutaneously the next 2 days. No changes made to diet. Fit few were single fits then every fit was a cluster fit. Response to increased medication doses was to increase the time between fits. There were no fits between Feb and June 1992 then the intensity got increasingly worse. Neutered on Vets advice, but made no impact on fits.	DATA TRANSFER FROM LYNN MORTON Added 11.09.13

Stress doesn't help. Medication: Epiphen, Libromide, Levetiracetam, Zonisamide. All help but have had to be added over time (in the order as written. Dosage tweaked over time too). Details: Neutered before 8 months old at The Dogs Trust. He cluster seizures and has worsened over time. Seizures usually last less than 1 minute, but had 1 spell last month of status epilepticus. The post-ictal period varies in length although doesn't usually last more than 5 to 10 minutes. He is now on a Neuro diet. I also use extra Levetiracetam as pulse therapy as soon as he's able to swallow after a seizure.	OWNER

19-07-19		Zak	N/A	N/A	Unregistered - UK	15-Jun-12	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	8 months	YES	Blood tests	YES	N/A	Suspected triggers: Exposure to nemectin based cattle and sheep products. He was badly abused by a farm labourer which resulted in a head injury. Medication: Phenoprett. Some a twice daily. Details: Zak was neutered at 2 yrs old. He hasn't had a seizure since leaving the farm and starting medication. The longest seizure I witnessed was around 5 mins, on that day he had 7 in total with the others lasting around 2 mins. I don't know anything about Zak's breeding, all I know is that he was bought from a shepherd in the Glenlyn area who has a constant stream of pups. He took part in the Neumarket Canine Health Check a couple of years ago.	OWNER
