29-11-19		Absolutely Dot (AG CH)	Not known	239196	BC	10-Jul-98	UK	Bitch	Lethams Maximillion (ISDS 208556)	Roy (ISDS 161740)	Lethams Kip (ISDS 176421)	Pipped at the Post (ISDS Pip 225768)	Snip (ISDS 207611)	Tess (ISDS 196529)	5 years 6 months	NO	N/A	NO	Died of old age	Medication: None. Dot only ever had ONE 'almost fit', that came on 60 minutes after whelping. Diagnosed as pre-ictal. Treated with x/c calcium and magnesium for 2-3 weeks. Never fitted previously, and no further fit-like episodes afterwards. At age 14-15, started having drop attacks, where she would lose consciousness after making strange howling noises. Diagnosed as secondary to poor cardiac function, and she stopped having them after starting digoxin. Spayed.	DATA TRANSFER FROM LYNN NORTON Added 10.03.15

31-01-21		Bailey Lyness	N/A	N/A	Unregistered - UK	02-Oct-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Glasgow Vet School and Hospital	YES	N/A	Suspected triggers: Have not been able to confirm a reason so far. Medication: Epilphen 120mg twice daily, Libromide 1.5 tablets a.m. and 1 tablet p.m., Zonogram 100mg twice daily, Kepra 500mg 2 tablets 3 times a day after each cluster fit for 7 days, Destollit 150mg tablets twice daily, 10mg CBD capsule at night. Details: Bailey is neutered and he has fits every 3 to 4 weeks generally although at the moment they are weekly. He has generally 3 cluster fits at a time that last 2 to 3 minutes but yesterday he had 7 fits over a 6 hour period. It is so stressful as it is hard to keep Bailey quiet after the fits as it takes him around an hour to come round and see properly as well as regain his balance. We have bought a child's playpen to keep him in so as he can't get out and hurt himself as the dog pens he was able to escape from. Typically Collie.	OWNER

19-07-19		Bewitched Over Pendle - Zara	K136807	N/A	WSD - UK KC Activity Register	25-Dec-10	UK	Bitch	Unknown	Unknown	Unknown	Jess (ISDS no. not known)	Unknown	Unknown	6 years	YES	While in emergency vets, while in epileptic status	NO	6 years 2 months. Went downhill very quickly after another emergency admission to vet on Thursday 9th March 2017, collected her Friday evening seemed her normal self but not long after we arrived home she had another fit, spoke to vet who advised 3 days of Kepra, went rapidly downhill over the weekend to the point Zara seemed like she was in a coma, made the decision on Monday morning 13th March 2017 to PIS	No triggers that I was aware of. Medication: Sedation at emergency vet for epileptic status on January 5th 2017, then given 10 Kepra and 10 Phenobarbital. Came home 3 days later and was on Phenobarbital 12 hourly, very quiet and disorientated at first but got better and more her normal self over the following week, told by vet to give Kepra after fits to prevent clusters. Had massive fit lasting 7 minutes. Let owner on my phone when I realised what was happening, this was her first fit to my knowledge, got her to vets within half an hour, seen by vet sent home and was told it was possibly a one off. Booked in for blood tests 2 days later, went into epileptic status same night with a trip to emergency vets, was stabilised and returned home on medication. Small fits recurred every couple of weeks, with 2 lots of clusters, went rapidly downhill after final 2 fits on 10th March 2017, while still in vets and one at home but never seemed to fully come around from the last. Zara was a local farm bred Collie, contacted breeder to ask if there was any history of Epilepsy within her breeding, wouldn't answer me and then blocked my tel number. Zara was PIS 13th March 2017 to avoid my girl any further suffering. Zara was spayed at 12 months.	OWNER

29-02-20		<b>Blodwen</b>	N/A	N/A	Unregistered - UK	28-Feb-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Neurology assessment	YES	N/A	No known triggers. Blodwen is a Double Merle collie from a breeder but to me via an informal rescue. She has focal seizures - her MRI was clear so the seizures are not related to brain trauma or disease. Medication: Started with CBD aged 6 months which kept symptoms under control until she was one year old. They became significantly worse and unmanageable so she was started on phenobarbital and levetiracetam - starting doses were steadily increased to maximum for her weight and we also increased CBD oil and finally introduced Epitaur. Over a six month period her seizure related behaviour gradually diminished from jerking awake every few minutes all through the night, circling, twitching and being aggressive) and she now sleeps for up to 11 hours through the night with no issues and is markedly more settled in the daytime. She was spayed at 6 months old but the focal seizure symptoms had already started (eg twitching, staring with head tilted, circling). The neutering didn't appear to make it worse. I have come to understand Blodwen, her symptoms and treatment requirements through close observation, asking for help from a Double Merle Facebook group and researching this genetic problem. We have a regular border collie from a farm litter who has displayed no health problems. I had no knowledge of merle or double merle collies when we rescued Blodwen and this was not mentioned by the person we rescued her from.	OWNER

Medication: Jack has Epiphen 1 x 60 mg twice a day and have just started him on Topiramate. Details: Vet started Jack on Epiphen did well then had occasional fit, tried higher dose but he was worse so put him back on lower dose. He still has a few fits a year and focal ones. Went from a quiet dog to being very noisy. Not neutered. His fits are a few mins, he takes a while to come round. Last one last year, he could not see and panicked, he took a while to recover.	OWNER
29-10-19		Choystean Wyken Pippin - Murphy	AS00677402	N/A	BC - UK KC Pedigree	24-Jan-15	UK	Dog	Jacksrofer Silverbitch Over Choystean	SH CH Littlehorn Galaxy	Jacksrofer Greatglen Be My Girl	Sarkam Life Imitation In Choystean	Terannos Final Demand	Sarkam Destiny's Dream	2 years 2 months	YES	Referred to Willows at Solihull who examined & did an MRI scan	YES	N/A	No reason for fitting as far as I am aware. Medication: Initially Levetiracetam 3 times a day but as it did not control the fits Epiphen was included twice a day. Full blown fit at lunchtime by my feet. Went on for a minute from which he got up and walked slightly wobbly into the garden. Up until then perfectly healthy, happy young dog. Fed on Millie Mable. Seizures are now under control. He was castrated at almost 3 yr old but prior to that he was chemically castrated twice. He is currently well controlled on meds.	OWNER
28-02-21		Cloudy	N/A	N/A	Unregistered - UK	28-Aug-16	UK	Dog	Unknown	Unknown	Unknown	Misty	Unknown	Unknown	1 year 7 months	YES		YES	N/A	Suspected triggers: He definitely has epilepsy but the condition could have been triggered, or exacerbated, by the original liver problem. Medication: Cloudy responds very successfully to a regimen of KBr (Lithromide), Levetiracetam (Kepra) and Phenobarbital (Epiphen) and has almost no fitting, with the occasional 'petit mal' seizures. He has very occasional full tonic-clonic seizures when his medication has been compromised e.g. missed dose or after activated charcoal treatment for ingestion of toxins. Details: Has epilepsy and liver shunt. He started fitting regularly at 18 months in February 2018 and responded well to Phenobarbital. Went into status in May, probably due to hepatic encephalopathy. Routine blood analysis showed a liver anomaly and it was found he had a hepatic shunt after scanning. Surgery was carried out in June with 100% success, but the fitting continued. He is still taking regular medication at 4+ years of age with occasional recurrence of fitting especially if medication is compromised, even though his liver is perfectly healthy and functioning. No indication of food relating to seizures but he is now on a hepatic diet due to the shunt.	DATA TRANSFER & UPDATE BY OWNER

Lived until she was 14 years	Del used to fit every 6 months, 3 fits and then none for next approximately 6 months. This continued until I moved, then she stopped. Del was never given any medications as my vet thought they would cause more damage than the fits themselves. Full bloods were done annually until towards the end of her life, there were no abnormalities thrown up. I moved when she was approximately 11. Once I moved there were no more fits. Spayed.	OWNER
31-05-20		Delanor Pinball Wizard -Whiz	AJ03743806	N/A	BC - UK KC Pedigree	22-Jun-08	UK	Dog	AG CH Forbyfor Turbo Diesel	Woodjurnal Red Wine	Tri Fly	Delanor Waggit A Lot	Rosmarinus The Weryman	Delanor Kirri	5 years	YES	Various consultations and investigations with vet. Blood tests etc for other causes (nothing found). No scan was done.	NO	Whiz died in status when he was 7 years, 3 months. He started fitting early morning on Sept 19th 2015. He did not come out of the fit as he usually did and we were unable to stop it. After speaking to the emergency vet we managed to carry him to the car. Sadly he died on the way to the vets	No known triggers. I spent two years looking for triggers and did wonder if swimming in the sea was a trigger for Whiz (aah ???) but the day he died he hadn't been to the sea for two weeks. Medication: He was on Epiphen 30mg twice a day. This had kept him relatively stable until the last day. Whiz was neutered at 15 months. I do not believe this had any effect as he did not start fitting until he was five. He had cluster fits, usually two or three lasting less than a minute with about half an hour between. He only had five groups of fits over an eighteen month period. He was, however, hospitalised overnight in July 2015 when he fitted six times over five hours. The vets gave him rectal valium.	OWNER
29-11-19		Detania Glittering Pride	Not known	Not known	BC	29-Jun-97	UK	Bitch	Detania Cosworth	Detania Singing The Blues	Detania Keira	Detania Faith Moves	Detania Araz (ISDS 162879)	Detania Lady Lucy Lockett	4 to 5 years old	Not known	Not known	NO	10 <sup>15</sup> years old. Megan actually contracted Bone Cancer in her shoulder which sadly ended her life.	She started having epilepsy at around the age of 4 or 5 I think, with one fit which lasted probably less than a minute. They never actually lasted more than a minute I would guess, just seems a long time at the time. They gradually increased until about 18 months - 2 years, months later when she had 5 in one day, the vets then put her on medication - Phenobarbital I believe. This stopped the fits until the dosage needed correcting. Megan had to have regular check ups every 6 months (I think) and the medication did gradually increase. That's about all the information I can give you I'm afraid - hope it helps in some way.	DATA TRANSFER FROM LYN NORTON Added 25.07.14

28-02-21		Easterdale's Fleet O'Foot	K134734	N/A	WSD - UK KC Activity Register	07-Jan-10	UK	Dog	Easterdale's Prince Rory	Rock	Kim	Just the Tonic	Robbie	Tess	3 years 9 months	YES	Diagnosed by my vets and confirmed by specialist	NO	Age 8 years 4 months. Fleet was pts on 30 May 2018 following several hours of continuous fitting	Suspected triggers: None mentioned Medication: Started on Pexion December 2015 with Diazepam when needed. Changed to Libromide, with Keppra when needed and Diazepam for immediate treatment of fits. Details: First fit at 3yrs 9 mths at 4am, grand mal. 9 fits over next 2 years, very short, all grand mal, all around 4am. On no medication then, in December 2015 had a severe fit lasting 5 minutes and put on Pexion. 2 further fits and dose increased to Aug 2016 as last fit was 6 mins and required Diazepam. Severity seemed to increase but frequency varied from 4 weeks to 9 months. Then Fleet's fits sadly increased in frequency and severity and he eventually began to cluster fits. His meds were changed, but things continued to decline. He saw a specialist who advised the meds he was on were what he would recommend but to try changing the timing of his meds. His fits continued to lengthen and he had several emergency trips to the vet in the middle of the night, when Diazepam did not bring him out. At the end he was fitting during the day as well as at night-time and the fits were taking a terrible toll on him. He was pts in my house following a night of almost continuous cluster fitting. Neutered at 12 months, well before fits started. On cereal free salmon and potato mix. Food did not seem to be a factor.	DATA TRANSFER & UPDATE BY OWNER

31-03-21		Ellan-Vannin Millie	AS0902157	00/312956	BC - Dual Registered UK KC & ISDS	18-May-14	UK	Bitch	Ellan-Vannin Kirk (ISDS 00/314443)	Joe	Breeze	Ellan-Vannin Mia (ISDS 00/314110)	Spot	Bliss	2 years	YES	Bloods, head scans etc all normal but clinical diagnosis based on the episodes, seemingly brought on by touch, was one of a rare type of seizure / rage syndrome.	NO	Age 4. Due to the escalating frequency and intensity of the episodes which were very distressing for her and us, we sadly despite trying all we could, had her PTS	Suspected triggers: Millie was a very loving girl who used to lay for hours next to me having cuddles and snuggly rubs so this is all the harder to explain. Every six weeks a sudden explosive episode of rage with no warning. We didn't understand at first but there became a pattern to it and so the 2 year journey of trying to manage her seizures safely began. Before an episode she became increasingly sensitive to light and noise, afterwards she would hide and sleep it off. Medication: Pexion to start then stopped. Followed by a combination of Epithen and Keppra. Prazo was also tried but made no difference so was stopped. We tried all different types of epilepsy medicine. Details: Frequency was from about every 6 weeks until Christmas 2017 when she started clustering. After the initial setting of the cluster episode the following seizures were more frequent with no pattern and each one was for a longer period of time. Food was not a trigger although to alleviate as much non natural things in her diet as possible, we changed her to a raw diet and although it did not help her seizures, she did very well on it. Millie was neutered but it made no difference, she was spayed before the onset of the seizures. Due to the severity and type of seizures Millie had, we could no longer manage her safely. Just to say that Millie would come to us probably feeling unwell for a cuddle and it was always as we would touch her that the seizure would happen. She would usually have been asleep beforehand. Never happened at play or with strong touch/rough cuddles only ever gentle strokes, episodes lasted 5 seconds but nearer the end more like 10 seconds and we just couldn't manage her safely and the most traumatic thing was we could no longer cuddle her as she or we would have worried fine seizures along with disc degeneration was also aging her rapidly too, so the heart breaking decision was made to say goodbye. It was truly a traumatic journey for and with her.	DATA TRANSFER & UPDATE BY OWNER

Cluster seizure/status epilepticus	No triggers. Full investigations completed at AHT - other medical/traumatic causes ruled out. Medication: Tried Phenobarbitone, Potassium Bromide, Kepra, plus several other trial drugs (no positive changes) except Kepra gave us a 'honeymoon period' - made it to 5 weeks without seizures but then they went back to heavy clusters again, worsening over the 2 years we had with him. Neutered. Cluster seizures lasting several minutes between weekly - 4 weekly prominently. For 2 yrs until we had to let him go.	OWNER
29-11-19		Grenaby Skeel Graih	Not known	Not known	BC	15-Sep-11	UK	Dog	Ludgate Red Laser	Woodsorrel Spectre AW	Firelynx Jumarj at Ludgate	Grenaby Editors Choice	Grenaby Tucker	Nummy Kim At Grenaby (ISDS 231219)	1 year 6 months	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Pexion 400mg twice daily. Initially fed on Skinner kibble then once the fitting started, a home prepared diet of brown rice, potatoes and vegetables with raw meat (to try and reduce gluten, corn, soy and cases as per the GABD diet). This seemed to help for a while, with improving gaps between fits until last week, when he had several fits and he became critically ill at the weekend with cluster fitting. Fits have changed in frequency. We had got him up to 17 days between fits, and had wanted to try and manage it naturally (without drugs) but that all changed last week as described above and the treatment was necessary to save his life. After we got him, we heard that the dogs (not the bitches) in the previous litter had all started to fit. So we opted for an early castration at 5 months. We are very lucky that it is still with us, but it is devastating to see him so poorly. He was in intensive care for 3 days and has been home for 3 days now, improving visibly by the hour. If I can provide you with any additional information, please do not hesitate to shout.	DATA TRANSFER FROM LYN NORTON Added 11.09.13
31-08-20		Gwen	N/A	N/A	Unregistered - UK	01-May-99	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	Veterinary observation	NO	16 years. Euthanasia after uncontrolled fitting	Medication: Phenobarbital given initially with limited success. Potassium Bromide controlled the epilepsy completely until aged 16 when digestive problems made the medication unusable. Details: Spayed before 1yr by rescue charity. Survived Parvovirus virus, aged 8 months. Fits became progressively longer and uncontrollable. She had to be sedated for up to two days to stop the fitting. Fits ceased immediately once potassium bromide was given (in solution twice daily with food). Suspected triggers: Unsure of any triggers.	OWNER
31-08-20		Gwyneth (ABC 41786)	N/A	N/A	Non UK Registered (Border Collie)	02-Jun-15	USA	Bitch	Yosemite Gold (FBI ABC 320881)	Race (ABC 145723)	Bella Jewel (ABC 239542)	BB Honey (ABC 397387)	MISR BB Shiloh (ABC 386155)	BB's Scorch (ABC 338096)	4 years 6 months	YES	All tests came back normal MRI, spinal tap, and bloodwork all normal. The neurologist diagnosed her with idiopathic epilepsy	YES	N/A	Medication: She was just put on Zonisamide 100mg in the am, and 50mg in the pm. Details: She has had 4 grand mal seizures at night only. They started in Jan 2020 at 3 months apart, then once they got to a month apart, the neurologist put her on medication. She convulses, foams at mouth, eyes roll back, she loses consciousness and I am not able to snap her out of it. She used to run around the room right before she started seizing, but after doing this twice, I started to notice her at night in a soft crate. Her seizures last a little over a minute, and she takes on average 3 minutes before she is completely conscious. She gets monthly chiropractic and acupuncture. I got a wellness check with fur sample done and I gave me a list of foods she is sensitive to. I have created her home cooked meals ensuring she only eats foods that she should. I have added MCT oil, B complex vitamins, omegas and do a monthly liver cleanse.	OWNER
29-11-19	31-03-20	Gwynfair Marc My Words	Not known	Not known	BC - UK KC Pedigree	19-Dec-11	UK	Dog	Wildblue It's The Business	AM CH Kybota Wildblue Rhythm	Wildblue Eternal Dream	Trevellis She's A Gem at Gwynfair	Alicricia Shadey Blue	Dentelle of Sunloch Valley	2 years 2 months	YES	Vet confirmed as Epilepsy	NO	3 years 5 months. He had another severe seizure during the night which left him paralyzed from the shoulder. We then made the decision that he should be pgs, 1st June 2015	Medication: Initially Pexion, after 6 weeks Libromide was added. This combination was satisfactory for a while but then fits resumed, if anything worse than previously, he then had Epiphen and also Diazepam. Neutered after onset of fits. From the outset his fits were severe and caused significant memory loss and required a lot of retraining etc. We had a honeymoon period when we thought that the medication was going to control the seizures but when they resumed each time he had one it was severe and the recuperation period took longer. He had a very severe cluster of fits which effectively wiped his memory and character. He was very close to death but pulled through. We taught him to walk again and after 6 weeks he was basically ok. He was a different dog but he liked us and was content in his life. UPDATE ADDED 31/03/2020 - Update to Registration Type. 29-11-19		Gwynfair You Were Made For Me	Not known	Not known	WSD	22-Feb-05	UK	Dog	Fenom Full 'O' Fun	Summertime Sweep	Majacabus Oso Tricky	Tyzemade Maggie May of Gwynfair	Whatnook Rockin Symphony	Gwynfair Catch Me If You Can	1 year 10 months	YES	Vet confirmed as Epilepsy	NO	6 years 10 months. Dog is no longer alive. He went into a cluster fit episode that could not be stopped with medication and it was felt that he had suffered enough and had had his last fit.	Medication: He was initially prescribed just Epiphen, but over the next 5 years his medication was gradually increased to try to control his fitting. From his first fit, he didn't have another for 18 months then the frequency increased until roughly every 3 weeks by this time he was on 120mg Epiphen at 8am and 8pm, 300mg Gabapentin at 8am, 2pm and 8pm, 500mg Kepra at 8am and 8pm, and 250mg at 2pm. He was on Austerly at the onset of the fits but as the intensity increased, he was moved to a completely natural diet of chicken and vegetables. Much research was carried out into the ingredients of manufactured dog foods, and it was found that certain things can be a trigger factor to epilepsy so knowing what was in his food was important. He had cluster fits over 2 days on the first occasion and was given medication to try to stop the cluster, it was then 18 months before his next cluster fit. His next fit was then 3 months later, after which the frequency increased from around the age of 4 until the fits were happening every 3ish weeks. It was often a cluster of 3 or 4 fits over a couple of hours, but he needed veterinary assistance on 2 occasions where he was anaesthetised to stop the fitting as the episodes had continued over 24 hours or more. NOT neutered as the vet advised against him being operated on because of the risks with his epilepsy.	DATA TRANSFER FROM LYN NORTON Added 10.09.13

Frequency of all fits where around 10-20 minutes. Starts in 10/18 with her first fit (10 min). Then other fits in a frequency of around 2-3 days, sometimes 2 fits a day. Starting with homoneopathy, but there was no effect but the fits were shorter and the rehabilitation was faster. But the decision from 2 vets was to give her Phenoleptil starting with a half tablet in the morning and evening. After 9 weeks she fit again, so there was a new blood test and in case of the low phenoleptil value in blood the vet decided to give her a quarter tablet more in the morning and evening. The last fit was 1 week ago (29.06.2019), between this fit and the last fit where 3 months. Data from 11.07.2016. Suspected triggers: No triggers known. It just happened after a run quite out of the blue, sometimes would have a fit, go to stand up then go down again and have another one. Medication: He is on Epiphen, has one in the morning and two at tea time. He had a fit 07/07/2016 while out for a run, the one before that was 30/06/2016 and before that he had gone about 5 months. Details: He also has a very itchy body, always licking or scratching himself and was put on Prednisolone every now and again just to give some relief. He is neutered. 33-05-20		Jack	N/A	00/355613	BC - ISDS	21-Sep-17	UK	Dog	Fellicoe Dash (ISDS 00/315780)	Killebrae Ladie (ISDS 262753)	Killebrae Jet (ISDS 283073)	Meg (ISDS 00/316242)	Spot (ISDS 258972)	Nell (ISDS 274798)	2 years 1 Month	YES	Vet	YES	N/A	Suspected triggers: Possibly stress. Medication: Epiphen and Libromide. Intact Male. Seizure approx every 2-4 weeks. Seizure length average 45seconds. We got Jack when he was 14 months old, he had his first seizure about 1 month after his 2nd birthday (late Oct 2015). I phoned the vet and they gave me some great advice on how to monitor and what to do during a seizure, unfortunately a couple hours later he began to cluster so was rushed off to our emergency vet for sedation. We discussed the options for meds and agreed that we would not medicate at this point. 2 months later he had his next seizure, so an appointment was made to check his bloods again, this time the vet suggested we put him on Epiphen. After a while with only the sporadic minor seizures he began to cluster again (5 in October) he was kept at the vet that day and was started on Libromide and we were given emergency meds for future clusters. Since then Jack has been only having small seizures roughly once every 2 months. We continue to medicate with the Epiphen and Libromide and record any seizures in his diary or on film when we can. Jack is the most loving, happy dog and wants to be friendly with everyone he meets. We love Jack dearly and wouldn't be without him.	OWNER

Epileptic cousins. Medications: Initially Epiphen then Libromide added and finally Kepra. Spayed before onset. Cluster fits showing signs of brain damage. Jess had refractory epilepsy. Despite increase in doses of Epiphen and addition of Libromide followed by Kepra she continued to have cluster fits. admitted to vets on several occasions to try and stop the clusters. The only time she was fit free was on large doses of Epiphen which eventually caused her liver to have problems metabolising the drug and she started to fall over eventually being unable to walk. At this stage she was referred to a neurologist and put through MRI scan, spinal tap, blood tests etc. The result was that she was being poisoned by the epiphen which her liver wasn't metabolising. Her dose of Epiphen was reduced and she was put on a liver supplement. With the reduction of Epiphen she went back to cluster fitting every three months till she died 2 years later in status epilepticus.	OWNER
31-10-20		Jess	N/A	N/A	Unregistered - UK	10-Mar-14	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	7 to 8 months	YES	Monitoring fits and keeping record of everything that happened	YES	N/A	Suspected triggers: None known. Medication: Pevion 600mg a day. Details: Rarely happens but occasional cluster fits, longest fit lasted 13 minutes usually last about 4 minutes. Can be months/weeks between fits since being on medication.	OWNER
31-03-21		Jess	N/A	N/A	Unregistered - UK	20-Jun-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	About 18 months	YES	After videos we had taken and being tested at Fitzpatrick. They started her on medication, which caused her to fit more	YES	N/A	Suspected triggers: Extreme exercise, stress, heat in the summer. Medication: Phenobarbital and Pevion which she is being weaned off. Getting ready to start Potassium Bromide once Pevion has finished. Details: Jess has been spayed. She is a very anxious dog who is upset by any noise. Her fits are like petit mal at times but also grand mal fits where her nose and bottom jaw, her eyes roll up, then she starts to shake. They can last from between 30secs and 5mins. She also has episodes where she lays in her Dad's arms and flaps her head on the sofa and can sleep for up to 30 mins. You can say pussycat, squirrel, dinner, name of a visitor and she doesn't move. All the time there, her limbs don't move and when she gets off she has left a small mark on his trousers. The last two fits she has been incontinent and wet the bed. Occasionally she can be aggressive, but normally a very placid girl. She has changed, doesn't like her harness or collar, seems worried to go to my husband.	OWNER
21-08-19		Jez - Jazz (activity register)	K141585 (activity register)	00/313905	BC - ISDS	03-Apr-11	UK	Dog	Lad (ISDS 267484)	Roy (ISDS 245540)	Jan (ISDS 237153)	Tess (ISDS 00/301628)	Lhwysnam Nap (ISDS 253871)	Killebrae Sky (ISDS 274792)	2 years 2 months	YES	MRI	YES	N/A	Possible glancing added bite - he had a puncture wound in his nose and swollen face for 4 weeks, frontlines 4 days before. Medication: Epiphen, Potassium Bromide, Kepra and Diazepam to try to stop clusters. CBD oil plus herbal products. Everything has worked well initially but then has become less effective. He has just been prescribed Pevion to use for a few days after seizures to try to stop the cluster. Jazz was entire. He fathered a litter before his seizures started. His son started having seizures at 15 months and was ptt at under 2 years due to uncontrollable seizures. Jez' sister started fitting a year after him and she lost her battle in May this year. Jez always has GMS and always clusters. They have become progressively longer - will often be unconscious for up to 6 mins. We are very fortunate that Jez has a VNS implant. Langford vet hospital is doing a trial with Bristol Children's Hospital and Jez is the 4th dog to have the implant in June 2017. I am convinced that he would not still be alive if he hadn't had this. He is very active and 3 years ago started Rally Obedience and is now working at the top 2 levels.	OWNER
22-12-19		Jilly	N/A	N/A	Unregistered - UK	05-Jan-15	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 6 months	NO	N/A	YES	N/A	Taken to vet after first fit. Suspected triggers are totally unknown, just happened one night. Then continued monthly, always about 2am. Medication: Vet recommended not going on meds as they didn't last long and were so spread out just monitoring her and if anything changes consulting vet. Have retail Diazepam in case she has another. She had one large fit about 6 months ago followed by some smaller ones. Was left with a twitch but vet put her on diazepam for a week and twitch cleared. All her fits are over in a couple of minutes and doesn't seem to be a pattern to them apart from monthly and always about 2am. She has had fits monthly up until 14th of September, but nothing since (now 02/12/19). She is spayed.	OWNER

29-09-19		Kingsfarm Lady In Red - Indi	K127121	N/A	WSD - UK KC Activity Register	22-Feb-08	UK	Bitch	Borderlair King Of Swing	SH CH Brookside Country Classic	Borderlair Pink Fizz	Merrymarsh Dress To Kill Of Kingsfarm	Tenita Black Magic At Kingsfarm	Faith In Merrymarsh	9 years	YES	Blood Tests	YES	N/A	No suspected triggers. Medication: 200mg Pexion twice daily. No change noted as put on 2nd time she fitted when she fitted 3 times in 3 days which coincided with having vitamin tablets. Put on Purina Neurocare dog food which made a big difference in her recovery after a fit. When taken off this I started on Coconut Oil since when the time between fits has gone from roughly every 2 months to over 6 months.	OWNER
21-08-19		Kingsfarm Maid of Honor	K139324	N/A	BC - UK KC Pedigree	08-Nov-11	UK	Bitch	Tamerye Celtic Laird	Bellatrix Highlander CDee Udeu	Tamerye The Ferrari	Kingsfarm Dress To Impress	Borderlair King Of Swing	Merrymarsh Dress To Kill Of Kingsfarm	5 years 5 months	YES	Vet said it was because she had now had 4 episodes	YES	N/A	In vets during first one - stress? 2nd one it was a very hot day and had eaten cheese? Medication: Epiphen 1x twice a day, Eptaur 500, Milk Thistle & CBD Oil. She has remained fit free since. Spayed in 2012. Her last fit was the worst - much more intense and longer (lasted about 3 minutes) and she took longer to come out of it. In April 2017 Macey had a routine dental examination. In waiting room afterwards I noticed her mouth was twitching and started to foam. The vet took her to a side room where she was fitting on the floor. They kept her in for observation for a few hours. Vet thought as she was stressed this was probably the reason. No medication given to me as they said they only medicate when they have had 3. All ok and fit free until June 2018. Around 10am Macey was resting in kitchen and started to fit. No vet appointment until 4pm that day. No tablets given but was told to administer rectal diazepam if she had another. 2 hours after being home she had 2 more - more severe than before - rectal diazepam given. Called emergency vets as I couldn't cope with seeing her like this. They agreed to have her in overnight to observe. Got a call 3 hours later saying she was so stressed and would be better at home. Epiphen was prescribed 1 tablet twice a day. I also give her Eptaur 500, Milk Thistle (to help liver on Epiphen) & CBD Oil. She has remained seizure free since. The day of her first fit at home it was a very hot day she had also just eaten some cheese (which is now off the menu).	OWNER
19-07-19		Kobi	N/A	N/A	Unregistered - UK	15-Jun-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 8 months	YES	Confirmed by vet	YES	N/A	Suspected triggers are stress and also air pressure (thunder weather), bright lights. As Kobi is deaf and also almost blind he bumps into objects which stresses him. He can't go to vets surgery as stress causes seizures. Medication: Vets have tried almost all meds over the last four years. He still has seizures but they are 1-2 a month now. At the moment his meds are: Epiphen, Libromide, Levetiracetam and Sodium Valproate. Diagnosis for cluster seizures. He has recently been diagnosed with diabetes too so is now on insulin too. We have struggled for four years to get him to this point and tried so many different meds. Have also had advice from a neurologist who diagnosed textbook Epilepsy. Kobi has blood tests regularly to tweak his meds. He is a blue Merle, totally deaf, almost blind and now diabetic aged four old. While trying to get the right balance of his meds he has having clusters every other day. As his meds are now he will have 1-2 seizures which leave him completely exhausted and wobbly for days. His seizures are 1-2 a month at present. Neurosed. Rescue dog from Border Collie Trust GB.	OWNER
29-02-20		Kooki	N/A	N/A	Unregistered - UK	01-Feb-16	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 6 months	YES	Filmed event. Explained to vet. Examinations.	YES	N/A	No apparent trigger. Medication: None. Thankfully it only happened twice and not since. Random seizures. Only had two in space of that month. Monitored and not happened since. Lasted around 10 mins each.	OWNER
21-08-19		Koopa	N/A	N/A	Unregistered - UK	22-Feb-14	UK	Dog	Gwynion Paddy	Unknown	Unknown	Gwynion Gwen	Unknown	Unknown	2 years	YES	MRI	NO	5 years. He had two failed intussusceptions, couldn't stop the seizures	No suspected triggers. Medication: he had a VNS implant, was on epiphen, pregabalin, keppra and zonisamide. KBR made him crazy and then unresponsive, we even had a VNS implant inside him to try help. CBD did nothing.	OWNER
29-09-19		Lacey	N/A	N/A	Non UK Unregistered (Border Collie)	10-May-19	SOUTH AFRICA	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	Blood tests MRI scans Diagnosed idiopathic Epilepsy	YES	N/A	Suspected triggers: Bravecto tick and flea treatment. Light sensitivity. Extreme change of routine. Medication: Phenobarbital. This has helped control the seizures and we went 9 months seizure free at a stage. She seemed to develop resistance to it and due to her liver enzyme levels we added Keppra. Valium is used as a rescue medication. Lacey is playful. Behaviorally she is very active, not just border collie active (we have two) she has endless amounts of energy and it seems as though she rarely switches off. She chases shadows and light reflections endlessly and kicks them mainly on floors and walls. She also seems very sensitive and reacts to seemingly normal activities she has a barking fit/hantum if you shower, take off your shirt, use squeeze bottles etc. It's as though she doesn't like you doing it and even gets worked up before you begin to do it for example if she sees you take clothes out to shower she starts barking. 2021 May 1 seizure, July 1 seizure, August September, November and October (partial seizures one each month), December 1 seizure. 2018 January 2 seizures increased phenobarbital meds, April 2 seizure. 2019 February 1 seizure, March 1 seizure, June 1 seizure, July 1 seizure added keppra. Partial seizures it seems as though a seizure is starting and she comes and asks for help but then there is no seizure only excessive drool or teeth chattering. Lacey's seizures are usually just over a minute and she urinates during her seizures.	OWNER
19-07-19		Loinka Like A Rocket - Sam	Not known	N/A	BC - UK KC Pedigree	10-Apr-11	UK	Dog	Rosmak Dapple Dandy	Canen Baz (ISDS 251245)	Rosmarinus Rising Star	Rosmarinus Gin Soda	AG CH Farflyer Turbo Diesel	Rosmarinus Pimms	9 months	YES	Vet and consultant neurologist	NO	Sam died at 15 months old from cluster fits.	No triggers known. Medication: Phenobarbitone, Keppra, Bromide - no improvement seen. Fits started 1 a week. Cluster fits of up to 6 in an hour started after 3 months - sometimes only 3 days between clusters. Sam fitted almost constantly in his last 24 hours and had to be PTS because he fitted every time anyone went near him. A horrendous death as the chemicals to PTS made him fit more. Entire.	OWNER

She was vaccinated 4 weeks prior to onset. Initially fed on James Wellbeloved. Changed to after onset fit consistently reduced. Initially the fits were one a month for the 4 months and then settled. The following year on the same time she had two in 3 months and that has been the pattern since 2011 but less in time and intensity. Spayed at 9 months.	DATA TRANSFER FROM LYN NORTON Added 05.07.14
29-02-20		Lass	N/A	N/A	Unregistered - UK	15-Sep-11	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2years	YES	By my vet and MRI Scan	YES	N/A	No suspected triggers. Fed Royal Canin, Hypoallergenic DR21 Food. Medication: Epiphen, Libromide and Levetiracetam tablets. Spayed. Lass has an allergy to Beef & Wheat.	OWNER
29-11-19		Lassie - Lass	Not known	Not known	BC	16-Sep-11	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years 7 months	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Epiphen 50mg 2 a daily since the beginning of May. Fed on Royal Canin Hypoallergenic DR21 Dry food as she has an allergy to Wheat & Beef. She has been fed this for 3 years. 3 fits over 3 days in April 2015, no medication till a further week went by. She had a further fit in mid May, then went 4 months fit free until the 03.09.15. Last fit 19.09.15. Spayed. Still alive at time of submission.	DATA TRANSFER FROM LYN NORTON Added 19.09.15
29-10-19		Little Ozie	Died before being able to be registered	N/A	WSD - UK KC Activity Register	08-Mar-07	UK	Dog	OB CH Whatnowk Razumtzezz (WSD)	Rockin Rapid	Forever Magic Fantasia	Croftmist Megan (BC)	Tamerye Krikmoss	Mainline Mist (BC)	45 days	NO	N/A	NO	46 days old. See Fitting details for more information	Suspected triggers: The vet suggested that he may have had worms but it was not the case. Medication: No medication for fitting but Adv and Anti-inflams as below. At 43 days he became quiet and stopped interacting with his siblings. At 44 days he started seeking out dark places. Taken to the vet and was given antibiotics and anti-inflammatory injection. At 45 days he was again searching for dark places. He was very distressed when travelling back to the vets and fitted badly within minutes of arriving. At 46 days old he began fitting and was taken back to the emergency vet. He resembled a clockwork toy and was very rigid in his mobility. He seemed to have stopped growing. The vet blood tested for a liver-shunt which came back negative. As the vet examined him, Ozie became very distressed when his head was held and was obviously in a great deal of pain. The vet diagnosed inflammation of the meningeal (tissue surrounding the brain). The vet and I agreed that euthanasia was the only option. Two other pups from the litter also fitted at later intervals and both have died. The rest of the litter were registered with my 'Cupfmat' alias. Megan was spayed after. The two other dogs from the litter, that fitted, were put to sleep at young ages due to the fitting. Ozie was unregistered but the rest of the litter were KC registered.	OWNER/ BREEDER

First fits 2 weeks apart. Medication: He was on Phenoobarbital, Libronide and another drug I can't remember the name of. Fit free for 8 months until Sept 2014, we struggled and could not get them better than one every 7-10 days. Had to increase his meds several times, this impacted on his body. He had a period of seven months, during the twelve months before he died, when we thought we had him stable and no fits. Then they came back and we just could not get any control at all. At the end he was having constant Petit Mal seizures between the Grand Mal ones, the drugs just didn't work anymore. Also rectal values to stop the fits once they started. During his last three months he had some Prednisone. Taz was not neutered. His fits were, right from the start, five to eight minutes long and extremely violent. They occurred mostly when he was asleep or resting. Frequency two to four weeks apart but he might have two or three fits at a time. Pied Pike has sired other dogs that have fitted. Unfortunately none of them had started to fit before he was mated to Lulu.	DATA TRANSFER & UPDATE BY OWNER

29-11-19		Manderian Country Lady	Not known	Not known	BC	12-Jul-06	UK	Bitch	Ryans Country Lad at Kaldien	SH CH Brookbid Country Classic	Beesting Tia from Komargo	Manderian SummerSong	Manderian Summer Solstice (ISDS 259763)	Darian Indian Summer over Manderian	12 weeks	NO	Admitted to AHT. Exhaustive tests negative or inconclusive results until blood tests confirmed B12 deficiency	NO	Massive cluster fits & euthanised, aged under 8 months. No PM.	At age 12 weeks, was given Milbemax +/- Bam, then a flea/Tick spot on at 12.00. Fitting began at 5.30pm. Medication Kepra 8 fortnightly B12 injections. Kepra phased out, 5 weeks later massive cluster fit & euthanised. Dam and all surviving puppies in litter neutered.	DATA TRANSFER FROM LYN NORTON Added 07.12.12 Updated 20.03.13
29-02-20		Mandy Patrick	N/A	N/A	Unregistered - UK	18-Jun-05	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	By the vet as she went on quickly to have a series of fits stopped only by being given an anaesthetic.	NO		Age 11. Death was related. Mandy went into a state of conscious shaking and her body shut down and she was unable to move over a period of days.	OWNER
29-02-20		Marley	N/A	N/A	Unregistered - UK	2011 approx	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	Not known (rescue dog, owned since 6 years old, had fits before being adopted)	YES	Blood tests excluded anything else, vet said most likely idiopathic Epilepsy	YES	N/A	Triggers unknown, although previous owner mistreated him and was convicted of animal cruelty after kicking Marley repeatedly on numerous occasions. He had a broken tail. Could have had injuries to head maybe? Medication: He has had far less fits since starting a raw diet with coconut oil and CBD oil. Once a seizure starts, we give CBD drops immediately and the fits subside quickly and he recovers far better. Before CBD he would have cluster fits and twice had status epilepticus where the seizure continued for nearly an hour. With CBD they last only a minute or two and are very mild. Neutered at approx. 4 years old. Very dominant male, pushy with other male dogs. We think Marley is a Welsh collie. He is sable and white, heads upright and is loose eyed. Contacted the Welsh Sheepdog society who said epilepsy is very rare and practically unknown in registered Welsh Sheepdogs, although common in border collies. They suggested Marley is therefore most likely a Welsh Sheepdog/BC cross, or if he's a pure Welsh, his epilepsy is probably injury related rather than inherited.	OWNER
29-11-19		Marshonelle Howdydicious	Not known	Not known	BC	05-Nov-12	UK	Dog	Rosmarinus The Chocolatier	Rosmarinus Jaffa	Rosmarinus Demerara	Marshonelle Izzie	Rosmarinus The Rainmaker	Amazin Grace	1 year 1 month	YES	Vet confirmed Idiopathic Epilepsy. All possible tests done, including an MRI scan and spinal fluid tap	Not known	Not known	Medication: 40mg of Pevion twice a day. He was first treated a week before, to which he was stressed at time of doing so and was off colour from that point up to first fit. He was fed in mainly raw with some dry food. Had an allergy test done and he is allergic to chickens, duck, wheat and gluten. Changed to pure BA80 diet minus the chicken and duck. In himself he became brighter when food was changed, he started to grow again, coat became fuller. His fits have become less frequent but this may coincide with having all possible tests done, including an MRI scan and spinal fluid tap, to diagnose epilepsy and being put on the right medication. When they first started he had several in a week, once food changed these decreased and since medication started they have decreased further. Longest between fits has been 31 days.	DATA TRANSFER FROM LYN NORTON Added 30.04.14
19-07-19		Marshonelle Switch N On	APO429501	N/A	BC - UK KC Pedigree	05-Nov-12	UK	Dog	Rosmarinus The Chocolatier	Rosmarinus Jaffa	Rosmarinus Demerara	Marshonelle Izzie	Rosmarinus The Rainmaker	Amazin Grace	7 months	YES	Vet confirmed as Idiopathic Epilepsy	NO	Major seizure	No triggers identified. Time frame was too short to collate information. Medication: Pevion 400mg twice daily. One small fit on 28.06.13 whilst asleep on sofa lasting less than a minute, recovered within 10 mins. No further fits until 09th July, when bound fitting in the morning. Rectal Diazepam given. Fitted again same day at 3pm, same treatment, but 4 further fits, taken to vet, kept overnight and stabilised. Home on the 10th but fitting again between 11am and 2pm so back to vet and again kept in overnight and sedated. Phenoobarbital on and a drip. Progress was poor at this time. Brought home on the 13th July, Pevion 400mg twice daily. Recovery seemed unlikely but daily improvements noted - motor function, spatial awareness, vision, recognition. Following 22 days charted phenomenal progress in physical and mental capabilities. By 1st Aug he was at 95% of his previous levels of Obedience training. On 2nd Aug he had another brief fit at 10pm (similar to his first) with the same outcome. As some time between 3am and 4am on the 8th Aug he suffered a major seizure, rectal diazepam x3 was administered but to no avail, and he passed away shortly afterwards before the vet arrived. Vet hazarded a guess at major haemorrhage as cause of death.	OWNER

Blood tests next morning, nothing found. No scans performed at veterinary advice was, due to her age, a tumour etc. was unlikely. Idiopathic epilepsy diagnosed.	NO	PTS on 23/01/18 aged 3 years, 7 months after deteriorating over the previous few weeks. She'd been in season the previous December and although these had no effect before, she started to have focal seizures, almost daily	First seizure was 9 days after her first annual booster. Triggers were strong scents, some foods, being startled, stressful situations, although she didn't show stress signals. She would fit after vet visits for blood work or if she got injured. Medication: She was on Epiphen and Potassium Bromide with Kepra for 5 days after a cluster and rectal Diazepam. When she deteriorated in the December, Kepra was added as a third drug, not just to break clusters and dosage were increased (can't remember specifics) but seizures couldn't be controlled. Was also seeing a homeopathic vet. She had a couple of remedies which helped in the short term. Rogue was entire. Veterinary advice was not to stay due to her epilepsy and the fact she was a blue merle. Seizures were intense, she frequently had clusters but never lasted more than a couple of minutes, until the end. No two ever seemed the same.	OWNER

Seizures getting worse, developed into cluster seizures preceded by running without purpose including into fences/walls.	No triggers identified. Went on elimination diet, then natural diet only (holistic vet advice). Thyroid panel showed normal range. Medication: Phenobarb and KBr, increasing dosages but seizures got worse.	OWNER
29-11-19		Sam	N/A	N/A	Unregistered - UK	30-Mar-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	YES	Multiple fits leading to seeing a neurologist. He has had numerous blood tests and an MRI to eliminate tumours etc.	YES	N/A	Suspected trigger is pollen as he is worse throughout the summer period. He is on a hypoallergenic diet. Fully vaccinated. Up to date on flea and worming. Medication: He started on Pevion which made clusters worse. He moved to Epiphen which was a lot better but still having them often. He has just started on Bromide and after 4 months, we are going to start reducing the Epiphen. He is neutered. He was fitting every 2 weeks but currently 33 days seizure free from starting Bromide. His fits go on for approx 5 mins and they are all grand mal. I have not noticed him have a focal seizure nor does he just tingle. If he has a fit, it's always a big one. He starts fits by running his head all the way around and basically looks behind him. His eyes go wide and he starts to fit. He always pees and foams at the mouth. Sometimes he bites his tongue ending up in bloody spit being straited around.	OWNER
29-11-19		Sam	Not known	Not known	BC	01-May-07	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years	YES	MRI and Lumbar Puncture. Bath Vet hospital confirmed as Epilepsy	NO	Died May 2013 aged 6 years. He fitted off and on for just over a week in clusters. We arrived home one evening to find that he had died. The vet said it was a grand mal seizure that only instant medication could have saved him and he would not have known what was going on	Medication: Epiphen. Nothing unusual happened that I can think of I did notice it initially happened after we had been out and we got caught in the rain. Like he had caught a chill, it happened often after a soaking. The vet said it wasn't connected, I'm not to sure. After diagnosis at Bath Vet hospital where he had an MRI and I think a lumbar puncture he was initially given just Epiphen, strength and dose varied, then also given Lobarbide when fits continued, can't remember strength. The fits did change even though he was on medication. The fits didn't last as long and I could tell when he was about to have one, or if he had had one when he was home alone. Usually when he was sleeping then he would wake, his head would shake he would fall over and his back legs would move as if he were running his front legs would be stiff. Was fed on bakers complete. A lighter diet was offered after fits, although he was usually starving when he came around. He gained weight so we were advised to give him a weight control food, there was no change in fits. He was neutered before the fits began.	DATA TRANSFER FROM LYV NORTON Added 21.06.14
29-11-19		Seve	Not known	Not known	WSD - Unregistered	approx 02-Nov-07	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	Vet confirmed as Epilepsy	Not known	Not known	Suspected triggers: On keeping a diary fits always on around spot on flea treatment - stopped using and fits a bit less severe and less frequent, plus have changed his diet to part raw and don't give any vet meds unless very necessary (use alternative and herbal) and ALWAYS check they are suitable for dogs with seizures. Medication: None. Fits always in a morning after a deep sleep but have been able to halt them when I see and hear the signs (vomiting noise and lip licking) and talk to him and stroker him gently. Now fed part raw part JWB kibble. Did read an article about giving frozen vanilla ice cream immediately after a fit. Have only tried this once but was AMAZING at bringing him round very quickly. Fits have gone from every 1 to 4 months to every 5 to 6 months (last time was 5 months 22 days) and are less severe lasting less than 1 min and recovery time afterwards a lot quicker (due to ice cream?). Dog came from a rescue and was neutered before owner got him.	DATA TRANSFER FROM LYV NORTON Added 11.09.13 Updated 20.10.13

29-11-19		Skye	Not known	Not known	BC - Unregistered	09-Jul-10	UK	Bitch	Blue	Ted	Meg	Dot	Glen	Nell	3 years	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Epiphen 60mg twice a day and Pevion 400mg half twice a day. It was a really hot day in July 2013 late afternoon evening, was going to take Skye in the car to park. It happened outside, then again at the same time on the next day while taking her to the car and the following week then same happened. Then was diagnosed as epileptic. To start they were every 21 days and not that intense but the last couple of months they have become more intense and not regularly. The last week she had cluster fits more and more so medication was changed to Pevion and weaned off Epiphen but that did not work she was put back on Epiphen and Pevion and so far it is working well. Fed on bakers complete and Cesar. Entire.	DATA TRANSFER FROM LYV NORTON Added 12.05.14
28-02-21		Skye	N/A	N/A	Unregistered - UK	05-Jun-17	UK	Bitch	Scottish Farm dog	Unknown	Unknown	Scottish Farm dog	Unknown	Unknown	3 years 3 months	YES	Several identical seizures. Vet feels as they started around 3 years old, otherwise extremely healthy fit bitch, epilepsy likely cause	YES	N/A	Suspected triggers: No known triggers at present, still documenting seizures to find any pattern or link. Medication: Treated with Phenobarbital twice daily (under duress), initially 60mg, halved to 30mg by me as behaviour badly subdued by dose. All ok at present, hopeful of stopping or reducing meds after spaying and hormonal fluctuations taken out of equation. Using EFT tapping, calming and enjoyable, also Reiki. Very dooped, poor soul could barely walk. Have discussed with vet who agrees the treatment shouldn't be worse than the condition! Details: First fit at 4 am, jaw chattering woke me, foaming, twitching and urinary incontinence, (having worked with kids/seizures was aware of how scary it looks, and to me it). Around 3.5 mins, four long bouts and jumped up like nothing happened. Vet did urine test in morning, slightly elevated white count so treated with antibiotics in case of infection. All other fits (5 more) have been identical, only shorter in every case. Differing times, no real common denominator. One thing I am monitoring is we use a calor heater in sunroom topping up heat in autumn/winter. Most recent seizure Skye had spent half a day with me there doing a Zoom course online. It is well ventilated and has a CO alarm, but wonder if she is affected by this? Just grasping at anything I can change to remove meds etc.	OWNER

29-11-19		Smudge	Not known	Not known	Collie	19-Oct-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 1 month	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Epiphen increased to 2 twice daily 60mg. After 4 months given Libromide, which only made him lethargic and not acting like his usual self. Now on Epiphen and Levetiracetam which we used to give him now and then before a fit, but not on one every 8 hours. Fits started off as around 8 or 9 clusters every 21 days, this increased to 11, his last one being 16 clusters from 2pm to 7 am the next day. Some last 30 to 40 seconds, some 2 or 3. There is usually 15 minutes in between but now a few minutes. Clenches jaw, then jaw wide, outstretched legs, urinates sometimes and a slobber from mouth and the smell awful. Then he will pace, used to pace for 20 minutes and could not see us. Now he paces and tends not to bang into objects, seems to manoeuvre around them a little better. Before a fit, he howls at the moon, tries to escape, but now he tends to approach me to cuddle and follow me everywhere I go. You can see in his eyes that he is due to fit, his personality changes. The fits had increased to double the amount, but more often between them. Neutered before fits started. He had been neutered only 4 weeks before. He had trauma to his leg when only 5 months. And we had a collie out when he seized the following week.	DATA TRANSFER FROM LYN NORTON Added 16.07.15

19-07-19		Talwood Tri Star - Jizy	K109344	N/A	WSD - UK KC Activity Register	10-Dec-02	UK	Dog	Zigest Jaffa at Talwood	Greatgen Hawatha	Zigdan Zest	Jarro's Exclusive Edition	OB CH Daleman Red Rasal	Trajan Jumper Jiff	4 years 7 months	YES	Animal Health Trust did all elimination tests necessary, MRI brain scan, cerebral fluid spinal tap, ultrasound of all organs, proprioception tests and blood, urine etc. Confirmed as idiopathic Epilepsy	NO	12 years old. Jizy starting fitting around breakfast time, not his normal time. After 3 fits we rushed him to vets as we always did at that stage, he never really came out of one before going into another. After all day in vets being treated we had to let him go. He died in Status Epilepticus.	We bred Jizy, he always fitted in the early hours of the morning. Clusters reduced when on meds that suited him. We had to stop doing agility as Jizy's co-ordination wasn't good enough to continue. Triggers we worked out over time were household cleaners especially air freshener sprays, plug ins and scented candles. We had to clean when he was out of house and have windows open. Stress was also a big factor, he didn't look stressed but didn't like changes. Like one of us packing to go away. Also had to pack cases and load car so he didn't see or hear our luggage. Medication: Initially given Epiphen 60mg x 2 daily. Continued to cluster fit so medication increased to 30mg 2x daily and Pottalium Bromide (KBr) 97mg once daily added. The 30mg caused severe disorientated mental status, very wobbly and occasional falling while standing or walking. AHT said KBr was causing toxicity, once it was withdrawn he was back to his normal alert self. Changed to 105mg of Epiphen 2x daily, 300mg 3x daily of Gabapentin. When he fitted was given rectal diazepam and an ice pack applied to his neck/back area. Since meds changed, fits approx every 10-15 weeks and generally only one fit instead of 4/6/8 clusters within the space of 1-4 hours that he was having every 4 weeks. Castrated after being diagnosed with idiopathic epilepsy, made no difference to the pattern of his fitting. His Dam was spayed and owners of his litter brothers/sisters advised to neuter, which they all did. Our dog is the only one from the 2 litters of this parentage that has fitted out of the 11 puppies. They were all healthy to a grand age.	OWNER

Suspected triggers: No idea other than routine booster vaccine given 3 weeks previously. Medication: Tess was in vet hospital for 2 days to try to stabilise. Just so devastating to see Tess like this. I had a laboratory years ago who fitted every few months but not cluster fits like this. The poor dog didn't know where she was, who we were, couldn't walk - horrendous experience.	OWNER	
29-02-20		Tess	N/A	N/A	Unregistered - UK	02-Feb-11	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	8 years	YES	Consultation with specialist neurologist at Langford Vale in Bristol, who diagnosed Idiopathic Epilepsy	YES	N/A	My beautiful Tess has been changed due to a hypoparathyroidism since she was 2 years old. She is on Tetalyonin, dry kibble & Nature Hypoparathyroidism meal. Medication: Tess was started on a high dose of phenobarbitone (Epilavon) after her appointment at Langford in March 2020 which made her slow and low coordination of her back end for about a month but gradually she came off. The dosage was reduced by a maintenance level over a few months until she was 2 years 12 months. She still fitted on medication, roughly once every 4-6 weeks. However, she developed incontinence due to increased thyroid levels and was unable to pee so we introduced her to a urinary bag every 2-3 hours and we weaned her off Epilavon gradually over 3 months. Three days after her last Epilavon September 2020, she had four seizures in a 24 hour period (previously only ever had one fit at a time) and was hospitalised overnight. She was started back on the Epilavon immediately but on maintenance amount, so to rise on the same amount as mentioned previously and soon had her first seizure September 2020. Tess is a spayed bitch that we rehomed from the Border Collie Trust at 12/2019 and she was around 12 months at that time. There was no medical history or evidence of seizures before we got her. Tess used to sleep downstairs in our previous house. A year after we moved to our current house in 2017, Tess started sleeping upstairs next to me in 2018. She started reacting to me in 2019. She only stays in the middle of the night when she is asleep and as far as we know, she is unaware of them and when they are going to happen. They last around 30-40 mins and we witness everything which is why we believe the first fit occurred before she started sleeping upstairs because we would have felt the wet patch on her face on the morning 10/10/2019 but I didn't. During the seizure, her eyes roll, she stops breathing, her head is tilted back and her body is stiff. She paddles with her front feet before lying still and still breathing heavily and then gasping before the convulsion. She is very disorientated for about 20-30 mins and then goes back to sleep and wakes up normal. Excessive exercise and stress don't seem to have any effect. Outside the hypoparathyroidism diet has made a difference as she has always been food sensitive and used to be very fussy with food not eating, throwing up food in the morning after eating. She loves the raw diet and her stools are good. She is definitely more hungry on the medication.	OWNER	
21-08-19	28/01/2020 & 28/02/2020	Tess O'Bromelaw	AH0901331	278780	BC - Dual Registered UK KC & ISDS	14-Aug-05	UK	Bitch	Moss (ISDS 263829)	Mac (ISDS 2224692)	Lynwood Nell (ISDS 234979)	Jan (ISDS 267609)	Glenn (ISDS 243997)	Nell (ISDS 225113)	2 years 2 months	YES	Blood tests taken at same time as we've affirmed that description of seizures couldn't be anything else.	NO (FIRST UPDATED 28/01/2020)	Tess died on Thursday 23rd January 2020 at 14 years old. She was quite peacefully as her spinal problems had appeared considerably and we did not want her to get to a state of distress.	Suspected triggers: Certain paint smells, nervous excitement, illness, once we suspected a vaccine, we certain it's bank holidays too as she always has a cluster when they are off duty!! Medication: Currently on Epipress, Potassium Bromide, Levetiracetam and Scullap & Valerian also has Gabapentin but that is now amongst drugs prescribed for spinal problems. She has been more stable since the Kepra than ever before. History of drugs tried en route available. Spayed 13/10/06. Heard of others from the sire also diagnosed epileptic. Although we have occasional solitary fits they usual come in clusters (largest cluster was 27 over a Christmas holiday). We've kept a medical diary. If Tess didn't have spinal and hypothyroidism problems now I would suspect that she still be enjoying a reasonably active life. As it is she still wants to play, go for short walks and eat as she nears her 14th birthday. The epilepsy has aged us as much as the dog. I would always advise working in partnership with the vet and insurance company and we have been blessed with all the support we have received. SECOND UPDATE ADDED 28/02/2020 - We regret to report that Tess died on Thursday 23rd January 2020. She was quite peacefully as her spinal problems had spread considerably and we did not want her to get to a state of distress. Having been warned by the vet who diagnosed her epilepsy that he doubted she would reach the age of two we feel blessed to have had her in our lives for over 14 years.	OWNER

They carried out a physical and neurological examination and exhaustive diagnostic procedures including an MRI brain scan and Cerebral Spinal Fluids. Idiopathic Epilepsy was diagnosed.	Suspected triggers: Stress, anxiety and over excited. Has had 5 fits each lasting 3-2 mins, all after being left and over excited when we returned and then 6th during the night when new puppy wasn't settled. UPDATE ADDED 28/01/2020 - Update on Tonlynor River - Basil has now been diagnosed with Idiopathic Epilepsy and started medication. Medication: Basil received a loading dose of Potassium Bromide while hospitalised. He is now on Soligen 60mg, three quarters of a tablet every 12 hours and Libromide 325mg: one tablet every 12 hours with a full meal.	OWNER
31-08-20		Tosari Khamin Kara - Kara	Y107404101	N/A	BC - UK KC Pedigree	01-Mar-98	UK	Bitch	Detania Summersam of Tosari	SH CH Caristan Chempers W	Detania Pati	Tosari Fleurie	SH CH Detania Mahorn	Tosari She's a Cracker	Approx. 3 years	YES	YES	NO	Died 12/02/10 aged 11 years 10 months. She had cancer of the vulva which had spread to lungs. Exhaustised as having difficulty breathing	No known suspected triggers. She had grand mal whilst at rest, (Obedience) and from running to no particular trigger. Medication: She was on Phenobarbitone and regular blood tests from 2003 when diagnosed, until about 2006 when no more fits. Drug free for 3 years. Then started petit mal again and put on low dose of Phenobarbitone which controlled fits. She then developed cancer. She was sprayed at approx. 18 months. Did not throw through fits but went completely rigid and tremored. Lasted about 3-4 minutes, then with coaxing came round and had cold milk to bring her temperature down, then back to normal. Had Diazepam to administer rectally if it did not come out of fit but never had to use it. I total probably had about 6 grand mal's and several petit mal's which were not too noticeable. Thought at first to have heatstroke, then due to raised calcium levels thought to be a problem with parathyroid gland. Believe other puppies sired by Detania Summersam to have developed epilepsy but had retired from stud when found.	OWNER

29-11-19		Wildblue Intuition	Not known	Not known	BC	16-Jul-09	USA	Bitch	AKC CH Kybota Wildblue Rhythm	AUS CH Devondene Kiwi Legend CD	AUS CH Kybota City Rhythm	Wildblue Eternal Dream [USA]	AKC CH Wildblue Eternity	AKC CH Wildblue In A Dream	4 years	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: None. The fits are very mild and she is at this time being treated holistically. Her first fit was on a hot day when the dogs were out running and we thought that might have triggered it; however after her second one we took her to a vet to have it confirmed where several tests were done. She continues to fit regularly on average one to two times a month. Originally fed on Diamond High Energy at the onset but it was recommended that we place her in a less physical home so that her protein and fat content could be lowered. She is now in a pet home on an adult formula by Diamond. The fits are more frequent now but also more mild. Spayed.	DATA TRANSFER FROM LYV NORTON Added 14.10.14
21-08-19		Willow	N/A	N/A	Unregistered - UK	05-Jul-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	14 weeks	YES	By a brain scan. They couldn't find any problems with her brain. So the conclusion was Idiopathic Epilepsy.	YES	N/A	No triggers known. Tends to have seizures only when sleeping. Medication: Started at 45mg of epiphen twice a day. Now currently on 60mg twice a day. Diazepam rectal tubes are given during or just after a seizure to help calm her down. Levetiracetam 500mg tablets are given to break up any clusters. 1 tablet after 2nd seizure and had a tablet every 8 hours until 48 hours after 2nd seizure. Since starting on 60mg of epiphen twice a day, Willow went 20 weeks without having a seizure. Before that she was having them every few weeks. I had Willow from a local rescue centre when she was 10 weeks old. I have no background information of her at all. Willow has always been clumsy. She's not your typical bright intelligent border collie. She tends to trip over her own feet, bump into things etc. At first I thought maybe it was just because she was a puppy getting used to her new surroundings but as she was getting older she was still the same. At 14 weeks she had a massive cluster where she had 9 before I even got her to the vets. They had to put her under anaesthetic 4 times to bring her out of the cluster. I don't know if this affected her brain but sometimes she's very uncoordinated.	OWNER

Nothing unusual happened that might have caused fitting to start. She was being fed on dry food, now on Chappie. Fits are happening more often and are more severe. Neutered, but didn't make any difference to the fits.	DATA TRANSFER FROM LYV NORTON Added 25.07.14
21-08-19		Woughstock Wattclass - Try	KC0045443	N/A	WSD - UK KC Activity Register	27-Dec-92	UK	Dog	OB CH Bisquet Dan	OB CH Chalkwell Greywood Danny	Ailrees Sea Spangle	Woughstock Wyedeyne	Master Kip of Keyoep	Woughstock Wonder	4 years	YES	By vet and process of elimination	NO	15 years - age related	Sudden excitement would always trigger a fit but also fitted in his sleep. Medication: Phenobarbitone 50mg x 2 daily controlled fits from 6 weekly to around 3 a year. At 6 years I took him to see holistic vet Christopher Day and gave a very detailed diary of events. He had fitted every 6 weeks prior to meds and now fitted around 3 times a year. He prescribed a homeopathic remedy which I gave daily. At 8 years I dared to start to reduce the pheno as had not fitted since visit to Mr Day. I reduced over 6 months to 0 pheno and to meet fitted again.	OWNER
29-11-19		Wydensend Maurice Traveller	Not known	Not known	WSD	03-Dec-90	UK	Dog	Monkfield Minstral JW	SH CH Melodur Flint at Dykebar	SH CH Whemway Janis of Monkfield (ISDS 123231)	Caristan Charisma	SH CH Caristan Captain (ISDS 160585)	Rosacore Joanna of Mobella	8 months	YES	Vet confirmed as Epilepsy	NO	1 year 7 months. Euthanised in July 1992 when fit frequency increased to less than 1 week between clusters and the drags were affecting his liver. His personality also changed and he lost the ability to remember simple commands	Medication: Initially Valium and Phenobarbitone. Then Potassium Bromide and Epim added after specialist advice. Doses systematically increased which increased the space between fits but did not reduce the intensity when the cluster fits happened. These required large doses of IV Valium and Phenobarbitone for 22 hours. IV dexamethasone was given the following day and substantially the next 2 days. No changes made to diet. First few were single fits then every fit was a cluster fit. Response to increased medication doses was to increase the time between fits. There were no fits between Feb and June 1992 then the intensity got increasingly worse. Neutered on Vets advice, but made no impact on fits.	DATA TRANSFER FROM LYV NORTON Added 11.09.13
