UPDATE ADDED 31/08/2020 Andraste of Robate was euthanised on 05/08/2020 for reasons unrelated to epilepsy.	OWNER
29-11-19		Anfields Touch Of Clan-Ti	N/A	294032	BC-ISDS	26-Sep-07	UK	Dog	Paddy Gwynion (ISDS 280634)	Glen (ISDS 244809)	Bess (ISDS 242897)	Kelly Gwynion (ISDS 286252)	Lad (ISDS 231344)	Jess (ISDS 244950)	4 years	YES	Vet confirmed as Epilepsy	NO	4 years old. Died after choking on his own vomit	Medication: None noted. The fits started completely out of the blue just as he was approaching his 4th birthday. He had one fit in the early hours of the morning, checks were done at local vets and they couldn't agree what had caused it, a week later another fit followed by his body starting to shut down, laboured breathing and no energy. Taken to Potters Bar vets hospital, kept in for a week, one small fit while he was there, they said sudden onset epilepsy, bought him home as they had he might not fit again. He had been home from Potters Bar for 2 weeks with no fits, then had a major fit in his crate while we were out and died after choking on his own vomit. Roughly 8 weeks after his first fit. He was neutered at least two years before the fits started.	DATA TRANSFER FROM LYN NORTON Added 29.05.14

29-02-20		Blodwen	N/A	N/A	Unregistered - UK	28-Feb-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Neurology assessment	YES	N/A	No known triggers. Blodwen is a Double Merle collie from a breeder but to me via an informal rescue. She has focal seizures - her MRI was clear so the seizures are not related to brain trauma or disease. Medication: Started with CBD aged 6 months which kept symptoms under control until she was one year old. They became significantly worse and unmanageable so she was started on phenobarbital and levetiracetam - starting doses were steadily increased to maximum for her weight and we also increased CBD oil and finally introduced Epiphen. Over a six month period her seizure related behaviour gradually diminished (from jerking awake every few minutes all through the night, circling, twitching and being aggressive) and she now sleeps for up to 11 hours through the night with no issues and is markedly more settled in the daytime. She was spayed at 6 months old but the focal seizure symptoms had already started (leg twitching, staring with head tilted, circling). The neutering didn't appear to make it worse. I have come to understand Blodwen, her symptoms and treatment requirements through close observation, asking for help from a Double Merle Facebook group and researching this genetic problem. We have a regular border collie from a farm litter who has displayed no health problems, I had no knowledge of merle or double merle collies when we rescued Blodwen and this was not mentioned by the person we rescued her from. First single fits soon became frequent clusters. Would fit for 4 days at a time. He was neutered age 3, it made no difference	DATA TRANSFER FROM LYNN NORTON Added 21.01.13
31-03-20		Boston	N/A	N/A	Unregistered - UK	23-Jun-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years 6 months	YES	After initial seizure followed a couple of months later by a focal seizure and clusters - diagnosed with idiopathic epilepsy after MRI eliminated any brain issues	NO	Feb 4th 2020 - aged 5 years and 8 months. PTS as diagnosed with chronic liver failure due to Phenobarbital	Suspected triggers: Stress, over tiredness and heat would appear to be triggers. Stress from being bullied by our other collies, or going to the vet. Medication: Initially given Flexion - no impact. Then moved to Phenobarbital, then added Potassium Bromide. Kepra was given as an emergency protocol. Diazepam did not appear to work. Boston had his first seizure on 4th Dec 2017. From then till he died on Feb 4th 2020 - he had approximately 80+ seizures lasting on average 60 seconds with some as cluster seizures. When he first started seizing it was shorter and he recovered relatively quickly. He never lost bladder control when he seized. The critical turning point was in September 2018 when he went into focal seizure mode and had to go to ICU. This followed another ICU episode in December 2018 where we thought we would lose him. The neurologists worked with us to find the right medication level. There were times we pushed back on the suggested medication levels and discussed it with the neurologists. I think it's important that owners who know their dogs best and have to manage the dog everyday feel confident to add their suspension worth it. On hindsight we saw three issues: (1) the length of time it takes a medication level to work through and to assess impact means it's several weeks from each medication change before you see if it has had any impact in controlling the seizures. (2) the vets are highly dependent on blood lab results to ascertain the medication levels and in our case, there were blood results that was inaccurate/incorrect and thus unreliable. We queried this and new bloods were taken but each time there was an episode, this delayed the possibility of accurate blood works and (3) neurologists are focussed on controlling the seizures but need to work hand in hand with liver experts so any increase in PB should be done only after a check on the state of the liver, it should not be automatic. It is our belief that we might have been able to reverse the liver failure had Boston's PB not been raised after summer 2019. Though the seizures were better controlled, his liver was damaged beyond repair. On the other hand if the PB was tapered down in summer 2019 and only Bromide used (or possibly in tandem with Kepra), would he have succumbed to some extent mal seizure - we will never know. I'll mention epiphen as it's in the notes that we do. Brain stem tumour. Medication: Epiphen and Libramide. Entire. Fitted about once a month for approx. 2 mins. Fed grain free.	OWNER
19-07-19		Broomielow Fleet at Sea - Fleet	AJ0801018	292908	BC - Dual Registered UK KC & ISDS	07-Sep-07	UK	Dog	Moss (ISDS 263829)	Mic (ISDS 224692)	Lymwood Nell (ISDS 234979)	Spotlie (ISDS 266480)	Moss (ISDS 230121)	Gem (ISDS 225586)	1 year 10 months	YES	Not disclosed	NO	Not disclosed	Stopped giving him worming and flea and tick medication looking at alternatives as there is a lot of people saying it can bring on a seizure through the dog epilepsy site. Medication: Started on a low dose of epiphen, seizures were getting more frequent, now on 50g twice a day, eight in the morning eight at night. It started with a seizure then around four months later he had a cluster, put on kepra for a week, then just a few months ago he was having one every two weeks that when the vet upped his meds. We now also give him CBD oil, fingers crossed he has not had one in about 4 weeks.	OWNER

Lived until she was 14 years	Del used to fit every 6 months, 3 fits and then none for next approximately 6 months. This continued until I moved, then she stopped. Del was never given any medications as my vet thought they would cause more damage than the fits themselves. Full bloods were done annually until towards the end of her life, there were no abnormalities thrown up. I moved when she was approximately 11. Once I moved there were no more fits. Spayed.	OWNER	
31-05-20		Delanor Pinball Wizard - Whiz	AJ03743806	N/A	BC - UK KC Pedigree	22-Jun-08	UK	Dog	AG OH Forbyfor Turbo Diesel	Woodborrel Red Wine	Tri Fly	Delanor Waggit A Lot	Rosmarinus The Wherryman	Delanor Kirri	5 years	YES	Various consultations and investigations with vet. Blood tests etc for other causes (nothing found). No scan was done.	NO	NO	Whiz died in status when he was 7 years, 3 months. He started fitting early morning on Sept. 19th 2015. He did not come out of the fit as he usually did and we were unable to stop it. After speaking to the emergency vet we managed to carry him to the car. Sadly he died on the way to the vets	No known triggers. I spent two years looking for triggers and did wonder if swimming in the sea was a trigger for Whiz (sai 777) but the day he died he hadn't been to the sea for two weeks. Medication: He was on Epiphen 30mg twice a day. This had kept him relatively stable until the last day. Whiz was neutered at 15 months. I do not believe this had any effect as he did not start fitting until he was five. He had cluster fits, usually two or three lasting less than a minute with about half an hour between. He only had five groups of fits over an eighteen month period. He was, however, hospitalised overnight in July 2015 when he fitted six times over five hours. The vets gave him rectal valium.	OWNER
29-11-19		Detania Glistening Pride	Not known	Not known	BC	29-Jun-97	UK	Bitch	Detania Cosworth	Detania Singing The Blues	Detania Keira	Detania Faith Moves	Detania Araz (ISDS 162879)	Detania Lady Lucy Lockett	4 to 5 years old	Not known	Not known	NO	10 ^{1/2} years old. Megan actually contracted Bone Cancer in her shoulder which sadly ended her life.	She started having epilepsy at around the age of 4 or 5 I think, with one fit which lasted probably less than a minute. They never actually lasted more than a minute I would guess, just seems a long time at the time. They gradually increased until about 18 months - 2 years, months later when she had 5 in one day, the vets then put her on medication - Phenobarb? believe. This stopped the fits until the dosage needed correcting. Megan had to have regular check ups every 6 months (I think) and the medication did gradually increase. That's about all the information I can give you I'm afraid - hope it helps in some way.	DATA TRANSFER FROM LYNN NORTON Added 25.07.14

29-11-19		Grenaby Skeelak Grah	Not known	Not known	BC	15-Sep-11	UK	Dog	Ludgate Red Laser	Woodcorrel Spectre AW	Firehys Jumanji at Ludgate	Grenaby Editors Choice	Grenaby Tucker	Nunnery Kim At Grenaby (ISDS 231219)	1 year 6 months	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Peison 400mg twice daily. Initially fed on Slimers kibbles then once the fitting started, a home prepared diet of brown rice, potatoes and vegetables with raw meat (to try and reduce gluten, corn, soy and casein as per the GARD diet). This seemed to help for a while, with improving gaps between fits until last week, when he had several fits and he became critically ill at the weekend with cluster fitting. Fits have change in frequency. We had got him up to 17 days between fits, and had wanted to try and manage it naturally (without drugs) but that all changed last week as described above and the treatment was necessary to save his life. After we got him, we heard that the dogs (not the bitches) in the previous litter had all started to fit. So we opted for an early castration at 5 months. We are very lucky that he is still with us, but it was devastating to see him so poorly. He was in intensive care for 3 days and has been home for 3 days now, improving visibly by the hour. If I can provide you with any additional information, please do not hesitate to shout.	DATA TRANSFER FROM LYNN NORTON Added 11.09.13
31-08-20		Gwen	N/A	N/A	Unregistered - UK	01-May-99	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	Veterinary observation	NO	16 years. Euthanasia after uncontrolled fitting	No known triggers. Medication: Phenobarbital given initially with limited success. Potassium Bromide controlled the epilepsy completely until aged 16 when digestive problems made the medication unusable. Spayed before 1yr by rescue charity. Survived Parvovirus aged 8 months. Fits became progressively longer and uncontrollable. She had to be sedated for up to two days to stop the fitting. Fits ceased immediately once potassium bromide was given (in solution twice daily with food).	OWNER
31-08-20		Gwyneth (ABC 421786)	N/A	N/A	Non UK Registered (Border Collie)	02-Jun-15	USA	Bitch	Yosemite Gold (Flash) (ABC 320881)	Race (ABC 145723)	Bella Jewel (ABC 239542)	BB Honey (ABC 397387)	MISR BB Shloh (ABC 386155)	BB'S Scorch (ABC 338096)	4 years 6 months	YES	All tests came back normal. MRI, spinal tap, and bloodwork all normal. The neurologist diagnosed her with idiopathic epilepsy	YES	N/A	Unsure of any triggers. Medication: She was just put on Zonisamide 100mg in the am and 50mg in the pm. She has had 4 grand mal seizures at night only. They started in Jan 2020 at 3 months apart, then once they got to a month apart, the neurologist put her on medication. She convulses, flails at mouth, eyes roll back, she loses consciousness and I am not to snap her out of it. She used to snore around the room right before she started seizing, but after doing this twice, I started crating her at night in a soft crate. Her seizures last a little over a minute, and she takes on average 3 minutes before she is completely conscious. She gets monthly chiropractic and acupuncture. I got a wellness check swab with fur sample done and it gave me a list of foods she is sensitive to. I have created her home cooked meals ensuring she only eats foods that she should. I have added MCT oil, B complex vitamins, omegas and do a monthly liver cleanse.	OWNER
29-11-19	31-03-20	Gwynfair Marc My Words	Not known	Not known	BC - UK KC Pedigree	19-Dec-11	UK	Dog	Wildblue IT'S The Business	AM CH Kybota Wildblue Rhythm	Wildblue Eternal Dream	Trevellis She's A Gem at Gwynfair	Atricia ShadyBlue	Dentelle of Sunloch Valley	2 years 2 months	YES	Vet confirmed as Epilepsy	NO	3 years 5 months. He had another severe seizure during the night which left him paralyzed from the shoulders. We then made the decision that he should be put to rest, 18 June 2015.	Medication: Initially Peison, after 6 weeks Libromide was added This combination was satisfactory for a while but then fits resumed, if anything worse than previously, he then had Epiphen and also Diazepam. Neutered after onset of fits. From the outset his fits were severe and caused significant memory loss and required a lot of retraining etc. We had a honeymoon period when we thought that the medication was going to control the seizures but when they resumed each fit he had one it was severe and the recuperation period took longer. He had a very severe cluster of fits which effectively wiped his memory and character. He was very close to death but had cluster fits over 2 days on the first occasion and was given medication to try to stop the cluster, it was then 18 months before his next cluster fit. His next fit was then 3 months later, after which the frequency increased from around the age of 4 until the fits were happening every 3ish weeks. It was often a cluster of 3 or 4 fits over a couple of hours, but he needed veterinary assistance on 2 occasions where he was anaesthetised to stop the fitting as the episodes had continued over 24 hours or more. NOT neutered as the vet advised against him being operated on because of the risks with his epilepsy.	DATA TRANSFER FROM LYNN NORTON Added 25.08.15 UPDATE BY OWNER
29-11-19		Gwynfair You Were Made For Me	Not known	Not known	WSD	22-Feb-05	UK	Dog	Ferom Full 'O' Fun	Summertime Sweep	Majacabus Ooo Tricky	Tyemade Maggie May of Gwynfair	Whatknoon Rockin Symphony	Gwynfair Catch Me If You Can	1 year 10 months	YES	Vet confirmed as Epilepsy	NO	6 years 10 months. Dog is no longer alive. He went into a cluster fit episode that could not be stopped with medication and it was felt that he had suffered enough and had had his last fit.	Medication: He was initially prescribed just Epiphen, but over the next 5 years his medication was gradually increased to try to control his fitting. From his first fit, he didn't have another for 18 months then the frequency increased until roughly every 2 weeks by this time he was on 120mg Epiphen at 8am and 8pm, 300mg Gabapentin at 8am, 2pm and 8pm, 500mg Kepra at 8am and 8pm, and 250mg at 2pm. He was on Autuhy at the onset of the fits but as the intensity increased, he was moved to a completely natural diet of chicken and vegetables. Much research was carried out into the ingredients of manufactured dog foods, and it was found that certain things can be a trigger factor to epilepsy so knowing what was in his food was important. He had cluster fits over 2 days on the first occasion and was given medication to try to stop the cluster, it was then 18 months before his next cluster fit. His next fit was then 3 months later, after which the frequency increased from around the age of 4 until the fits were happening every 3ish weeks. It was often a cluster of 3 or 4 fits over a couple of hours, but he needed veterinary assistance on 2 occasions where he was anaesthetised to stop the fitting as the episodes had continued over 24 hours or more. NOT neutered as the vet advised against him being operated on because of the risks with his epilepsy.	DATA TRANSFER FROM LYNN NORTON Added 10.09.13

Frequency of all fits where around 10 minutes. Starts in 10/18 with her first fit (10 min). Then other fits in a frequency of around 2-3 days, sometimes 2 fits a day. Starting with homophobia, but there was no effect but the fits were shorter and the rehabilitation was faster. But the decision from 2 vets was to give her Phenoleptil starting with a half tablet in the morning and evening. After 9 weeks she had a fit again, so there was a new blood test and in case of the low phenoleptil value in blood the vet decided to give her a quarter tablet more in the morning and evening. The last fit was 1 week ago (29.06.2019), between this fit and the last fit where 3 months.	OWNER
30-09-20		Its Jaros O'Veion - Zak	K133779	N/A	WSD - UK KC Activity Register	08-Feb-10	UK	Dog	Forever Magic Krated	Waggenland Mister Jake	Daneway Double Delight at Forever Magic	OB CH Janjoo Jumping Jaro	Bellatrix Highlander	Jaros New Release	3 years	YES	Blood and other tests done by the vet	YES	N/A	Data from 11.07.2016. No triggers known. It just happened after a run quite out of the blue, sometimes would have a fit, go to stand up then go down again and have another one. Medication: He is on Epiphen, has one in the morning and two at tea time. He had a fit 07/07/2016 while out for a run, the one before that was 30/06/2016 and before that he had gone about 5 months. He also has a very itchy body, always licking or scratching himself and was put on Prednisolone every now and again just to give some relief. He is neutered. UPDATE ADDED 30/09/2020 to: Date of Birth/Registration Type/KC Reg No./How epilepsy diagnosed.	DATA TRANSFER & UPDATE BY OWNER

Most of her fits have been whilst exercising, rather than at rest although she has had both. She is fed Pedigree Chum all in one and Pedigree Chum timed. Good results since prescribed Pevion and after the tablets got into her system. She was already spayed before the fits started.	DATA TRANSFER FROM LYN NORTON Added 23.03.14
31-05-20		Jack	N/A	00/355613	BC - ISDS	21-Sep-17	UK	Dog	Felside Dash (ISDS 00/315780)	Killiebrae Laddie (ISDS 262753)	Killiebrae Jet (ISDS 283073)	Meg (ISDS 00/316242)	Spot (ISDS 258972)	Nell (ISDS 274798)	2 years 1 month	YES	Vet	YES	N/A	Suspected triggers: Possibly stress. Medication: Epiphen and Libromide. Intact Male. Seizure approx every 2-4 weeks. Seizure length average 45 seconds. We got Jack when he was 14 months old, he had his first seizure about 1 month after his 2nd birthday (late Oct 2019). I phoned the vet and they gave me some great advice on how to monitor and what to do during a seizure, unfortunately a couple hours later he began to cluster so was rushed off to our emergency vet for sedation. We discussed the options for meds and agreed that we would not medicate at this point. 2 months later he had his next seizure, so an appointment was made to check his bloods again, this time the vet suggested we put him on Epiphen. After a while with only the sporadic minor seizures he began to cluster again (5 in 2 hours) he was kept at the vet that day and was started on Libromide and we were given emergency meds for future clusters. Since then Jack has been only having small seizures roughly once every 2 months. We continue to medicate with the Epiphen and Libromide and record any seizures in his diary or on film when we can. Jack is the most loving, happy dog and wants to be friends with everyone he meets. We love Jack dearly and wouldn't be without him.	OWNER

21-08-19		Jess	N/A	N/A	Unregistered - UK	27-Jun-03	UK	Bitch	Rip (ISDS 250011)	Glen (ISDS 198708)	Fran (ISDS 219858)	Floss (Not registered)	Ben (Not registered)	Jill (ISDS 225588)	2 years	YES	Blood tests and other family members fitting	NO	Died aged 11 in Status Epilepticus	No known triggers. Epileptic cousin. Medications: Initially Epiphen then Libromide added and finally Kepra. Spayed before onset. Cluster fits showing signs of brain damage. Jess had refractory epilepsy. Despite increase in doses of Epiphen and addition of Libromide followed by Kepra she continued to have cluster fits. admitted to vets on several occasions to try and stop the clusters. The only time she was fit free was on large doses of Epiphen which eventually caused her liver to have problems metabolising the drug and she started to fall over eventually being unable to walk. At this stage she was referred to a neurologist and put through MRI scan, spinal tap, blood tests etc. The result was that she was being poisoned by the epiphen which her liver wasn't metabolising. Her dose of Epiphen was reduced and she was put on a liver supplement. With the reduction of Epiphen she went back to cluster fitting every three months till she died 2 years later in status epilepticus.	OWNER
21-08-19		Jez - Jazz	K141585 (activity register)	00/313905	BC - ISDS	03-Apr-11	UK	Dog	Lad (ISDS 267484)	Roy (ISDS 245540)	Jan (ISDS 237153)	Tess (ISDS 00/301628)	Lwynnarn Nap (ISDS 253871)	Killiebrae Sky (ISDS 274792)	2 years 2 months	YES	MRI	YES	N/A	Possible glancing adder bite - he had a puncture wound in his nose and swollen face for 4 weeks, frontline 4 days before. Medication: Epiphen, Potassium Bromide, Kepra and Diazepam to try to stop clusters. CBD oil plus herbal products. Everything has worked well initially but then has become less effective. He has just been prescribed Pevion to use for a few days after seizures to try to stop the cluster. Jazz is entire. He fathered a litter before his seizures started - his son started having seizures at 15 months and was pits at under 2 years due to uncontrollable seizures. Jez's sister started fitting a year after him and she lost her battle in May this year. Jez always has GMs and always clusters. They have become progressively longer - will often be unconscious for up to 5 mins. We are very fortunate that Jez has a VMS implant. Langford vet hospital is doing a trial with Bristol Children's Hospital and Jez is the 4th dog to have the implant in June 2017. I am convinced that he would not still be alive if he hadn't had this. He is very active and 3 years ago started Rally Obedience and is now working at the top 2 levels.	OWNER

Short fits for first few times, 5 to 10 minutes until last one which lasted at least 5 to 6 hours. Went into Status Epilepticus, found fitting at 12.30 pm, taken to vets, still fitting at 4.00 pm.	OWNER
29-09-19		Kingsfarm Lady in Red - Indi	K127121	N/A	WSD - UK KC Activity Register	22-Feb-08	UK	Bitch	Borderlair King Of Swing	SH CH Brookside Country Classic	Borderlair Pink Fizz	Merrymarsh Dress To Kill Of Kingsfarm	Tenita Black Magic At Kingsfarm	Faith In Merrymarsh	9 years	YES	Blood Tests	YES	N/A	No suspected triggers. Medication: 200mg Pexion twice daily. No change noted as put on 2nd time she fitted when she fitted 3 times in 3 days which coincided with having vitamin tablets. Put on Purina Neurocare dog food which made a big difference in her recovery after a fit. When taken off this I started on Coonoon Oil since when the time between fits has gone from roughly every 2 months to over 6 months.	OWNER
21-08-19		Kingsfarm Maid of Honor	K139324	N/A	BC - UK KC Pedigree	08-Nov-11	UK	Bitch	Tamerye Celtic Laird	Bellatrix Highlander Odeux Udeux	Tamerye The Ferrari	Kingsfarm Dress To Impress	Borderlair King Of Swing	Merrymarsh Dress To Kill Of Kingsfarm	5 years 5 months	YES	Vet said it was because she had now had 4 episodes	YES	N/A	In vets during first one - stress? 2nd one it was a very hot day and had eaten cheese? Medication: Epiphen (1 x twice a day), Epitaur 500, Milk Thistle & CBD Oil. She has remained fit free since. Spayed in 2012. Her last fit was the worse - much more intense and longer (lasted about 3 minutes) and she took longer to come out of it. In April 2017 Macey had a routine dental examination. In waiting room afterwards I noticed her mouth was twitching and started to foam. The vet took her in side room where she was fitting on the floor. They kept her in for observation for a few hours. Vet thought as she was stressed this was probably the reason. No medication given to me as they said they only medicate when they have had 3. All ok and fit free until June 2018. Around 10pm Macey was resting in kitchen and started to fit. No vet appointment until 4pm that day. No tablets given but was told to administer rectal diazepam if she had another. 2 hours after being home she had 2 more - more severe than before - rectal diazepam given. Called emergency vets as I couldn't cope with seeing her like it. They agreed to have her in overnight to observe. Got a call 3 hours later saying she was so stressed and would be better at home. Epiphen was prescribed 1 tablet twice a day. I also give her Epitaur 500, Milk Thistle (to help liver on Epiphen) & CBD Oil. She has remained seizure free since. The day of her first fit at home it was a very hot day she had also just eaten some cheese (which is now off the menu).	OWNER

19-07-19		Kobi	N/A	N/A	Unregistered - UK	15-Jun-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 8 months	YES	Confirmed by vet	YES	N/A	Suspected triggers are stress and also air pressure (hundry weather), bright lights. As Kobi is deaf and also almost blind he bumps into objects which stresses him. He can't go to vets surgery as stress causes seizures. Medication: Vets have tried almost all meds over the last four years. He still has seizures but they are 1-2 a month now. At the moment his meds are: Epiphen, Libromide, Levetiracetam and Sodium Valproate. Diazepam for cluster seizures. He has recently been diagnosed with diabetes too so is now on insulin too. We have struggled for four years to get him to this point and tried so many different meds. Have also had advice from a neurologist who diagnosed textbook Epilepsy. Kobi has blood tests regularly to tweak his meds. He is a blue Merle, totally deaf, almost blind and now diabetic aged 5yrs old. While trying to get the right balance of his meds he was having clusters every other day. As his meds are now he will have 1-2 seizures which leave him completely exhausted and wobbly for days. His seizures are 1-2 a month at present. Neutered. Rescue dog from Border Collie Trust GB	OWNER
29-02-20		Kooki	N/A	N/A	Unregistered - UK	01-Feb-16	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 6 months	YES	Filmed event. Explained to vet. Examinations.	YES	N/A	No apparent trigger. Medication: None. Thankfully it only happened twice and not since. Random seizures. Only had two in space of that month. Monitored and not happened since. Lasted around 10 mins each.	OWNER
21-08-19		Koopa	N/A	N/A	Unregistered - UK	22-Feb-14	UK	Dog	Gwynion Paddy	Unknown	Unknown	Gwynion Gwen	Unknown	Unknown	2 years	YES	MRI	NO	5 years. He had two failed infusions, couldn't stop the seizures	No suspected triggers. Medication: he had a VNS implant, was on epiphen, pregabalin, kepra and zonisamide. KBR made him crazy and then unresponsive, we even had a VNS implant inside him to try help. CBD did nothing.	OWNER
29-09-19		Lacey	N/A	N/A	Non UK Unregistered (Border Collie)	10-May-19	SOUTH AFRICA	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	Blood tests MRI scans Diagnosed Idiopathic Epilepsy	YES	N/A	Suspected triggers: Bravecto tick and flea treatment. Light sensitivity. Extreme change of routine. Medication: Phenobarbital. This has helped control the seizures and we went 9 months seizure free at a stage. She seemed to develop resistance to it and due to her liver enzyme levels we added Kepra. Valium is used as a rescue medication. Lacey is spayed. Behaviorally she is very active, not just border collie active (we have two) she has endless amounts of energy and it seems as though she rarely switches off. She chases shadows and light reflections endlessly and likes them mainly on floors and walls. She also seems very sensitive and reacts to seemingly normal activities she has a barking fit/anturam if you shower, take off your shirt, use squeeze bottles etc. It's as though she doesn't like you doing it and even gets worked up before you begin to do it for example if she sees you take clothes out to show she starts talking. 2017 May 1 seizure, July 1 seizure, August September, November and October (partial seizures one each month), December 1 seizure. 2018 January 2 seizures increased phenobarbital meds, April 1 seizure. 2019 February 1 seizure, March 1 seizure, June 1 seizure, July 1 seizure added kepra. Partial seizure it seems as though a seizure is starting and she comes and asks for help but then there is no seizure only excessive drool or teeth chattering. Lacey's seizures are usually just over a minute and she urinates during her seizures.	OWNER
19-07-19		Lackin Like A Rocket - Sam	Not known	N/A	BC - UK KC Pedigree	10-Apr-11	UK	Dog	Rosmak Dapple Dandy	Canen Baz (ISDS 251245)	Rosmarinus Rising Star	Rosmarinus Gin Soda	AG CH ForByfor Turbo Diesel	Rosmarinus Pimms	9 months	YES	Vet and consultant neurologist	NO	Sam died at 15 months old from cluster fits.	No triggers known. Medication: Phenobarbitone, Kepra, Bromide - no improvement seen. Fits started 1 a week. Cluster fits of up to 6 in an hour started after 2 months, sometimes only 3 days between clusters. Sam fitted almost constantly in his last 24 hours and had to be PTS because he fitted every time anyone went near him. A horrendous death as the chemicals to PTS made him fit more. Entire.	OWNER

Fed on Royal Canin Hypoallergenic DR21 Dry food as she has an allergy to Wheat & Beef. She has been fed this for 3 years. 3 fits over 3 days in April 2015, no medication till a further week went by. She had a further fit in mid May, then went 4 months fit free until the 03.09.15. Last fit 19.09.15. Spayed. Still alive at time of submission.	DATA TRANSFER FROM LYNNORTON Added 19.09.15
29-10-19		Little Ozzie	Died before being able to be registered	N/A	WSD - UK KC Activity Register	08-Mar-07	UK	Dog	OR CH Whatknow Razmatazz (WSD)	Rockin Rapid	Forever Magic Fantasia	Croftmist Megan (BC)	Tanamerye Krismos	Mainline Mist (BC)	45 days	NO	N/A	NO	46 days old. See Fitting details for more information	Suspected triggers: The vet suggested that he may have had worms but it was not the case. Medication: No medication for fitting but ABs and Anti-inflams as below. At 43 days he became quiet and stopped interacting with his siblings. At 44 days he started seeking out dark places. Taken to the vet and was given antibiotics and anti-inflammatory injection. At 45 days he was again searching for dark places. He was very distressed when travelling back to the vets and fitted badly within minutes of arriving. At 46 days old he began fitting and was taken back to the emergency vet. He resembled a clockwork toy and was very rigid in his mobility. He seemed to have stopped growing. The vet blood tested for a liver-shut which came back negative. As the vet examined him, Ozzie became very distressed when his head was held and was obviously in a great deal of pain. The vet diagnosed inflammation of the meningeal (tissue surrounding the brain). The vet and I agreed that euthanasia was the only option. Two other pups from the litter also fitted at later intervals and both have died. The rest of the litter were registered with my 'Croftmist' office. Megan was spayed after. The two other dogs from the litter, that fitted, were put to sleep at young ages due to the fitting. Ozzie was unregistered but the rest of the litter were KC registered.	OWNER/ BREEDER

His liver was grossly enlarged and he could not breathe as he had fluid in his lungs. Extensive organ collapse and brain damage due to drugs and cluster fits. FTS 22.04.15	Never could find a trigger. First fits 2 weeks apart. Medication: He was on Phenobarbital, Libromide and another drug I can't remember the name of. Fit free for 8 months until Sept 2015, we struggled and could not get them better than one every 7-10 days. Had to increase his meds several times, this impacted on his body. He had a period of seven months, during the twelve months before he died, when we thought we had him stable and no fits. Then they came back and we just could not get any control at all. At the end he was having constant Fretz Mal seizures between the Grand Mal ones, the drugs just didn't work anymore. Also rectal Valium to stop the fits once they started. During his last three months he had some Prednisone. Taz was not neutered. His fits were, right from the start, five to eight minutes long and extremely violent. They occurred mostly when he was asleep or resting. Frequency two to four weeks apart but he might have two or three fits at a time. Pied Pike has sired other dogs that have fitted. Unfortunately none of them had started to fit before he was mated to Lulu.	DATA TRANSFER & UPDATE BY OWNER

Admitted to AMT, exhaustive tests negative or inconclusive results until blood tests confirmed B12 deficiency	NO	Massive cluster fit & euthanised, aged under 8 months. No PM.	At age 12 weeks, was given Milbemax +/- Ban, then a Flea/Tick spot on at 12 noon. Fitting began at 5.30pm. Medication: Kepra & Fortrightly B12 injections. Kepra phased out, 5 weeks later massive cluster fit & euthanised. Dam and all surviving puppies in litter neutered.	DATA TRANSFER FROM LYNN NORTON Added 07.12.12 Updated 20.03.13
29-02-20		Mandy Patrick	N/A	N/A	Unregistered - UK	18-Jun-05	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	By the vet as she went on quickly to have a series of fits stopped only by being given an anaesthetic.	NO	Age 11. Death was related. Mandy went into a state of conscious shaking and her body shut down and she was unable to move over a period of days	Suspected triggers: All vaccines, flea and tick treatments, loud noises and stress eg: visit to vet, agility class, being left alone. Medication: Started on Epiphen, added Libromide, added Kepra as each drug became less effective. Also had rectal Diazepam to bring her out of seizures. Extra Kepra used as preventative before a stressful event and after fitting to prevent recurrence. Spayed age one. Mandy had fits, often two in a short space of time, around once a month once we got medication settled. We added more meds as they became more frequent each time. To begin with she was very unstable as vet wanted to introduce meds gradually. Several visits to emergency vet. Eight fits after vaccination when she was four. Always fitted five days after flea and tick treatment. Diagnosed as tonic clonic epilepsy. In her last few months she did not fit until last major episode. A beautiful girl who took it all in her stride and remained gentle and loving and full of life through it all. Major meds over nine years did not impact liver and kidneys which was one of our big concerns.	OWNER
29-02-20		Marley	N/A	N/A	Unregistered - UK	2011 approx	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	5 years old, had fits before being adopted)	YES	Blood tests excluded anything else, vet said most likely Idiopathic Epilepsy	YES	N/A	Triggers unknown, although previous owner mistreated him and was convicted of animal cruelty after kicking Marley repeatedly on numerous occasions. He had a broken tail. Could have had injuries to head maybe? Medication: He has had far less fits since starting a raw diet with coconut oil and CBD oil. Once a seizure starts, we give CBD drops immediately and the fit subsides quickly and he recovers far better. Before CBD he would have cluster fits and twice had status epilepticus where the seizure continued for nearly an hour. With CBD they last only a minute or two and are very mild. Neutered at approx. 4 years old. Very dominant male, pushy with other male dogs. We think Marley is a Welsh collie. He is sable and white, herds upright and is loose eye. Contacted the Welsh Sheepdog society who said epilepsy is very rare and practically unknown in registered Welsh Sheepdogs, although common in border collies. They suggested Marley is therefore most likely a Welsh Sheepdog/ BC Cross, or that's a pure Welsh, his epilepsy is probably injury related rather than inherited.	OWNER
29-11-19		Marshonelle Howdyicious	Not known	Not known	BC	05-Nov-12	UK	Dog	Rosmarinus The Chocolatier	Rosmarinus Jaffa	Rosmarinus Demerara	Marshonelle Izzie	Rosmarinus The Rainmaker	Amazin Gracie	1 year 1 month	YES	Vet confirmed Idiopathic Epilepsy. All possible tests done, including an MRI scan and spinal fluid tap	Not known	Not known	Medication: 40mg of Pexion twice a day. He was flea treated a week before, to which he was stressed at time of doing so and was off colour from that point to first fit. He was fed on mainly raw with some dry food. Had an allergy test done and he is allergic to chicken, duck, wheat and gluten. Changed to pure BARF diet minus the chicken and duck. In himself he became brighter when food was changed, he started to grow again, coat became fuller. His hair has become less brittle. We decided to coincide with having all possible test done, including an MRI scan and spinal fluid tap, to diagnose epilepsy and being put on the right medication. When they first started he had several in a week, once food changed these decreased and since medication started they have decreased further. Longest between fits has been 31 days.	DATA TRANSFER FROM LYNN NORTON Added 30.04.14
19-07-19		Marshonelle Switch 'N It On	AP04298501	N/A	BC - UK KC Pedigree	05-Nov-12	UK	Dog	Rosmarinus The Chocolatier	Rosmarinus Jaffa	Rosmarinus Demerara	Marshonelle Izzie	Rosmarinus The Rainmaker	Amazin Gracie	7 months	YES	Vet confirmed as Idiopathic Epilepsy	NO	Major seizure	No triggers identified. Time frame was too short to collate information. Medication: Pexion 400mg twice daily. One small fit on 28.06.13 whilst asleep on sofa lasting less than a minute, recovered within 10 mins. No further fits until 8th July, when found fitting in the morning. Rectal Diazepam given. Fitted again same day at 3pm, same treatment, but 4 further fits, taken to vet, kept overnight and stabilised. Home on the 10th but fitting again between 11am and 2pm so back to vet and again kept in overnight and sedated, Phenobarbitone and on a drip. Prognosis was poor at this time. Brought home on the 13th July, Pexion 400mg twice daily. Recovery seemed unlikely but daily improvements noted - motor function, spatial awareness, vision, recognition. Following 22 days showed phenomenal progress in physical and mental capabilities, by 1st Aug he was at 95% of his previous levels of Obedience training. On 2nd August he had another brief fit at 10pm (similar to his first fit with the same outcome. At some time between 3am and 6am on the 4th Aug he suffered a major seizure, rectal diazepam 3 was administered but to no avail, and he passed away shortly afterwards before the vet arrived. Vet hazarded a guess at major haemorrhage as cause of death. Neutered.	OWNER

30-09-20		Ozy Bear - Bear	N/A	N/A	Unregistered - UK	31-Jan-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 9 months	YES	Taken to vets after seizures at home. Treated by local vet and also Animal Health Trust Newmarket Suffolk. Brain scans and medication check. The neurologist at Newmarket had told us that Bear was one of the most difficult dogs he'd seen to treat at the time. His brain scan showed white areas where brain damage had occurred because of his seizures	NO	3 years - Passed to bridge 30th May 2017	3 years - Passed to bridge 30th May 2017	DATA TRANSFER & UPDATE BY OWNER
29-11-19		Paddy	N/A	N/A	Unregistered - UK	12-Oct-17	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	Vet tested for all other possible conditions which were clear, this left us with idiopathic Epilepsy	YES	N/A	Not sure as very early stages of any suspected triggers, only had first seizure on 1/10/19. Possibly stress related? Medication: initially given Pexion 400mg half a tablet twice a day, 12 hours apart. On 15th November began fitting again, first one was as all the others, he was sleeping then began a cluster, Diazepam administered but continued to fit the morning after, on another trip to the vets they issued more Diazepam & introduced Epiphen, he had a loading dose for 24 hours (4 tabs) along with the Pexion then reverted to 2 tabs 12 hours apart plus Pexion for 24 hours another vet trip booked for 18/11/19 to discuss future medication. Neutered at 10 months old. Seizures initially were when sleeping but in last 24 hours they have been when awake. Fits are never very long at the moment, around 30-45 seconds. Some seizures have appeared to be caused by one of the other dogs growling at him.	OWNER

29-11-19		Remajak Somerset Morn	Not known	Not known	BC	11-Jun-13	UK	Dog	Altricia Double Dare To Avrodare	Altricia Mister Constant	Altricia Lady Madge	Borderbeau Blithe Spirit At Remajak	Locheil Traveller South To Borderbeau JW SHcm	Locheil First To Finish At Borderbeau	1 year 4 months	NO	N/A	Not known	Not known	Medication: see below. First fit 28.10.14 - seizure in the afternoon, followed by a slow but full recovery to normal state. Second fit 29.10.14 at 7am. Seen by the vet after each seizure and blood tests undertaken. Vet advised diagnosis of Idiopathic Epilepsy at this stage but as yet no MRI or spinal tap has been carried out. He was otherwise fit and well with no further seizures as of 2.12.14. Initial course of Diazepam for approximately one week; treated with Epiphen twice daily from day of second fit for four weeks. Bloods have been sent to Epiphen to assess viability of phasing out medication. 14.9.14 castration under general anaesthetic; vet treated with Advantage for possible fleas same week. 1.10.14 first year vaccination; 25.10.14 routine worming with Panacur. He is otherwise fit and healthy. All breeders/owners directly connected were informed immediately with sire/dam owners agreeing to wait for completion of initial four week treatment plan before submitting to database; dam & littermates will never henceforth be bred from. DNA to be submitted in due course. Fed James Wellbeloved Turkey & Rice; no change before or after seizures. Neutered on 24th September, before onset of fits. UPDATE ADDED 04.05.15: Bron suffered a seizure at 10.30pm. Recovery time was quicker than the initial two seizures last October but he lost vision for 15 minutes. 25 minutes after the seizure he took his ball to his owners to ask for a game. At the time of the seizure, his owners report that his Epiphen dose had been reduced gradually to 1/4 tablet each day (as he had suffered no further fits after the initial two) with the plan to take him off med altogether in another week. However, their vet has now advised that the dosage should be returned to 1/2 tablet each day.	DATA TRANSFER FROM LYN NORTON Added 04.12.14 Update 01.05.15

Medication: Pexion, at first he was on the highest dose but cluster fitting. Now on 450mg of Eplexase and 150mg of Epiphen. Neutered at 9 months. Fit lasts approx 46 seconds to 1 min. Wets himself, always grand mals. Can cluster up to 12 fits in 24 hours but usually 3 or 2 up to 23 days in between.	OWNER
31-05-20		Rogue	N/A	N/A	Unregistered - UK	17-Jun-14	UK	Bitch	Klevey The Muppet Meister	SH CH Goytre Going Places	Meisterwerk Thakat	Ruby	Unknown	Unknown	1 year 3 months	YES	First seizure at 15 months, 2 within close succession. Blood tests next morning, nothing found. No scans performed as veterinary advice was, due to her age, a tumour etc was unlikely. Idiopathic epilepsy diagnosed.	NO	PTS on 23/01/18 aged 3 years, 7 months after deteriorating over the previous few weeks. She'd been in season the previous December and although these had no effect before, she started to have focal seizures, almost daily	First seizure was 9 days after her first annual booster. Triggers were strong scents, some foods, being startled, stressful situations, although she didn't show stress signals. She would fit after vet visits for her blood work or if she got injured. Medication: She was on Epiphen and Potassium Bromide with Kepra for 5 days after a cluster and rectal Diazepam. When she deteriorated in the December, Kepra was added as a third drug, not just to break clusters and dogges were increased (can't remember specifics) but seizures couldn't be controlled. Was also using a homeopathic vet. She had a couple of remedies which helped in the short term. Rogue was entire. Veterinary advice was not to spay due to her epilepsy and the fact she was a blue merle. Seizures were intense, she frequently had clusters but never lasted more than a couple of minutes, until the end. No two ever seemed the same.	OWNER

29-11-19		Rosmak Fortune Teller	Not known	Not known	BC	16-May-12	UK	Dog	Rosmarinus Gin Cooler	AG CH ForByFor Turbo Diesel	Rosmarinus Pimms	Rosmarinus Eclipse	Rosmarinus The Werrymann	Rosmarinus Loganberry	12 months	NO	N/A	NO	See Fitting Details	He had puppy vaccinations but not old enough to have needed booster yet. No injuries or changes to diet, not recently had flea or worm treatments. Enrle. He was his usual happy, lively self when we left the house, drove to a show and was acting 'odd' when we arrived. He had drool hanging from his mouth and seemed a little vacant. Took him for a walk, he seemed spooked which wasn't his personality, went to put him on lead and he fell to the floor fitting. Lasted approx 8-10 minutes. No help available at show, phoned vets who recommended taking him in, said it was his first fit would be highly unlikely to have another straight away. Travelled in van with myself, he didn't return to his usual self and started fitting again within minutes. I had a vet on speakerphone, the fits were huge and he was struggling to breathe, followed directions and tried to resuscitate. He very sadly died. Not confirmed as epilepsy as didn't want a postmortem but the vet said it was highly likely due to his physical appearance.	DATA TRANSFER FROM LYNN NORTON Added 18.07.14
19-07-19		Rosmak Redbuck - Ben	AM01846301	N/A	BC-UK KC Pedigree	16-Mar-11	UK	Dog	Rosmarinus The Rainmaker	Rosmarinus The Werrymann	Rosmarinus Mulberry	Rosmarinus Demerara	Anabaron Forest Flame At Nobite	Prunus Cherry Red	3 years 8 months	YES	The neurologist said that she would normally do an MRI but he was too weak to take another anaesthetic and they didn't want to risk another lot of fits as they didn't think he would survive that.	YES	N/A	Ben had an auto immune skin disease which affected his whole head. Blisters on his eyes, in his ears and around his mouth. He had a high temperature but needed a biopsy under general anaesthetic to diagnose the disease as no drugs were touching it. Within 24 hours of the anaesthetic, he started fitting and within 10 hours had gone into status and spent 6 days in vet hospital. Medication: He was started on Phenytoin with Kepra as a cluster buster. He has since had 4 for added to the Pheno and now also takes Kepra full time. Ben was neutered before this started. His fits have been at completely random intervals and luckily he has not had any further clusters.	OWNER

29-11-19		Sam	Not known	Not known	BC	01-May-07	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years	YES	MRI and Lumbar Puncture, Bath Vet hospital confirmed as Epilepsy	NO	Died May 2013 aged 6 years. He fited off and on for just over a week in clusters. We arrived home one evening to find that he had died. The vet said it was a grand mal seizure that only instant medication could have saved him and he would not have known what was going on	Medication: Epiphen. Nothing unusual happened that I can think of I did notice it initially happened after we had been out and we got caught in the rain. Like he had caught a chill. It happened often after a soaking. The vet said it wasn't connected, I'm not so sure. After diagnosis at Bath Vet hospital where he had an MRI and I think a lumbar puncture he was initially given just Epiphen, strength and dose varied, then also given Lobaramide when fits continued, can't remember strength. The fits did change even though he was on medication. The fits didn't last as long and could tell when he was about to have one, or if he had had one when he was home alone. Usually when he was sleeping then he would wake, his head would shake he would fall over and his back legs would move as if he were running his front legs would be stiff. Was fed on Bakers complete. A lighter diet was offered after fits although he was usually starving when he came around. He gained weight so we were advised to give him a weight control food, there was no change in fits. He was neutered before the fits began.	DATA TRANSFER FROM LYNN NORTON Added 21.06.14
29-11-19		Seve	Not known	Not known	WSD - Unregistered	approx 02-Nov-07	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	Vet confirmed as Epilepsy	Not known	Not known	Suspected triggers: On keeping a diary fits always on around spot on flea treatment - stopped using and fits a lot less severe and less frequent, plus have changed his diet to part raw and don't give any vet meds unless very necessary (use alternative and herbal) and ALWAYS check they are suitable for dogs with seizures. Medication: None. Fits always in a morning after a deep sleep but have been able to halt them when I see and hear the signs (snooring noise and lip licking) and talk to him and stroke him gently. Now fed part raw/ part JWB kibble. Did read an article about giving frozen vanilla ice cream immediately after a fit. Have only tried this once but was AMAZING at bringing him round very quickly. Fits have gone from every 2 to 4 months to every 5 to 6 months (last time was 5 months 22 days) and are less severe lasting less than 1 min and recovery time afterwards a lot quicker (due to ice cream?). Dog came from a rescue and was neutered before owner got him.	DATA TRANSFER FROM LYNN NORTON Added 11.09.13 Updated 20.10.13

29-10-19		Smudge	N/A	N/A	Unregistered - UK	16-Jun-99	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	9 years	NO	N/A	NO	PTS following a significant seizure at 17.5 years. Vet concluded the last seizure had caused brain damage and a high probability of a recurrence within a few days	OWNER	
29-11-19		Smudge	Not known	Not known	Collie	19-Oct-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 1 month	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Epiphen increased to 2 twice daily 60mg. After 4 months given Libromide, which only made him lethargic and not acting like his usual self. Now on Epiphen and Levetiracetam which we used to give him now and then before a fit, but not on one every 8 hours. Fits started off as around 8 or 9 clusters every 21 days, this increased to 11, his last one being 16 clusters from 2pm to 7 am the next day. Some last 30 to 40 seconds, some 2 or 3. There is usually 15 minutes in between but now a few minutes. Clenches jaw, then jaw wide, outstretched legs, urinates sometimes and a slaver from mouth and the smell is awful. Then he will pace, used to pace for 20 minutes and could not see us. Now he paces and tends not to bang into objects, seems to manoeuvre around them a little better. Before a fit, he howls at the moon, tries to escape, but now he tends to approach me to cuddle and follow me everywhere I go. You can see in his eyes that he is due to fit, his personality changes. The fits had increased to double the amount, but more often between them. Neutered before fits started. He had been neutered only 4 weeks before. He had trauma to his leg when only 5 months. And we had a collie out when he seized the following week.	DATA TRANSFER FROM LYNN NORTON Added 16.07.15

Medication: Currently on Pexon, Kepra and Bromide. Epilopin - serious side effects and cannot be used - hospitalised her twice. Neutered. UPDATE ADDED 29/09/19 - Update on Tartan Ticking Time Bomb - devaluated to say she was put to sleep on 20th August after cluster fits that went on over 55 hours and nothing could stop them (she was on double dose Kepra, also given in liquid form at start of cluster, Bromide and Pexon). Phenobarb tried again but made her lose her mind and didn't know who she was and had no ability to switch off and stop.	OWNER	
29-09-19		Ted	N/A	N/A	Unregistered - UK	01-Jun-15	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	By Cambridge University Veterinary Hospital	YES	N/A	Suspected triggers: Initially overheating, exercise (ball chasing). Gets overexcited/anxious. Now mostly happens at rest. Medication: Acupuncture (I'm an acupuncturist) helps to stop it. Clujh happy for me to use acupuncture to monitor it. For this last year CBD oil stops it quickly. Although always a nervous collie, wary of some men for no reason, quickly forgetting if they moved or came back in room, fits started after he was neutered. Something went wrong with operation, he got abscess and took long time to heal. Initially they were 6 weekly, but now can be longer between or gets a bit at once. Just had 3 bad ones in 24 hours. No triggers. Without acupuncture or CBD, fits become very strong, full body tension/trembling, head banging, drooling. Purchased as an 11/12 week old puppy from farm in Swineshead, Boston, Lincolnshire.	OWNER

29-02-20		Tess	N/A	N/A	Unregistered - UK	02-Feb-11	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	8 years	YES	Consultation with specialist neurologist at Langford Vets in Bristol, who diagnosed Idiopathic Epilepsy	YES	N/A	No specific triggers that we know of although we have changed diet to a hypoallergenic one since her seizure started. She is on Tally hypoallergenic dry kibble & natural hypoallergenic meat. Medication: Tess was started on a high dose of Phenytoin (Epilepsin) when her appointment in Langford in March 2020 which made her dizzy and her coordination of her back and front a fortnight but gradually side effects wore off. The dosage was reduced to a maintenance level over a few months until she was on 20mg every 12 hours. She still had an medication, brought one every 4-6 weeks. However, she developed incontinence due to increased diuretic (side effect) and excessive drinking, so we introduced Prozac 20mg every 12 hours and we started her off Epilopin 30mg over 3 months. Three days later she had her last Epilopin (September 2020). She had her seizure in a 24 hour period (probably only ever had one fit at 4 AM) and was hospitalised overnight. She was started back on the Epilopin (monthly) but on maintenance amount, this is now on the same amount as mentioned previously and hasn't had one since September 2020. This is a suggestion that we withdrew from the Border Collie Trust at 2.12.20 (January) appeared when we got her. There was no medical history or evidence of seizures before we got her. Tess used to have epilepsin in her previous house. As a child she was never treated for epilepsy in 2012. Tess started sleeping upstairs next to me in 2018. She started seizure in March 2019. She only seizure in the middle of the night when she wakes up and for a few hours, there is evidence of them and when they are going to happen. They last around 30 mins. She wets and salivates excessively which is why we believe the nerve had seizures before she started sleeping upstairs because we would have felt the wet table on her face in the morning if taken hours to days. During the seizure, her eyes roll, she stops breathing, her head is thrown back and her body stiff. She paddles with her front feet before lying stiff and still, breathing heavily and then getting back to the corner room. She is very disorientated for about 20-30 mins and then goes back to sleep and when we "terror" (excessive exercise and stress don't seem to have any effect), a second if the hypoallergenic diet has made a difference as she has always been fed omnivore and used to have lots with food and eating. Memory of food in the morning (after eating). She loves the new diet and her stool are good. She is definitely more happy on the medication.	OWNER

21-08-19	28/01/2020 & 28/02/2020	Tess O'Broomielaw	AH0901331	278780	BC - Dual Registered UK KC & ISDS	14-Aug-05	UK	Bitch	Moss (ISDS 263829)	Mac (ISDS 224692)	Lynwood Nell (ISDS 234979)	Jem (ISDS 267609)	Glen (ISDS 243997)	Nell (ISDS 225113)	2 years 2 months	YES	Blood tests taken at same time as vet affirmed that description of seizures couldn't be anything else	NO (FIRST UPDATED 28/01/2020)	Tess died on Thursday 23rd January 2020 at 14 years old. She was p/s quite peacefully as her spinal problems had spread considerably and we did not want her to get to a state of distress.	Suspected triggers: Certain paint smells, nervous excitement, illness, once we suspected a vaccine, vet certain it's bank holidays too as she always has a cluster when they are off duty! Medication: Currently on Epreps, Potassium Bromide, Levitracetam and Sulcafa & Valerian also has Gabapentin but that is how amongst drugs prescribed for spinal problems. She has been more stable on the Keppra than ever before. History of drugs tried en route available. Spayed 13/3/06. Heard of others from the sire also diagnosed epileptic. Although we have occasional solitary fits they usually come in clusters (largest cluster was 27 over a Christmas holiday). We kept a medical diary. If Tess didn't have spinal and hip dysplasia problems now I would suspect that she would still be enjoying a reasonably active life. As is she still wants to play, go for short walks and eat as she nears her 14th birthday. The epilepsy has aged us rather than the dog! I would always advise working in partnership with the vet and insurance company and we have been blessed with all the support we have received. SECOND UPDATE ADDED 28/02/2020 - We regret to report that Tess died on Thursday 23rd January 2020. She was p/s quite peacefully as her spinal problems had spread considerably and we did not want her to get to a state of distress. Having been warned by the vet who diagnosed her epilepsy that he doubted she would reach the age of two we feel blessed to have had her in our lives for over 14 years.	OWNER

31-08-20		Tosari Khamisn Kara - Kara	Y1076401V05	N/A	BC - UK KC Pedigree	01-Mar-98	UK	Bitch	Detania Summersam of Tosari	SH CH Cristan Champs JW	Detania Patti	Tosari Fleurie	SH CH Detania Magnum	Tosari She's a Cracker	Approx. 3 years	YES	MRI scan and Lumbar Puncture at AHT Newmarket	NO	Died 12/01/10 aged 11 years 10 months. She had cancer of the vulva which had spread to lungs. Exhausted as having difficulty breathing	No known suspected triggers. She had grand mals whilst at rest, work (obedience) and from running so no particular trigger. Medication: She was on Phenobarbitone and regular blood tests from 2001 when diagnosed, until about 2006 when no more fits. Drug free for 3 years. Then started petit mals again and put on low dose of Phenobarbitone which controlled fits. She then developed cancer. She was spayed at approx. 18 months. Did not thrash through fits but went completely rigid and tremored. Lasted about 3-4 minutes, then with cooing came round and had a cold drink to bring her temperature down, then back to normal. Had Diazepam to administer rectally if did not come out of fit but never had to use it. In total probably had about 6 grand mals and several petit mals which were not too noticeable. Thought at first to have heatstroke, then due to raised calcium levels thought to be a problem with parathyroid gland. Believe other puppies sired by Detania Summersam to have developed epilepsy but had retired from stud when found.	OWNER

21-08-19		Willow	N/A	N/A	Unregistered - UK	05-Jul-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	14 weeks	YES	By a brain scan. They couldn't find any problems with her brain. So the conclusion was Idiopathic Epilepsy.	YES	N/A	No triggers known. Tends to have seizures only when sleeping. Medication: Started at 45mg of epiphen twice a day. Now currently on 60mg twice a day. Diazepam rectal tubes are given during or just after a seizure to help calm her down. Levetiracetam 500mg tablets are given to break up any clusters. 1 tablet after 2nd seizure and half a tablet every 8 hours until 68 hours after 2nd seizure. Since starting on 60mg of epiphen twice a day, Willow went 20 weeks without having a seizure. Before that she was having them every few weeks. I had Willow from a local rescue centre when she was 10 weeks old. I have no background information of her at all. Willow has always been clumsy. She's not your typical bright intelligent border collie. She tends to trip over her own feet, bump into things etc. At first I thought maybe it was just because she was a puppy getting used to her new surroundings but as she was getting older she was still the same. At 14 weeks she had a massive cluster where she had 9 before I even got her to the vets. They had to put her under anaesthetic. 4 times to bring her out of the cluster. I don't know if this affected her brain but sometimes she's very uncoordinated.	OWNER

Nothing unusual happened that might have caused fitting to start. She was being fed on dry food, now on Chappie. Fits are happening more often and are more severe. Neutered, but didn't make any difference to the fits.	DATA TRANSFER FROM LYNN NORTON Added 25.07.14
21-08-19		Woughstock Wattclass - Try	KCOR045443	N/A	WSD - UK KC Activity Register	27-Dec-92	UK	Dog	OB CH Bisquet Dan	OB CH Chalkwell Greywood Danny	Alicres Sea Spangle	Woughstock Wydesesny	Master Kip of Keysoe	Woughstock Wonder	4 years	YES	By vet and process of elimination	NO	15 years - age related	Sudden excitement would always trigger a fit but also fitted in his sleep. Medication: Phenoobarbitone 60mg + 2 daily controlled fits from 6 weeks to around 3 a year. At 6 years I took him to see holistic vet Christopher Day and gave a very detailed diary of events. He had fitted every 6 weeks prior to meds and now fitted around 3 times a year. He prescribed a homeopathic remedy which I gave daily. At 8 years I dared to start to reduce the pheno as had not fitted since visit to Mr Day. I reduced over 6 months to 0 pheno and Try never fitted again.	OWNER
29-11-19		Wyndsend Maurice Traveller	Not known	Not known	WSD	03-Dec-90	UK	Dog	Monkfield Minstral JW	SH CH Melodior Flint at Dylebar	SH CH Whenway Janita of Monkfield (ISDS 123211)	Caristan Charisma	SH CH Caristan Captain (ISDS 169585)	Rosacree Joanna of Mabella	8 months	YES	Vet confirmed as Epilepsy	NO		1 year 7 months. Euthanised in July 1992 when fit frequency increased to less than 1 week between clusters and the drugs were affecting his liver. His personality also changed and he lost the ability to remember simple commands. Medication: Initially Valium and Phenoobarbitone. Then Potassium Bromide and Epilin added after specialist advice. Doses systematically increased which increased the space between fits but did not reduce the intensity when the cluster fits happened. These required large doses of IV Valium and Phenoobarbitone for 12 hours. IV dexmethasone was given the following day and subcutaneously the next 2 days. No changes made to diet. First few were single fits then every fit was a cluster fit. Response to increased medication doses was to increase the time between fits. There were no fits between Feb and June 1992 then the intensity got increasingly worse. Neutered on Vets advice, but made no impact on fits.	DATA TRANSFER FROM LYNN NORTON Added 11.09.13
