29-11-19		Absolutely Dot (AG CH)	Not known	239196	BC	10-Jul-98	UK	Bitch	Lethans Maximillon (ISDS 208556)	Roy (ISDS 161740)	Lethans Kip (ISDS 176421)	Pipped at the Post (ISDS Pip 225768)	Snip (ISDS 207611)	Tess (ISDS 196529)	5 years 6 months	NO	N/A	NO	Died of old age	Medication: None. Details: Dot only ever had ONE 'limos fit', that came on 60 minutes after whelping. Diagnosed as pre-eclampsia. Treated with 1/4 calcium and magnesium for 2-3 weeks. Never fitted previously, and no further fit-like episodes afterwards. At age 14-15, started having drop attacks, where she would lose consciousness after making strange howling noises. Diagnosed as secondary to poor cardiac function, and the stopped having them after starting digoxin. Spayed.	DATA TRANSFER FROM LYN NORTON Added 10.03.15

Died after choking on his own vomit	Medication: None noted. Details: The fits started completely out of the blue just as he was approaching his 4th birthday. He had one fit in the early hours of the morning, checks were done at local vets and they couldn't agree what had caused it, a week later another fit followed by his body starting to shut down, laboured breathing and no energy. Taken to Potters Bar vets hospital, kept in for a week, one small fit whilst he was there, they said sudden onset epilepsy, bought him home as they said he might not fit again. He had been home from Potters Bar for 2 weeks with no fits, then had a major fit in his crate whilst we were out and died after choking on his own vomit. Roughly 8 weeks after his first fit. He was neutered at least two years before the fits started.	DATA TRANSFER FROM LYN NORTON Added 29.05.14

31-01-21		Bailey Lyness	N/A	N/A	Unregistered - UK	02-Oct-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Glasgow Vet School and Hospital	YES	N/A	Suspected triggers: Have not been able to confirm a reason so far. Medication: Epilphen 120mg twice daily, Libromide 1.5 tablets a.m. and 1 tablet p.m., Zongrom 100mg twice daily, Kepro 500mg 2 tablets 3 times a day after each cluster fit for 7 days, Destoli 150mg tablets twice daily, 10mg CBD capsule at night. Details: Bailey is neutered and he has fits every 3 to 4 weeks generally although at the moment they are weekly. He has generally 3 cluster fits at a time that last 2 to 3 minutes but yesterday he had 7 fits over a 6 hour period. It is so stressful as it is hard to keep Bailey quiet after the fits as it takes him around an hour to come round and see properly as well as regain his balance. We have bought a child's playpen to keep him in so as he can't get out and hurt himself as the dog pens he was able to escape from. Typically Collie.	OWNER

19-07-19		Bewitched Over Pendle - Zara	K136807	N/A	WSD - UK KC Activity Register	25-Dec-10	UK	Bitch	Unknown	Unknown	Unknown	Jess (ISDS no. not known)	Unknown	Unknown	6 years	YES	While in emergency vets, while in epileptic status	NO	6 years 2 months. Went downhill very quickly after another emergency admission to vet on Thursday 9th March 2017, collected her Friday evening seemed her normal but not long after we arrived home she had another fit, spoke to vet who advised 3 days of Kepra, went rapidly downhill over the weekend to the point Zara seemed like she was in a coma, made the decision on Monday morning 13th March 2017 to PTS	No triggers that I was aware of. Medication: Sedation at emergency vet for epileptic status on January 5th 2017, then given IV Kepra and IV Phenobarbital. Came home 3 days later and was on Phenobarbital 12 hourly, very quiet and disorientated at first but got better and more her normal self over the following week, told by vet to give Kepra after fits to prevent clusters. Had massive fit lasting 7 minutes. 1st timer on my phone when I realised what was happening, this was her first fit to my knowledge, got her to vets within half an hour, seen by vet sent home and was told it was possibly a one off. Booked in for blood tests 2 days later, went into epileptic status same night with a trip to emergency vets, was stabilised and returned home on medication. Small fits recurred every couple of weeks, with 2 lots of clusters, went rapidly downhill after final 2 fits on 10th March 2017, one while still in vets and one at home but never seemed to fully come around from the last. Zara was a local farm bred Collie. I contacted breeder to ask if there was any history of Epilepsy within her breeding, wouldn't answer me and then blocked my tel number. Zara was PTS 13th March 2017 to avoid my girl any further suffering. Zara was spayed at 12 months.	OWNER

29-02-20		Blodwen	N/A	N/A	Unregistered - UK	28-Feb-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Neurology assessment	YES	N/A	No known triggers. Blodwen is a Double Merle collie from a breeder but to me via an informal rescue. She has focal seizures - her MRI was clear so the seizures are not related to brain trauma or disease. Medication: Started with CBD aged 6 months which kept symptoms under control until she was one year old. They became significantly worse and unmanageable so she was started on phenobarbital and levetiracetam - starting doses were steadily increased to maximum for her weight and we also increased CBD oil and finally introduced Eptaur. Over a six month period her seizure related behaviour gradually diminished from prying awake every few minutes all through the night, circling, twitching and being aggressive) and she now sleeps for up to 11 hours through the night with no issues and is markedly more settled in the daytime. She was spayed at 6 months old but the focal seizure symptoms had already started (leg twitching, staring with head tilted, circling). The neutering didn't appear to make it worse. I have come to understand Blodwen, her symptoms and treatment requirements through close observation, asking for help from a Double Merle Facebook group and researching this genetic problem. We have a regular border collie from a farm litter who has displayed no health problems, I had no knowledge of merle or double merle collies when we rescued Blodwen and this was not mentioned by the person we rescued her from. 31-03-20		Boston	N/A	N/A	Unregistered - UK	23-Jun-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years 6 months	YES	After initial seizure followed a couple of months later by a focal seizure and clusters diagnosed with idiopathic epilepsy after MRI eliminated any brain issues	NO	Feb 4th 2020 - aged 5 years and 8 months, PTS as diagnosed with chronic liver failure due to Phenobarbital	Suspected triggers: Stress, over tiredness and heat would appear to be triggers. Stress from being bullied by our other collies, or going to the vet. Medication: Initially given Pexson - no impact. Then moved to Phenytoin, then added Potassium Bromide. Keppra was given as an emergency protocol. Diazepam did not appear to work. Boston had his first seizure on 4th Dec 2017. From then till he died on Feb 4th 2020 - he had approximately 80+ seizures lasting on average 40 seconds, with some as cluster seizures. When he first started seizing it was shorter and he recovered relatively quickly. He never lost bladder control when he seized. The critical turning point was in September 2018 when he went into focal seizure mode and had to go to ICU. This followed another ICU episode in December 2018 where we thought we would lose him. The neurologists worked with us to find the right medication level. There were times we pushed back on the suggested medication levels and discussed it with the neurologists. I think it is important that owners who know their dog best and have to manage the dog everyday feel confident to add their tuppence worth in. On hindsight we saw three issues: (1) the length of time it takes a medication level to work through and to assess impact means it is several weeks from each medication change before you see if it has had any impact in controlling the seizures; (2) the vets are highly dependent on blood lab results to ascertain the medication levels and in our case, there were blood results that were inaccurate/incorrect and thus unreliable. We queried this and new bloods were taken but each time there was an episode, this delayed the possibility of accurate blood works and (3) neurologists are focussed on controlling the seizures but need to work hand in hand with liver experts so any increase in PB should be done only after a check on the state of the liver, it should not be automatic. It is our belief that we might have been able to reverse the liver failure had Boston's PB not been raised after summer 2019. Though the seizures were better controlled, his liver was damaged beyond repair. On the other hand if the PB was tapered down in summer 2019 and only Bromide used (or possibly in tandem with Keppra), would he have succumbed to some grand mal seizure - we will never know. Ultimately, epilepsy is life limiting, that we do realise.	OWNER

Medication: Initially Levetiracetam 3 times a day but as it did not control the fits Epiphen was included twice a day. Full blown fit at lunchtime by my feet. Went on for a minute from which he got up and walked slightly wobbly into the garden. Up until then perfectly healthy, happy young dog. Fed on Millies kibble. Seizures are now under control. He was castrated at almost 5 yrs old but prior to that he was chemically castrated twice. He is currently well controlled on meds.	OWNER	
28-02-21		Cloudy	N/A	N/A	Unregistered - UK	28-Aug-16	UK	Dog	Unknown	Unknown	Unknown	Misty	Unknown	Unknown	1 year 7 months	YES		YES	N/A	Suspected triggers: He definitely has epilepsy but the condition could have been triggered, or exacerbated, by the original liver problem. Medication: Cloudy responds very successfully to a regimen of KBr (Lidomide), Levetiracetam (Keppra) and Phenobarbital (Epiphen) and has almost no fitting, with the occasional 'petit mal' seizures. He has very occasional full tonic-clonic seizures when his medication has been compromised e.g. missed dose or after activated charcoal treatment for ingestion of toxins. Details: Has epilepsy and liver shunt. He started fitting regularly at 18 months in February 2018 and responded well to Phenobarbital. Went into status in May, probably due to hepatic encephalopathy. Routine blood analysis showed a liver anomaly and it was found he had a hepatic shunt after scanning. Surgery was carried out in June with 100% success, but the fitting continued. He is still taking regular medication at 4+ years of age with occasional recurrence of fitting especially if medication is compromised, even though his liver is perfectly healthy and functioning. No indication of food relating to seizures but he is now on a hepatic diet due to the shunt.	DATA TRANSFER & UPDATE BY OWNER

Megan actually contracted Bone Cancer in her shoulder which sadly ended her life.	She started having epilepsy at around the age of 4 or 5 I think, with one fit which lasted probably less than a minute. They never actually lasted more than a minute I would guess, just seems a long time at the time. They gradually increased until about 18 months - 2 years, months later when she had in one day, the vets then put her on medication - Phenobarb? I believe. This stopped the fits until the dosage needed correcting. Megan had to have regular check ups every 6 months (I think) and the medication did gradually increase. That's about all the information I can give you I'm afraid - hope it helps in some way.	DATA TRANSFER FROM LYN NORTON Added 25.07.14

28-02-21		Easterdale's Fleet Foot	K134734	N/A	WSD - UK KC Activity Register	07-Jan-10	UK	Dog	Easterdale's Prince Rory	Rock	Kim	Just the Tonic	Robbie	Yes	3 years 9 months	YES	Diagnosed by my vets and confirmed by specialist	NO	Age 8 years 4 months. Fleet was fit on 30 May 2018 following several hours of continuous fitting	Suspected triggers: None mentioned Medication: Started on Pevoen December 2015 with Diazepam when needed. Changed to Libromide, with Kepra when needed and Diazepam for immediate treatment of fits. Details: First fit at 3yrs 9 mths at 4am, grand mal. 9 fits over next 2 years, very short, all grand mal, all around 4m. On no medication then. In December 2015 had a severe fit lasting 5 minutes and put on Pevoen. 3 further fits and dose increased in Aug 2016 as last fit was 6 mins and required Diazepam. Severely seemed to increase but frequency varied from 4 weeks to 9 months. Then Fleet's fits sadly increased in frequency and severity and he eventually began to cluster fit. His meds were changed, but things continued to decline. He saw a specialist who advised the meds he was on were what he would recommend but to try changing the timing of meds. His fits continued to lengthen and he had several emergency trips to the vet in the middle of the night, when Diazepam did not bring him out. At the end he was fitting during the day as well as at night-time and the fits were taking a terrible toll on him. He was ptt in my house following a night of almost continuous cluster fitting. Neutered at 12 months, well before fits started. On cereal free Salmon and Potato mix. Food did not seem to be a factor.	DATA TRANSFER & UPDATE BY OWNER

31-03-21		Ellan-Vannin Millie	AS0902157	00/332956	BC - Dual Registered UK KC & ISDS	18-May-14	UK	Bitch	Ellan-Vannin Kirk (ISDS 00/311443)	Joe	Breeze	Ellan-Vannin Mia (ISDS 00/314110)	Spot	Bliss	2 years	YES	Bloods, head scans etc all normal but clinical diagnosis based on the episodes, seemingly brought on by touch, was one of a rare type of seizure / rage syndrome.	NO	Age 4. Due to the escalating frequency and intensity of the episodes which were very distressing for her and us, we sadly despite trying all we could, had her PTS	Suspected triggers: Millie was a very loving girl who used to lay for hours next to me having cuddles and tummy rubs so this is all the harder to explain. Every six weeks a sudden explosive episode of rage with no warning. We didn't understand at first but there became a pattern to it and so the 2 year journey of trying to manage her seizures safely began. Before an episode she became increasingly sensitive to light and noise, afterwards she would hide and sleep it off. Medication: Pevoen to start then stopped. Followed by a combination of Epiphen and Kepra. Prozac was also tried but made no difference so was stopped. We tried all different types of epilepsy medicine. Details: Frequency was from about every 6 weeks until Christmas 2017 when she started clustering, after the initial settling of the cluster episode the following seizures were more frequent with no pattern and each one was for a longer period of time. Food was not a trigger although to alleviate as much non natural things in her diet as possible, we changed her to a raw diet and although it did not help her seizures, she did very well on it. Millie was neutered but it made no difference, she was spayed before the onset of the seizures. Due to the severity and type of seizure Millie had, we could no longer manage her safely. Just to say that Millie would come to us probably feeling unwell for a cuddle and it was always as we would touch her that the seizure would happen. She would usually have been asleep beforehand. Never happened at play or with strong touch/rough cuddles only very gentle strokes, episodes lasted 5 seconds but nearer the end more like 10 seconds and we just couldn't manage her safely and the most traumatic thing was we could no longer cuddle her as she or we would have wanted (the seizures along with this degeneration was also ageing her rapidly too), so the heart breaking decision was made to say goodbye. It was truly a traumatic journey for and with her.	DATA TRANSFER & UPDATE BY OWNER 31.03.21

Kidney failure	No obvious triggers - fitted approx twice per month - no pattern. Not on medication as vet thought he wasn't fitting regular enough. Neutered at around 2 years old. Fits lasted for around 5 mins, approx 2 per month.	OWNER
19-07-19		Glenalla Jack - Captain Jack Sparrow	N/A	296035	BC - ISDS	21-Apr-08	UK	Dog	Kilcreen Fox (ISDS 276619)	INT. SUP. CH CRAIG DEVI TWEED (ISDS 249897)	Kilcreen Midge (ISDS 262307)	Nelle (ISDS 285347)	Ben Of Killibrae (ISDS 220939)	Molly (ISDS 268821)	12 months	YES	Sparrow's idiopathic epilepsy was diagnosed following a full work up at the AHT Newmarket, including spinal tap, full UREs, FBC, CT Scan, Acid bile test	NO	3 years old. Cluster seizure/status epilepticus	No triggers. Full investigations completed at AHT - other medical/traumatic causes ruled out. Medication: Tried Phenobarbitone, Potassium Bromide, Keppra, plus several other trial drugs (no positive changes) except Keppra gave us a 'honeymoon period' made it to 5 weeks without seizures but then they were back to heavy clusters again, worsening over the 2 years we had with him. Neutered. Cluster seizures lasting several minutes between weekly - 4 weekly prominently. For 2 yrs until we had to let him go.	OWNER
30-09-21		Glennie Glen	K164560	N/A	WSD - UK KC Activity Register	17-May-16	UK	Dog	Glen (ISDS 00/313103)	INT SUP & WORLD CH DEVI TWEED (ISDS 278783)	Meg (ISDS 257352)	Gwen (ISDS 00/314102)	INT SUP & WORLD CH RAY (ISDS 266416)	Bet (ISDS 00/294932)	5 years	NO	I am very familiar with epilepsy, as I have previously had animals who had grand mal fits, so have no doubt this is what he has. At this stage I don't want to put him thru the trauma MRI testing etc.	YES	N/A	Suspected triggers: 18.07.21 - 5 days prior to 1st seizure he ate mystery substance at fishing lake. 19.7.21 - Following day very lethargic and not eating or drinking. Emergency vet visit required. General anaesthetic given. Oesophagus, trachea etc massively swollen. Vet prescribed a large dose of the steroid Dexamethadone and follow up Pirron to alleviate swelling. Almost immediate improvement, but diarrhoea for 4 days, 23.7.21. On day 5 after consumption of unknown substance, he had a full grand mal type seizure. 24.7.21. This was repeated approx the same time the following day at 6.30 am when being let out in to garden. A time of excitement. Medication: Immediately after the first seizure I gave a drop of CBD Brothers Silver Edition Indica CBD Oil and another drop that night. A single drop was given the following morning immediately before he went outside, but he had another seizure at approx the same time and place and under the same circumstances. I believe because the Silver Oil had not yet been absorbed. I now give CBD Brothers Silver Edition Indica Oil 1 Single drop 3 x daily. Organic MCT Oil 1 level teaspoon 3 x daily. Equilar Capsules 3 per day with food. Details: He has several small meals during the day now, instead of just one meal in the evening (as before). He is fed almost exclusively a raw keto diet. So far he has had no further seizures, but it is obviously very early days. He was neutered 3.5 weeks prior to the first seizure. Both grand mal type fits lasted between 10 and 15 seconds. He was unconscious, but eyes wide open and glazed. He was paddling and foaming at the mouth. He recovered pretty much back to normal within 2 to 3 minutes. I now understand that there is a history of seizure in his line. His litter sired started fitting at 2.5 years of age, initially under similar circumstances (excitement), but has continued to fit, both while excited and at times of rest and has needed her veterinary meds increased over time.	OWNER
29-11-19		Grenaby Skeel Graih	Not known	Not known	BC	15-Sep-11	UK	Dog	Ludgate Red Laser	Woodorrel Spectre AW	Firelynx Jumanji at Ludgate	Grenaby Editors Choice	Grenaby Tucker	Nunney Kim At Grenaby (ISDS 231219)	1 year 6 months	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Pexion 400mg twice daily. Initially fed on Skinners kibble then once the fitting started, a home prepared diet of brown rice, potatoes and vegetables with raw meat (to try and reduce gluten, corn, soy and casing as per the GARID diet). This seemed to help for a while, with improving gaps between fits until last week, when he had several fits and he became critically ill at the weekend with cluster fitting. Fits have change in frequency. We had got him up to 17 days between fits, and had wanted to try and manage it naturally (without drugs) but that all changed last week as described above and the treatment was necessary to save his life. After we got him, we heard that the dogs (not the batches) in the previous litter had all started to fit. So we opted for an early castration at 5 months. We are very lucky that he is still with us, but it was devastating to see him so poorly. He was in intensive care for 3 days and has been home for 3 days now, improving visibly by the hour. If I can provide you with any additional information, please do not hesitate to shout.	DATA TRANSFER FROM LYN NORTON Added 11.09.13
31-08-20		Gwen	N/A	N/A	Unregistered - UK	01-May-99	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	Veterinary observation	NO	16 years. Euthanasia after uncontrolled fitting	Suspected triggers: No known triggers. Medication: Phenobarbital given initially with limited success. Potassium Bromide controlled the epilepsy completely until aged 16 when digestive problems made the medication unusable. Details: Spayed before 1 yr by rescue charity. Survived Parvovirus virus aged 8 months. Fits became progressively longer and uncontrollable. She had to be sedated for up to two days to stop the fitting. Fits ceased immediately once potassium bromide was given (in solution twice daily with food).	OWNER
31-08-20		Gwyneth (ABC 421786)	N/A	N/A	Non UK Registered (Border Collie)	02-Jun-15	USA	Bitch	Yosemite Gold (Flash) (ABC 320881)	Raze (ABC 145723)	Bella Jewel (ABC 239542)	BB Honey (ABC 397387)	MISR BB Shloh (ABC 386155)	BB's Scorch (ABC 338096)	4 years 6 months	YES	All tests came back normal. MRI, spinal tap, and bloodwork all normal. The neurologist diagnosed her with idiopathic epilepsy	YES	N/A	Suspected triggers: Unsure of any triggers. Medication: She was just put on Zonisamide 100mg in the am and 50mg in the pm. Details: She has had 4 grand mal seizures at night only. They started in Jan 2020 at 3 months apart, then once they got to a month apart, the neurologist put her on medication. She convulses, foams at mouth, eyes roll back, she loses consciousness and I am not able to snap her out of it. She used to run around the room right before she started seizing, but after doing this twice, I started crating her at night in a soft crate. Her seizures last a little over a minute, and she takes on average 3 minutes before she is completely conscious. She gets monthly chiropractic and acupuncture. I got a wellness check with fur sample done, and it gave me a list of foods she is sensitive to. I have created her home cooked meals ensuring she only eats foods that she should. I have added MCT oil, B complex vitamins, omegas and do a monthly liver cleanse.	OWNER
29-11-19	31-03-20	Gwynfair Marc My Words	Not known	Not known	BC - UK KC Pedigree	19-Dec-11	UK	Dog	Wildblue It's The Business	AM CH Kybota Wildblue Rhythym	Wildblue Eternal Dream	Trevellis She's A Gem at Gwynfair	Alicrnia Shadley Blue	Dentelle of Sunloch Valley	2 years 2 months	YES	Vet confirmed as Epilepsy	NO	3 years 5 months. He had another severe seizure during the night which left him paralysed from the shoulders. We then made the decision he should be pgs, 1st June 2020. He was a different dog but he liked us and was content in his life. UPDATE ADDED 31/03/2020 - Update to Registration Type.	Medication: Initially Pexion, after 6 weeks Libromide was added this combination was satisfactory for a while but then fits resumed, if anything worse than previously, he then had Epigheal and also Diazepam. Neutered after onset of fits. From the outset his fits were severe and caused significant memory loss and required a lot of returning etc. We had a honeymoon period when we thought that the medication was getting to control the seizures but when they resumed each time he had one it was severe and the recuperation period took longer. He had a very severe cluster of fits which effectively wiped his memory and character. He was very close to death but pulled through. We taught him to walk etc again and after 6 weeks he was basically ok. He was a different dog but he liked us and was content in his life. UPDATE ADDED 31/03/2020 - Update to Registration Type. Medication: Epiphen and Libromide. Intact Male. Seizure approx every 2-3 weeks. Seizure length average 60-90secs. We got Jack when he was 14 months old, he had his first seizure about 1 month after his 2nd birthday (late Oct 2019). I phoned the vet and they gave me some great advice on how to monitor and what to do during a seizure, unfortunately a couple hours later he began to cluster so was rushed off to our emergency vet for sedation. We discussed the options for meds and agreed that we would not medicate at this point. 2 months later he had his next seizure, so an appointment was made to check his bloods again, this time the vet suggested we put him on Epiphen. After a while with only the sporadic minor seizures he began to cluster again (5 in 2 hours) he was kept at the vet that day and was started on Libromide and we were given emergency meds for future clusters. Since then Jack has been only having small seizures roughly once every 2 months. We continue to medicate with the Epiphen and Libromide and record any seizures in his diary or on film when we can. Jack is the most loving, happy dog and wants to be friends with everyone he meets. We love Jack dearly and wouldn't be without him.	OWNER

Epileptic cousins. Medications: Initially Epiphen then Libromide added and finally Keppra. Spayed before onset. Cluster fits showing signs of brain damage. Jess had refractory epilepsy. Despite increase in doses of Epiphen and addition of Libromide followed by Keppra she continued to have cluster fits admitted to vets on several occasions to try and stop the clusters. The only time she was fit free was on large doses of Epiphen which eventually caused liver to have problems metabolising the drug and she started to fall over eventually being unable to walk. At this stage she was referred to a neurologist and put through MRI scan, spinal tap, blood tests etc. The result was that she was being poisoned by the epiphen which her liver wasn't metabolising. Her dose of Epiphen was reduced and she was put on a liver supplement. With the reduction of Epiphen she went back to cluster fitting every three months till she died 2 years later in status epilepticus.	OWNER
31-10-20		Jess	N/A	N/A	Unregistered - UK	10-Mar-14	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	7 to 8 months	YES	Monitoring fits and keeping record of everything that happened	YES	N/A	Suspected triggers: None known. Medication: Pexion 600mg a day. Details: Rarely happens but occasional cluster fits, longest fit lasted 13 minutes usually last about 4 minutes. Can be months/weeks between fits since being on medication.	OWNER
31-03-21		Jess	N/A	N/A	Unregistered - UK	20-Jun-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	About 18 months	YES	After videos we had taken and being tested at Fitzpatrick's. They started her on medication, which caused her to fit more	YES	N/A	Suspected triggers: Extreme exercise, stress, heat in the summer. Medication: Phenybarbital and Pexion which she is being weaned off. Getting ready to start Potassium Bromide once Pexion has finished. Details: Jess has been spayed. She is a very anxious dog who is upset by any noise. Her fits are like petit mal at times but also grand mal fits where her nose and bottom jaw, her eyes roll up, then she starts to shake. They can last from between 30secs and 6mins. She also has episodes where she lays in her dad's arms and flops in her head on the sofa and can sleep for up to 30 mins. You can say pugsycat, squirrel, dinner, name of a visitors and she doesn't move. All the time there, her limbs don't move and when she gets off she has left a small mark on his trousers. The last two fits she has been incontinent and wet the bed. Occasionally she can be aggressive, but normally a very placid girl. She has changed, doesn't like her harness or collar, seems worried to go to my husband.	OWNER

Medication: Epiphen, Potassium Bromide, Keppra and Diazepam to try to stop clusters. CBD oil plus herbal products. Everything has worked well initially but then has become less effective. He has just been prescribed Pexion to use for a few days after seizures to try to stop the cluster. Jezi is entire. He fathered a litter before his seizures started - his son started having seizures at 115 months and was pps at under 2 years due to uncontrollable seizures. Jezi sister started fitting a year after him and she lost her battle in May this year. Jezi always has GMS and always clusters. They have become progressively longer - will often be unconscious for up to 6 mins. We are very fortunate that Jezi has a VNS implant. Langford vet hospital is doing a trial with Bristol Children's Hospital and Jezi is the 4th dog to have the implant in June 2017. I am convinced that he would not still be alive if he hadn't had this. He is very active and 3 years ago started Rally Obedience and is now working at the top 2 levels.	OWNER	
22-12-19		Jilly	N/A	N/A	Unregistered - UK	05-Jan-15	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 6 months	NO	N/A	YES	N/A	Taken to vet after first fit. Suspected triggers are totally unknown, just happened one night. Then continued monthly, always about 2am. Medication: Vet recommended not going on meds as they didn't last long and were so spread out just monitoring her and if anything changes consulting vet. Have rectal Diazepam in case she has another. She had one large fit about 6 months ago followed by some smaller ones. Was left with a twitch but vet put her on diazepam for a week and twitch cleared. All her fits are over in a couple of minutes and doesn't seem to be a pattern to them apart from monthly and always about 2am. She has had fits monthly up until 14th of September, but nothing since (now 02/12/19). She is spayed.	OWNER

29-09-19		Kingsfarm Lady In Red - Indi	K127121	N/A	WSD - UK KC Activity Register	22-Feb-08	UK	Bitch	Borderlair King Of Swing	SH CH Brookside Country Classic	Borderlair Pink Fizz	Merrymarsh Dress To Kill Of Kingsfarm	Tenita Black Magic At Kingsfarm	Faith In Merrymarsh	9 years	YES	Blood Tests	YES	N/A	No suspected triggers. Medication: 200mg Pexion twice daily. No change noted as put on 2nd time she fitted when she fitted 3 times in 3 days which coincided with having vitamin tablets. Put on Purina Neurocare dog food which made a big difference to her recovery after a fit. When taken off this I started on Coconut Oil since when the time between fits has gone from roughly every 2 months to over 6 months.	OWNER
21-08-19		Kingsfarm Maid of Honor	K139324	N/A	BC - UK KC Pedigree	08-Nov-11	UK	Bitch	Tamerye Celtic Laird	Bellatrix Highlander CDex Udex	Tamerye The Ferrari	Kingsfarm Dress To Impress	Borderlair King Of Swing	Merrymarsh Dress To Kill Of Kingsfarm	5 years 5 months	YES	Vet said it was because she had now had 4 episodes	YES	N/A	In vets during first one - stress? 2nd one it was a very hot day and had eaten cheese? Medication: Epiphen (1 x twice a day), Eptaur 500, Milk Thistle & CBD Oil. She has remained fit free since. Spayed in 2012. Her last fit was the worse - much more intense and longer (lasted about 3 minutes) and she took longer to come out of it. In April 2017 Macey had a routine dental examination. In waiting room afterwards I noticed her mouth was twitching and started to foam. The vet took her in side room where she was fitting on the floor. They kept her in for observation for a few hours. Vet thought as she was stressed this was probably the reason. No medication given to me as they said they only medicate when they have had 3. All ok and fit free until June 2018. Around 10am Macey was resting in kitchen and started to fit. No vet appointment until 4pm that day. No tablets given but was told to administer rectal diazepam if she had another. 2 hours after being home she had 2 more - more severe than before - rectal diazepam given. Called emergency vets as I couldn't cope with seeing her like it. They agreed to have her in overnight to observe. Got a call 3 hours later saying she was so stressed and would be better at home. Epiphen was prescribed 1 tablet twice a day. I also give her Eptaur 500, Milk Thistle (to help liver on Epiphen) & CBD Oil. She has remained seizure free since. The day of her first fit at home it was a very hot day she had also just eaten some cheese (which is now off the menu).	OWNER
19-07-19		Kobi	N/A	N/A	Unregistered - UK	15-Jun-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 8 months	YES	Confirmed by vet	YES	N/A	Suspected triggers are stress and also air pressure (humid weather), bright lights. As Kobi is deaf and also almost blind he bumps into objects which stresses him. He can't go to vets surgery as stress causes seizures. Medication: Vets have tried almost all meds over the last four years. He still has seizures but they are 1-2 a month now. At the moment his meds are: Epiphen, Lidormide, Levitracetam and Sodium Valproate. Diazepam for cluster seizures. He has recently been diagnosed with diabetes too so is now on insulin too. We have struggled for four years to get him to this point and tried so many different meds. Have also had advice from a neurologist who diagnosed textbook Epilepsy. Kobi has blood tests regularly to tweak his meds. He is a blue Merle, totally deaf, almost blind and now diabetic aged 6yrs old. While trying to get the right balance of his meds he was having clusters every other day. As his meds are now he will have 1-2 seizures which leave him completely exhausted and wobbly for days. His seizures are 1-2 a month at present. Neutered. Rescue dog from Border Collie Trust GB.	OWNER
29-02-20		Kooki	N/A	N/A	Unregistered - UK	01-Feb-16	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 6 months	YES	Filmed event. Explained to vet. Examinations.	YES	N/A	No apparent trigger. Medication: None. Thankfully it only happened twice and not since. Random seizures. Only had two in space of that month. Monitored and not happened since. Lasted around 10 mins each.	OWNER
21-08-19		Koopa	N/A	N/A	Unregistered - UK	22-Feb-14	UK	Dog	Gwynion Paddy	Unknown	Unknown	Gwynion Gwen	Unknown	Unknown	2 years	YES	MRI	NO	5 years. He had two failed infusions, couldn't stop the seizures.	No suspected triggers. Medication: he had a VNS implant, was on epiphen, pregabalin, keppra and opiomamide. VBR made him crazy and then unresponsive, we even had a VNS implant inside him to try help. CBD did nothing.	OWNER
29-09-19		Lacey	N/A	N/A	Non UK Unregistered (Border Collie)	10-May-19	SOUTH AFRICA	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	Blood tests MRI scans Diagnosed idiopathic Epilepsy	YES	N/A	Suspected triggers: Bravecto tick and flea treatment. Light sensitivity. Extreme change of routine. Medication: Phenebarbital. This has helped control the seizures and we went 9 months seizure free at a stage. She seemed to develop resistance to it and due to her liver enzyme levels we added Keppra. Valium is used as a rescue medication. Lacey is spayed. Behaviorally she is very active, not just border collie active (we have two) she has endless amounts of energy and it seems as though she rarely switches off. She chases shadows and light reflections endlessly and licks them mainly on floors and walls. She also seems very sensitive and reacts to seemingly normal activities she has a barking fit/harmon if you shower, take off your shirt, use squeeze bottles etc. It's as though she doesn't like you doing it and even gets worked up before you begin to do it for example if she sees you take clothes out to shower she starts barking. 2017 May 1 seizure, July 1 seizure, August September, November and October (partial) seizures one each month, December 1 seizure. 2018 January 2 seizures increased phenobarbital meds, April 1 seizure. 2019 February 1 seizure, March 1 seizure, June 1 seizure, July 1 seizure added keppra. Partial seizure it seems as though a seizure is starting and she comes and asks for help but then there is no seizure only excessive growl or teeth chattering. Lacey's seizures are usually just over a minute and she urinates during her seizures.	OWNER
19-07-19		Ladika Like A Rocket - Sam	Not known	N/A	BC - UK KC Pedigree	10-Apr-11	UK	Dog	Rosmak Dapple Dandy	Canen Baz (ISDS 252345)	Rosmarinus Rising Star	Rosmarinus Gin Soda	AG CH Forbyfor Turbo Diesel	Rosmarinus Pimms	9 months	YES	Vet and consultant neurologist	NO	Sam died at 15 months old from cluster fits.	No triggers known. Medication: Phenebarbitone, Keppra, Bromide - no improvement seen. Fits started 1 week. Cluster fits of up to 6 in an hour started after 2 months, sometimes only 3 days between clusters. Sam fitted almost constantly in his last 24 hours and had to be PTS because he fitted every time anyone went near him. A horrendous death as the chemicals to PTS made him fit more. Entire.	OWNER

29-10-19		Little Ozzie	Died before being able to be registered	N/A	WSD - UK KC Activity Register	08-Mar-07	UK	Dog	OB CH Whistnow Razmatuzz (WSD)	Rokkin Rapid	Forever Magic Fantasia	Croftmist Megan (BC)	Tanamerje Krimoss	Mainline Mist (BC)	45 days	NO	N/A	NO	46 days old. See Fitting details for more information	Suspected triggers: The vet suggested that he may have had worms but it was not the case. Medication: No medication for fitting but ABs and Anti-inflams as below. At 43 days he became quiet and stopped interacting with his siblings. At 44 days he started seeking out dark places. Taken to the vet and was given antibiotics and anti-inflammatory injection. At 45 days he was again searching for dark places. He was very distressed when travelling back to the vets and fitted badly within minutes of arriving. At 46 days old he began fitting and was taken back to the emergency vet. He resembled a dockwork toy and was very rigid in his mobility. He seemed to have stopped growing. The vet blood tested for a liver shunt which came back negative. As the vet examined him, Ozzie became very distressed when his head was held and was obviously in a great deal of pain. The vet diagnosed inflammation of the meningeal (tissue surrounding the brain). The vet and I agreed that euthanasia was the only option. Two other pups from the litter also fitted at later intervals and both have died. The rest of the litter were registered with my 'Croftmist' alias. Megan was spayed after. The two other dogs from the litter, that fitted, were put to sleep at young ages due to the fitting. Ozzie was unregistered but the rest of the litter were KC registered.	OWNER/ BREEDER

29-11-19		Lupitooz Tazmanian Devil - Taz	Not known	N/A	WSD - UK KC Activity Register	03-Mar-09	UK	Dog	Pied Pike (ISDS 254417)	Ben (ISDS 235217)	Bet (ISDS 230544)	OB CH Collewood Candy Girl	WT CH Waggerland Fizz	Forest Sprite Psyche	2 years 10 months	YES	Referred to Animal Health Trust Newmarket for MRI & Spinal Tap (both clear)	NO	6 years 1 month. His liver was grossly enlarged and he could not breathe as he had fluid in his lungs. Extensive organ collapse and brain damage due to drugs and cluster fits. PFS 22.04.15	Never could find a trigger. First fits 2 weeks apart. Medication: He was on Phenytoin, Libromide and another drug I can't remember the name of. Fit free for 8 months until Sept 2014, we struggled and could not get them better than one every 7-10 days. Had to increase his meds several times, this impacted on his body. He had a period of seven months, during the twelve months before he died, when we thought we had him stable and no fits. Then they came back and we just could not get any control at all. At the end he was having constant Petit Mal seizures between the Grand Mal, the drugs just didn't work anymore. Also rectal Valium to stop the fits once they started. During his last three months he had some prednisone. Taz was not neutered. His fits were, right from the start, five to eight minutes long and extremely violent. They occurred mostly when he was asleep or resting. Frequency two to four weeks apart but he might have two or three fits at a time. Pied Pike has sired other dogs that have fitted. Unfortunately none of them had started to fit before he was mated to Lulu.	DATA TRANSFER & UPDATE BY OWNER

At age 12 weeks, was given Milbemax +/- Sam, then a Flea/Tick spot on at 12 noon. Fitting began at 5.30pm. Medication: Kepra & fortnightly B12 injections. Kepra phased out, 5 weeks later massive cluster fit & euthanised. Dam and all surviving puppies in litter neutered.	DATA TRANSFER FROM LYN NORTON Added 07.12.12 Updated 20.03.13
29-02-20		Mandy Patrick	N/A	N/A	Unregistered - UK	18-Jun-05	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	By the vet as she went on quickly to have a series of fits stopped only by being given an anaesthetic.	NO	Age 11. Death was related. Mandy went into a state of conscious shaking and her body shut down and she was unable to move over a period of days	Suspected triggers: All vaccines, flea and tick treatments, loud noises and stress eg: visit to vet, agility class, being left alone. Medication: Started on Epiphen, added Libromide, added Kepra as each drug became less effective. Also had rectal diazepam to bring her out of seizures. Extra Kepra used as preventative before a stressful event and after fitting to prevent recurrence. Spayed age one. Mandy had fits, often two in a short space of time, around once a month once we got medication settled. We added more meds as they became more frequent each time. To begin with she was very unstable as vet wanted to introduce meds gradually. Several vets to emergency vet. Eight fits after vaccination when she was four. Always fitted five days after flea and tick treatment. Diagnosed as tonic clonic epilepsy. In her last few months she did not fit until last major episode. A beautiful girl who took it all in her stride and remained gentle and loving, and full of life through it all. Major meds over nine years did not impact liver and kidneys which was one of our big concerns.	OWNER
30-04-21		Marky	N/A	N/A	Unregistered - UK	27-Jan-15	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 4 months	YES	Blood tests after change of vets	YES	N/A	Suspected triggers: Weather and pressure Medication: Epiphen 45mg 2 daily Details: Neutered. Fits last up to 2 mins and about 10 mins recovery. Marky was bought from working farm at 4 weeks old... was not the first to leave the farm and was the smallest.	OWNER

29-02-00		Marley	N/A	N/A	Unregistered - UK	2011 approx	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	Not known (rescue dog, owned since 6 years old, had fits before being adopted)	YES	Blood tests excluded anything else, vet said most likely idiopathic Epilepsy	YES	N/A	Triggers unknown, although previous owner mistreated him and was convicted of animal cruelty after kicking Marley repeatedly on numerous occasions. He had a broken tail. Could have had injuries to head/mast? Medication: He has had far less fits since starting a raw diet with coconut oil and CBD oil. Once a seizure starts, we give CBD drops immediately and the fit subsides quickly and he recovers far better. Before CBD he would have cluster fits and twice had status epilepticus where the seizure continued for nearly an hour. With CBD they last only a minute or two and are very mild. Neutered at approx. 4 years old. Very dominant male, pushy with other male dogs. We think Marley is a Welsh collie. He is sable and white, herds upright and is loose eyed. Contacted the Welsh Sheepdog society who said epilepsy is very rare and practically unknown in registered Welsh Sheepdogs, although common in border collies. They suggested Marley is therefore most likely a Welsh Sheepdog/ BC cross, or if he's a pure Welsh, his epilepsy is probably injury related rather than inherited.	OWNER
29-11-19		Marshonelle Howdylicious	Not known	Not known	BC	05-Nov-12	UK	Dog	Rosmarinus The Chocolater	Rosmarinus Jaffa	Rosmarinus Demerara	Marshonelle Izzie	Rosmarinus The Rainmaker	Amazin Gracie	1 year 1 month	YES	Vet confirmed Idiopathic Epilepsy. All possible tests done, including an MRI scan and spinal fluid tap	Not known	Not known	Medication: 40mg of Pexion twice a day. He was flea treated a week before, to which he was stressed at time of doing so and was off colour from that point up to first fit. He was fed on mainly raw with some dry food. Had an allergy test done and he is allergic to chicken, duck, wheat and gluten. Changed to pure BARF diet minus the chicken and duck. In himself he became brighter when food was changed, he started to grow again, coat became fuller. His fits have become less frequent but this may coincide with having all possible tests done, including an MRI scan and spinal fluid tap, to diagnose epilepsy and being put on the right medication. When they first started he had several in a week, once food changed these decreased and since medication started they have decreased further. Longest between fits has been 31 days. 19-07-19		Marshonelle Switch'N It On	AP04298501	N/A	BC - UK KC Pedigree	05-Nov-12	UK	Dog	Rosmarinus The Chocolater	Rosmarinus Jaffa	Rosmarinus Demerara	Marshonelle Izzie	Rosmarinus The Rainmaker	Amazin Gracie	7 months	YES	Vet confirmed as idiopathic	NO	Major seizure	Suspected triggers: No triggers identified. Time frame was too short to collate information. Medication: Pexion 400mg twice daily. One small fit on 28.06.13 whilst asleep on sofa lasting less than a minute, recovered within 10 mins. No further fits until 08 July when found fitting in the morning. Rectal Diazepam given. Fitted again same day at 8pm, same treatment, but 4 further fits, taken to vet, kept overnight and stabilised. Home on the 12th but fitting again between 11am and 2pm so back to vet and again kept in overnight and sedated. Phenobarbitone and on a drip. Prognosis was poor at this time. Brought home on the 13th July, Pexion 400mg twice daily. Details: Remy seemed unlikely but daily improvements noted - motor function, spatial awareness, vision, recognition. Following 22 days chartered phenomenal progress in physical and mental capabilities, by 1st Aug he was at 95% of his previous levels of Obedience training. On 2nd August he had another brief fit at 10pm (similar to his first) with the same outcome. At some time between 3am and 4am on the 4th Aug he suffered a major seizure, rectal diazepam x 3 was administered but to no avail, and he passed away shortly afterwards before the vet arrived. Vet hazarded a guess at major haemorrhage as cause of death. Neutered.	OWNER

No fits since RVC increased epiphen to top of therapeutic dose. UPDATE ADDED 31/07/2020 Since November 2019 Mojo was on Phenobarb 150mg twice daily, Potassium Bromide 500mg once daily & 300mg Kepra twice daily. He had Diazepam after every bad fit by injection. Was having worsening fits weekly. He was euthanised in April after going into status.	OWNER Updated 31.07.20
29-02-20		Molly	N/A	N/A	Unregistered - UK	17-Aug-19	UK	Bitch	Unknown	Unknown	Unknown	Shadwell Sophie (ISDS 350782)	Jock (ISDS 327212)	Adelph Ember (ISDS 321991)	6 months	YES	All blood tests done and no underlying issues	YES	N/A	Suspected trigger: Stress may be a trigger. Medication: Pexion - this did not work in my opinion made it worse. Epiphen - immediately calmer and fitting stopped. Molly had what we thought were panic attacks from when we brought her home. I now believe that these were partial seizures (Psychomotor), which evolved into full seizures. These stopped when Epiphen was introduced. She is also very anxious and hyper sensitive to certain sounds (cutlery, tin foil, running water). Epiphen has also helped with this.	OWNER
29-10-19		Moose	N/A	N/A	Unregistered - UK	15-Jan-19	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Moose took his first fit at 6 months, from which I took him to the vet and blood tests were conducted. Since Moose was a male BC the vet believed it was a high probability that Moose was suffering from idiopathic Epilepsy	NO	Passed away at 8 months old. Began fitting, fits were lasting around 4 minutes give or take. Was taken into vets where he was sedated. As he came out of the sedation he took a fit which he did not come out of	No suspected triggers. Medication: Started on Pexion and went two weeks without fitting. However had to be placed on Kepra as well due to him still fitting. After 3 weeks on Kepra and Pexion, Moose took a cluster of 7 fits within 18 hours and then was placed on Epiphen and Kepra. This allowed him to be fit free for 1 month until vets decided to lower the dosage of Kepra, the Kepra was dropped to half a tablet and then Moose took his final fit and eventually passed away. Due to the level of medication Moose was on, his focus and concentration were terrible. I have recently read an article stating that the trainability of dogs suffering from epilepsy drops after their first fit and I can back this up from what I've seen with my boy.	OWNER

30-09-20		Ozzy Bear - Bear	N/A	N/A	Unregistered - UK	31-Jan-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 9 months	YES	Taken to vets after seizures at home. Treated by local vet and also Animal Health Frust Newmarket Suffolk. Brain scans and medication check. The neurologist at Newmarket had told us that Bear was one of the most difficult dogs he'd seen to treat at the time. His brain scans showed white areas where brain damage had occurred because of his seizures	NO	3 years - Passed to bridge 30th May 2017	Details from 31.01.2016: Suspected triggers: I've kept a diary since his first fit which was in October 2015 and at first we thought it was a supplement oil we put on his food. We stopped it but found the fits carried on regularly until he clustered and we had to put him on meds. They were 3 weeks apart within a day each time, then he had 2 in 3 hours. Medication: He started on Epiphen 45mg twice daily. He had blood tests every 3 weeks and after each blood test his dosage was increased by half a tablet each case. As at the above date he was on 75mg twice daily. He has also had Diazepam in case of severe fitting of 5 minutes. Details: Bears first seizure was at 6.30am, he'd last eaten at 5.30pm the evening before. He is fed Nature's Diet which is cooked, he has that with Pedigree Chum mixer for large dogs. Most fits are between 6.30am and 6.30am when asleep. Since he started his meds he has not fitted, though after blood tests they have kept increasing his dosage. He has now been 6 weeks fit free. Bear is a very large collie weighing around 34kg. He came from a working farm in Wales as did his brother who is coming up to 3 with no signs of the same. He was neutered at 9 months old and had not fitted until October 2015. UPDATE ADDED 30/09/2020 to: Date of Birth/Registration Type/How epilepsy diagnosed/Is dog alive/Is Cause of Death	DATA TRANSFER & UPDATE BY OWNER
29-11-19		Paddy	N/A	N/A	Unregistered - UK	12-Oct-17	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	Vet tested for all other possible conditions which were clear, this left us with Idiopathic Epilepsy	YES	N/A	Not sure as very early stages of any suspected triggers, only had first seizure on 1/10/19. Possibly stress related? Medication: Initially given Pexion 400mg half a tablet twice a day, 12 hours apart. On 15th November began fitting again, first one was as all the others, he was sleeping then began a cluster, Diazepam administered but continued to fit the morning after, on another trip to the vets they issued more Diazepam & introduced Epiphen, he had a loading dose for 24 hours (4 tabs) along with the Pexion then reverted to 2 tabs 12 hours apart plus Pexion for 24 hours, another vet trip booked for 18/11/19 to discuss future medication. Neutered at months old. Seizures initially were when sleeping but in last 24 hours they have been when awake. Fits are never very long at the moment, around 30-45 seconds. Some seizures have appeared to be caused by one of the other dogs growing at him.	OWNER
21-08-19		Phoenix	N/A	N/A	Non UK Unregistered (Border Collie)	30-Jan-14	CANADA	Dog	Etrick Moss (CBCA 7365)	Imp Jake (ABC 174412)	Etrick Fait (ABC 184189)	Tess (Unregistered)	Quill	Reba (CBCA Reg)	4 years	YES	Toxoplasmosis Titre	YES	N/A	It's only been a year and we are looking for triggers. Neurologist suspects seasonal pollen. Medication: Kepra, Topramax, Zonisamide. Seizures stopped after the addition of Zonisamide. All three meds are taken three times a day. Seizures stopped all winter and started up again in May. One in May, one in June, one in July. Peanut butter and potato chips might be a trigger. Neutered at 13 months, seizures average 2 mins. My dog is healthy, fit and competes in Rally-Obedience trials. His personality has changed and he barks more, will often lack focus and will only obey half of the time now. He has started whining and is completely ball obsessed. Sire registered CBCA. Dam not registered. Phoenix is the only dog out of two Moss/Fess breedings (18 pups) with a seizure disorder. Phoenix's seizures are from Toxoplasmosis. It might be good to allow others connected to him through genetics to know that it is not an inherited disorder.	OWNER

29-11-19		Remajak Somerset Morn	Not known	Not known	BC	11-Jun-13	UK	Dog	Altricia Double Dare To Arrondee	Altricia Mister Consistant	Altricia Lady Madge	Borderbeau Blithe Spirit At Remajak	Lochell Travellor South To Borderbeau JW ShCm	Lochell First To Finish At Borderbeau	1 year 4 months	NO	N/A	Not known	Not known	Medication: see below. First fit 28.10.14 - seizure in the afternoon, followed by a slow but full recovery to normal state. Second fit 29.10.14 at 7am. Seen by the vet after each seizure and blood tests undertaken. Vet advised diagnosis of idiopathic Epilepsy at this stage but as yet no MRI or spinal tap has been carried out. He was otherwise fit and well with no further seizures as of 2.12.14. Initial course of Diazepam for approximately one week, treated with Epiphen twice daily from day of second fit for four weeks. Bloods have been sent to Epiphen to assess viability of phasing out medication. 24.9.14 castration under general anaesthetic, vet treated with Advantage for possible flea same week. 1.10.14 first year vaccination. 25.10.14 routine worming with Panacur. He is otherwise fit and healthy. All breeders/owners directly contacted were informed immediately with sire/dam owners agreeing to wait for completion of initial four week treatment plan before submitting to database, dam & littermates will never henceforth be bred from. DNA to be submitted in due course. Fed James Wellbeloved Turkey & Rice; no change before or after seizures. Neutered on 24th September, before onset of fits. UPDATE ADDED 01.05.15 - Bryn suffered a seizure at 10.30pm. Recovery time was quicker than the initial two seizures last October but he lost vision for 15 minutes. 25 minutes after the seizure he took his ball to his owners to ask for a game. At the time of the seizure, his owners report that his Epiphen dose had been reduced gradually to 1/4 tablet each day (as he had suffered no further fits after the initial two) with the plan to take him off med altogether in another week. However, his vet has now advised that the dosage should be returned to 1/2 tablet each day.	DATA TRANSFER FROM LYN NORTON Added 04.12.14 Update 01.05.15

Blood tests next morning nothing found. No scans performed as veterinary advice was, due to her age, a tumour etc was unlikely. Idiopathic epilepsy diagnosed.	NO	PTS on 23/01/18 aged 3 years, months after deteriorating over the previous few weeks. She'd been in season the previous December and although these had no effect before, she started to have focal seizures almost daily	First seizure was 9 days after her first annual booster. Triggers were strong scents, some foods, being startled, stressful situations, although she didn't show stress signals. She would fit after vet visits for her blood work or if she got injured. Medication: She was on Epiphen and Potassium Bromide with Keppra for 5 days after a cluster and rectal Diazepam. When she deteriorated in the December, Keppra was added as a third drug, not just to break clusters and dosages were increased (can't remember specifics) but seizures couldn't be controlled. Was also seeing a homeopathic vet. She had a couple of remedies which helped in the short term. Rogue was entire. Veterinary advice was not to spay due to her epilepsy and the fact she was a blue merle. Seizures were intense, she frequently had clusters but never lasted more than a couple of minutes, until the end. No two ever seemed the same.	OWNER

(Bloods, Spinal Tap, imaging etc)	YES	N/A	It is idiopathic Epilepsy. I have not noticed any triggers. Medication: Epiphen, changed August/September 2018 to Libromide 325mg & Levitracetam 500mg. Marnie is spayed & seizures usually occur early morning & last a few minutes. Medication changed August / Sept 2018 after she was admitted to A&I with liver failure, one of the possible causes could have been a reaction to Epiphen but this was never confirmed. There were 6 puppies in Marnies litter, 3 of which (including Marnie) have seized, one died at approx 12-18 months, the other is still alive.	OWNER
19-07-19		Rosmak Fortune Seeker - Bilbo Baggins	AP02543903	N/A	BC - UK KC Pedigree	16-May-12	UK	Dog	Rosmarinus Gin Cooler	AG CH ForbyFor Turbo Diesel	Rosmarinus Pimms	Rosmarinus Eclipse	Rosmarinus The Werrymann	Rosmarinus Loganberry	3 years	YES	He had several tests carried out, bloods, spinal fluid and other tests. These were to check for any other condition, which he didn't have. So he was diagnosed as having idiopathic epilepsy	YES	N/A	Suspected triggers: Don't know trigger point. Medication: 325mg Libromide and 75mg Epiphen twice daily. Details: Testicles didn't drop so had operation to find and remove. Has had 21 seizures since Mar 17.	OWNER
29-11-19		Rosmak Fortune Teller	Not known	Not known	BC	16-May-12	UK	Dog	Rosmarinus Gin Cooler	AG CH ForbyFor Turbo Diesel	Rosmarinus Pimms	Rosmarinus Eclipse	Rosmarinus The Werrymann	Rosmarinus Loganberry	12 months	NO	N/A	NO	See Fitting Details	He had had puppy vaccinations but not old enough to have needed booster yet. No injuries or changes to diet, not recently had flea or worm treatments. Entire. He was his usual happy, lively self when we left the house, drove to a show and was acting 'odd' when we arrived. He had drool hanging from his mouth and seemed a little yappy. Took him for a walk, he seemed spoiled which wasn't his personality, went to put him on lead and he fell to the floor fitting. Lasted approx 3-8 minutes. No help available as show, phoned vets who recommended taking him in, said as it was his first fit would be highly unlikely to have another straight away. Travelled in van with myself, he didn't return to his usual self and started fitting again within minutes. I had a vet on speakerphone, the fits were huge and he was struggling to breathe, followed directions and tried to resuscitate. He very sadly died. Not confirmed as epilepsy as didn't want a postmortem but the vet said it was highly likely due to his physical appearance.	DATA TRANSFER FROM LYN NORTON Added 18.07.14

Seizures getting worse, developed into cluster seizures preceded by running without purpose including into fences/walls.	Suspected triggers: No triggers identified. Medication: Phenobarb and KBr. Increasing dosages but seizures got worse. Details: Went on elimination diet, then natural diet only (Holistic vet advised) Thyroid panel showed normal range.	OWNER
29-11-19		Sam	N/A	N/A	Unregistered - UK	30-Mar-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	YES	Multiple fits leading to seeing a neurologist. He has had numerous blood tests and an MRI to eliminate tumours etc	YES	N/A	Suspected trigger is pollen as he is worse throughout the summer period. He is on a hypoallergenic diet. Fully vaccinated. Up to date on flea and worming. Medication: He started on Posion which made clusters worse. He moved to Epiphen which was a lot better but still having them often. He has just started on Bromide and after 4 months, we are going to start reducing the Epiphen. He is neutered. He was fitting every 2 weeks but currently 33 days seizure free from starting Bromide. His fits go on for approx 5 mins and they are all grand mal. I have not noticed him have a focal seizure nor does he just tingle. If he has a fit, it's always a big one. He starts his fit by turning his head all the way around and basically looks behind him. His eyes go wide and he starts to fit. He always pees and farts at the mouth. Sometimes he bites his tongue ending up in bloody spit being thrashed around.	OWNER
29-11-19		Sam	Not known	Not known	BC	01-May-07	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years	YES	MRI and Lumbar Puncture. Bath Vet hospital confirmed as Epilepsy	NO	Died May 2013 aged 6 years. He fitted off and on for just over a week in clusters. We arrived home one evening to find that he had died. The vet said it was a grand mal seizure that only instant medication could have saved him and he would not have known what was going on	Medication: Epiphen. Nothing unusual happened that I can think of I did notice it initially happened after we had been out and we got caught in the rain. Like he had caught a chill, it happened often after a soaking. The vet said it wasn't connected, I'm not so sure. After diagnosis at Bath Vet hospital where he had an MRI and then a lumbar puncture he was initially given just Epiphen, strength and dose varied, then also given Libromide when fits continued, can't remember strength. The fits did change even though he was on medication. The fits didn't last as long and I could tell when he was about to have one, or if he had had one when he was home alone. Usually when he was sleeping then he would wake, his head would shake he would fall over and his back legs would move as if he were running his front legs would be stiff. Was fed on Bakers complete. A lighter diet was offered after fits although he was usually starving when he came around. He gained weight so we were advised to give him a weight control food, there was no change in fits. He was neutered before the fits began.	DATA TRANSFER FROM LYNN NORTON Added 21.06.14

29-11-19		Skye	Not known	Not known	BC - Unregistered	09-Jul-10	UK	Bitch	Blue	Ted	Meg	Dot	Glen	Neil	3 years	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Epiphen 60mg twice a day and Pexion 400mg half twice a day. It was a really hot day in July 2013 late afternoon evening, was going to take Skye in the car to park. It happened outside, then again at the same time on the next day while taking her to the car and the following week then same happened. Then was diagnosed as epileptic. To start they were every 21 days and not that intense but the last couple of months they have become more intense and not regularly. The last week she had cluster fits more and more so medication was changed to Pexion and weaned off Epiphen but that did not work she was put back on Epiphen and Pexion and so far it is working well. Fed on Bakers complete and Cesar. Entire.	DATA TRANSFER FROM LYNN NORTON Added 16.05.14
28-02-21		Skye	N/A	N/A	Unregistered - UK	05-Jun-17	UK	Bitch	Scottish Farm dog	Unknown	Unknown	Scottish Farm dog	Unknown	Unknown	3 years 3 months	YES	Several identical seizures. Vet feels as they started around 3 years old, otherwise extremely healthy fit bitch, epilepsy likely cause	YES	N/A	Suspected triggers: No known triggers at present, still documenting seizures to find any pattern or link. Medication: Treated with Phenobarbital twice daily (under duress), initially 60mg, halved to 30mg by me as behaviour badly subdued by dose. All ok at present, hopeful of stopping or reducing meds after spraying and hormonal fluctuations taken out of equation. Using EFT taping, calming and enjoyable, also Reiki. Very doped, poor soul could barely walk. Have discussed with vet who agrees the treatment shouldn't be worse than the condition! Details: First fit at 4 am, jaw chattering woke me, foaming, twitching and urinary incontinence. Having worked with kids (seizures was aware of how scary it is and to time it). Around 3.5 mins, four long bouts and jumped up like nothing happened. Vet did urine test in morning, slightly elevated white count so treated with antibiotic in case of infection. All other fits (5 more) have been identical, only shorter in every case. Differing times, no real common denominator. One thing I am monitoring is we use a calor heater in sunroom topping up heat in autumn/winter. Most recent seizure Skye had spent half a day with me there doing a Zoom course online. It is well ventilated and has a CO alarm, but wonder if she is affected by this? Just grasping at anything I can change to remove meds etc.	OWNER

YES	N/A	No triggers identified. Medication: Epiphen started 3 weeks ago. No seizures since. Fits are normally 2-4 weeks apart. Mostly grand mal. 3 waves lasting 5-6 mins.	OWNER
29-10-19		Smudge	N/A	N/A	Unregistered - UK	16-Jun-99	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	9 years	NO	N/A	NO	PFS following a significant seizure at 17.5 years. Vet concluded this last seizure had caused brain damage and a high probability of a recurrence within a few days	Suspected triggers: Over activity was definitely suspected as fits generally occurred outside of the home after ball chasing or similar. There was one event after a dash of heads whilst running for a ball with our other dog. Fits were infrequent, possibly once or twice a year but reduced as his age increased and his activity levels decreased. Medication: No medication recommended by vet due to infrequency. Although he was when I first realised he was fitting, with hindsight we realised there may have been earlier occasions where we had not recognised the symptoms from around 2 years of age. Registration status not known. He was full Border Collie but adopted from Border Collie Trust at approx. 10 weeks old. DOB added is approximate.	OWNER
29-11-19		Smudge	Not known	Not known	Collie	19-Oct-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 1 month	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Epiphen increased to 2 twice daily 60mg. After 4 months given Libromid, which only made him lethargic and not acting like his usual self. Now on Epiphen and Levitracetam which we used to give him now and then before a fit, but not on one every 8 hours. Fits started off as around 8 or 9 clusters every 24 days, this increased to 11, his last one being 16 clusters from 2pm to 7 am the next day. Some last 30 to 40 seconds, some 2 or 3. There is usually 15 minutes in between but now a few minutes. Clenches jaw, then jaw wide, outstretched legs, urinates sometimes and a slaver from mouth and the smell is awful. Then he will pace, used to pace for 40 minutes and could not see us. Now he paces and tends not to bang into objects, seems to manoeuvre around them a little better. Before a fit, he howls at the moon, tries to escape, but now he tends to approach me to cuddle and follow me everywhere I go. You can see in his eyes that he is due to fit, his personality changes. The fits had increased to double the amount, but more often between them. Neutered before fits started. He had been neutered only 4 weeks before. He had trauma to his leg when only 5 months. And we had a collie out when he seized the following week.	DATA TRANSFER FROM LYNN NORTON Added 16.07.15

Suspected triggers: No idea other than routine booster vaccine given 3 weeks previously. Medication: Tess was in vet hospital for 2 days to try to stabilise. Just so devastating to see Tess like this. Had a Labrador year ago who fitted every few months but not cluster fits like this. The poor dog didn't know where she was, who we were, couldn't walk - horrendous experience.	OWNER
29-02-20		Tess	N/A	N/A	Unregistered - UK	02-Feb-11	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	8 years	YES	Consultation with specialist neurologist at Langford Vets in Bristol, who diagnosed idiopathic Epilepsy	YES	N/A	No specific triggers that we know of although we have changed diet to a hypoallergenic one since her seizures started. She is on Talk hypoallergenic dry kibble & Natura hypoallergenic meat. Medication: Tess was started on a high dose of Phenytoin (Epilepsy) after her appointment at Langford in March 2019 which made her groggy and low coordination of her back and for about a fortnight but gradually side effects wore off. The dosage was reduced to a maintenance level over a few months until she was on 55mg every 12 hours. She still had on medication, roughly once every 4-5 weeks. However, she developed incontinence due to increased thirst (side effect) and excessive drinking. So far we introduced Pevion 200mg every 12 hours and we weaned her off Epilepsy gradually over 3 months. Three days after her last Epilepsy (September 2020), she had four seizures in a 24 hour period (previously only ever had one fit at a time) and was hospitalised overnight. She was started back on the Epilepsy (mainly but not maintenance amount, so it is now on the same amount as mentioned previously) and hasn't fitted since September 2020. Tess is a quiet bitch that we returned from the Border Collie Trust at 2 1/2 years old when we got her. There was no medical history or evidence of seizures before we got her. Tess used to sleep downstairs in our previous house. A year after we moved to our current house in 2017, Tess started sleeping upstairs next to us in 2018. She started seizing in March 2019. She only seizes in the middle of the night when she is asleep and as far as we know, she is unaware of them and when they are going to happen. They last around 20 mins. She wets and urinates unconsciously which is why we believe she never had seizures before she started taking tablets because we would have felt the wet under her back in the morning (it takes hours to dry). During the seizure, her eyes roll, she stops breathing, her back is lifted back and her back is stiff. She paddles with her front feet before going stiff and still, breathing heavily and then panting before she comes round. She is very disorientated for about 10-15mins and then goes back to sleep and wakes up 'normal'. Excessive urination and stress don't seem to have any effect. I wonder if the hypoallergenic diet has made a difference as she has always been food sensitive and used to be very fussy with food but eating, drinking up food in the morning after eating. She loves the new diet and her stools are good. She is definitely more hungry on the medication.	OWNER
21-08-19	28/01/2020 & 28/02/2020	Tess O'Broomielaw	AH0901331	278780	BC - Dual Registered UK KC & ISDS	14-Aug-05	UK	Bitch	Moss (ISDS 263829)	Mac (ISDS 249492)	Lymwood Nell (ISDS 238979)	Jen (ISDS 267609)	Glen (ISDS 243997)	Nell (ISDS 225113)	2 years 2 months	YES	Blood tests taken at same time as vet affirmed that description of seizures couldn't be anything else	NO (FIRST UPDATE 28/01/2020)	Tess died on Thursday 23rd January 2020 at 14 years old. She was pte quite peacefully as her spinal problems had spread considerably and we did not want her to get to a state of distress.	Suspected triggers: Certain paint smells, nervous excitement, illness, once we suspected a vaccine, vet certain it's bank holidays too as she always has a cluster when they are off duty! Medication: Currently on Epilepsin, Potassium Bromide, Levetiracetam and Scullac & Valerian also has Gabapentin but that is now amongst drugs prescribed for spinal problems. She has been more stable on the Kepra than ever before. History of drugs tried on route available: Spayed 13/06. Heard of others from the sire also diagnosed epileptic. Although we have occasional solitary fits they usual come in clusters (largest cluster was 27 over a Christmas holiday). We've kept a medical diary. If Tess didn't have spinal and hip dysplasia problems now I would suspect that she would still be enjoying a reasonably active life. As it is she still wants to play, go for short walks and eat as she nears her 14th birthday. The epilepsy has aged us rather than the dog! I would always advise working in partnership with the vet and insurance company and we have been blessed with all the support we have received. SECOND UPDATE ADDED 28/02/2020 - We regret to report that Tess died on Thursday 23rd January 2020. She was pte quite peacefully as her spinal problems had spread considerably and we did not want her to get to a state of distress. Having been warned by the vet who diagnosed her epilepsy that he doubted she would reach the age of two we feel blessed to have had her in our lives for over 14 years. She had cancer of the vulva which had spread to lungs. Euthanased as having difficulty breathing	Suspected triggers: No known suspected triggers. She had grand mals whilst at rest, work (Obedience) and from running so no particular trigger. Medication: She was on Phenobarbitone and regular blood tests from 2001 when diagnosed, until about 2006 when no more fits. Drug free for 3 years. Then started petit mals again and put on low dose of Phenobarbitone which controlled fits. Details: She then developed cancer. She was spayed at approx. 18 months. Did not brush through fits but went completely rigid and tremored. Lasted about 3-4 minutes, then with cooing came round and had a cold drink to bring her temperature down, then back to normal. Had Diazepam to administer rectally if did not come out of fit but never had to use it. In total probably had about 6 grand mals and several petit mals which were not too noticeable. Thought at first to have haemostasis, then due to raised calcium levels thought to be a problem with parathyroid gland. Believe other puppies sired by Detania Summersam to have developed epilepsy but had retired from stud when found.	OWNER

He had a bad ear infection and was sedated then anaesthetised where his ear was flushed. We originally thought he had something in his ear as he was head shaking. With the drug Epiphen in his system the fits are less severe though still as debilitating but not for such a long period. He was neutered before the fits began. He had a retained testicle removed early on then a benign lump in the remaining testicle/overgrowth of hormonal cells. The testicle was removed in 2013. He is on Green Dog Turkey and Rice kibble and has always been on this food. It has never been changed.	DATA TRANSFER FROM LYN HORTON Added 15.03.15

29-11-19		Wildblue Intuition	Not known	Not known	BC	16-Jul-09	USA	Bitch	AKC CH Kybota Wildblue Rhythm	AUS CH Devondene Kwi Legend CD	AUS CH Kybota City Rhythm	Wildblue Eternal Dream [USA]	AKC CH Wildblue Eternity	AKC CH Wildblue in A Dream	4 years	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: None. The fits are very mild and she is at this time being treated holistically. Her first fit was on a hot day when the dogs were out running and we thought that might have triggered it, however after her second one we took her to a vet to have it confirmed where several tests were done. She continues to fit regularly on average one to two times a month. Originally fed on Diamond High Energy at the onset but it was recommended that we place her in a less physical home so that her protein and fat content could be lowered. She is now in a pet home on an adult formula by Diamond. The fits are more frequent now but also more mild. Spayed.	DATA TRANSFER FROM LYN HORTON Added 14.10.14
21-08-19		Willow	N/A	N/A	Unregistered - UK	05-Jul-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	14 weeks	YES	By a brain scan. They couldn't find any problems with her brain. So the conclusion was Idiopathic Epilepsy.	YES	N/A	No triggers known. Tends to have seizures only when sleeping. Medication: Started at 45mg of epiphen twice a day. Now currently on 60mg twice a day. Diazepam rectal tubes are given during or just after a seizure to help calm her down. Levetiracetam 500mg tablets are given to break up any clusters. 1 tablet after 2nd seizure and half a tablet every 8 hours until 48 hours after 2nd seizure. Since starting on 60mg of epiphen twice a day, Willow went 20 weeks without having a seizure. Before that she was having them every few weeks. I had Willow from a local rescue centre where she was 10 weeks old. I have no background information of her at all. Willow has always been clumsy. She's not your typical bright intelligent border collie. She tends to trip over her own feet, bump into things etc. At first I thought maybe it was just because she was a puppy getting used to her new surroundings but as she was getting older she was still the same. At 14 weeks she had a massive cluster where she had 9 before I even got her to the vets. They had to put her under anaesthetic 4 times to bring her out of the cluster. I don't know if this affected her brain but sometimes she's very uncoordinated.	OWNER

30-04-21		Wren You Have It Flaunt It - Wren	K158363	N/A	WSD - UK KC Activity Register	21-Oct-16	UK	Bitch	Kiaminogue Old King Cole	Kiaminogues Thats Daz's Tri	Detania Golden Girl	Stella	Cookvale Dark Stranger	Lucy	4 years 2 months	YES	Had blood tests after the second fit. Vet said it's probably 'idiopathic epilepsy'.	YES	N/A	Suspected triggers: No suspected triggers. No accidents or illness prior to the fits. Wren only has had puppy vaccinations and I do not use chemical treatments on her. Medication: Since the fits she has been on MCT oil and has not had a seizure since. Details: Wren has been raw fed since a puppy. She had a hip spay after her third season at the age of two. She is a fit healthy dog and has never had any accidents or illness prior to the two fits. Wren had her first fit on Saturday 5th December 2020 at 6:45am. I heard a knocking downstairs and I found her collapsed having a generalised seizure which lasted under one minute. She made paddling movements, drooled/frothed and urinated. She came round quickly, being wobbly for 2-3 minutes. After that she was back to normal like nothing had happened. Her second fit was on Monday 14th December at 2:30am. She had got up in the night wanting to go outside. This is not unusual for her as she often gets up at this time to go toilet. As I opened the patio door she collapsed to the left and started fitting. Exactly the same as the time before. Quick recovery and within a few minutes she ran back upstairs back to bed and went to sleep.	OWNER
29-11-19		Wyndsend Maurice Traveller	Not known	Not known	WSD	03-Dec-90	UK	Dog	Monkfield Minstral JW	SH CH Melodior Flint as Dykebar	SH CH Whemway Janita of Monkfield (ISDS 123211)	Caristan Charisma	SH CH Caristan Captain (ISDS 160685)	Rossacre Joanna of Mobela	8 months	YES	Vet confirmed as Epilepsy	NO	1 year 7 months. Euthanised in July 1992 when fit frequency increased to less than 1 week between clusters and the drugs were affecting his liver. His personality also changed and he lost the ability to remember simple commands	Medication: Initially Valium and Phenobarbitone. Then Potassium Bromide and Epilim added after specialist advice. Doses systematically increased which increased the space between fits but did not reduce the intensity when the cluster fits happened. These required large doses of IV Valium and Phenobarbitone for 12 hours. IV hexamethesone was given the following day and subcutaneously the next 2 days. No changes made to diet. First few were single fits then every fit was a cluster fit. Response to increased medication doses was to increase the time between fits. There were no fits between Feb and June 1992 then the intensity got increasingly worse. Neutered on Vets advice, but made no impact on fits.	DATA TRANSFER FROM LYN HORTON Added 11.09.13
