11 August 2024		Morag	N/A	N/A	Unregistered - UK	07-Nov-20	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years	YES	Observation and clear blood tests.	YES	N/A	Suspected triggers: Nothing that we are aware of. Medication: Nothing yet. Details: Morag's brother from same litter has been on medication for two years, phenobarbital/levetiracetam.	OWNER
11 August 2024		Pip	N/A	N/A	Unregistered - UK	01-May-14	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	10 years	YES	Bloods ruled out organ failure and epilepsy medication stopped fitting.	YES	N/A	Suspected triggers: Unsure - still early days. Medication: Epiphen 30mg twice a day Details: Fits in evenings at bed time when lights are turned out and settled for sleep.	OWNER
30 September 2024		Ben	N/A	N/A	Unregistered - UK	13/05/2018	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	5 years	YES	It was diagnosed by the vet.	YES	N/A	Suspected triggers: It seems to be when he gets hot in summer, he went all winter and spring without any problems. Medication: Fenoin and Epiphen. Details: No other details.	OWNER
30 September 2024		Nora	N/A	N/A	Unregistered - UK	08-Dec-23	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 6 months	YES	Symptoms, amount of seizures, medical history.	YES	N/A	Suspected triggers: None known Medication: Phenobarbital/Epiphen. Dog is slightly more aggressive while playing but not to a point of concern. Has a little mad then 20 mins after taking tablets then settles back down. More hungry. Details: Not spayed, seizures started 2 months after 2nd season. 5 seizures within a 24 hour period after having no previous or other health concerns.	OWNER
11 October 2024		Ivy Morag	N/A	N/A	Unregistered - UK	18-May-19	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	5 years	YES	After a number of seizures and tests to rule out other causes, plus her littermate being diagnosed 6 weeks earlier (same vets and family known to us). Vets diagnosed Idiopathic Epilepsy. No MRI.	YES	N/A	Suspected triggers: No obvious triggers - the majority of the seizures or other health concerns when she is asleep. Medication: Daily Epiphen 30mg (just increased to 45mg) twice a day. Diazepam 10mg as emergency medication. Epiphen initially helped but has also caused weight gain, dose has just been adjusted. Details: Spayed. Food not changed. Vaccines not given this year due to my concerns.	OWNER
30 November 2024		Duke	N/A	N/A	Unregistered - UK	07-Nov-23	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	9 months	YES	It was diagnosed by vet.	YES	N/A	Suspected triggers: Unable to identify the triggers. Medication: Phenobarbital and Potassium Bromide Details: No other details.	OWNER
30 November 2024		Ozlie	N/A	N/A	Unregistered - UK	04-Apr-22	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	After 3 seizures the vet diagnosed epilepsy.	Yes	N/A	Suspected triggers: Unknown triggers, currently has seizures while he is sleeping. Medication: Has started Fenoin, so far no changes, we are only 1 week of starting medication as at 29 November 2024. Details: Ozlie has been neutered, seizures last 1 minute. Seems absolutely fine within 10 mins after 5 minutes. No other symptoms.	OWNER
31 December 2024		Fudge	N/A	N/A	Unregistered - UK	23-Nov-23	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	By the vet.	YES	N/A	Suspected triggers: Primarily Associate and the noise of the recent storm may have played a part recently. Medication: Soliphen 60mg twice a day, Kepra 750mg 3 times a day. Details: No other details.	OWNER
11 January 2025		Harehope Gin - Gin	N/A	00/394526	BC - ISDS	26-Dec-22	UK	Bitch	Valley Cap (ISDS 00/379461)	TBA (ISDS 00/372940)	TBA (ISDS 00/362937)	Dreamwork Tea (ISDS 00/348038)	TBA (ISDS 00/304089)	TBA (ISDS C2/311902)	1 year	YES	Our vet diagnosed her.	YES	N/A	Suspected triggers: At 6 months she was diagnosed with heart disease and takes Sildenafil tablets for that. She had Hex Guard flea and worm tablet in November, the vet said not to give her another one as it sometimes triggers the seizure. Medication: She was given Epiphen and Diazepam for about 10 days until the Epiphen tablets kicked in. Details: She hasn't been neutered. Her fit would last about 2 minutes, sometimes just one but sometimes more. And it could go on for 15/20 minutes. She is booked in for an MRI scan on the 10th Jan.	OWNER
11 January 2025		Evsee	N/A	N/A	Unregistered - UK	03-Aug-20	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	YES	Blood tests, MRI and CSF tests to rule out other causes.	YES	N/A	Suspected triggers: No known triggers yet. Medication: Fenoin given, but too early to see impact. Levetiracetam given short term, seems to have helped. Details: Spayed. Fits last between 1-2 mins. Good recovery each time. Changing frequency - three weeks 10 days, 15 days.	OWNER
11 January 2025		Dreamfire - Pigeau Foreign FCI	N/A	395728	BC - ISDS	11-Dec-22	POLAND	Bitch	Llangoddy Gary (ISDS 308277)	Spot (ISDS 281596)	Gwen (ISDS 281000)	Killebrae Lassie (ISDS 339904)	Killebrae Laddie (ISDS 262753)	Felidsie Peg (ISDS 241199)	2 years 1 month	YES	Blood tests, ultrasound, pulse. Heart exam as pup clear. Metabolic, ticks, other issues excluded.	YES	N/A	Suspected triggers: We suspect the trigger is going outside house for pee. Seizures immediately after and close to the door. Never was sick, no medication, no food changes, no accidents, last vaccine almost a year before, last performing around 2 months before. Medication: Phenobarbital just started. Details: Seizures lasting 1-2 minutes, after 1 minute comes back normal, without pre-fit phase, unresponsive, no convulsions offered.	OWNER
11 January 2025		Sarkam Black Berry	AW00135108	N/A	BC - UK KC Pedigree	25-Oct-18	UK	Bitch	Moss (ISDS 116805)	Scot (ISDS 270679)	Jan (ISDS 292106)	Sarkam Fuse the Dream	OB,CH,Ruskaht Magical Image	Sarkam Focus on the Dream	2 years 1 month	YES	After consultations with my vet.	YES	N/A	Suspected triggers: Nothing in particular. Medication: Seizure started 23.02.2021 after 8 fits, dose increased 06.10.2022. Fits stopped after 25.02.2021, still on Fenoin 300mg per day. Details: She was spayed on 13.07.2020 aged 20 months. Most fits lasted about two minutes with a longer recovery time.	OWNER
11 January 2025		Merlyn	N/A	N/A	Unregistered - UK	29-Jul-22	UK	Bitch	Tim (ISDS 00/379985)	Sam (ISDS 00/348754)	Ffios (ISDS 00/364207)	Jill (ISDS 00/357369)	Lad (ISDS 274041)	Gwen (ISDS 00/294932)	2 years 3 months	YES	After consulting my vet.	YES	N/A	Suspected triggers: Initially when excited (as in going for a walk) but later she had them when resting and when asleep at night. Medication: Given Fenoin. However seizures have still continued. Details: Spayed 6.11.23 aged 15 months. Fits usually last about two minutes. Gap between them varies from two weeks to one week. Twice she has had cluster fits of three and four at about 4 hour intervals.	OWNER
28 February 2025		Morse	N/A	N/A	Unregistered - UK	11-Apr-17	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	Diagnosed by own vet and also by a specialist in 2022.	YES	N/A	Suspected triggers: Nothing in particular. Medication: Seizure started 23.02.2021 after 8 fits, dose increased 06.10.2022. Fits stopped after 25.02.2021, still on Fenoin 300mg per day. Details: She was spayed on 13.07.2020 aged 20 months. Most fits lasted about two minutes with a longer recovery time. Suspected triggers: Initially when excited (as in going for a walk) but later she had them when resting and when asleep at night. Medication: Given Fenoin. However seizures have still continued. Details: Spayed 6.11.23 aged 15 months. Fits usually last about two minutes. Gap between them varies from two weeks to one week. Twice she has had cluster fits of three and four at about 4 hour intervals.	OWNER
28 February 2025		Misty Highland Unique	N/A	376746	BC - ISDS	30-May-00	POLAND	Dog	Eiri Greime Sogno (ISDS-CH/313178)	Eiri Greime Moss (ISDS 369733)	Eiri Greime Maybe (ISDS 309942)	Jod Nix (ISDS 368158)	Rob (ISDS 343848)	Tarn At Jpot (ISDS 333087)	3 years	YES	Resonance EEG examination of cerebrospinal fluid.	NO	The dog was euthanised at the age of 4.	Suspected triggers: In the beginning there was no cause, later excitement was causing fits. Medication: Phenoleptol, Levetiracetam, Zonisamide. There was a good reaction at first, but there was no improvement after some time. Details: No other details.	
31 July 2024	31/08/2024	Grant's Gwen CBCA Registered 19932	N/A	N/A	Non UK Registered (Border Collie)	23-Apr-12	CANADA	Bitch	CWS Ky (ISCA 9143)	Don (Also known as Tim) (CBCA 7258)	Gin (CBCA 5738)	Bella (ABCA 325208)	Roy (ISDS 264202)	Queen (ABC 0197083)	12 years	NO	N/A	NO	Aged 12 yrs 5 days after her first seizure. See fitting details for more information.	Suspected triggers: At first thought maybe heat related. Her second seizure came two days later, she had been laid very cool in the house since her first seizure. Gwen had blood work done last year when I was considering dental work, the vet indicated for a dog her age her blood work was excellent. Medication: Nothing has changed with Gwen, she is on no medication, and has had a steady diet for a long time. Details: Her first seizure was about 3-4 minutes long, about an hour recovery then heavy sleep. Her second seizure did not witness, but it obviously happened right before I came back from the garden. She was disoriented, her mouth was foamy and she had released a bit of urine. It took a good hour for her to come back. Just before I stepped out I noticed she was really tired. The first seizure happened at 3:30pm, the second at 4:00pm. That night she ate a heaver dinner, and had her good day. Through 12 years old, Gwen is fat, on 100 work her on sheep (until the other day). I have noticed a significant decline in her energy levels. Gwen is a working sheep dog. She is CBCA registered. Her Aunt Alice died from seizures (Alice is the top winning dog of North America). Gwen's Dad, Alton's brother is still alive. Gwen was a singleton. Gwen's mother was killed by a cow 1/2 an hr in touch with her maternal grandparents owner to see what they died of. Queen and Roy were both imported from Scotland. Gwen was spayed at 7 years of age. UPDATE ADDED 31/08/2024 - Gwen was euthanised five days after her first seizure. She had four in total and they were coming fairly quickly. It was felt she had a brain tumor. She worked sheep as efficiently as ever the morning she died. I was on the phone to the vet when she had a huge seizure, and I felt it was enough. She was a tabulous strong dog, who never ever left my side. She died with her head in my hands.	OWNER Updated 31.08.2024
28 February 2023	30/09/2024	Makenzie of Albion's March - L.O.S.H 1125538	N/A	N/A	Non UK Registered (Border Collie)	25-Mar-13	BELGIUM	Dog	Novelyne Mac (ISDS 281183) (KC AG50388401)	Moss (ISDS 229426)	Novelyne Skarty (ISDS 251144) (KC AG50183702)	Gully of Albion's March (LSH 10027847)	Born to be a Freak (LOL AG099/04)	Amazinggem of Albion's March (LSH 0885896)	4 years 6 months	YES	Based on his age and symptoms by a Neurologist. And the fact that he is still alive after 5 years.	NO	Died 03/09/2024, age 11 years 6 months, euthanised during a cluster.	Suspected triggers: No triggers, always during rest. Medication: At first Fenoin (did not work) then Phenoleptol worked well for 3 years, the start dose was ok. Last year new fits, increase of dose was necessary. Now he is again stable. At the end added Kallium Bromide but had to stop this because of the side effects. Details: He is neutered. UPDATE ADDED 30/09/24 - to age and cause of death and medication. Gwen died 03/09/2024, age 11 years 6 months, euthanised during a cluster.	OWNER Updated 31/09/2024

28 February 2023	24/01/2025	Windriven Rowe CBCA B5003422	N/A	N/A	Non UK Registered (Border Collie)	12-Oct-17	CANADA	Bitch	RisingSun Bandit (ABC 352453)	Imp. Astra Mars (ABC 336903)	RisingSun Spin (ABC 286503)	Lock-Eye Windriven Eva (CBCA 5003193)	Ellecto Lockeye Reese (DN21359002)	FA Lockeye Bai (D043428110)	3 years	YES	Bloodwork & vitals only. Assumption on my vets part.	YES	N/A	Suspected triggers: Delayed stress response, low blood sugar, kibbles. Medication: Kippra with 500mg Kippra every 8 hours on 13th March 2021. Moved up to 750mg Kippra 13 June 2021 - seizure free 11 months until 2 breakthrough seizures. Moved up to 1000mg Kippra summer of 2022 - 3 month break until next breakthrough. Details: All in the morning during feeding or very shortly after. Often follows a trial weekend. After last breakthrough (Oct 13/22) we switched to raw diet + MCT oil and regular supplements with feedings spread out to every 12 hours to regulate blood sugar. UPDATE ADDED 28/02/2025 - Spelling of some of the pedigree names, suspected triggers and medications updated.	OWNER Updated 31.01.2025
31 July 2024		Echo	N/A	N/A	Unregistered - UK	28-May-19	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	Vet confirmation.	YES	N/A	Suspected triggers: No triggers. Medication: Phenobarbital, Liriodemol, Levetiracetam (Keppra), Pregabalin. No changes. Details: Seizure.	OWNER
30 June 2024		Milo	N/A	N/A	Unregistered - UK	20-Mar-20	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	NO	N/A	YES	N/A	Suspected Triggers: Unknown Medication: N/A Details: None provided.	OWNER
30 June 2024		Bruno	N/A	N/A	Unregistered - UK	24-May-22	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 11 months	YES	Cluster of seizures, blood test ruled out other causes.	YES	N/A	Suspected Triggers: Only one month into diagnosis and no triggers apparent - often when he sleeps. Medication: Epiphen, Phenobarbital, Rectal Diazepam for now - awaiting neurology referral. Details: So far has had two clusters. 1) 4 seizures total, every 5 hours, ranging 2-4 mins long. 2) 5 seizures within 20 hours, ranging 1-4 mins. Neurotest.	OWNER
30 June 2024		Newimbo Emeralds Son	AHW2123556	Not known	BC-UK KC Pedigree	16-Mar-19	UK	Dog	Turlockfield Prince Diesel (AT01215901)	Merl of Turlockfields (ISDS 00/016289)	Bel of Turlockfields (ISDS 00/307387)	Newimbo Millie's Rose Retal (AQ0424E803)	Zak of Newoak (ISDS 00/309907)	Newoak Blue Diamond Coley	2 years 7 months	YES	Appointment with neurologist at Farnham Walsford. Wouldn't ISDS confirm idiopathic Epilepsy as no scan done, but they were convinced that's what it is. Especially given his age, breed and the fact he fits outwith the seizure.	YES	N/A	Suspected Triggers: No idea of triggers. Medication: Currently on: 500mg Epiphen 2 per day, 325mg Libromb 2.5 per day, 500mg Levetiracetam 3 per day. Emergency meds: increase Levetiracetam to 1250mg 3 per day for 48/72 hours. Details: Fits normally last 1-2 minutes with about 5 mins recovery time. Normally when he is asleep although the fits have happened in the local park - which is unusual. Pretty much always generalised seizures, he does have clusters too. Longest he has gone between episodes is 22 weeks but then he fits for a few and we take him to the vets and they increase the meds and we get a reasonable time before the next batch. It's like he gets used to the meds and the seizures come back again. He's had about 56 seizures in total - he was neutered before seizures started. Breeders were informed. Litter sister has now had puppies.	OWNER
31 May 2024		Brodie	N/A	N/A	Unregistered - UK	07-Aug-22	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 6 months	YES	We rushed him to the vets after his first fit where he was put on Phenobarbital medication, vets have said it's idiopathic.	YES	N/A	Suspected triggers: No clue we've done absolutely nothing different. Medication: Phenytoin 75mg twice daily, his seizures aren't as frequent but are lasting around 4 mins. Details: He was going through a period where he would have 4+ seizures daily, he's now sitting at 1 seizure every 28ish days.	OWNER
31 May 2024		Chester	N/A	N/A	Unregistered - UK	01-Apr-22	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 1 month	NO	I'm not sure. Spoke to the vet and bloods were done that came back fine. Was asked to start a seizure diary before any other decisions are made, dependent on how often the seizures happen.	YES	N/A	Suspected triggers: I'm not sure. Medication: Diazepam. Details: No other details provided.	OWNER
31 May 2024		Axel	N/A	N/A	Unregistered - UK	10-Mar-21	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years 2 months	NO	N/A	YES	N/A	Suspected triggers: Don't know. We woke up hearing something falling down the stairs (last few had waxy up the stairs for some reason) when we got to the top of the stairs Axel was at the bottom having a fit. We don't know if he's fallen asleep on the steps and rolled down and hit his head or if the fit has caused him to fall down the steps. It only lasted about a minute. Medication: N/A Details: Only had 1 fit so far. lasted 1 minute. Neurotest.	OWNER
31 May 2024		Blue	N/A	N/A	Unregistered - UK	05-Jun-19	UK	Dog	Red Dog	Unknown	Unknown	Jess	Unknown	Unknown	3 years	YES	Neurologist	YES	N/A	Suspected triggers: Worming treatment (only us Panac now). Stronghold flea treatment. Medication: Rectal Diazepam. Starting to look at full time medication now. Details: Fits where 6 months apart lasting 4.5 mins but are now a month apart and lasting between 2.5 - 3mins. Eats lots of grass right before a fit. Still intact due to consciousness. Brother sister has sired a litter.	OWNER

Bloodwork panel, MRI and spinal tap all came back normal.	YES	N/A	Suspected triggers: N/A Medication: Starting on Kippra XR for 1000mg twice a day. Details: No other details provided.	OWNER
30 April 2024		Mayhem CBCA Registered	N/A	N/A	Non UK Unregistered	23-May-21	CANADA	Bitch	Unknown	Unknown	Unknown	Ember	Unknown	Unknown	2 years 6 months	YES	Ruled out after bloodwork.	YES	N/A	Suspected triggers: Either overstimulation or fluorescent lights, still trying to determine. Always on the way in after a walk. Medication: Just started Phenobarbital 3 day ago (11/04/24). No seizures, but not sure if the medication is helping yet or not. Behaviour is the same. Details: She had 1 fit so far, all while alone a minute in length. Not seized.	OWNER
30 April 2024		Rosmally Light Fantastic - Cutch	AHX2073802	N/A	BC-UK KC Pedigree	02-Mar-23	UK	Dog	Redchrisma The Merchant	Darian Dargfire	Rosmarinus Ratfala	Rosmarinus Rock Chick	Rosmalk Capercaille	Rosmarinus Sunny Morning	2 years	YES	Through testing.	YES	N/A	Suspected triggers: First few followed stressful situations. However not the case now. Medication: Phenobarb and Levetiracetam. Duration between fits became longer when he went permanently on the latter. Other than increased appetite no other side effects. Details: He went every 4 weeks between fits over the winter/early of 2022/23. Then 5 months over the summer and this winter we have gone to over 5 weeks.	OWNER
30 April 2024		Georgestan Buffa	AHX2274501	N/A	BC-UK KC Pedigree	26-Apr-20	UK	Dog	Turlockfields Just A Hunch	Bannetstone Wind Of Change	Flois of Turlockfields (ISDS 00/314999)	Turlockfields Sceptum	Langamay Try Agin	Gwynion Yemi	9 months	YES	Idiopathic Epilepsy	NO	Died from a seizure early morning on the 23rd of April 2024.	Suspected triggers: None 100mg was given twice a day. Medication: Seizures were 3 months apart and under 3 minutes until the last 2 which were 8 weeks apart and resulted in my boys death. He was chemically castrated which helped his behaviour. He seized comfort after his fits. Suspected triggers: Unsure. Happens when he is asleep. Medication: Phenobarbital 1.5 tabs morning and 1 tab evening. Had a minor seizure 12 days after starting treatment. Had blood tests 2 weeks after starting treatment and levels were 70 (lower end of the therapeutic dose). Vet chose to keep treatment as is. 3 days later had 8 seizures over 30 minutes and was rushed to hospital. They have now upped pheno to 2 tabs morning and night and added highest dose of Potassium Bromide. He is in an induced coma as he continues to have seizures when they wake him up (24/03/2024). Details: The seizures first occurred on 8 Feb 2024. While he was awake in the back of the car going to the park. We didn't realise it was a seizure at the time and thought he had caught his collar. It next occurred 21st Feb and 1 seizure lasted about a minute whilst he was asleep around 2am. We were awaiting a vet appointment and he then had 3 seizures from 2:30am to 3am we rushed him to the emergency vet. He was admitted and put on Pheno. Then seizure free for 10 days. Then had 1 minor seizure. Vet did blood 14 days after starting treatment and kept dose as is. 3 days later at 2am he had a major series of seizures of 8 with no recovery in between for around 30 minutes. He was rushed to the vet while in this state and they gave him lithium but he continued to seizure at the hospital. They added Potassium Bromide at max dose and upped Pheno to 2 tabs twice a day. He continued to have seizures and they put him on a propofol drip. When they tried to wake him he had 3 more seizures so he is in an induced coma until the specialists can conduct an MRI tomorrow (24/03/2024). He is seizure free.	OWNER

NO	Aged 2 years 10 months. Euthanased 17th February 2024 due to refractory epilepsy. She was cluster fitting every few hours. Medication was not stopping it.	Suspected Triggers: No clear trigger. The initial start of Jess's epilepsy in October was cluster fits. This started the day after a 4 hour car journey (nothing new, we've travelled lots with Jess from a young age). That week she'd had her flea, worm and tick treatment but she'd been on the same one for years. We also noticed an air freshener in the car we'd borrowed. Also the first fit was in the morning while playing frisbee. On another occasion Jess had a seizure while playing frisbee, so not sure if that was a trigger, we were to fightback to play frisbee again. Medication: Epilim and Kepra initially seemed to help. But then had to add in Potassium Bromide which again initially seemed to help - 50 days fit free. But unfortunately none of the meds seemed to be helping and uncontrollable seizures. Details: In the end we had 4 episodes of 5 day long cluster fits - grand mal. The last 2 episodes also involved a couple of hours long post ictal behaviour, walking into things, appearing unable to see. Jess was never aggressive after or during her fits.	OWNER
29 February 2024		Olivia The Entertainer	KD265805	N/A	WSD - UK KC Activity Register	16-Jan-22	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 7 months	NO	N/A	NO	Aged 1 year, 7 months, cluster fitted. 29 February 2024		Mollie	N/A	N/A	Unregistered - UK	01-Dec-16	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	By neurologist through MRI, bloods, lumbar puncture, observation of video evidence.	YES	N/A	Suspected Triggers: No triggers. Medication: Phenobarbital started after neurologist visit. Currently takes 30mg x 2. Levetiracetam added at 3 years old. Now on 1 tablet x 3. Libromide introduced at 5 years old. Now on 3/4 tablet x 3. She has Diazepam if she clusters. It is effective. Mollie is considered refractory. The drugs make her slow and untidy and she eats and drinks more. We are trying to wean her off (see below) as in the past this has not altered fit frequency but has made her more active and playful. Details: Mollie's fits occur usually around every 6 - 10 days - longest ever gap was 27 days - and can be either focal or generalised. Now, they almost always occur in the night directly from sleep. She does not urinate, defecate or vomit during fits. Fits are quick - 20 seconds at most but recovery is slow - can take up to 3.5 hrs to be back to normal and longer lasting if a focal seizure. Mollie was a rescue dog so history is unknown except she came to England from a farm in Ireland. We homed her at 5 months old. She has taken part in 2 RCI trials - The Big Brandy Border Collie and RESET. We have recently introduced MCT oil to her raw food diet and B12 was introduced today. In the past we were referred to a holistic vet who tried acupuncture and herbal remedies and weaned her off AEDs. They made Mollie no worse but no better and she had no fewer or no more fits as a result hence refractory diagnosis. Mollie is spayed.	OWNER

30 September 2023		T/X Decker ABC6 506630	N/A	N/A	Non UK	22-Dec-20	USA	Dog	Spot (ISDS 362131)	Carflin Clem (ISDS 344067)	Nel (ISDS 340962)	Imp. Floss (ABC 502518)	Sam (ISDS 334162)	Nell (ISDS 338696)	2 years 3 months	YES	Process of elimination through BVI/urinalysis/sonogram/ray/physical exams	NO	2 years 7 months. See Fitting Details for more information	<p>Suspected triggers: Exercise, activity, motion, stress, surgery, medications.</p> <p>Medication: Keppra, dexamrin, cephalixin, anesthesia, acepromazine.</p> <p>Details: Conceived in Wales, born in USA. Decker was intact, never bred. DNA Clear for everything via optimal selection wisdom panel. His seizures were violent and lasted 5 to 7 minutes during, and after he would pace frantically, run into things while screaming. So, we crated him for safety. When not seizing, he was a very happy, lovable, social dog with a strong desire to work all the time.</p> <p>We first witnessed a seizure during post op restricted exercise. He had surgery to remove an obstruction which turned out to be a swallowed part of a long. The doctors in hindsight theorize the long part was swallowed during a seizure unbeknownst to us at the time. The seizure allowed the item to enter the stomach to which it was unable to exit due to size. This they said solved the mystery as to how it got into the stomach in the first place. So, during post op, he had the first seizure we knew of. We stopped his pain meds, rushed him to the hospital where he started his journey of multiple tests leading him with the diagnosis of epilepsy. Decker was being treated for seizures and undergoing multiple exams, tests, etc for 4 months. On July 18, 2023 he suffered 7 minute long, multiple full seizures before he could get into the hospital. His final seizure occurred upon arrival at the hospital. He was quickly sedated. Through consultation with the vet regarding his potential to have a safe and quality of life, a decision was made to relieve him of his suffering. A necropsy was performed which confirmed an additional complication of a disease liver which the doctor said was congenital in nature. He determined this to be a separate underlying issue from the epilepsy.</p>	OWNER
30 September 2023		Stillmoor Show Stopper	AF03012404	N/A	BC - UK KC Pedigree	19-Jun-05	UK	Dog	Kurgan Red Marauder Of Stillmoor	Comebye Shay to Kurgan (ISDS 223000)	Kurgans Foxy Lady (ISDS 232882)	Stillmoor Naughty But Nice	Goytres Simply A New Flame At Carston	Feroama Cascade of Stillmoor	8 years	YES	By the vet after fitting	NO	He died age 13 he went into status and had to be PTS	<p>Suspected triggers: Seizure started after a really small collision with one of my dogs nothing much but he went down. Up after a minute and then nothing. Steadily progressed - triggers started with full moons but then became totally erratic and no predictor at all.</p> <p>Medication: Can't remember now he had the lot - Penion to start which worked for about 6 months then he got hyper. Keppra, Pheno - etc.</p> <p>Details: He was not neutered. He was the sweetest of dogs. Seizures initially lasted less than a minute and he would be perfectly fine after them but they got steadily worse. Last year of his life he needed rectal Diazepam and then Diazepam tablets. Towards the end they took longer and longer. Last one was in the middle of the night and I tried for 40 minutes to bring him out. Took him to the vets, they tried too but he did not recover.</p>	OWNER

31 July 2023	31/10/2023	Astra Riley	N/A	00/393115	BC - ISDS	31-May-22	UK	Dog	Astra Leo (ISDS 00/349203)	Astra Rocket (ISDS 313627)	Astra Breagha (ISDS 324552)	Astra Floss (ISDS 00/382566)	Glen (ISDS 349451)	Astra Cloud (ISDS 323242)	9 months	YES	Bloods, MRI, Lumbar.	NO	Aged 16 months, while asleep in the garden. See fitting details for more info.	<p>Details: intact.</p> <p>UPDATE ADDED 31/10/2023 - Riley passed away on 5 October 2023 aged 16 months while asleep in the garden, we don't think it was a seizure - most likely that his heart stopped while asleep. He'd also been on Libromide (as well as Solphen and Keppra) for last three months too.</p> <p>Suspected triggers: None known. He was raw fed from birth, never treated with any chemicals.</p> <p>Medication: N/A.</p>	OWNER Updated 31.10.23
31 July 2023	06/09/2023 & 31/01/2024	Stockyard Megamix Styctlin - Needle	KD261020	N/A	Collie Cross - UK KC Activity Register	19-Mar-20		Dog	Stockyard Mity Black Jack	Topeka Justa Silver Storm	Origine Deux Jee-Witz (Imp Fra)	Jaybeez Meg (ISDS 00/350773)	Red Br. Ch. Trng. Nat. Ch. Sweep (ISDS 00/293085)	Nan (ISDS 00/320284)	2 years 10 months 20 days	NO	N/A	NO	2 years, 10 months, 20 days. Fits to prevent further suffering. See fitting details for more information.	<p>Details: Needle was a perfectly fit and healthy boy up until 00:04 on the 9th February 2023. At 00:05 he had his first fit. He then proceeded to continue to fit throughout the night and into the morning, each one longer and worse than the one before, and each one coming more quickly, culminating with him not coming around. He was given steps to prevent his little body having to endure anymore seizures. Neutered.</p> <p>UPDATE ADDED 06/09/2023 - Request received from owner. Status Epilepticus removed from Cause of Death, admin auto response to description provided in fitting details.</p> <p>UPDATE ADDED 31/01/2024 - At the insistence of Needle's breeder please see further update. When trying to find a reason it was found that Needle had put on weight prior to his fitting and photographs of him taken, four weeks prior to his death, whilst in a forest on holiday in Scotland, seemed to show enlarged pupils. (A veterinary professional that his breeder showed the photograph to give a suggested diagnosis as he may have been poisoned) His head shape also appeared slightly different to a photograph taken 6 months earlier. He suffered multiple seizures in a 4 & a half hour period, each one more severe with less recovery time between. As it was my choice not to have a postmortem his cause of death can only be surmised and nothing can be proved regarding it, however he had shown no signs of illness prior to his first fit. His night is a wonderful thing.</p> <p>His breeder categorically states that there are no notable issues in his line. Needle was from one of two accidental crossbreed litters sired by her dog at the time. None of the other pups from either these, or the two subsequent litters he has sired, have any known issues.</p>	OWNER Updated 06.09.23 Updated 31.01.24

Phenobarbital (daily anti-convulsive medication) manages daily levels. Details: He has cluster fits of about 1 minute each spaced out at about 3 minutes at a time. He is not yet neutered, but is scheduled at 6 months.	OWNER
30 November 2022		Glimo	N/A	N/A	Unregistered - UK	22-Nov-21	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	9 months	YES	Grimo had blood tests, MRI scans, urine tests etc to rule out other causes, vet diagnosed Idiopathic Epilepsy.	YES	N/A	Suspected triggers: Not sure. Medication: Grimo is on Phenobarbital medication. Not had any other episodes but only had 2 before medication started. Details: The episodes Grimo had weren't your typical fitting. He was acting very strange almost scared like, covering / hiding away, shaking, drooling and was like that for a few hours, then it happened again the day after.	OWNER
30 November 2022		Loki	N/A	N/A	Unregistered - UK	28-Sep-20	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 8 months	YES	Yes.	YES	N/A	Suspected triggers: None noted. Medication: Penion 0.5 twice a day. Details: Fits last under a minute, very unsteady after, disorientated, nervous doesn't hear surroundings.	OWNER
30 November 2022		Pippa	N/A	00/315681	BC - ISDS	03-Jul-11	UK	Bitch	Ben (ISDS 00/264758)	Sid (ISDS 00/344412)	Tillymauld Nell (ISDS 00/241682)	Jan (ISDS 00/304522) [nr]	Glen (ISDS 00/285566)	Meg (ISDS 00/290889) [nr]	1 year 6 months	YES	By her vet after her first seizure on 1st January 2011.	NO	She died on 4th October 2018, aged 7, of liver failure because of Phenobarbital.	Suspected triggers: Her triggers were either food or strong smells such as air fresheners. Sometimes too much excitement. All human food would set her off. (Bar raw veg). Medication: Various over the years. Phenobarbital 60 mg x 2 times a day. Potassium Bromide. Keppra 4 x a day. Diazepam. Plus some others I can't remember. Pheno and Keppra showed the most improvement. Details: Pippa was spayed. Her fits were very severe and without medication she wouldn't have seen the week out. Mostly 2 - 3 mins in length. They would come as clusters when they arrived, varying frequency but generally a cluster every 2-3 month.	OWNER
30 November 2022		Spike	N/A	N/A	Unregistered - UK	22-May-19	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years	YES	Taken to vet, symptoms described and after effects.	YES	N/A	Suspected triggers: Blood work came back clear, no suspected triggers. Medication: None unless it happens again. Details: He has been neutered. One fit so far lasting 3 minutes.	OWNER
30 November 2022		Farley	N/A	N/A	Unregistered - UK	01-Dec-21	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	11 months	NO	Pending diagnostic tests.	YES	N/A	Suspected triggers: No triggers currently identified. Medication: None noted. Details: Neutered at 6 months old. 2 seizures currently experienced 5 days apart lasting ~15min. Arking and sniffing, drooling. Short post ictal phase with spontaneous return to normal behaviour.	OWNER
30 November 2022		Templehall Isla	N/A	388873	BC - ISDS	14-Jan-22	UK	Bitch	Shadwell Cub (ISDS 364770)	INT. SUP. CH. Liangwen Cao (ISDS 00/315270)	Adelph Ember (ISDS 321991)	Templehall Barra	Frej (ISDS 345112)	Jill (ISDS 331632)	8 months	NO	Vet visit booked for Monday 28th November 2022.	YES	N/A	Suspected triggers: Rabies vaccine 3 weeks prior to first seizure. Medication: None noted. Details: None noted.	OWNER
30 November 2022		Buddy	N/A	N/A	Non UK Crossbreed	21-Jul-18	AUSTRALIA	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 6 months	YES	Veterinarian, unknown, we did not own Buddy then.	YES	N/A	Suspected triggers: Heat. Medication: Phenobarb. Yaggra Potassium Bromide - led to weakness in back legs and seems to have affected personality from fun loving to sombre. Details: Has cluster seizures averaging between 3-9 per month. Buddy was rehomed, we do not know a lot about his previous history. Although we were told he was a Border Collie we believe he is a cross breed.	OWNER
30 November 2022		Maggie	N/A	N/A	Unregistered - UK	13-Sep-14	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years	YES	Diagnosed by Vet.	YES	N/A	Suspected triggers: None noted. Medication: Solphen and Keppra. Details: Spayed.	OWNER
31 October 2022		Barney	N/A	N/A	Unregistered - UK	30-Oct-19	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years	YES	MRI Scan, blood tests and spinal fluid tests by Neurological Veterinary Practice.	YES	N/A	Suspected triggers: Triggers unknown. Idiopathic epilepsy had been diagnosed. Medication: Diazepam given to use if Barney has another seizure. If this does happen then further medication will be given. Details: Barney is an intact dog. He has had three seizures. His first was when he collided with our other collie and was knocked unconscious in October 2021. Second and third were in March and June this year 2022.	OWNER
31 October 2022		Barney	N/A	N/A	Unregistered - UK	10-Aug-19	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 4 months	NO	Vet diagnosis initially then also following cluster seizure.	NO	Barney was 2 years nine months, had one seizure, vet said could be nothing and might not happen again but to document it. Then one evening he started cluster seizures which the emergency vet couldn't see him from.	Suspected triggers: Unknown. Medication: N/A Details: He wasn't neutered. He was active on our smallholding and always busy, but not particularly anxious - very loving and well adjusted.	OWNER
31 October 2022		Harry	N/A	N/A	Unregistered - UK	19-Jul-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	7 years	YES	Had an MRI and various blood/spinal tap at Royal Referrals. Nothing found so diagnosed Idiopathic Epilepsy.	YES	N/A	Suspected triggers: Stress. 3 out 3 seizures have been when showing him. Medication: Gave rectal Diazepam after last seizure, no changes. Details: Neutered, fits less than 2 minutes. Had 3 seizures in 3 months.	OWNER
31 October 2022		Bailey	N/A	N/A	Unregistered - UK	25-May-17	UK	Dog	Unknown Border Collie	Unknown	Unknown	Unknown	Unknown	Unknown	5 years	YES	Confirmed after 2 seizures within 24 hours. Bloods normal.	YES	N/A	Suspected triggers: No suspected triggers Medication: Phenobarbital - recently started. Details: Neutered 17 month old.	OWNER
31 October 2022		Reggie	N/A	N/A	Unregistered - UK	05-Jun-11	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	10 years	YES	Vet vet. No MRI/Scan, given no age.	YES	N/A	Suspected triggers: Head trauma 10 months prior to first fit (running after a ball head first into a bench. Required stitches and teeth removed). Also given Nexgard Spectra 8 months prior to first fit. Medication: Not currently medicated. We have rescue Diazepam which we have used twice and now been prescribed Gabapentin to relax following fit. No preventative medications started. We recently started him on CBD oil. Details: One fit every two - three months. Lasting 3 minutes but prolonged post-ictal period lasting most of the day where he is very distressed. Seem to be caused by stress and vomiting. One fit was in the shower, the other three were after vomiting which stresses him.	OWNER
31 October 2022		Echo	N/A	N/A	Unregistered - UK	28-May-19	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 6 months	YES	Tests.	YES	N/A	Suspected triggers: No triggers Medication: Phenobarbital, Libromide, Penion, Keppra, Gabapentin, Rectal Diazepam Details: Spayed. Physcomotor seizures plus full seizures. Physcomotor seizures could last up to over 2 hours, gone back down to 20 mins to 1 hour.	OWNER
31 October 2022		Hamish	N/A	N/A	Unregistered - UK	14-Nov-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	8 years	YES	By vet, exclusion tests of other conditions.	YES	N/A	Suspected triggers: None, however have seizures approx. 1 week after stressful events now (due to fireworks). Medication: Eprinorex - changes in behaviour digging in garden, more intense herding traits, less tolerant of other dog. Details: Neutered aged 3. Length of fit lasted 1.5 minutes, 5 minute blackout afterwards where doesn't recognise surroundings, people etc. - approx 5 per 2 months in last 8 months (4 fits in 8 months) - vet increased medication after blood tests.	OWNER
31 October 2022		Georganst Biran - Baloo	AX02274504	N/A	BC - UK KC Pedigree	26-Apr-20	UK	Dog	Turlowfields last a Hurch AW01393603	Bannethre Wind of Change	Floss of Turlowfields (ISDS 00/311499)	Turlowfields Spectrum AU0244307	Langamay Tri Agin	Gwynion Yemi	2 years	YES	Idiopathic Epilepsy.	YES	N/A	Suspected triggers: Heat, Anxiety Medication: Solphen 90mg 2x day (increased from 60 mg after last fit. Rectal Diazepam also prescribed if fit is bad). Details: He has been castrated and is fully vaccinated. The fits have occurred only 3 times, they are a series of 3-4 intensive fits lasting less than a minute each. He is otherwise affectionate. Afraid of cars. He was 18 months old when we took ownership (Feb 22). Previous owners had returned him to breeder. Breeder did not pass on their details to us. Breeder has been contacted since diagnosis and has refused to take him back. We will email you copy of five generation KC pedigree.	OWNER

30 September 2022		Fflur Pwd Bach	N/A	N/A	Unregistered - UK	15-Jan-22	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	10 weeks	YES	Via the vet as Idiopathic Epilepsy	YES	N/A	Suspected triggers: She had had her initial vaccinations and worming before we bought her. No triggers but she does the head wobble over ball and also when she is falling asleep. We have not used any chemicals in worming or flea protection. Medication: No medication prescribed as yet as it doesn't bother her but we are monitoring her and keeping constant contact with the vet. Also have a day diary. Details: Fflur has just started her first season and she will be spayed to prevent pups in due course. She is presently going through about 8 head twitches a day but I believe she has actual fits last night as she was incontinent. I have informed the breeder of Fflur's epilepsy diagnosis and asked that he not breed from that line in future. He is a farmer local to me and we are a tight Welsh community so I have also informed the community.	OWNER
30 September 2022		Vitala Chapter in Red Auro	AUO166801	N/A	BC - UK KC Pedigree	01-Apr-17	UK	Dog	Goytre Legacy for Tit	SH CH Goytre Prince of Dreams	SH CH Goytre Never Ending Story	Goytre The Next Chapter of Obitaria	SH CH Shelytham Shoulin Book	Goytre Repeat The Story	5 years	YES	My vet diagnosed it. He had bloods to check his liver which were fine. He had two fits the first time which were only seconds apart and they advised epilepsy.	YES	N/A	Suspected triggers: Nothing known at the moment, completely out of the blue. Medication: Pexion started on the 27/9/22, he had the fits in the early hours of 25/12. Details: Castrated male. I heard him bash the sides of his crate and when I came downstairs he was rigid and lying on his side, then his head went back and he went into a seizure, whole body convulsing, legs paddling, frothing at the mouth and passed a stool. That stopped and then a few seconds later into another one, which seemed worse to me. In total for both about 6 minutes. Afterwards no idea where he was, did not know us and wandered around the house, took about 20mins for him to calm down and be aware of us.	OWNER
31 August 2022		Joe	N/A	344456	BC - ISDS	01-Jun-16	UK	Dog	Grahams Sam (ISDS 264640)	Tom (ISDS 246801)	Ned (ISDS 265356)	Ming (ISDS 309770)	Zip (ISDS 278126)	Ret (ISDS 257506)	5 years	YES	Vet	YES	N/A	Suspected triggers: Unknown. Medication: Epiphen 4mg x 2 daily plus CBD Details: 2 fits initially lasted 1/4 mins. One at home one in vets. Started meds then slowly reduced on advice. 2 more fits 4 weeks later and returned to full meds plus CBD.	OWNER
31 August 2022		Ben	N/A	N/A	Unregistered - UK	29-Dec-19	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 10 months	YES	Cluster fits, went straight onto medication. Wounded him off meds but immediately had seizure. Now on meds.	YES	N/A	Suspected triggers: Heat, over stimulation. Suspect food and flea treatment also triggers. Medication: Epiphen and Keppra. Also just started MCT oil and CBD oil. Details: 1-2 week frequently at the moment.	OWNER
31 August 2022	30/11/2022	My Boy Rocky	AW090023	00/359946	BC - Dual Registered UK KC & ISDS	27-Jun-18	UK	Dog	Highgate Hill (ISDS 00/314502)	Cammen Rip (ISDS 00/299110)	Harriot Queen (ISDS 307839)	Moorside Red (ISDS 00/306336)	Staff (ISDS 267697)	Maisie (ISDS 274494)	4 years	YES	Blood test and dates of fits. I had a dog 9 years ago that had epilepsy so I know the symptoms.	YES	N/A	Suspected triggers: The heat triggers his fits so I keep him as cool in his heat as I can. Details: Rocky is on Epiphen, it's early days but he seems ok. Medication: Length of fits 2-5 mins. He has had 4 in the past 2 months and is now on Epiphen. He is a typical collie, loves to twist and he is high energy. UPDATE ADDED 30/11/2022: Grand parents details on both sides added. My Boy Rocky's ISDS number changed from 00/359946 to 00/359946. Admin error - Moorside Red's ISDS number changed from 00/3063 to 00/306336.	OWNER Updated 30.11.22
31 August 2022		Ireac	N/A	N/A	Unregistered - UK	13-Aug-20	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 8 months	YES	Clinical presentation, I refused full investigations.	YES	N/A	Suspected triggers: No known triggers. Medication: Epiphen 90mg twice daily started 3 months after first seizure. Lethargy and ataxic back legs noted. Details: Seizure every 5 weeks, last around 1 minute. Usually single but had two this apart one month. Started on Neurocare food after 2nd seizure and CBD Oil (Siv) after 3rd seizure. Dose increased gradually. Also started Milk Thistle once Epiphen started 2 weeks ago. Neutered at 7 months.	OWNER
31 August 2022		Evy	N/A	N/A	Non UK Unregistered (Border Collie)	24-Apr-19	NETHERLANDS	Bitch	Maison	Unknown	Unknown	Noa	Unknown	Unknown	2 years 6 months	YES	Epilepsy was diagnosed based on my observations.	YES	N/A	Medication: 150 mg of Phenytoin a day in case of fits in the next 6 weeks Potassium Bromide will be added. During fits we give 10 mg of Diazepam rectally. Details: Evy is spayed. She suffers from clustering epilepsy. Usually her fits start in the morning and she'll have 4-6 fits within the first 1.5 hours. We give Diazepam during the first or second fit. After that it stays calm all day and there is a big chance she has another fit about 12 - 14 hours later. We give another dose of Diazepam when that happens. Fits don't usually last long, 1-5 minute tops. They follow each other up very quickly so we need to be on top of things immediately. The current frequency between days is 5 - 7 weeks. We're hoping to bring that up to 12 weeks. Evy comes from an unaffiliated breeder. This woman just wanted to have a nest of puppies once. There is no family tree available. Both parents are carriers of the SM gene. 2 pups from the nest suffered the illness and died before their first birthday. Pups in separate litters.	OWNER
31 August 2022		Fury	N/A	N/A	Unregistered - UK	07-May-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	NO	N/A	YES	N/A	Suspected triggers: None noted. Details: Parents are both from Burns Farm Kenwick. Dog has had 2 fits, the first one about 6 months ago, the second today. Very sudden attack, lasts around 4 to 5 minutes, dog convulses.	OWNER
31 August 2022		Bonnie	N/A	N/A	Unregistered - UK	06-Jan-21	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 4 months	NO	N/A	YES	N/A	Suspected triggers: Can't see to the cause of the seizures, happening no warning. Flea treatment changed 2 weeks before her first seizure. Medication: Was on Epiphen now on Epraxess. Details: Clusters of every 2 weeks. Suspected triggers: None noted.	OWNER
31 August 2022		Bobby	N/A	N/A	Unregistered - UK	19-Apr-14	UK	Dog	Max	Unknown	Unknown	Molly	Unknown	Unknown	4 years	YES	By the vets.	YES	N/A	Medication: Originally put on 30mg of Epiphen twice daily and fits stopped for a couple of years. He started to have clusters every 10 to 14 days and the Epiphen was slowly increased plus Levetiracetam was added 3 times daily. He is now on 180mg Epiphen twice daily and 750mg Levetiracetam 3 times daily (increasing to 4 times during clusters). Recently the period between clusters has increased to 16 days sometimes and the time between each fit has got longer. Details: See above and usually each fit is about a minute, but varies a bit, some silent seizures, some thrashing and some thrashing and howling. Period between fits in a cluster varies from 2 to 12 hours and 4 to 8 fits. Suspected triggers: Suspected degenerative neurological condition. Stress appears to be a trigger.	OWNER
31 July 2022		Limon	TBC	N/A	WSD - UK KC Activity Register	26-Jun-14	COLUMBIA barn, export to UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	7 years	NO	N/A	YES	N/A	Medication: None. Details: Fits are usually about 1 min long (grand mal) and are about 2 months apart. Limon is spayed. Suspected triggers: Started having seizure just a week after yearly shots. No known food triggers. Too much activity seems to be a trigger. Medication: Phenytoin - 3 years, Potassium bromide - 2.5 years, Keppra - 2 years, just started Zonisamide.	OWNER
31 July 2022		Dio	N/A	N/A	Non UK Crossbred	26-Jan-18	CANADA	Dog	Border Collie/ Great Pyrenees mix	Unknown	Unknown	Border Collie	Unknown	Unknown	1 year 1 month	YES	Idiopathic epilepsy, through ruling out other causes. No advanced imaging done.	YES	N/A	Details: When fits started they were every 3 weeks. Work up to every 3 days by the second year. Then by the 3rd yr we got them to once every 10-14 days. Just this spring we finally got him to do a one month stretch, followed by a month and a half stretch. Normally has cluster grand mal seizures lasting a few minutes. Normally three fits in 24 hours recovers 1-2 hours after each fit. Last seizures were the 27th of June. 15 grand mal seizures in 2 hours and continued for the next two days until we could get home from out of town to a vet. With emergency care he has regained sight and awareness but can not sit, walk or stand still. Neutered.	OWNER

Blood tests done to make sure no underlying illnesses.	YES	N/A	Suspected triggers: No idea. Medication: Diazepam to be given if needed. Details: 1st fit lasted 8 minutes nothing for 8 months then 2 in 6 weeks. Merlin had concussion 3 years ago. Vet thought that might have something to do with it.	OWNER
31 July 2022		Lord Liquorice Rock - Barney	N/A	N/A	Unregistered - UK	16-Aug-16	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 6 months	YES	Extensive tests/vet diagnosis.	NO	He died at 5 years 7 months old. Status Epilepticus.	Suspected triggers: Potassium Bromide caused pancreatitis which started all his troubles. We had his seizures very well controlled. Medication: Keppra, Epiphen, Zonisamide for faint and we went 6 months fit free on this drug. We stopped Potassium Bromide. Details: Occurred at 18 months old, didn't affect fits. His main prob was the Potassium Bromide causing the pancreatic flares, this was the beginning of all his troubles. He had peritonitis too and had surgery. He only lived to be 5.5 years old. He died on 4th April 2022 due to a fit of seizures that we couldn't stop. He had a huge fit and our vet tried everything to save him but we had to make the decision because he's fitted for so long. We believe his epi meds stopped working due to a pancreatic flare and infection of the tum (yet again). We'd been very poorly. We miss him a lot.	OWNER
31 July 2022		Cilla	N/A	N/A	Unregistered - UK	06-Jun-15	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 years	YES	The vet told me she likely has epilepsy after she ran tests.	YES	N/A	Suspected triggers: She eats a lot when on walks and I think certain things trigger her. Irritate her on walks now. Medication: Not on meds. Details: Had two in the same day then went 5 months before she had a single one. Fits don't last long but she's very disoriented after.	OWNER
31 July 2022		Sweep	N/A	N/A	Unregistered - UK	31/12/77	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 9 months	YES	During vet visit 28.07.2022, 2 seizures within 2 hour period, 4 seizures within a 8 week period.	YES	N/A	Suspected triggers: Unknown, possible tick / flea treatment. Previously used Bravecto, not since January 2022. Medication: Epilif twice daily from 28.07.2022. Details: Actual fit around 5-7 minutes, look fit can last up to 20 minutes. Spayed.	OWNER

30 June 2022		Marley	N/A	N/A	Unregistered - UK	28-Aug-15	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	YES	Blood test at vets	YES	N/A	Suspected triggers: There were no triggers at first, but we noticed after he had been put on medication he had a fit when he was anxious at the groomers. Medication: Marley is on Epiphen tablets. He has been OK apart from the groomers incident so far. Details: No more detail provided.	OWNER
30 June 2022		Harley	N/A	N/A	Unregistered - UK	12-Nov-21	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	7 months	YES	Blood tests	YES	N/A	Suspected triggers: None provided. Medication: Pevion. Details: No more detail provided.	OWNER
30 June 2022		Quinn	N/A	N/A	Unregistered - UK	21-Oct-16	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	5 years	NO	N/A	YES	N/A	Suspected triggers: Currently unknown. Medication: Pheno 40 twice a day. Details: First fit around 1 minute. 2nd 5 weeks later, small one during night then one the next morning lasting around 2 minutes. Started meds after this cluster. Currently 60 days past her 12/05/2022. No more detail provided. Suspected triggers: None known to date. Medication: Epiphen 50mg x 2 daily, Liracetam 2 x daily, Levetiracetam x3 daily. Only meds that appear to give some sort of stability is the Levetiracetam. No improvement on the other 2 meds. Details: Since 8th Jan 2022 when he started clustering, over the months has gotten progressively worse. Hence the long term use of Levetiracetam, but he can never go past 2 wks without an episode. Recently has had a few occasions where he has gone fit and follows a seizure.	OWNER
30 June 2022		Mara	N/A	N/A	Unregistered - UK	11-Sep-11	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	10 years	YES	By vets Idiopathic Epilepsy	YES	N/A	Suspected triggers: Initially caused by contracting kennel cough. Medication: Epiphen and Epilase. Still settling the doses to best levels, meds have reduced grand mal section of seizure but overall length of time for full event is same. Ataxia varies from not much to wobbly, to very wobbly. Assumed from meds rather than brain injury. Details: Grand mal fits usually 2 mins grand mal then 3 mins recovery, usually brings self out of activity. Medication reduced Grandmal section but whole seizure usually lasts 4-5 minutes. Has had 3 sets of cluster seizures since start of Dec 2023, meds increased each time. Spayed.	OWNER
30 June 2022		Cassie	N/A	N/A	Unregistered - UK	09-Oct-20	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 2 months	YES	Blood tests, MRI and CT spinal tap	YES	N/A	Suspected triggers: Unknown. Medication: Pevion 800mg per day. Epiphen. Currently being weaned off Pevion. Details: At the start the fits were roughly every four weeks, then she started to have clusters. This is when Epiphen was added to her meds. Spayed.	OWNER

When we first introduced Phenobarbital (subsequently Epiphen, now Soliphen), he was very wobbly on his feet.</p> <p>Details: Bailey is neutered and was having seizures every seven weeks but we have up to 2 fits medication and currently he has been 11 weeks without one. Normally he has on average three grand mal seizures.</p>	OWNER
31 May 2022		Mia	N/A	N/A	Collie Cross Unregistered - UK	25-Nov-16	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	NO	1 diagnosed it without vet advice	YES	N/A	<p>Suspected triggers: 1 give Bristol wormer 6 days before last episode but this is not always the case. Do not vaccinate.</p> <p>Medication: Not on medication. She has a vet phobia and as episode's are mild I haven't taken her to a vet.</p> <p>Details: Fits are not very frequent and are mild, ie not grand mal or clusters. She is soayed, vet phobia happened after that.</p>	OWNER
30 April 2022		Freya	N/A	N/A	Unregistered - UK	01-May-17	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	NO	N/A	YES	N/A	<p>Suspected triggers: Not aware of any triggers</p> <p>Medication: None as yet. May need to be started on medication if has another seizure.</p> <p>Details: Completely out of the blue. She was settled, jumped up on settee and I went over to her. She then went into a full blown seizure. Frothing at mouth, all 4 limbs involved. No loss of continence. Lasted about 20 seconds. Very clingy and unsettled after. Checked over by vet. Then had another seizure 4 hours later. Was asleep, raised her head and went into another seizure. Same as before but lasted about 10 seconds. Blood done by vet. Nothing shown. Am observing her for next 4 weeks.</p>	OWNER
30 April 2022		Harley Quinn	N/A	N/A	Unregistered - UK	16-Jan-16	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	Had cluster fits over 24 hours and medication prescribed worked	YES	N/A	<p>Suspected triggers: Harley had a litter of pups which went great but when she went for her flea and tick treatment within an hour she had her first episode. Now if she gets over excited by going to the seaside or seeing lots of family in one go it results in an episode.</p> <p>Medication: We have been on several different medications over the years but now we are on Epiphen 60mg and Leviticaram 250mg. Until recently Libromide 325mg was being taken but a bout of pancreatitis hit and the vet believes this drug may have had a part in the problem.</p> <p>Details: Harley was spayed after having a single litter of seven, although one was still born. The first fit was a one off then we went around 18 months with nothing before the cluster fits on 31st Dec 2019. After this it was almost monthly with the odd extended break until August 2021 when we were episode free until March 2022. The March episode was part of the becoming ill with pancreatitis where she was taken into hospital for five weeks. Thankfully all on the mend now.</p>	OWNER
30 April 2022		Gigha	N/A	N/A	Unregistered - UK	08-Jan-16	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	By taking her to the vet repeatedly and eventually taking her to different vets for alternative opinions as our first vet advised us to euthanise her. It came after a year of increasingly regular fits during which Gigha was anxious and this led to her being aggressive behaviour. It took reaching the climax for her to be diagnosed.	YES	N/A	<p>Suspected triggers: We are unsure of triggers.</p> <p>Medication: Epiphen, her dosage has been changed three times since she was first prescribed. It changed her life, she is a happy energetic little now.</p> <p>Details: She still has a fit once a year or so and the build up to a fit is still noticeable but the Epiphen has made a huge difference. She has her bloods checked regularly at the vets. Fit lengths vary, they are on average 5+ mins long.</p>	OWNER
30 April 2022		Indiana	N/A	N/A	Unregistered - UK	28-Dec-19	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Vet diagnosis (bloods)	YES	N/A	<p>Suspected triggers: Over tired. They happen when in a deep sleep.</p> <p>Medication: Epiphen, 1 tablet twice a day.</p> <p>Details: Seizures started 48 hours after he'd been neutered. Had cluster fits that week (6 months old), then nothing until he was 2 years old. Had 4 seizures in space of 3 weeks. Fits usually only last under 1 minute.</p> <p>Suspected triggers: Usually has fits before food.</p> <p>Medication: Soliphen and Licaramide. Fits have got more frequent over time. He is on liver supplements which make him process the drugs very quickly so the fits are unpredictable.</p> <p>Details: Fits last 20-40 seconds. Neutered just before 3 years old. Think fits caused by flea collar with him playing with other dog and mouthing flea collar.</p> <p>UPDATE ADDED 31/07/2022 - ISDS number added to Sire Nilyris Lucky Judd.</p> <p>UPDATE ADDED 31/10/2023 - Please can you update Kingfarm Gogeta Dela as he has ISD 212023A. Not due to his fits but chronic back pain.</p>	OWNER Updated 31.07.22 Updated 31.10.23
31 March 2022	31/07/2022 & 31/10/2023	Kingfarm Gogeta Dela	K154056	N/A	WSD - UK KC Activity Register	27-Feb-16	UK	Dog	Nilyris Lucky Judd (ISDS 280664)	Glen (ISDS 238875)	Mel (ISDS 259090)	Kingfarm Dress to Impress	Borderlair King of Sailing	Merrymarsh Sire of Kingsfarm	3 years 6 months	YES	2 fits following flea collar treatment	NO	7 years 7 months Chronic Back problem.	<p>Suspected triggers: Triggers were stress from other dogs, hormones, full moon and especially super moons.</p> <p>Medication: As there was only Phenobarbital and Potassium Bromide in those days so far as I know, he was on the max of both.</p> <p>Details: He still had a Grand Mal every month at a full moon at 03:30 at night. The Grand Mal took about 15 - 10 minutes. After his Grand Mal he was screaming for 2 hours and pacing, trying to hide behind anything and after that came 2 hours of walking and panting before he came to his normal self. And then he slept for 24 hours. It was the same every month. Only just before he was to be started to have cluster seizures. Then I knew it was enough. Quickstep was an intact dog, thus the hormones were a problem with other dogs. He was bred without any health tests from the parents and got a Dutch pedigree. He was out of Working Shetland Lines, only a few generations in the Netherlands. He also got supplements like herbs and the food was changed from kibbles to meat which helped a lot. As was normal in those days he had his vaccines and deworming on a regular basis. Quickstep was pgs at the age of 12 1/2 years. He had had enough seizures, his body couldn't take anymore. So it was the only humane thing to do, to give him peace. He had a very active life with walks to the horses and playing with a football and doing lots of things but only with us, no other dogs except the ones he knew before the seizures started.</p>	OWNER

YES	N/A	<p>Suspected triggers: Possible stress of other dog (related Uncle) having a cluster of 7 fits in one day.</p> <p>Medication: Now on Soligen 45mg twice a day and seizure free for 6wks.</p> <p>Details: Barkis had a small focal seizure, which was very lucky to see a week later he had another one again very lucky to see it. 3 hours later he had his first fit. His second fit was 4 days later and then another the next morning which is when he was put onto medication.</p>	OWNER
28 February 2022		Brodie	N/A	N/A	Unregistered - UK	25-Jan-21	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 1 month	YES	MRI scan at referral.	YES	N/A	<p>Suspected triggers: Unknown.</p> <p>Medication: Epilphen - confused, sleepy, hungry, thirsty.</p> <p>Details: Neutered.</p>	OWNER
28 February 2022		Chaos	N/A	N/A	Non UK Unregistered (Border Collie)	24-Dec-17	USA	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	A neurologist evaluated and diagnosed.	YES	N/A	<p>Suspected triggers: No known triggers, it happened while playing, usually while sleeping. She had another set of seizures 4 months later, no correlation with spaying or other medication.</p> <p>Medication: She is doing well on 45 mg Phenobarbital twice a day. Initial dose was 30 mg, but she started having focal seizures, so we increased it. She seems to be fine on the meds. She is also on Proin 72 mg x 1/day and D5 3mg pill twice a week.</p> <p>Details: Seizure history - First seizure was 20th July 2021, 2 minute seizure in her sleep. The next day chemistry profile and a CBC test were done, everything was normal. Second seizure was on 10pm on 5th August 2021, she had a 1 minute seizure while playing. Third seizure 3am on 6th August 2021, 2 minute seizure while sleeping. A thorough vet check was done on 6th August 2021, everything was fine. Started her on Phenobarbital. The initial dose was 50 mg x 2/day that was decreased to 45 mg x 2/day two weeks later, and then decreased to 30 mg x2 /day at the beginning of September. Phenobarbital blood level was checked on 5th December 2021, it was 15 µg/ml. Increasing the dosage is under consideration since she is having 1-2 second seizures while playing fetch. She had two more 2 minute seizures in her sleep in January 2022 so meds were increased to 45 mg. Neutered.</p> <p>UPDATE ADDED 31/03/2022: Registration numbers added to Registered name of Dog also to Dam and (D)G Dam. Country of Registration changed to Hungary.</p>	OWNER Updated 31.03.22
28 February 2022	31/03/2022	Blessed Borders Sooner or Later - Mia MET Border Col.1594/17	N/A	N/A	Non UK Registered (Border Collie)	08-Dec-16	HUNGARY	Bitch	Astra Mavrik (ISDS 00/315184)	Astra Hawk (ISDS 249679)	Astra Eta (ISDS 00/307117)	Braze Olyb (ISDS 00/299850)	Elte Of Maranns Home [Bel] (MET Border Col.1113/H/06)		4 years 6 months	YES	She had multiple full body seizures.	YES	N/A	<p>Suspected triggers: We had no clue as to his triggers. We eliminated certain foods, he still fitted so re-introduced them. We didn't think it was food related, although he was yv fed from diagnosis. He was chemically castrated 6 months before fits started, 3 months after chemical implant we had him surgically castrated. We wonder if that had an impact on the start of his seizures or not.</p> <p>Medication: Initially started on Levitracetam 200mg TDS. Seizures increased so drug was increased to 500mg. Christmas Day 2017 he suffered 4 seizures within 12 hours, instructed by specialist to load dose then over 5 days and meds increased to 750mg TDS. By June 2018 we had to introduce Pheno, this was increased to 40mg twice. 2019 he started on Potassium Bromide. It made him extremely unstable, we had to use one of the help them up harnesses to help him get up as sometimes he couldn't manage. On a vet visit with one of our other dogs, my vet cried when she saw how uncoordinated he was, even though we had told his neurologist. She immediately got on to them and they reduced the drug. He did improve but still had little issues at times. Unfortunately I don't know the sire or dam, even though we met them. However, I wrapped my brain this morning and remembered that we got him from Barn Farm Border Collies in Stafford (or near there) and the chaps name was Ed (Edward). One thing we did do with Loli (our epileptic) was enrol him with besties (my wives boy Darcy) onto the RVC's IDEAS study. They went for the day taking part in different trials and having fur and stool samples taken. That was pre Potassium Bromide.</p> <p>Details: We wondered if weather pressure changes can set seizures off as well, maybe environmental things. We have overhead electricity cables where we live but who knows. Castrated, seizures started 1 month after this.</p> <p>Suspected triggers: None provided.</p> <p>Medication: Pheno initially (ineffective), Pheno since 2013, generic Kepra since 2018.</p> <p>Details: Spayed at 18mths. 170 odd fits in total (30 before pheno), gradual downward frequency. 5 to 2021. All Grand Mal, all around a minute. Lili Marlene's breeder was banned and not allowed to register BC status, although previous identical litter were registered as BC's.</p>	OWNER Updated 31.03.22

31 January 2022		Puppichino	N/A	N/A	Non UK Unregistered	22-Oct-15	INDIAN born, export to UK	Dog	Johny	Unknown	Unknown	Unknown street dog	Unknown	Unknown	1 year	YES	Vet examination and blood tests	YES	N/A	Suspected triggers: Originally triggered by rabies vaccine batch (suspected). His brother and my other (non-border collie dog) were also vaccinated but had another batch. Medication: Fenoin 400 mg - 1.5 tablets twice daily, Levitracetam 750 mg - 1 tablet three daily, Epiphen 60 mg - 1.5 tablet twice daily. Details: Puppichino was born in New Delhi, India as a stray dog and was neutered at 9 months old. We relocated him to the UK in 2017 July and he had shown no signs of epilepsy. Puppichino is now 6 years old and has been epileptic since he was a year old. He had only a few attacks each year until December 2020, we didn't put him on medication. But in December 2020 he started having cluster seizures and was initially put on Fenoin, he is now on 3 Drugs Fenoin, Levet and Epiphen. He had a very severe attack of almost 90 minutes in October 2021 and had to be rushed to an emergency vet. It was triggered when the vet tried reducing his dosage of Levitracetam. Fortunately since then he was cluster free till last night 3 Jan 2022, then he had a single attack yesterday. This is an improvement from the 6 or so he would have each month.	OWNER
31 January 2022		Jinx	N/A	N/A	Unregistered - UK	06-Dec-16	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 6 months	YES	Referred to a specialist neurologist vet who did a MRI scan, spinal tap and blood work.	YES	N/A	Suspected triggers: Not really sure as there so random. Medication: Epiphen 60mg and will be starting Keppra next week. Epiphen has been increased to try and control the seizures but still having so many. Vet has just ordered Keppra to try and control them. Details: Jinx is neutered and his seizures are getting worse as he's getting older. Taking steps to increase the odds he's better.	OWNER

30 September 2021		Glennie Glen	K164560	N/A	WSD- UK KC Activity Register	17-May-16	UK	Dog	Glen (ISDS 00/313103)	INT SUP & WORLD CH Dewl Tweed (ISDS 270783)	Mag (ISDS 257352)	Owen (ISDS 00/314102)	INT SUP & WORLD CH Roy (ISDS 26614)	Ret (ISDS 00/294932)	5 years	NO	I am very familiar with epilepsy, as I have previously had animals who had grande mal fits, so I have no doubt this is what he has. At this stage I don't want to put him thru the trauma MRI testing etc.	YES	N/A	Suspected triggers: 18.07.21 - 5 days prior to 1st seizure he ate mystery substance at fishing lake. 19.7.21 - Following day very lethargic and not eating or drinking. Emergency vet visit required. General anaesthetic given. Desflurane, trachea etc. maxillary ventilation. Vet prescribed a large dose of the steroid Dexamethasone and follow up Pritin to alleviate swelling. Almost immediate improvement, but status was 4-6 days. 23.7.21 - On day 5 after consumption of unknown substance, he had a full grande mal type seizure. 24.7.21 - This was repeated approx the same time the following day at 6.30 am when being let out in to garden. A tone of excitement. Medication: Immediately after the first seizure I gave a drop of CBD Brothers Silver Edition Indica CBD Oil and another drop that night. A single drop was given the following morning immediately before he went outside, but he had another seizure at approx the same time and place and under the same circumstances. I believe because the Silver Oil had not yet been absorbed. I now give CBD Brothers Silver Edition Indica Oil 5 Single drop 3 x daily. Organic MCT Oil 1 level teaspoon 3 x daily. Ephar Capsules 3 per day with food. Details: He has several small meals during the day now, instead of just one meal in the evening (as before). He is fed almost exclusively a raw keto diet. So far he has had no further seizures, but it is obviously very early days. He was neutered 3.5 weeks prior to the first seizure. Both grande mal type fits lasted between 10 and 15 seconds. He was unconscious, but eyes wide open and glazed. He was paddling and foaming at the mouth. He recovered pretty much back to normal within 2-3 minutes. I now understand that this is a history of seizures in his line. His litter sister started fitting at 2.5 years of age, initially under similar circumstances (excitement), but has continued to fit, both while excited and at times of rest and has needed her veterinary needs increased over time.	OWNER
30 September 2021	31/10/2021	Jack	N/A	N/A	Unregistered - UK	17-Aug-20	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	11 months	YES	Vet diagnosis. Bloods tested to rule out other causes.	NO	12 months old - severe cluster fits never recovered and had to take heart-breaking decision to give him sleep.	Suspected triggers: No known triggers. Medication: Epiphen, 60mg twice per day Details: Neutered. Smaller focal seizures progressed to general seizures and cluster seizures. Postage both BC. One BC ISDS 701 UPDATE ADDED 31/10/2021: I worked closely with the vets but Jack had regular and very severe cluster fits and rarely recovered inbetween. The medication (Epiphen) was unable to make any difference. I do believe that Jack may have had idiopathic Epilepsy for longer than we knew before diagnosis. Now I have learnt much more about this disease, I think there were earlier signs. I had to take the heart-breaking decision and he is euthanased.	OWNER Updated 31.10.21
30 September 2021		Ink Credible - Ink	N/A	N/A	Non UK Unregistered	03-Sep-18	IRELAND	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 yrs 11 months	YES	No other cause found for the seizure plus type of fit along with breed and age as significant factors.	YES	N/A	Suspected triggers: None known. Medication: He's been started on 1x 400mg Pexion twice a day Details: Nothing similar prior to seizure. He's now fed, only had first puppy vaccines then titre tested and faecal counts done for worm checks. Chemical treatments not used. He's not neutered. His seizures have only been around 30 seconds in length but quite violent.	OWNER
30 September 2021	31/10/2021 & 31/03/2022	Puldibhainn Gentlessen - Ziggy	AW02658303	N/A	BC - UK KC Pedigree	21-Jun-19	UK	Dog	Sky of Puldibhainn (ISDS 00/346013)	Gilliegan Jack (ISDS 00/312677)	Jan (ISDS 00/312664)	Grace of Puldibhainn (ISDS 338846)	Gilliegan Jack (ISDS 00/312677)	Floss of Puldibhainn (ISDS 00/296987)	2 years	YES	By vet, blood tests, ruled out other things, so diagnosed as idiopathic epilepsy	YES	N/A	Suspected triggers: Heat might be a factor Medication: Emergency diazepam which seemed to reduce fit. Details: He is neutered, 6 months pre fit, his first fit was less than a minute in the van when bringing him back from his daycare. Then second was that night, which was 4-5 minutes. Next cluster was not for another 8 weeks when he had 5 in 24 hours, all 2-3 minutes UPDATE ADDED 31/10/2021: Input correction to (D) G.Dam from Grace of Puldibhainn to Floss of Puldibhainn. UPDATE ADDED 31/03/2022: (ISDS) has added all parentage. Suspected triggers: Low blood sugar (not eating often enough). Medication: Diazepam (in case of fits that last longer than 5 minutes). Details: Neutered. Frequency of fits: 1 every year (any time between March and June). Length of fits: 1 min for aura, 1 min during grand mal phase, 10 min aftermath (temporary blindness and unable to walk properly). Vaccinated with yearly boosters. Vet prescribed de-flea and de-worm medication, as standard. Food is pedigree wet jelly dog does not tolerate dry food well - causes bloating and chronic flatulence. Several pedigree cheese and beef mini treats throughout the day and 1 pedigree denta stick per evening. Since identifying the potential trigger no fits have occurred, as the dog is now fed at exact timings each day.	OWNER Updated 31.10.21 & 31.03.22

No accidents or illness prior to the fits. Wren only has had puppy vaccinations and I do not use chemical treatments on her. Medication: Since the fits she has been on MCT oil and has not had a seizure since. Details: Wren has been raw fed since a puppy. She had a lap spay after her third season at the age of two. She is a fit healthy dog and has never had any accidents or illness prior to the two fits. Wren had her first fit on Saturday 6th December 2020 at 6:45am. I heard a knocking downstairs and I found her collapsed having a generalised seizure which lasted under one minute. She made paddling movements, drooled/frothed and urinated. She came round quickly, being wobbly for 2-3 minutes. After that she was back to normal like nothing had happened. Her second fit was on Monday 14th December at 2:30am. She had got up in the night wanting to go outside. This is not unusual for her as she often gets up at this time to go toilet. As I opened the patio door she collapsed to the left and started fitting. Exactly the same as the time before. Quick recovery and within a few minutes she ran back upstairs back to bed and went to sleep.	OWNER
30 April 2021		Marky	N/A	N/A	Unregistered - UK	27-Jan-15	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 4 months	YES	Blood tests after change of vets	YES	N/A	Suspected triggers: Weather and pressure Medication: Epiphen 45mg x 2 daily Details: Neutered. 31 March 2021		Jess	N/A	N/A	Unregistered - UK	20-Jun-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	About 18 months	YES	After videos we had taken and being tested at Fitzpatrick's. They started her on medication, which caused her to fit more	YES	N/A	Suspected triggers: Extreme exercise, stress, heat in the summer. Medication: Phenobarbital and Pexion which she is being weaned off. Getting ready to start Potassium Bromide once Pexion has finished. Details: Jess has been spayed. She is a very anxious dog who is upset by any noise. Her fits are like pett mal at times but also grand mal fits where her nose and bottom jaw, her eyes roll up, then she starts to shake. They can't be from between 30secs and 6mins. She also has episodes where she lays in her Dad's arms and flops her head on the sofa and can sleep for up to 30 mins. You can say purr/squeal, squirrel, dinner, names of a visitors and she doesn't move. At the time there, her limbs don't move and when she gets off she has left a small mark on his trousers. The last two fits she has been incontinent and wet the bed. Occasionally she can be aggressive, but normally a very placid girl. She has changed, doesn't like her harness on or collar, seems worried to go to my husband.	OWNER
31 March 2021		Ethan-Vannin Millie	A50902157	00/332956	BC - Dual Registered UK KC & ISDS	18-May-14	UK	Bitch	Ethan-Vannin Kirk (ISDS 00/11443)	Joe	Breeze	Ethan-Vannin Mia (ISDS 00/114110)	Spot	Bliss	2 years	YES	Bloods, head scans etc: all normal but clinical diagnosis based on the episodes, seemingly brought on by touch, was one of a rare type of seizure / ray syndrome.	NO	Age 4. Due to the escalating frequency and intensity of the episodes which were very distressing for her and us, we sadly despite trying all we could, had her PTS	Suspected triggers: Millie was a very loving girl who used to lay for hours next to me having cuddles and tummy rubs so this is all the harder to explain. Every six weeks a sudden explosive episode of rage with no warning. We didn't understand at first but there became a pattern to it and so the 2 year journey of trying to manage her seizures safely began. Before an episode she became increasingly sensitive to light and noise, afterwards she would hide and sleep it off. Medication: Pexion to start then stopped. Followed by a combination of Epilphen and Keppra. Pexion was tried but made no difference so was stopped. We're at different types of epilepsy medicine. Details: Frequency was from about every 6 weeks until Christmas 2017 when she started flaring. After the initial setting of the cluster episode the following seizures were more frequent with no pattern and each one was for a longer period of time. Food was not a trigger for her as at each month natural things in her diet as possible, we changed her to a raw diet and although it did not help her seizures, she did very well on it. Millie was neutered but it made no difference, she was spayed before the onset of the seizures. Due to the severity and type of seizure Millie had, we could no longer manage her safely. Just to say that Millie would come to us probably feeling unwell for a cuddle and it was always as we would touch her that the seizure would happen. She would usually have been asleep beforehand. Never happened at play or with strong touch/rough cuddles only ever gentle strokes, episodes lasted 5 seconds but never the end more like 10 seconds and we just couldn't manage her safely and the most traumatic thing was we could no longer cuddle her as she or we would have wanted the seizures along with disc degeneration was also ageing her rapidly too, so the heart breaking decision was made to say goodbye. It was truly a traumatic journey for and with her.	DATA TRANSFER & UPDATE BY OWNER 31.03.21

Medication: Phenobarbital 50mg twice a day and Libromide 325mg twice a day. Details: Rhett has always been raw fed and this has not changed. Food was not a trigger. To date, Rhett has not had a fit since 10th Aug 2016. UPDATE ADDED 28/02/2022: Registered name amended from Rhett is Gone With The Wind to Rhett's Gone With The Wind. Added KC Registration number. Added how epilepsy was diagnosed. Available update of fitting details. Suspected triggers: No apparent triggers though all occurred at rest and some occurred at a full moon. Medication: Phenobarbital after first cluster with rectal Diazepam when fitting. Quickly changed to Pexion/Diazepam. After second cluster Gabapentin and Pexion/Keppra with Diazepam. The Diazepam did not work. Then went on to Phenobarbital and Keppra. Details: Rhett has had more seizures in the spring and I think that's because everything starts up again with training and so on. Medications: Fenemal 75mg twice daily. Before medication he had 2 seizures, one after another but when he started Pexion the second seizure stopped. He still had seizures every 3 months so we went on Fenemal instead and he went down to one seizure a year. Details: He got a castrating chip a year ago due to prostate problems and after that, he has calmed down and his seizure are very far apart now. Not recorded. There are 3 more dogs from the same father on the Swedish list of epileptic dogs. There are also some other dogs that have the same relatives as the mother of Rex. Suspected triggers: The fits came every 7-10 mins out of the blue and from nowhere. There never seemed to be a reason. Medication: Epilphen x 50mg twice a day. Levetiracetam/Keppra 1 x 3 times daily. Keppra 50mg x 2 once a day. Plus Diazepam Rectal tubes 50mg as needed. Details: In between times she was fit and acting normally and always keen and happy to work at her Obedience. No change of food either before or after. Spayed well before fits started. 1st fit was Aug 2015 then Oct 2015. In Nov 2014 cluster fits when had to be sedated. Then another, monthly from then on, apart from Aug Oct 2015 when she went 17 weeks without a fit. Nov 2015 one minor fit and finally Dec 2015 cluster fits. 28 February 2021		Cloudy	N/A	N/A	Unregistered - UK	28-Aug-16	UK	Dog	Unknown	Unknown	Unknown	Misty	Unknown	Unknown	1 year 7 months	YES	N/A	YES	N/A	Suspected triggers: He definitely has epilepsy but the condition could have been triggered, or exacerbated, by the original liver problem. Medication: Cloudy responds very successfully to a regimen of KBr (Libromide), Levetiracetam (Keppra) and Phenobarbital (Epilphen) and has almost no fitting, with the occasional 'pett mal' seizures. He has very occasional full tonic-clonic seizures when his medication has been compromised e.g. missed dose or after activated charcoal treatment for ingestion of toxins. Details: Has epilepsy and liver shunt. He started fitting regularly at 18 months in February 2016 and responded well to Phenobarbital. Went into status in May probably due to hepatic encephalopathy. Routine blood analysis showed a liver anomaly and it was found he had a hepatic shunt after scanning. Surgery was carried out in June with 100% success, but the fitting continued. He is still taking regular medication at 4+ years of age with occasional recurrence of fitting especially if medication is compromised, even though his liver is perfectly healthy and functioning. No indication of food relating to seizures but he is on a hepatic diet due to the shunt.	DATA TRANSFER & UPDATE BY OWNER

28 February 2021		Skye	N/A	N/A	Unregistered - UK	05-Jun-17		Bitch	Scottish Farm dog	Unknown	Unknown	Scottish Farm dog	Unknown	Unknown	3 years 3 months	YES	Several identical seizures. Vet feels as they started around 3 years old, otherwise extremely healthy fit bitch, epilepsy likely cause	YES	N/A	Suspected triggers: No known triggers at present, still documenting seizures to find any pattern or link. Medication: Treated with Phenoobarbital twice daily (under duress), initially 60mg, halved to 30mg by me as behaviour badly subdued by dose. All ok at present, hopeful of stopping or reducing meds after spaying and hormonal fluctuations taken out of equation. Using FFT tapping, calming and enjoyable, also feels. Very doped, poor soul could barely walk. Have discussed with vet who agrees the treatment shouldn't be worse than the condition! Details: First fit at 4.45, jaw chattering woke me, foaming, twitching and urinary incontinence, (having worked with kids/seizures was aware of how scary it looks, and to time it). Around 3.5 mins. Four long bouts and jumped up like nothing happened. We did urine test in morning, slightly elevated white count so treated with antibiotic in case of infection. All other fits (5 more) have been identical, only shorter in every case. Differing times, no real common denominator. One thing I am monitoring is we use a calor heater in sunrooms topping up heat in autumn/winter. Most recent seizure Skye had spent half a day with me there doing a Zoom course online. It is well ventilated and has a CO alarm, but wonder if she is affected by this? Just grasping at anything I can change to remove meds etc.	OWNER

Had to PTS as medication stopped working, she became very ill with seizures.	Suspected triggers: No triggers that we knew of. Medication: Phenoobarbital 2 and half tablets per day but stopped helping. Details: Most seizure improved at first with medication but slowly got worse and increasing medication did not work. She was neutered.	DATA TRANSFER & UPDATE BY OWNER
28 February 2021		Taff	N/A	289834	BC (ISDS)	05-May-07	UK	Dog	Plas Major Storm (ISDS 249754)	Plas Major Gull (ISDS 189532)	Briar (ISDS 232390)	Carl (ISDS 242461)	Don (ISDS 218443)	Nel (ISDS 210531)	7 years 5 months	YES	Vet ran blood tests which showed nothing that could be causing the fitting, so concluded Taff had idiopathic epilepsy	NO	Age 10 years. Taff died in May 2017 following a series of cluster seizures from which he never recovered	Suspected triggers: None mentioned Medication: Epiphen Details: First seizure brought on by introduction of new dog into household. Taff was fairly stable, cluster seizures every 6-8 weeks. Found out from an article in the ISDS magazine that Taff's grandmother, Briar, was heretofore because of epilepsy. Her breeder consequently stopped breeding from this line (Plas Major).	DATA TRANSFER & UPDATE BY OWNER
28 February 2021		Easterdale's Fleet Foot	K134734	N/A	WSD - UK KC Activity Register	07-Jan-10	UK	Dog	Easterdale's Prince Rory	Rock	Kim	Just the Tonic	Robbie	Tess	3 years 9 months	YES	Diagnosed by my vets and confirmed by specialist	NO	Age 8 years 4 months. Fleet was pts on 20 May 2018 following several hours of continuous fitting	Suspected triggers: None mentioned Medication: Started on Pexion December 2015 with Diazepam when needed. Changed to Libromide, with Kepra when needed and Diazepam for immediate treatment of fits. Details: First fit at 3yrs 9mths at 4am, grand mal. 9 fits over next 2 years, very short, all grand mal, all around 4am. On no medication then. In December 2015 had a severe fit lasting 5 minutes and put on Pexion. 3 further fits and dose increased in Aug 2016 as last fit was 6 mins and required Diazepam. Severe fits seemed to increase but frequency varied from 6 weeks to 9 months. Then Fleet's fits sadly increased in frequency and severity and he eventually began to cluster fit. His meds were changed, but things continued to decline. He saw a specialist who advised the meds he was on were what he would recommend but to try changing the timing of meds. His fits continued to lengthen and he had several emergency trips to the vet in the middle of the night, when Diazepam did not bring him out. At the end he was fitting during the day so well as at night time and the fits were taking a terrible toll on him. He was pts in my house following a night of almost continuous cluster fitting. Neutered at 12 months, well before fits started. On cereal free Salmon and Potato mix. Food did not seem to be a factor.	DATA TRANSFER & UPDATE BY OWNER

Details: Neutered. One to two minutes fits up to 45 minutes to recover. Normally happen when asleep. Put a flea collar on in May and have wormed three times a year.	OWNER
31 January 2021		Bailey Lyness	N/A	N/A	Unregistered - UK	02-Oct-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Glasgow Vet School and Hospital	YES	N/A	Suspected triggers: Have not been able to confirm a reason so far. Medication: Epiphen 120mg twice daily, Libromide 1.5 tablets a.m. and 1 tablet p.m., Zonargam 100mg twice daily, Kepra 500mg 2 tablets 3 times a day after each cluster fit for 7 days, Dextrole 150mg tablets twice daily, 10mg CBD capsule at night. Details: Bailey is neutered and he has fits every 3 to 4 weeks generally although at the moment they are weekly. He has generally 3 cluster fits at a time that last 2 to 3 minutes but yesterday he had 7 fits over a 1 hour period. It is so stressful as it is hard to keep Bailey quiet after the fits as it takes him around an hour to come round and see properly as well as regain his balance. We have bought a child's playpen to keep him in so as he can't get out and hurt himself as the dog pens he was able to escape from. Typically Collie.	OWNER
31 January 2021		Neil	N/A	N/A	Unregistered - UK	Approx. She had cancer of the vulva which had spread to lungs. Euthanased with having difficulty breathing	Suspected triggers: None. Medication: She was on Phenobarbitone and regular blood tests from 2001 when diagnosed, until about 2006 when no more fits. Drug free for 3 years. Then started petit mal again and put on low dose of Phenobarbitone which controlled fits. Details: She then developed cancer. She was spayed at approx. 18 months. Did not thrash through fits but went completely rigid and tremored. Lasted about 3-4 minutes, then with cooing came round and had a cold drink to bring her temperature down, then back to normal. Had Diazepam to administer rectally if it did not come out of fit but never had to use it. In total probably had about 6 grand mal and several petit mal which were not too noticeable. Thought at first to have heatstroke, then due to raised calcium levels thought to be a problem with parathyroid glands. Believe other puppies sired by Detania Summersam to have developed epilepsy, but had control from start when found.	OWNER

31 March 2020		Boston	N/A	N/A	Unregistered - UK	23-Jun-14		Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years 6 months	YES	After initial seizure followed a couple of months later by a focal seizure and clusters diagnosed with idiopathic epilepsy after MRI eliminated any brain issues	NO	Feb 4th 2020 - aged 5 years and 8 months. PTS as diagnosed with chronic liver failure due to Phenobarbital	<p>Suspected triggers: Stress, over tiredness and heat would appear to be triggers. Stress from being bullied by our other collies, or going to the vet.</p> <p>Medication: Initially given Phosin - no impact. Then moved to Phenobarbital, then added Potassium Bromide. Keppra was given as an emergency protocol. Diazepam did not appear to work.</p> <p>Details: Boston had his first seizure on 4th Dec 2017. From then till he died on Feb 4th 2020 he had approximately 80 seizures lasting on average 60 seconds with some as cluster seizures. When he first started seizing it was shorter and he recovered relatively quickly. His never lost bladder control when he seized. The critical turning point was in September 2018 when he went into focal seizure mode and had to go to ICU. This followed another 100 episodes in December 2018 where we thought we would lose him. The neurologists worked with us to find the right medication level. There were times we pushed back on the suggested medication levels and discussed it with the neurologists. I think it is important that owners who know their dogs best and have to manage the dog everyday feel confident to add their experience before you use if it has had any impact in controlling the seizures; (2) the vets are highly dependent on blood lab results to ascertain the medication level and in our case, there were blood results that were inaccurate/incorrect and thus unreliable. We queried this and new bloods were taken but each time there was an episode, this delayed the possibility of accurate blood work and (3) neurologists are focussed on controlling the seizures but need to work in hand with liver experts so any increase in PB should be done only after a check on the status of the liver, it should not be automatic. It is our belief that we might have been able to control the liver failure had Boston's PB not been raised after summer 2019. Though the seizures were better controlled, his liver was damaged beyond repair. On the other hand if the PB was tapered down in summer 2019 and only bromide used (or possibly in tandem with Keppra), would he have succumbed to some great mal seizure - we will never know. Ultimately, epilepsy is life limiting - that we do realise.</p>	OWNER
29 February 2020		Merlin	N/A	N/A	Unregistered - UK	01-Jan-12	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years	YES	By our vet	YES	N/A	<p>Suspected triggers: No known triggers, usually happen in the morning.</p> <p>Medication: Epiphon tablets twice a day. It's last a couple of minutes.</p> <p>Details: Neutered. Very distressing on us as he has. He is a blue merle and started fitting at the age of 3. Kept under control by Epiphon but he does still have the occasional fit.</p>	OWNER
29 February 2020		Kooki	N/A	N/A	Unregistered - UK	01-Feb-16	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 6 months	YES	Filmed event. Explained to vet. Examinations.	YES	N/A	<p>Suspected triggers: No apparent trigger.</p> <p>Medication: None.</p> <p>Details: Thankfully it only happened twice and not since. Random seizures. Only had two in space of that month. Monitored and not happened since. Lasted around 10 mins each.</p>	OWNER
29 February 2020		Blowden	N/A	N/A	Unregistered - UK	28-Feb-16	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Neurology assessment	YES	N/A	<p>Suspected triggers: No known triggers.</p> <p>Medication: Started with CBD aged 6 months which kept symptoms under control until she was one year old. They became significantly worse and unmanageable so she was started on phenobarbital and levetiracetam - starting doses were gradually increased to maximum for her weight and we also increased CBD oil and finally introduced Epilaur.</p> <p>Details: Blowden is a Double Merle collie from a breeder but to me via an informal rescue. She has focal seizures - her MRI was clear so the seizures are not related to brain trauma or disease. Over a six month period her seizure related behaviour gradually diminished from jerking awake every few minutes at through the night, circling, twitching and being aggressive and she now sleeps for up to 11 hours through the night with no issues and is markedly more settled in the daytime. She was aged 6 months old but the focal seizure symptoms had already started (leg twitching, starting with head tilted, circling). The neutering didn't appear to make it worse. I have come to understand Blowden, her symptoms and treatment requirements through close observation, asking for help from a Double Merle Facebook group and researching this genetic problem. We have a regular border collie from a farm litter who has displayed no health problems, I had no knowledge of merle or double merle collies when we rescued Blowden and this was not mentioned by the person we assumed her from.</p>	OWNER
29 February 2020		Diesel	N/A	N/A	Unregistered - UK	27-Dec-18	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 months	YES	He has been diagnosed as having cluster seizures, fairly owners. He was taken to Liverpool for an MRI that ruled out brain tumours.	YES	N/A	<p>Suspected triggers: We haven't been able to work out triggers, are diagnosed? 3D times a day for about 8 weeks. During this time we couldn't find no reasons for it.</p> <p>Medication: He was put on low doses of Keppra, he is now on 3 doses a day and seems to have stabilised. Never had to use the emergency drugs.</p> <p>Details: He is intact. Had 7-10 focal seizures a day, no full blown shaking. Spasms out, antics, fit bites, comes round, is very wobbly after 10-15 seconds.</p>	OWNER
29 February 2020		Yess	N/A	N/A	Unregistered - UK	02-Feb-11	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	8 years	YES	Consultation with specialist neurologist at Langford Vets in Bristol, who diagnosed idiopathic epilepsy	YES	N/A	<p>Suspected triggers: No specific triggers that we know of although we have changed diet to a hypoallergenic one (mostly chicken based). She is 100% hypoallergenic (Eukanuba & Nulo's hypoallergenic meat).</p> <p>Medication: This was started on a high dose of Phenobarbital (Epiphon) after her appointment at Langford in March 2015 which made her drowsy and coordination of the back end almost completely lost and she often went off. The dosage was reduced to a maintenance level over a few months until she was on 12mg every 12 hours. She still had an occasional, regular seizure every 6 weeks. However, we had a breakdown in maintenance due to incorrect three (side effect) and excessive drinking, so our vet introduced Keppra 300mg every 12 hours and we managed her off Epiphon gradually over 3 months. Three days after her last Epiphon (September 2019), she had four seizures in a 24 hour period (previously only ever had one fit at a time) and we hospitalised overnight. She was started back on Epiphon immediately but on maintenance amounts, in a case of the same amount as mentioned previously we have 100% seizure free since September 2019.</p> <p>Details: This is a severe bitch who was obtained from the Border Collie Trust at 2 1/2 (initially spayed when got her). There was no medical history or evidence of seizures before we got her. This used to sleep downstairs in our previous house. A year after we moved to our current house in 2015, this started sleeping upstairs and in 2016 she started returning to March 2015. She only returns in the middle of the night when she wakes and as far as we know, she is unaware of time and when they are going to happen. They are around 30 secs. She wags and vibrates excessively which we believe she never had before the seizure started (sheepy actions). Because we would have had the vet called for her in the morning it takes hours to get. During the seizures, her eyes roll, she stops walking, her head is tilted back and her body is off. She paddles with her front feet before lying off and off, breathing heavily and then panting when she comes round. She is very disoriented for about 10-15mins and then goes back to sleep and wakes up 'normal'. Excessive nervousness and stress don't seem to have any effect. I consider this hypoallergenic diet to make a difference as she has always been food sensitive and used to be very fussy with food but eating, bringing up food in the morning after eating. She loves the new diet and she really enjoys it. She is definitely more cheerful on the medication.</p>	OWNER
29 February 2020		Marley	N/A	N/A	Unregistered - UK	2011 approx	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	Not known (rescue dog, owned since 5 years old, had fits before being adopted)	YES	Blood tests excluded anything else, vet said most likely idiopathic Epilepsy	YES	N/A	<p>Suspected triggers: Triggers unknown, although previous owner mistreated him and was convicted of animal cruelty after kicking Marley repeatedly on numerous occasions. He had a broken tail. Could have had injuries to head/mouth?</p> <p>Medication: He has had for fits since starting a raw diet with coconut oil and CBD oil. Once a seizure starts, we give CBD drops immediately and the fit subsides quickly and he recovers far better. Before CBD he would have cluster fits and twice had status epilepticus where the seizure continued for nearly an hour. With CBD they last only a minute or two and are very mild.</p> <p>Details: Neutered at approx. 4 years old. Very dominant male, pushy with other male dogs. We think Marley is a Welsh collie. He is sable and white, herds upright and a loose eyed. Contacted the Welsh Sheepdog society who said epilepsy is very rare and practically unknown in registered Welsh Sheepdogs, although common in border collies. They suggested Marley is therefore most likely a Welsh Sheepdog (BC cross, or if he's a pure Welsh, his epilepsy is probably injury related rather than inherited).</p>	OWNER
29 February 2020		Mandy Patrick	N/A	N/A	Unregistered - UK	18-Jun-05	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	By the vet as she went on quickly to have a series of fits stopped only by being given an anaesthetic.	NO	Age 11. Death was related. Mandy went into a state of conscious shaking and her body shut down and she was unable to move over a period of days	OWNER	
29 February 2020		Polly Patch	N/A	N/A	WSD - UK KC Activity Register	25-Feb-11	UK	Bitch	Jake Strayer	Unknown	Unknown	Chips Thompson	Unknown	Unknown	4 years	YES	Tests	NO	8 years old - seizure	<p>Suspected triggers: No suspected triggers.</p> <p>Medication: Pexon at first caused more fits then on Phenobarbital.</p> <p>Details: Spayed.</p>	OWNER

She had to be PTS. She was unable to come out of a seizure properly. She had numerous seizures within a few hours without fully gaining consciousness and was clearly in pain and distressed	Suspected triggers: No triggers known. Medication: Started on Epiphen then added Libromide as well. Details: Spayed in February 2017 at aged 30 months. Severe cluster grand mal seizures.	OWNER
22 December 2019		Clover	N/A	N/A	Unregistered - UK	10-Jun-07	UK	Bitch	Unknown	Unknown	Unknown	Neil	Unknown	Unknown	10 years	YES	Only by tests ruling out other possible causes	YES	N/A	Suspected triggers: Seems to be an association with worming. Last fit the morning after treatment with Milpro. Details: Fits are infrequent. Three or four over a year. ALWAYS within a narrow time slot 7.30am to 8am. Not sure if this is to do with length of time since feeding or hormonal fluctuation. I have disconnected all routine medication. Clover is spayed and in excellent health generally. She has had about 10fits in total. Approx 2 to 3 mins duration. Her mother had no history of fits, though she died relatively young of renal cancer.	OWNER	
22 December 2019		Jilly	N/A	N/A	Unregistered - UK	05-Jan-15	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 6 months	NO	N/A	YES	N/A	Suspected triggers: Totally unknown, just happened one night. Taken to vet after first fit. Then continued monthly, always about 2am. Medication: Vet recommended not going on meds as they didn't last long and were so spread out just monitoring her and if anything changes consulting vet. Have rectal Diazepam in case she has another. Details: She had one large fit about 6 months ago followed by some smaller ones. Was left with a twitch but not put her on diazepam for a week and twitch cleared. All her fits are over in a couple of minutes and doesn't seem to be a pattern to them apart from monthly and always about 2am. She has had fits monthly up until 14th of September, but not since (over 10/12/19). She is spayed.	OWNER	
29 November 2019		Cookie	N/A	N/A	Unregistered - UK	20-May-16	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	12 months	YES	At 18 months	YES	N/A	Medication: Fenoin, Epiphen and Levetiracetam. Details: None noted.	OWNER	
29 November 2019		Sam	N/A	N/A	Unregistered - UK	30-Mar-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	YES	Multiple fits leading to seeing a neurologist. He has had numerous blood tests and an MRI to eliminate tumours etc	YES	N/A	Medication: He started on Fenoin which made clusters worse. He moved to Epiphen which was a bit better but still having them often. He has just started on Bromide and after 4 months, we are going to start reducing the Epiphen. Details: He is neutered. He was fitting every 2 weeks but currently 13 days seizure free from starting Bromide. His fits go on for approx 5 mins and they are all grand mal. I have not noticed him have a focal seizure nor does he just spook. If he has a fit, it's always a big one. He starts his fit by turning his head all the way around and basically looks behind him. His legs go wide and he starts to fit. He always paces and foams at the mouth. Sometimes he bites his tongue ending up in bloody spit being brushed around.	OWNER	
29 November 2019		Paddy	N/A	N/A	Unregistered - UK	12-Oct-17	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	Vet tested for all other possible conditions which were clear, this left us with idiopathic Epilepsy	YES	N/A	Suspected triggers: Not sure as very early stages of any suspected triggers, only had first seizure on 1/10/19. Possibly stress related? Medication: Initially given Fenoin 400mg half a tablet twice a day. 12 hours apart. On 12th November began fitting again, first one was as all the others, he was sleeping then began a cluster, Diazepam administered but continued to fit the morning after, on another trip to the vets they issued more Diazepam & introduced Epiphen, he had a loading dose for 24 hours (4 tabs) along with the Fenoin then reverted to 2 tabs 12 hours apart plus Fenoin for 24 hours, another vet trip booked for 18/11/19 to discuss future medication. Details: Neutered at months old. Seizures initially were when sleeping but in last 24 hours they have been when awake. Fits are never very long at the moment, around 30-45 seconds. Some seizures have appeared to be caused by one of the other dogs playing at him.	OWNER	
29 November 2019		Back in Black Shelby's Shelter - Millie NHS3 139934 (Dutch KC reg)	N/A	N/A	Non UK Registered (Border Collie)	08-Nov-18	NETHERLANDS	Bitch	Dutchfield's Wisp A Strain in the Wind (NHS 297443)	Dutchfield's Dillon Strain of Light (NHS 622918790)	Ries Run Rings Out (NHS 2971463 KCR A5900628)	Shelby Ough House on Fire (NHS 3039514 KCR A59009312)	Drift Shalun not strided (NHS 303858 KCR A60902678)	Queenie (SDS 00706132)	11 months	YES	By the vet through blood test	NO	N/A	Millie died one day short of her 1st birthday. We put her to sleep after 9 seizures the day before and ongoing seizures that day after a night of sedation to try to get her to recover. It was hopeless, and too much for her small body.	Suspected triggers: No triggers at all, all seizures were sudden and no warning signs. Medication: She was on Phenoral, but the seizures went right through it. Stesolid did not have any effect. Details: The seizures started two weeks before she died. It was intense and aggressive, there was nothing we could do. It was heartbreaking to see such a young dog, so sweet and gentle, and a great sportspost, turn from a lively sporty playful pup to a miserable, suffering soul.	OWNER

Megan actually contracted Bone Cancer in her shoulder which sadly ended her life.	Details: She started having epilepsy at around the age of 4 or 5 I think, with one fit which lasted probably less than a minute. They never actually lasted more than a minute I would guess, just seems a long time at the time. They gradually increased until about 18 months - 2 years, months later when she had 5 in one day, the vets then put her on medication - Phenobarbital I believe. This stopped the fits until the dosage needed correcting. Megan had to have regular check ups every 6 months (I think) and the medication did gradually increase. That's about all the information I can give you. I'm afraid, I don't believe in names now.	DATA TRANSFER FROM LYN NORTON Added 25.07.14

29 November 2019		Grenaby Sheal Ghrah	Not known	Not known	BC	15-Sep-11	UK	Dog	Ludgate Red Laser	Woodsomel Spectre AW	Firelynx Jumaraj at Ludgate	Grenaby Editors Choice	Grenaby Tucker	Nunney Kim At Grenaby (ISDS 231219)	1 year 6 months	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Pevion 400mg twice daily. Details: Initially fed on Skinkers kibbles then once the fitting started, a home prepared diet of brown rice, potatoes and vegetables with raw meat (to try and reduce gluten, corn, soy and casein as per the GARD diet). This seemed to help for a while, with improving gaps between fits until last week, when he had several fits and he became critically ill at the weekend with cluster fitting. Fito has change in frequency. We had got him up to 17 days between fits, and had wanted to try and manage it naturally (without drugs) but that all changed last week as described above and the treatment was necessary to save his life. After we got him, we heard that the dogs (not the bitches) in the previous litter had all started to fit. So we opted for an early castration at 5 months. We are very lucky that he is still with us, but it was devastating to see him so poorly. He was in intensive care for 3 days and has been home for 3 days now, improving visibly by the hour. If I can provide you with any additional information, please do not hesitate to shoot.	DATA TRANSFER FROM LYN NORTON Added 11.09.13
29 November 2019	31/03/2020	Gwynfair Marc My Words	Not known	Not known	BC - UK KC Pedigree	19-Dec-11	UK	Dog	Willbairr It's The Business	AM CH Wybora Willbairr Rhythm	Willbairr Eternal Dream	Trowells She's A Gem at Gwynfair	Attricia Shadley Blue	Dentelle of Sunloch Valley	2 years 2 months	YES	Vet confirmed as Epilepsy	NO	3 years 5 months. He had another severe seizure during the night which left him paralysed from the shoulders. We then made the decision that he should be put, 1st June 2015	Medication: Initially Pevion, after 6 weeks Libromide was added. This combination was satisfactory for a while but then fits resumed, if anything worse than previously, he then had Epiphen and also Diazepam. Details: Neutered after onset of fits. From the outset his fits were severe and caused significant memory loss and required a lot of retraining etc. We had a honeymoon period when we thought that the medication was going to control the seizures but it resumed each time he had one it was severe and the recuperation period took longer. He had a very severe cluster of fits which effectively wiped his memory and character. He was very close to death but pulled through. We taught him to walk etc again and after 6 weeks he was basically ok. He was a different dog but he lived us and was content in his life. UPDATE: AFTER 6 MONTHS, updates to Registration Page	DATA TRANSFER FROM LYN NORTON Added 03.08.15 UPDATE BY OWNER 20.03.20
29 November 2019		Gwynfair You Were Made For Me	Not known	Not known	WSD	22-Feb-05	UK	Dog	Fenom Full 'O' Fun	Summertime Sweep	Majacabus Oso Tricky	Tyemaded Magpie May of Gwynfair	Whatshook Rockin Symphony	Gwynfair Catch Me If You Can	1 year 10 months	YES	Vet confirmed as Epilepsy	NO	6 years 10 months. Dog is no longer alive. He went into a cluster fit episode that could not be stopped with medication and it was felt that he had suffered enough and had had his last fit.	Medication: He was initially prescribed just Epiphen, but over the next 5 years his medication was gradually increased to try to control his fitting. From his first fit, he didn't have another for 18 months then the frequency increased until roughly every 3 weeks by this time he was on 220mg Epiphen at 8am and 8pm, 300mg Gabapentin at 8am, 2pm and 8pm, 500mg Koppra at 8am and 8pm, and 250mg at 2pm. Details: He was on Auskay at the onset of the fits but as the intensity increased, he was moved to a completely natural diet of chicken and vegetables. Much research was carried out into the ingredients of manufactured dog foods, and it was found that certain things can be a trigger factor to epilepsy so knowing what was in his food was important. He had cluster fits over 2 days on the first occasion and was given medication to try to stop the cluster, it was then 18 months before his next cluster fit. His next fit was then 3 months later, after which the frequency increased from around the age of 4 until the fits were happening every 3-4 weeks. It was after a cluster of 3 or 4 fits over a couple of hours, but he needed veterinary assistance on 2 occasions where he was anaesthetised to stop the fitting as the episodes had continued over 24 hours or more. NOT neutered as the vet advised against him being operated on because of the risks with his epilepsy.	DATA TRANSFER FROM LYN NORTON Added 10.09.13

Reduced carb intake over 1 month took him off Libromide and his severely reduced Epilphen. Now on 30mg twice a day how he started - he is now in his thirtieth year and not had a fit for 11 months. Neutered before onset of fits.	DATA TRANSFER FROM LYNN NORTON Added 10.01.13 Updated 20.10.13
29 November 2019		Regency Spirit of Rosbrook	Not known	Not known	WSD	13-Feb-95	UK	Dog	Wraybord Flash (ISDS 158500)	Spick (ISDS 120755)	Gypsy from Wraybord (ISDS 143496)	Glendill Miss Mystertoe	Regency Prince of Rosbrook	Dill Daydream	3 years	YES	Vet confirmed as Epilepsy	NO	Euthanised. Age not known	Medication: Phenobarbitone. His fits were not controllable even on very high doses, unless dosed up with Diazepam. Details: He was also very nasty coming out of fits and would have bitten both human & dogs. Euthanised a few weeks later.	DATA TRANSFER FROM LYNN NORTON Added 10.01.13 Updated 04.04.15
29 November 2019		Remajak Somerset Morn	Not known	Not known	BC	11-Jun-13	UK	Dog	Atricia Double Dare To Adornare	Atricia Mister Constant	Atricia Lady Madge	Bordebeau Blithe Spirit At Remajak	Lochel Travellor South To Bordebeau JW 9Cm	Lochel First To Remaja At Bordebeau	1 year 4 months	NO	N/A	Not known	Not known	Medication: see below. Details: First fit 28.10.14 - seizure in the afternoon, followed by a slow but full recovery to normal state. Second fit 29.10.14 at 7am. Seen by the vet after each seizure and blood tests undertaken. Vet advised diagnosis of idiopathic Epilepsy at this stage but as yet no MRI or spinal tap has been carried out. He was otherwise fit and well with no further seizures as of 1.12.14. Initial course of Diazepam for approximately one week, treated with Epilphen twice daily from day of second fit for four weeks. Bloods have been sent to Epilphen to assess viability of phasing out medication. 24.9.14 castrated under general anaesthetic, vet treated with Advantage for possible flea same week, 1.10.14 first year vaccination, 25.10.14 routine worming with Panacur. He is otherwise fit and healthy. All breeders/owners directly contacted and informed immediately with sire/dam owners agreeing to wait for completion of initial four week treatment plan before submitting to database, dam & littermates will never henceforth be bred from. DNA to be submitted in due course. Fed James Wellbeloved Turkey & Rice, no change before or after seizures. Neutered on 24th September, before onset of fit.UPDATE 01.05.15 - Bryn suffered a seizure at 10.30pm. Recovery time was quicker than the initial two seizures last October but the loss vision for 15 minutes. 25 minutes after the seizure he took his ball to his owners to ask for a game. At the time of the seizure, his owners report that his Epilphen dose had been reduced gradually to 1/2 tablet each day (as he had suffered no further fits after the initial two) with the plan to take him off med altogether in another week. However, their vet has now advised that the dosage should be returned to 1/2 tablet each day.	DATA TRANSFER FROM LYNN NORTON Added 12.12.14 Updated 01.05.15

Details: Fed on Arden Grang complete. She hasn't fitted for over 5 years, having had 5 fits over a period of 18 months. Spayed aged 6 months. Details: He had had puppy vaccinations but not old enough to have needed booster yet. No injuries or changes to diet, not recently had flea or worm treatments. Entire. He was his usual happy, lively self when we left the house, drove to a show and was acting 'odd' when we arrived. He had drool hanging from his mouth and seemed a little vacant. Took him for a walk, he seemed spooked which wasn't his personality, went to put him on lead and he fell to the floor fitting, lasted approx 8-10 minutes. No help available at show, phoned vets who recommended taking him in, said as it was his first fit would be highly unlikely to have another straight away. Traveled in van with myself, he didn't return to his usual self and started fitting again within minutes. I had a vet on speakerphone, the fits were huge and he was struggling to breathe. Followed directions and tried to resuscitate. He very sadly died. Not confirmed as epilepsy as didn't want a postmortem but the vet said it was highly likely due to his physical appearance. 29 November 2019		Sam	Not known	Not known	BC	01-May-07		Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years	YES	MRI and Lumbar Puncture. Bath Vet hospital confirmed as Epilepsy	NO	Died May 2013 aged 6 years. He fitted off and on for just over 2 weeks in clusters. We arrived home one evening to find that he had died. The vet said it was a grand mal seizure that only instant medication could have saved him and he would not have known what was going on	Medication: Epiphen. Details: Nothing unusual happened that I can think of. I did notice it initially happened after we had been out and we got caught in the rain. Like he had caught a chill, it happened often after a soaking. The vet said it wasn't connected, I'm not so sure. After diagnosis at Bath Vet hospital where he had an MRI and I think a lumbar puncture he was initially given just Epiphen, strength and dose varied, then also given Lorazepam when fits continued, can't remember strength. The fits did change even though he was on medication. The fits didn't last as long and I could tell when he was about to have one, or if he had had one when he was home alone. Usually when he was sleeping then he would wake, his head would shake he would fall over and his back legs would move as if he were running his front legs would be stiff. Was fed on Bakers complete. A lighter diet was offered after fits although he was usually starting when he came around. He gained weight so we were advised to give him a weight control food, there was no change in fits. He was neutered before the fits began.	DATA TRANSFER FROM LYN NORTON Added 16.07.14 Updated 21.06.14
29 November 2019		Seve	Not known	Not known	WSD - Unregistered	approx 02-Nov-07	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	Vet confirmed as Epilepsy	Not known	Not known	Suspected triggers: On keeping a diary fits always on around spot on flea treatment, stopped using and fits a lot less severe and less frequent, plus have changed his diet to part raw and don't give any vet meds unless very necessary (use alternative and herbal) and A.W.A.'S check they are suitable for dogs with seizures. Medication: None. Details: Fits always in a morning after a deep sleep but have been able to halt them when I see and hear the signs (vomiting noise and lip licking) and talk to him and stroke him gently. Now feed part raw part WBS kibbles. Did read an article about giving frozen vanilla ice cream immediately after a fit. Have only tried this once but was AMAZING at bringing him round very quickly. Fits have gone from every 3 to 4 months to every 3 to 6 months (last time was 5 months 22 days) and are less severe lasting less than 1 min and recovery time afterwards a lot quicker (due to ice cream). Dog came from a rescue and was neutered before owner got him.	DATA TRANSFER FROM LYN NORTON Added 16.07.14 Updated 20.10.13

29 November 2019		Slye	Not known	Not known	BC - Unregistered	09-Jul-10	UK	Bitch	Blue	Ted	Mag	Dot	Glen	Neil	3 years	YES	Vet confirmed as Epilepsy	Not known	Not known	Details: It was a really hot day in July 2013 late afternoon evening, was going to take Slye in the car to park. It happened outside, then again at the same time on the next day while taking her to the car and the following week then same happened. Then was diagnosed as epileptic. To start they were every 21 days and not that intense but the last couple of months they have become more intense and not regularly. The last week she had cluster fits more and more so medication was changed to Phosin and weaned off Epiphen but that did not work she was put back on Epiphen and Phosin and so far it is working well. Fed on Bakers complete and Cesar. Entire.	DATA TRANSFER FROM LYN NORTON Added 16.07.14 Updated 12.05.14
29 November 2019		Smudge	Not known	Not known	Collie	19-Oct-13		Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 1 month	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Epiphen increased to 2 twice daily 60mg. After 4 months given Lithorone, which only made him lethargic and not acting like his usual self. Now on Epiphen and Levetiracetam which we used to give him now and then before a fit, but not on one every 3 hours. Details: Fits started off as around 8 or 9 clusters every 21 days, this increased to 11, his last one being 16 clusters from 2pm to 7 am the next day. Some last 30 to 40 seconds, some 2 or 3. There is usually 15 minutes in between but now a few minutes. Clenches jaw, then jaw wide, outstretched legs, urivates sometimes and a slaver from mouth and the usual itz'z'z'. Then he will pace, used to pace for 20 minutes and could not see us. Now he paces and tends not to bang into objects, seems to manoeuvre around them a little better. Before a fit, he howls at the moon, tries to escape, but now he tends to approach me to cuddle and follow me everywhere I go. You can see in his eyes that he is due to fit, his personality changes. The fits had increased to double the amount, but more often between them. Neutered before fits started. He had been neutered only 4 weeks before. He had trauma to his leg when only 5 months. And we had a collie out when he seized the following week.	DATA TRANSFER FROM LYN NORTON Added 16.07.14 Updated 16.07.15

Euthanised in July 1992 when fit frequency increased to less than 1 week between clusters and the drugs were affecting his liver. His personality also changed and he lost the ability to remember simple commands	<p>Medication: Initially Valium and Phorbolone. Then Potassium Bromide and Eplim added after specialist advice. Doses systematically increased which increased the space between fits but did not reduce the intensity when the cluster fits happened. These required large doses of IV Valium and Phorbolone for 12 hours. IV Phorbolone was given the following day and subsequently the next 2 days.</p> <p>Details: No changes made to diet. First few were single fits then every fit was a cluster fit. Response to increased medication doses was to increase the time between fits. There were no fits between Feb and June 1992 then the intensity got increasingly worse. Neutered on Vets advice, but made no impact on fits.</p>	DATA TRANSFER FROM LYNN NORTON Added 13.06.13
29 October 2019		Killbrae Tas - Merv	Not known	262183	BC - Dual Registered UK KC & ISDS	09-Oct-02	UK	Dog	Jim (S05 248214)	Glen (S05 228875)	Ban (S05 222832)	Lynwood Cass (S05 242555)	Glen (S05 181985)	Lyn (S05 192161)	18 months	YES	By vet	NO	Died at 3 years old. Vet unable to stabilise fits after hours of continuous fitting, decision taken to put.	<p>Suspected triggers: No trigger known.</p> <p>Medication: Epiphen, stabilised for a while.</p> <p>Details: Short fits for few times, 1 to 10 minutes until last one which lasted at least 5 to 6 hours. Went into Status Epilepticus, found fitting at 12.30 pm, taken to vets, GFI fitting at 4.00 pm.</p>	OWNER
29 October 2019		Rosmak Fame & Fortune	AP02543901	N/A	BC - UK KC Pedigree	16-May-12	UK	Bitch	Rosmarinus Gin Cooler	AG CH Ferby/Turbo Diesel	Rosmarinus Pimms	Rosmarinus Eclipse	Rosmarinus The Weryman	Rosmarinus Logaberry	5 Years 9 Months	YES	Tests done at Animal Health Trust, Newmarket, (Bloods, Spinal Tap, Imaging etc)	YES	N/A	<p>Suspected triggers: It is idiopathic Epilepsy, I have not noticed any triggers.</p> <p>Medication: Epiphen, changed August/September 2018 to Lbramide 325mg & Levretactan 500mg.</p> <p>Details: Marnie is spayed & seizures usually occur early morning & last a few minutes. Medication changed August / Sept 2018 after she was admitted to A&T with liver failure, one of the possible causes could have been a reaction to Epiphen but this was never confirmed. There were 6 puppies in Marnie's litter, 2 of which (including Marnie) have seizure, one died at approx 12-18 months, the other is still alive.</p>	OWNER
29 October 2019		Moose	N/A	N/A	Unregistered - UK	15-Jan-19	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Moose took his first fit at 6 months, from which took him to the vet and blood tests were conducted. Since Moose was a male BC the vet believed it was a high probability that Moose was suffering from idiopathic epilepsy	NO	Passed away at 8 months old. Began fitting, fits were lasting around 4 minutes give or take. Was taken into vets where he was sedated. As he came out of the sedation he took a fit which he did not come out of.	<p>Medication: Started on Kepra and went two weeks without fitting. However had to be placed on Kepra as well due to his still fitting. After 3 weeks on Kepra and on Kepra, Moose took a cluster of 7 fits within 18 hours and then was placed on Epiphen and Kepra. This allowed him to be fit free for 3 months until he decided to stop the dosage of Kepra, the Kepra was dropped to half a tablet and then Moose took his final fits and eventually passed away. Due to the level of medication Moose was on, his focus and concentration were terrible.</p> <p>Details: I have recently read an article stating that the trainability of dogs suffering from epilepsy drops after their first fit and I can back this up from what I've seen with my dog.</p>	OWNER

23 October 2019		Little Ozlie	Died before being able to be registered	N/A	Unregistered - UK	08-Mar-07	UK	Dog	OB CH Whadrow Razzmatuzz (WSD)	Rockin Rapid	Forever Magic Fantasia	Crofnist Megan (BC)	Tanameye Krismos	Mainline Mist (BC)	45 days	NO	N/A	NO	46 days old. See fitting details for more information	Suspected triggers: The vet suggested that he may have had worms but it was not the case. Medication: No medication for fitting but AB's and Anti Inflamm as below. Details: At 43 days he became quiet and stopped interacting with his siblings. At 44 days he started sneaking out dark places. Taken to the vet and was given antibiotics and anti-inflammatory injection. At 45 days he began searching for dark places. He was very distressed when travelling back to the vets and fitted badly within minutes of arriving. At 46 days old he began fitting and was taken back to the emergency vet. He resembled a clockwork toy and was very rigid in his mobility. He seemed to have stopped growing. The vet blood tested for a liver shunt which came back negative. As the vet examined him, Ozlie became very distressed when his head was held and was obviously in a great deal of pain. The vet diagnosed inflammation of the meningeal (tissue surrounding the brain). The vet and I agreed that euthanasia was the only option. Two other pups from the litter also fitted at later intervals and both have died. The rest of the litter were registered with my 'Crofnist' affix. Megan was spayed after. The two other dogs from the litter, that fitted, were put to sleep at young ages due to the fitting. Ozlie was unregistered but the rest of the litter were KC registered.	OWNER/BREEDER
29 September 2019	30/06/2022	Kingsfarm Lady In Red - Indi	K127121	N/A	WSD - UK KC Activity Register	22-Feb-08	UK	Bitch	Borderlair King Of Swif	SH CH Brookside Country Classic	Borderlair Pink Fizz	Merrymarsh Dress To Kill Of Kingsfarm	Tenita Black Magic At Kingsfarm	Faith In Merrymarsh	9 years	YES	Blood Tests	NO	13 years 9 months Cluster fitting	Suspected triggers: No suspected triggers. Medication: 200mg Pevion twice daily. No change noted as put on 2nd time she fitted when she fitted 3 times in 3 days which coincided with having vitamin supplements. Put on Beakos Purina Neurocare dog food which made a big difference in her recovery after a fit. When taken off this I started on Coconut Oil since when the time between fits has gone from roughly every 2 months to over 6 months. UPDATE: 30/06/2022 - Age and cause of death	OWNER Updated 30.06.22
29 September 2019		Lacey	N/A	N/A	Non UK Unregistered (Border Collie)	10-May-19	SOUTH AFRICA	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	Blood tests MRI scans Diagnosed Idiopathic Epilepsy	YES	N/A	Suspected triggers: Braveco tick and flea treatment. Light sensitivity. Extreme change of routine. Medication: Phenobarbital. This has helped control the seizures and we went 9 months seizure free at a stage. She seemed to develop resistance to it and due to her liver enzyme levels we added Keppra. Valium is used as a rescue medication. Details: Lacey is playful. Behaviourally she is very active, not just border collie active (we have two) she has endless amounts of energy and it seems as though she rarely switches off. She chases shadows and light reflections endlessly and licks them away on floors and walls. She also seems very sensitive and reacts to seemingly normal activities she has a barking fit/tantrum if you shower, take off your shirt, see security bottles etc. It's as though she doesn't like you doing it and even gets worked up before you begin to do it for example if she sees you take clothes out to shower she starts talking. 2017 May 1 seizure, July 1 seizure, August September, November and October (partial seizures one each month), December 1 seizure, 2018 January 2 seizures increased phenobarbital med. April 1 seizure, 2019 February 1 seizure, March 1 seizure, June 1 seizure, July 1 seizure added Keppra. Partial seizure it seems as though a seizure is starting and she comes and asks for help but then there is no seizure only excessive drool or teeth chattering. Lacey's seizures are usually just over a minute and she urinates during her seizures.	OWNER

Medication: 50mg Epilphen given twice a day. Neureded at 4 months. Details: Seizures have all been grand mal with loss of bladder and bowel control.	OWNER
29 September 2019		Jasper	N/A	N/A	Unregistered - UK	07-Jul-09	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	8 years	YES	Idiopathic Epilepsy	YES	N/A	Suspected triggers: No suspected triggers known to us. Medication: CBD oil was recommended by info page about dogs with epilepsy, but fits became more frequent, so vet prescribed phenobarbital 30 mg to start, now on 50mg daily/ Can go 8 weeks without a fit, but unsure if meds make a difference!! Details: Fits last about 3 mins, can happen anytime of day or night in the house mostly, but has happened a couple of times whilst out walking. Never had cluster fits. Usually always wears during fit, but no poo. Always starting when he comes out of fit.	OWNER
29 September 2019	28/01/2020	Tonlynor River	ASD4140201	N/A	BC - UK KC Pedigree	17-Nov-15	UK	Dog	Tonlynor Macloed	Pondeboys Macallum	Threysys Eilan	Tonlynor Teagan	Threysys Cymro	Detania Line Dancer at Tonlynor	3 years	YES	Bazil was referred to Dick White's neurology team by his vet in November 2019. They carried out a physical and neurological examination and exhaustive diagnostic procedures including an MRI brain scan and Cerebral Spinal Fluids. Idiopathic Epilepsy was diagnosed.	YES	N/A	Suspected triggers: Stress, anxiety and over excited. Details: Fitz had a fit each lasting 2-3 mins, all after being left and over excited when we returned and then a 6th during the night when new puppy wasn't settled. Medication: Bazil received a loading dose of Potassium Bromide while hospitalised, he is now on Selegen 50mg: three quarters of a tablet every 12 hours and Libromide 325mg: one tablet every 12 hours with a full meal. UPDATE ADDED 28/01/2020 - Update on Tonlynor River - Bazil has now been diagnosed with idiopathic Epilepsy and started above medication.	OWNER Updated 28.01.20
29 September 2019		Rugby	N/A	N/A	Non UK Unregistered (Border Collie)	26-Oct-15	USA	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	Blood tests	YES	N/A	Suspected triggers: Idiopathic epilepsy, thunder, full moon, fireworks. Medication: Phenobarbital, Keppra, Potassium Bromide, Nasal midazolam rescue, Diazepam preventative and rescue. Details: onset early, monthly fits clusters but stops after Midazolam.	OWNER
29 September 2019		Ted	N/A	N/A	Unregistered - UK	01-Jun-15	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	By Cambridge University Veterinary Hospital	YES	N/A	Suspected triggers: Initially overheating, exercise (ball chasing). Gets over excited/anxious. Now mostly happens at rest. Medication: Acupuncture (EM an acupuncturist) helps to stop it. CUSH happy for me to use acupuncture to monitor it. For this last year CBD oil stops it quickly. Details: Although always a nervous collie, wary of some men for no reason, quickly forgetting if they moved or came back in room. His started after he was neutered. Something went wrong with operation, he got excess and took long time to heal. Initially they were 2 weekly, but now can be longer between or gets a lot at once. Just had 3 bad ones in 24 hours. No triggers. Without acupuncture or CBD, fits become very strong, full body tension/twitching/trembling, head banging, drooling. Purchased as an 11/12 week old puppy from farm in Swineshead, Boston, Lincolnshire.	OWNER

Medication: He is on 50mg Epiphen twice a day and Libromide. He was quite unbalanced when the Libromide was added but since the dose has been split to getting half twice a day instead of once once a day he seems better. Details: No further information recorded.	OWNER
29 September 2019		Jasper of Frostfields	Not known	181816	BC - Dual Registered UK KC & ISDS	21-Apr-89	UK	Dog	NT SUP CH Davy (ISDS 111049)	Bobby (ISDS 119813)	Sandie (ISDS 122755)	Winder Bess (ISDS 144429)	Dryden Scam (ISDS 112653)	Atwood Tim (ISDS 128255)	2 years 6 months	YES	Our vet was present when Jazz was fitting.	NO	Jazz was FIT at 13 yrs after suffering his 2nd stroke	Suspected triggers: None noted. Medication: He was medicated with low dose Phenobarbitone from 2.5yrs old until his death. Details: Jazz was a gentle dog who couldn't cope with stressful situations and was noise sensitive. Especially high pitched noises like drills or even insects. He would run out of a room if he heard wasps, blowflies etc. There were no indications that food, vacs, worming etc ever contributed to his fits. He was neutered. His fits lessened as he got older. At the onset they were around one a fortnight. By the end of his life probably only one or two a year.	OWNER
21 August 2019		Kingfarm Maid of Honor	K13924	N/A	BC - UK KC Pedigree	08-Nov-11	UK	Bitch	Bellaritz Highlander Cdex Udev	Bellaritz Highlander Cdex Udev	Tameryne The Ferrari	Kingfarm Dress To Impress	Borderlair King Of Swing	Merrymash Dress To Impress	5 years 5 months	YES	Vet said it was because she had now had 4 episodes	YES	N/A	Suspected triggers: In vets during first one - stress? 2nd one it was a very hot day and had eaten cheese! Medication: Epiphen was prescribed 1 tablet twice a day. I also give her Epitax 500, Milk Thistle (to help Liver on Epiphen) & CBD Oil. She has remained seizure free since Details: The day of her first fit at home it was a very hot day she had also just eaten some cheese (which is now off the menu). Solved in 2012. Her last fit was the worst much more intense and longer (lasted about 3 minutes) and she took longer to come out of it. In April 2017 Macey had a routine dental examination. In waiting room afterwards I noticed her mouth was twitching and started to foam. The vet took her in side room where she was fitting on the floor. They kept her in for observation for a few hours. Vet thought as she was stressed this was probably the reason. No medication given to me as they said they only medicate when they have had 3. All ok and fit free until June 2018. Around 10am Macey was resting in kitchen and started to fit. No vet appointment until April that day. No tablets given but was told to administer rectal diazepam if she had another 2 hours after being home she had 2 more - more severe than before - rectal diazepam given. Called emergency vets as I couldn't cope with seeing her like it. They agreed to have her in overnight to observe. Got a call 3 hours later saying she was so stressed and would be better at home.	OWNER
21 August 2019		George Thor of Townsend - George	Not known	N/A	WSD - UK KC Activity Register	15-Jul-98	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	7 weeks	YES	By vet - suspected at 7 weeks, confirmed a few months later after another fit	NO	9 years. Kidney failure	Suspected triggers: No obvious triggers - fitted approx twice per month - no pattern. Medication: Not on medication as vet thought he wasn't fitting regular enough. Details: Neutered at around 2 years old. Fits lasted for around 2 mins, approx 2 per month.	OWNER

Primary epilepsy	Suspected triggers: No triggers. Details: Everything was tried to save him, even the best clinic couldn't save him. He didn't get out of the fits. He had one minor fit for a minute, two weeks before the severe and deadly attack who took two days! Vet and specialist were helpless. Nightly vigils, antibiotics etc.	OWNER
21 August 2019		Buddy	N/A	N/A	Unregistered - UK	10-Oct-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years 3 months	YES	Vet	YES	N/A	Medication: Started on a low dose of epiphen, seizures were getting more frequent, now on 10mg twice a day, eight in the morning eight at night. It started with a seizure then around four months later he had a cluster, put on kepra for a week, then just a few months ago he was having one every two weeks that's when the vet upped his meds. We now also give him CBD oil, fingers crossed he has not had one in about 4 weeks. Details: Stopped giving him worming and flea and tick medication hoping at alternatives as there is a lot of people saying it can bring on a seizure through the dog poop/side site.	OWNER
21 August 2019		Koopa	N/A	N/A	Unregistered - UK	22-Feb-14	UK	Dog	Gwynion Paddy	Unknown	Unknown	Gwynion Gwen	Unknown	Unknown	2 years	YES	MRI	NO	5 years. He had two failed infusions, couldn't stop the seizures.	Suspected triggers: None. Medication: He had a VNS implant, was on Epiphen, Pregabalin, Kepra and Zonisamide. Kepra made him crazy and then unresponsive, we even had a VNS implant inside him to try help. CBD did nothing. Details: None noted.	OWNER
21 August 2019		Jez - Jazz	K141585 (activity register)	00/131905	BC - ISDS	03-Apr-11	UK	Dog	Lad (ISDS 267484)	Roy (ISDS 245540)	Jan (ISDS 237153)	Tess (ISDS 00/301628)	Llwydnam Naps (ISDS 253871)	Killebrae Sky (ISDS 24792)	2 years 2 months	YES	MRI	YES	N/A	Suspected triggers: Possible glancing adder bite - he had a puncture wound in his nose and swollen face for 4 weeks, frontline 4 days before. Medication: Epiphen, Potassium Bromide, Kepra and Diazepam to try to stop clusters. CBD oil plus herbal products. Everything has worked well initially but then he became less effective. He has just been prescribed Penion to use for a few days after seizures to try to stop the cluster. Details: Jazz is entire. He fathered a litter before his seizures started. His son started having seizures at 15 months and was put under 2 years due to uncontrollable seizures. Jez sister started fitting a year after him and the last he had in May this year. Jez always has GMs and always clusters. They have become progressively longer will often be unconscious for up to 10 mins. We are very fortunate that Jez has a VNS implant. Longford vet hospital is doing a trial with Bristol Children's Hospital and Jez is the 4th dog to have the implant in June 2017. I am convinced that he would not still be alive if he hadn't had this. He is very active and 3 years ago started Rally Obedience and is now working at the top 2 levels.	OWNER

21 August 2019		Jess	N/A	N/A	Unregistered - UK	27-Jun-03	UK	Bitch	Rip (ISDS 250011)	Glen (ISDS 198708)	Fran (ISDS 219888)	Floss (Not registered)	Ben (Not registered)	Jill (ISDS 225588)	2 years	YES	Blood tests and other family members fitting	NO	Died aged 11 in Status Epilepticus	Suspected triggers: No known triggers. Epileptic cousins. Medications: Initially Epiphen then Libromide added and finally Kepra. Details: Spayed before onset. Cluster fits showing signs of brain damage. Jess had refractory epilepsy. Despite increase in doses of Epiphen and addition of Libromide followed by Kepra she continued to have cluster fits. admitted to vets on several occasions to try and stop the clusters. The only time she was fit free was on large doses of Epiphen which eventually caused her liver to have problems metabolising the drug and she started to fall over eventually being unable to walk. At this stage she was referred to a neurologist and put through MRI scan, spinal tap, blood tests etc. The result was that she was being poisoned by the Epiphen which her liver wasn't metabolising. Her dose of Epiphen was reduced and she was put on a liver supplement. With the reduction of Epiphen she went back to cluster fitting every three months till she died 2 years later in status epilepticus.	OWNER

21 August 2019		Just Tippy at Carreg Cwyd	K152937	N/A	WSD - UK KC Activity Register	03-Dec-15	UK	Bitch	Revermorada Rod Tryne	Lochell Black Russian at Brynack	Bryling Super Gael at Revermorada	Unregistered	Unregistered	Tosar Rio Grande by Stanide	3 years 7 months	NO	Epilepsy SUSPECTED by vet but not confirmed as Tippy has only had one fit so far	YES	N/A	Suspected triggers: Unknown at present. Medication: No medication prescribed by vet unless she fits more than once a month. Spayed, puppy jabs at 16 weeks of age (no leptog given), not flea or worm treated unless fleas or worms suspected, raw fed. First fit was 2 hours after completing an agility lesson. Weather was warm but not hot. House is air conditioned and she was resting/sleeping when fit occurred. Bloods taken by vet day after fit occurred and all results came back "normal". Suspected triggers: Does not set off by triggers. He is one of the VNS dogs of Langford vet hospital Bristol. Medication: Epiphen, Libromide, Levetiracetam (Kepra), Diazepam, Sello gel, Heparicare. Details: Neutered. Length between clusters always varies. He is a rescue dog from SSPCA Swansea so his past details are unknown unfortunately.	OWNER
21 August 2019		Django	N/A	N/A	Unregistered - UK	15-Feb-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 6 months	YES	Vet	YES	N/A	Suspected triggers: None known. Tends to have seizures only when sleeping. Medication: Started at 45mg of epiphen twice a day. Now currently on 60mg twice a day. Diazepam rectal tabs are given during or just after a seizure to help calm her down. Levetiracetam 500mg tablets are given to break up any clusters. 1 tablet after 2nd seizure and half a tablet every 8 hours until 48 hours after 2nd seizure. Since starting on 60mg of epiphen twice a day, Willow went 20 weeks without having a seizure. Before that she was having them every few weeks. Details: Had Willow from a local rescue centre when she was 10 weeks old. I have no background information on her at all. Willow has always been clumsy. She's not your typical bright intelligent border collie. She tends to tripe over her own feet, bump into things etc. At first I thought maybe it was just because she was a puppy getting used to her new surroundings but as she was getting older she was still the same. At 14 weeks she had a massive cluster where she had 9 before I even got her to the vets. They had to put her under anaesthetic 4 times to bring her out of the cluster. I don't know if this affected her brain but sometimes she's very uncoordinated.	OWNER
21 August 2019		Beckin Surprise Surprise - Vito	K136870	N/A	WSD - UK KC Activity Register	05-Dec-10	UK	Dog	Forever Magic Phantom	Changol Dizzy	Forever Magic Moon Madness	Gypton Just A Breeze	Quiffers Starryled Surprise	Iskra Sugar N Spice	7 years 5 months	NO	N/A	YES	N/A	Suspected triggers: None noted. Medication: Epitaur 3 x 1 caps per day, CBD oil 1 drop AM and 2 drops PM, Melatonin 3 mg PM. No more fits for now. Details: Really high cholesterol, all other blood test ok. Low fat raw meat diet which lowered cholesterol. High cholesterol according to vet doesn't give fits. Vito had 3 fits 2 weeks between fits. Always during the night, hence the melatonin. Grand mal lasting about 4 to 5 min (from start to fully recovered). Have put Vito on low fat raw meat diet which lowered his cholesterol. Not given any traditional meds yet. Had all relevant blood tests done but no MRI. Vito is neutered.	OWNER

19 July 2019		Jodie	N/A	125286	BC - ISDS	02-Nov-80	UK	Bitch	Joe (ISDS 77934)	Sweep (ISDS 55210)	Maid (ISDS 313178)	Drople (ISDS 100456)	Sweep (ISDS 84952)	Dream (ISDS 71093)	2 years	YES	Back then all the vet did was blood tests to rule out any causes for the fits. I think MRI scans for animals were unheard of in 1982	NO	Died of Lymphoma aged 12	Suspected triggers: No known triggers. Medication: When Jess started to fit she was put on Mysoline. On showing her damage was put on Epiphen and Potassium Bromide (one of first dogs to trial the PB as an add on drug). When put on this combination had no further fits. Details: Cluster fitted from beginning, usually 3 fits in one night every month. Spayed after 6 months.	OWNER
19 July 2019		Talwoodw T1 Star - Jay	K109344	N/A	WSD - UK KC Activity Register	10-Dec-02	UK	Dog	Zigzag Jaffa at Talwood	Greatgen Hawatha	Zigdan Zest	Jarro's Exclusive Edition	OB CH Deleman Red Rascal	Trajan Jumpin' Hiff	4 years 7 months	YES	Animal Health Trust did all elimination tests necessary, MRI brain scan, cerebral fluid spinal tap, ultrasound of all organs, proprioception tests and bloodurine etc. Confirmed as idiopathic Epilepsy	NO	12 years old. Jay starting fitting around breakfast time, not his normal time. After 3 fits he was withdrawn he was back to his normal alert self. Changed to 105mg of Epiphen 2x daily, 300mg 3x daily of Gabapentin. When he fitted was given rectal diazepam and an ice pack applied to his neck/ back area. Since meds changed, fits approx every 10-15 weeks and generally only has one fit instead of 4/5/6+ clusters within the space of 1-4 hours that he was having every 4-6 weeks. Details: We loved Jay, he always fitted in the early hours of the morning. Clusters reduced when on meds that suited him. We had to stop doing agility as Jay's co-ordination wasn't good enough to continue. Castrated after being diagnosed with idiopathic epilepsy, made no difference to the pattern of his fitting. His Dam was spayed and owners of his litter brothers/sisters advised to neuter, which they all did. Our dog is the only one from the 2 litters of this parentage that has fitted out of the 11 pups. They were all healthy to a grand age.	BREEDER/OWNER	
19 July 2019		Rosmak Redback - Ben	AM01846301	N/A	BC - UK KC Pedigree	16-Mar-11	UK	Dog	Rosmarinus The Ravensaker	Rosmarinus The Werrymann	Rosmarinus Mulberry	Rosmarinus Demerara	Anabaron Forest Flame At Hobbs	Frunus Cherry Red	3 years 8 months	YES	The neurologist said that she would normally do an MRI but he was too weak to take another anaesthetic and they didn't want to risk another lot of fits as they don't think he would survive that.	YES	N/A	Suspected triggers: None noted. Medication: He was started on Phenogest with Keppra as a cluster buster. He has since had fits added to the Phenogest and now also takes Keppra full time. Details: Ben had an auto immune skin disease which affected his whole head. Blisters on his eyes, in his ears and around his mouth. He had a high temperature but needed a konyu under general anaesthetic to diagnose the disease as he wasn't touching it. Within 24 hours of the anaesthetic he started fitting and within 10 hours had gone into status and spent 6 days in vet hospital. Ben was neutered before this started. His fits have been at completely random intervals and luckily he has not had any further clusters.	OWNER

These were to check for any other condition, which he didn't have. So he was diagnosed as having idiopathic epilepsy	YES	N/A	Suspected triggers: Don't know trigger point. Medication: 225mg Lithoramide 75mg Epiphen twice daily. Details: Testicles didn't drop so had operation to find and remove. Has had 21 seizures since Mar 17.	OWNER
19 July 2019		Ryans Mirk V4072 (VSDWA)	N/A	N/A	Non UK Registered	19-Mar-07	AUSTRALIA	Dog	Princes Dooley V2955	Braiston Don V2203	Princes Zoe N0102	Allandale Gypsy Q3336	Dan (ISDS 220972)	Crowdsale Cindy Sarah Q2789	10 months	YES	All usual testing was done, developed into cluster seizures preceded by running without purpose including into fences/walls	NO	Euthanased (17 months) after bad weekend and seizure on the Monday morning - very restless, whiny, regular valium to settle. Seizures getting worse, developed into cluster seizures preceded by running without purpose including into fences/walls	Suspected triggers: No triggers identified. Medication: Phenobarb and KBr. Increasing dosages but seizures got worse. Details: Went on elimination diet, then natural diet only (Holistic vet advised). Thyroid panel showed normal range.	OWNER
19 July 2019		Springdodde Can N6519-13 (N65AWW)	N/A	N/A	Non UK Registered	17-Mar-13	AUSTRALIA	Bitch	Ryans Sean V4073	Princes Dooley V2955	Allandale Gypsy Q3336	Lt Bright Star N Tri of Ohuhu (Link) (ISDS 292657)	Atra Cap (ISDS 277233)	Atra Cloud (ISDS 277111)	2 years	YES	Due to severity of cluster seizures and family history (sister and uncle with confirmed epilepsy), no tests apart from basic bloods were undertaken	NO	Euthanased after very bad cluster seizure	Suspected triggers: No potential triggers identified. Medication: Using Valium to stop a seizure starting - had symptoms prior to a seizure, restless, anxious. Details: Tried elimination diet. Thyroid panel on low side of normal. Unfortunately with the family history and a sister with poorly controlled bad clusters, decision taken to euthanase after very bad cluster seizure. On elimination diet, didn't make any difference. Spayed at 10 months. Uncle (Ryans Mirk) had seizures, gradually got worse and euthanased. With hindsight probably IE. Litter sister has cluster seizure - diagnosed IE. Started around 18months. Still alive at 6 years old but has clusters every few weeks. 2 older sisters of dam produced 1 affected each to very different sires - these started fitting much older and post Can and her sister starting to fit.	OWNER
19 July 2019		Marshonelle Switch'N It On	AP04298501	N/A	BC - UK KC Pedigree	05-Nov-12	UK	Dog	Rosmarinus The Choculater	Rosmarinus Jaffa	Rosmarinus Demerara	Marshonelle Izzie	Rosmarinus The Ravensaker	Amazon Gracie	7 months	YES	Vet confirmed as idiopathic epilepsy	NO	Major seizure	Suspected triggers: No triggers identified. Time frame was too short to collate information. Medication: Pevion 400mg twice daily. One small fit on 28.06.13 whilst asleep on sofa lasting less than a minute, recovered within 10 mins. No further fits until 9th July, when found fitting in the morning. Rectal Diazepam given. Fitted again same day at 8pm, same treatment, but 4 further fits, taken to vet, kept overnight and stabilised. Home on the 10th but fitting again between 11am and 2pm so back to vet and again kept in overnight and stabilised. Phendobarbitone and on a drip. Progress was poor at this time. Brought home on the 13th July, Pevion 400mg twice daily. Details: Recovery seemed unlikely but daily improvements noted - motor function, spatial awareness, vision, recognition. Following 22 days started phenomenal progress in physical and mental capabilities, by 1st Aug he was at 95% of his previous levels of Obedience training. On 2nd August he had another brief fit at 10pm (similar to his first) with the same outcome. At some time between 3am and 4am on the 4th Aug he suffered a major seizure, rectal diazepam x3 was administered but to no avail, and he passed away shortly afterwards before the vet arrived. Vet hazarded a guess at major haemorrhage as cause of death. Neutered.	OWNER

19 July 2019		Indeed of Bungee Borders AT/941023 (OH2H/BORC 4153)	N/A	N/A	Non UK Registered	27-Jul-15	AUSTRIA	Bitch	Joe Of Baw (ISDS 328775)	Craig (ISDS 280659)	Skye (ISDS 320366)	Gate Of Bungee-Borders (ISDS 327172)	Ballyglass Tuff (ISDS 262462)	Aimee Of Bungee-Borders (ISDS 286129)	3 years	YES	Not disclosed	YES	N/A	Medication: Phenytoin 100 mg 0.75/0.75 (tablets). Frequency of all fits where around 10 minutes. Starts on 10:18 with first fit (10 min). Then other fits in a frequency of around 2-3 days, sometimes 2 fits a day. Starting with homopathy, but there was no effect but the fits where shorter and the rehabilitation was faster. But the decision from 3 vets was to give her Phenytoin starting with a half tablet in the morning and evening. After 9 weeks she had a fit again, so there was a new blood test and in case of the low Phenytoin value in blood she decided to give her a quarter tablet more in the morning and evening. Details: The last fit was 1 week ago (29.06.2019), between this fit and the last fit was 3 months. Suspected triggers: Nothing specific identified as a trigger. Previous poor treatment means he is wary of strangers, and a bit stressed if they are in the house, but nothing specific at the time. Seizures started irregularly and far apart, but over 9 months increased in frequency. Medication: Started on Pexion in 2014 and once dose worked out they all but stopped. Details: Only aware of 2 minor and 1 as prg med since then, the latest being a minor one on 26 June. Had him neutered when we got him at 3 years old. Wast on a few other meds before seizures other than routine wormers, boosters etc, but no changes in the 3 years we had him before they started. UPDATE ADDED 30/04/2021: Sire and Dam's Grandparents added. UPDATE ADDED 31/07/2021: Epilepsy medically confirmed updated from No to Yes. UPDATE ADDED 30/09/2021: Aged 16. Sadly not was put to sleep because of another neurological issue. Nothing to do with his epilepsy.	OWNER Updated 30.04.21 Updated 31.07.21 Updated 30.09.21

19 July 2019		Kobi	N/A	N/A	Unregistered - UK	15-Jun-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 8 months	YES	Confirmed by vet	YES	N/A	Suspected triggers: Stress and also air pressure (handy weather), bright lights. As Kobi is deaf and also almost blind he bumps into objects which stresses him. He can't go to vets surgery as stress causes seizures. Medication: Vets have tried almost all meds over the last four years. He still has seizures but they are 1-2 a month now. At the moment his meds are: Epiphen, Librium, Levettiscorin and Sodium Valproate. Diazepam for cluster seizures. He has recently been diagnosed with diabetes too so is now on insulin too. We have struggled for four years to get him to this point and tried so many different meds. Details: Have also had advice from a neurologist who diagnosed textbook epilepsy. Kobi has blood tests regularly to tweak his meds. He is a blue Merle, totally deaf, almost blind and now diabetic aged 6yrs old. While trying to get the right balance of his meds he was having clusters every other day. As his meds are now he will have 1-2 seizures which leave him completely exhausted and wobbly for days. His seizures are 1-2 a month at present. Neutered. Rescue dog from Border Collie Trust GB.	OWNER
19 July 2019		Lackia Like A Rocket - Sam	Not known	N/A	BC - UK KC Pedigree	10-Apr-11	UK	Dog	Rosmak Dapple Dandy	Caran Baz (ISDS 281245)	Rosmarinus Rising Star	Rosmarinus Gin Soda	AG CH ForByFor Turbo Diesel	Rosmarinus Pimms	9 months	YES	Vet and consultant neurologist	NO	Sam died at 15 months old from cluster fits.	Suspected triggers: No triggers known. Medication: Phenobarbitone, Keppra, Bromide - no improvement seen. Details: Fits started 1 a week. Cluster fits of up to 6 in an hour started after 2 months, sometimes only 3 days between clusters. Sam fitted almost constantly in his last 24 hours and had to be PTS because he fitted every time anyone went near him. A toxicology death as the phenobarbitone to PTS made him fit more often.	OWNER
19 July 2019		Rossmi Chaotic Wizard	K059417	N/A	WSD - UK KC Activity Register	22-Jun-98	UK	Dog	Joem Jamie Meadow Joy	Garfield Angus	Joem Jilly	Golly It's Molly at Rossmi	Unknown	Unknown	8 years	YES	Informed vet of the 2 fits and he said it was epilepsy	NO	13 years 10 months. Stomach cancer	Suspected triggers: Most of fits were immediately after ching on a ball or baggy and hitting muzzle on ground. Seemed like a shock wave through his body. He often had a hot spot on his spine halfway along his back. Medication: He was put on Epiphen. It took about 6 weeks to get dosage right and I also stopped throwing balls etc which resulted in fits halting. He only had one or two more - when he again pounced on a ball of tennis. Details: Fits were always pretty short - seemed ages at time but I don't think they were longer than 30-60 secs. I also regularly took him to a MCTimoney nurse after the fits started and I still believe this helped more than the medication. Wizard was neutered.	OWNER

Seizures each year first two years, now 497 days seizure free (as of 07/07/19). Raw diet, acupuncture, filtered water, Keppra discontinued, many alternative treatments tried as well. UPDATE ADDED 31/08/2020 - Died 7 years, Status Epilepticus. Euthanased.	OWNER Updated 31.08.20
19 July 2019		Zak	N/A	N/A	Unregistered - UK	15-Jun-12	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	8 months	YES	Blood tests	YES	N/A	Suspected triggers: Exposure to vermectin based cattle and sheep products. He was badly abused by a farm labourer which resulted in a head injury. Medication: Phenolipin, Soling x twice daily. Details: Zak was neutered at 2 yrs old. He hasn't had a seizure since leaving the farm and starting medication. The longest seizure I witnessed was around 5 mins, on that day he had 7 in total with the others lasting around 2 mins. I don't know anything about Zak's breeding, all I know is that he was brought from a shepherd in the Glenllyn area who has a constant stream of pups. He took part in the Newmarket Canine Health Study a couple of years ago.	OWNER

Medication: Phenobarb and Potassium Bromide. Details: Neutered, Grand Mal / Primary Seizures - clusters.	OWNER
19 July 2019	29/09/2019	Tartan Ticking Time Bomb	K157865	N/A	Collie Cross - UK KC Activity Register	15-Jan-16	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 11 months	YES	MRI and blood test	NO	3 years 7 months. Cluster fits, see Fitting Details for more information	Suspected triggers: None. Medication: Currently on Pexion, Keppra and Bromide. Epiphen - serious side affects and cannot be used - hospitalised her twice. Details: Neutered. UPDATE ADDED 29/09/19 - Update on Tartan Ticking Time Bomb devastated to say she was put to sleep on 20th August after cluster fits that went on over 55 hours and nothing could stop them (she was on double dose Keppra, also given in liquid form at start of cluster, Bromide and Pexion). Phenobarb tried again but made her lose her mind and didn't know who she was and had no ability to switch off and stop.	OWNER Updated 29.09.19
19 July 2019		Bewitched Over Pende - Zara	K138807	N/A	WSD - UK KC Activity Register	25-Dec-10	UK	Bitch	Unknown	Unknown	Unknown	ISIS (ISDS no. not known)	Unknown	Unknown	6 years	YES	While in emergency vets, while in epileptic status	NO	6 years 2 months. Went downhill very quickly after another emergency admission to vet on Thursday 9th March 2017, collected her Friday evening seemed her normal self but not long after we arrived home she had another fit, spoke to vet who advised 3 days of Keppra, went rapidly downhill over the weekend to the point Zara seemed like she was in a coma, made the decision on Monday morning 13th March 2017 to PTS	Suspected triggers: No triggers that I was aware of. Medication: Sedation at emergency vet for epileptic status on January 5th 2017, then given IV Keppra and IV Phenobarbital. Came home 3 days later and was on Phenobarbital 12 hourly, very quiet and disorientated at first but got better and more her normal self over the following weeks, told by vet to give Keppra after fits to prevent clusters. Details: Had massive fit lasting 7 minutes. I set timer on my phone when I realised what was happening, this was her first fit to my knowledge, got her to vet within half an hour, seen by vet sent home and was told it was possibly a one off. Booked in for blood tests 2 days later, went into epileptic status same night with a trip to emergency vets, was stabilised and returned home on medication. Small fits occurred every couple of weeks, with 2 lots of clusters, went rapidly downhill after final 2 fits on 10th March 2017, one while still in vets and one at home but never seemed to fully come around from the last. Zara was a local farm bred Collie, I contacted breeder to ask if there was any history of Epilepsy within her breeding, wouldn't answer me and then blocked my tel number. Zara was PTS 13th March 2017 to avoid my girl any further suffering. Zara was spayed at 12 months.	OWNER
19 July 2019		Rainbow Jimi	A0900651	00/328563	BC - Dual Registered UK KC & ISDS	23-Aug-13	UK	Dog	Harry (ISDS 00/310357)	Cap (ISDS 270159)	Glennnragg Tess (ISDS 301119)	Millie (ISDS 316517)	Dwal Tweed (ISDS 278783)	Bo (ISDS 384933)	5 years 10 months	YES	3 seizures, typical IE. Bloods clear	YES	N/A	Suspected triggers: No apparent triggers. Medication: Soliphen 30mg daily. Four days into meds presented as over excited for three days, settled to normal by fourth. Details: The 3 seizures were 7/8 days apart, increasing in length. Length of postictal phase increased each time. Last one was 1 1/2 hours. Feeling devastated!	OWNER
19 July 2019		Desayo Black Friday - Era	AW00032007	N/A	BC - UK KC Pedigree	23-Nov-18	UK	Bitch	Blackharts Royal Desire	My Royal Rascal (ISDS 274990)	Just Be Truly Ace	Say Aye To A Killie Tri	Sivela Demolition	High Hopes Silva	7 th months	NO	I did not have a autopsy. She died during her first fit. It was a very, very bad strong cluster fit. She never stood a chance	NO	A cluster fit caused her death at 7 th months	Suspected triggers: None known. Medication: N/A Details: Was her first fit. Nothing out of the ordinary occurred. She went in a 6 cycle long cluster. Each fit was very strong and would refit 1 second after stopping. She only stopped when she died. Her sister fitted at 8 weeks after vaccines, on medication.	OWNER
