28/02/2026		Dexter	N/A	N/A	Non UK Unregistered	21-Feb-24	USA	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 10 months	YES	Doctor observation and blood tests.	YES	N/A	<b>Suspected triggers:</b> Unknown. <b>Medication:</b> Keppra, Zonisamide, Phenobarbital. Still waiting for him to be more than a few weeks seizure free. <b>Details:</b> Dexter started having seizures 31/12/2025, most recently had 3 in the course of one hour (he was taken to emergency vet). Dexter's mother was abandoned in the countryside of Colorado, taken to a kill shelter, and then rescued by a dog trainer who whelped the litter, and found a home for the mama. She trained the whole litter up to be service dogs before adopting them out. We do not have confirmation that he is purebred, however, the entire litter looks to be border collie with no hints of another breed. Neutered.	OWNER
28/02/2026		Fycoegyn Thunder Storm	A21397801	N/A	BC - UK KC Pedigree	08-Jan-22	UK	Dog	Borderpops Six of Diamonds	Fycoegyn Nightingale	Borderpops Diamond Dazzler	Cartez Sea Breeze Fycoegyn	Passim Courtesier	Cartez Summer Breeze	3 years	YES	Spent 2 days in Dec 2025 at Langford neurology team. Had MRI, ct, blood tests and EEG. Received diagnosis of idiopathic epilepsy.	YES	N/A	<b>Suspected triggers:</b> No clear triggers. <b>Medication:</b> Started Phenothiazol Dec 2025, so far no seizures since. <b>Details:</b> Tired tested and worm count checked so hasn't had any vaccines or worm/flea treatments in the past 2 years. Fits so far and all are between 1.5 to 2 min long. 18.05, 24.12.25, 31.12.25, 4.12.26 and started Phenothiazol on this day after this fit. Neutered.	OWNER
31/03/2026		InFlight Vic - VIC ABC 560435	N/A	N/A	Non UK Registered (Border Collie)	07-Oct-24	USA	Dog	Boss (ISDS 00352213)	Rick (ISDS 329735)	Meg (ISDS 328325)	Fien (ABC 532746)	Luke (ISDS 326402)	Maid (ISDS 332646)	1 year 1 month	Yes	Blood tests normal, MRI normal, spinal tap normal.	NO	17 months, euthanized because seizures were not adequately controlled with meds	<b>Suspected triggers:</b> No known triggers. <b>Medication:</b> Phenobarbital, Keppra, Midazolam (rescue med), Clonazepam (rescue med), Fluoxetine for anxiety. Both Phenobarbital and Keppra caused paradoxical hyperactive and manic behavior. <b>Details:</b> Seizures were grand mal and typically lasted 2 to 3 minutes. Clustered body and was hospitalized, and finally euthanized as it was determined meds were not adequately controlling seizures and dog's anxiety was affecting his quality of life.	OWNER
31/03/2026		Murphy	N/A	N/A	Unregistered - UK	12-Mar-25	UK	Dog	Barnie	Timba	Lily	Dottie	Unknown	Unknown	10 months	Yes	Taken to vets after first fit, bloods done and all fine. After more seizures started on medication.	NO	Started having very bad seizures very close together. Taken to the emergency vets and took over 24 hours for seizures to stop. Wasn't control round like he should have, temperature was high and suspected brain damage. Put sleep to end anymore suffering.	<b>Suspected triggers:</b> Unsure of triggers as most seizures started whilst asleep. Had his puppy vaccinations and flea treatment and wormer. Flea and wormer hadn't been given for months prior. <b>Medication:</b> Started on Solihaven 60mg 1 tablet twice a day. Upged to 1.4 tablets twice a day. Was in therapeutic range. Keppra added after first emergency vet visit. <b>Details:</b> After first seizure which was one, all the others were cluster. In less than 2 months, volume of seizures increased rapidly, lost count of how many on final weekend.	OWNER
31/03/2026		Wholestone Weenie	880923949	00/397419	BC - Dual Registered UK KC & ISDS	20-May-23	UK	Bitch	Boss (ISDS 00/343213)	Rick (ISDS 00/329735)	Meg (ISDS 328325)	Peg (ISDS 00/368315)	Hightate Hill (ISDS 14502)	Sawt Lass (ISDS 320457)	1 year 6 months	YES	Bloods, MRI, a spinal tap clear.	YES	N/A	<b>Suspected triggers:</b> No triggers. <b>Medication:</b> Various, currently on Phenobarbital, Keppra and Potassium Bromide. Still fits regularly, hard to control with meds. <b>Details:</b> None recorded.	OWNER

Died after choking on his own vomit	<b>Suspected triggers:</b> None noted. <b>Medication:</b> None noted. <b>Details:</b> The fit started completely out of the blue just as he was approaching his 4th birthday. He had one fit in the early hours of the morning, checks were done at local vets and they couldn't agree what had caused it, a week later another fit followed by his body starting to shut down, laboured breathing and no energy. Taken to Potters Bar vets hospital, kept in for a week, one small fit whilst he was there, they said sudden onset epilepsy, brought him home as they said he might not fit again. He had been home from Potters Bar for 2 weeks with no fits, then had a major fit in his crate whilst we were out and died after choking on his own vomit. Roughly 8 weeks after his first fit. He was neutered at least two years before the fits started.	DATA TRANSFER FROM LYN HORTON Added 29.05.14

Blood test normal, epilepsy diagnosed by vet.	YES	N/A	<b>Suspected triggers:</b> Not sure if this was a trigger but seems very strange, Ziggy's first vaccinations were the 12 but in March 2023 at 2 years the vets changed to the 14. He had his booster on the 8th March 2023 then a week later had a focal seizure. He went for his second booster the leptos two weeks later then had a head shake. Nothing then till August then he had a full seizure on the 16th, he then had blood test and all normal. But then the 10th September 2023 he had 1 seizure, then 2 on the 11th September. We then went to the vets and he was diagnosed with epilepsy. <b>Medication:</b> Neuguard each month and annual booster 14 given with above results. Now on Epilopin twice a day 60mg and he's been at that since. <b>Details:</b> Neutered at 15 months. Focal seizure like fly snapping. Paddling seizures lasted up to 4 mins. I can't be sure but think it was down to the vaccine or Neuguard. But I suppose I'll never know. He's doing really well now finger crossed. But I'm still heartbroken for him.	OWNER
19/07/2019		Bewitched Over Fendle - Zara	K136807	N/A	WSD - UK KC Activity Register	25-Dec-10	UK	Bitch	Unknown	Unknown	Unknown	Jess (ISDS no. not known)	Unknown	Unknown	6 years	YES	While in emergency vets, while in epileptic status	NO		<b>Suspected triggers:</b> No triggers that I was aware of. <b>Medication:</b> Sedation at emergency vet for epileptic status on January 5th 2017, then given N Keppra and N Phenobarbital. Came home 3 days later and was on phenobarbital 12 hourly, very quiet and disorientated at first but got better and more her normal self over the following week, told by vet to give Keppra after fits to prevent clusters. <b>Details:</b> Had massive fit lasting 7 minutes. I set timer on my phone when I realised that was happening. This was her first fit to my knowledge, got her to vets within half an hour, seen by vet sent home and was told it was possibly a one off. Booked in for blood tests 2 days later, went into epileptic status same night with a trip to emergency vets, was stabilised and returned home on medication. Small fits occurred every couple of weeks, with 2 lots of clusters, went rapidly downhill after final 2 fits on 10th March 2017, one while still in vets and one at home but never seemed to fully come around from the last. Zara was a local farm bred Collie. I contacted breeder to ask if there was any history of Epilepsy within her breeding, wouldn't answer me and then blocked my tel number. Zara was PTS 13th March 2017 to avoid my girl any further suffering. Zara was spayed at 12 months.	OWNER

YES	N/A	<b>Suspected triggers:</b> No known triggers, it happened while playing, usually while sleeping. She had another set of seizures 4 months later, no correlation with deworming or other medication. <b>Medication:</b> She is doing well on 45 mg Phenobarbital twice a day. Initial dose was 30 mg, but she started having focal seizures, so we increased it. She seems to be fine on her meds. She is also on 72 mg 1 day and 15mg 2mg twice a week. <b>Details:</b> Seizure history - First seizure was 20th July 2021, 2 minute seizure in her sleep. The next day chemistry profile and a CBC test were done, everything was normal. Second seizure was on 10pm on 8th August 2021, she had a 1 minute seizure while asleep. Third seizure 2pm on 6th August 2021. 3 minute seizure while sleeping.	OWNER Updated 31.03.22
29/02/2020		Blodwen	N/A	N/A	Unregistered - UK	28-Feb-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Neurology assessment	YES	N/A	<b>Suspected triggers:</b> No known triggers. <b>Medication:</b> Started with CBD aged 6 months which kept symptoms under control until she was one year old. They became significantly worse and unmanageable so she was started on phenobarbital and levetiracetam - starting doses were steadily increased to maximum for her weight and we also increased CBD oil and finally introduced Epilaur. <b>Details:</b> Blodwen is a Double Merle collie from a breeder but to me via an informal rescue. She has focal seizures - her MRI was clear so the seizures are not related to brain trauma or disease. Over a six month period her seizure related behaviour gradually diminished (from jerking awake every few minutes all through the night, circling, twitching and being aggressive) and she now sleeps for up to 11 hours through the night with no issues and is markedly more settled in the daytime. She was spayed at 6 months old but the focal seizure symptoms had already started (leg twitching, starting with head tilted, circling). The neutering didn't appear to make it worse. I have come to understand Blodwen, her symptoms and treatment requirements through close observation, asking for help from a Double Merle Facebook group and researching this genetic problem. We have a regular border collie from a farm litter who has displayed no health problems, I had no knowledge of merle or double merle collies when we rescued Blodwen and this was not mentioned by the person we rescued her from.	OWNER
31/05/2024		Blue	N/A	N/A	Unregistered - UK	05-Jun-19	UK	Dog	Red Dog	Unknown	Unknown	Jess	Unknown	Unknown	3 years	YES	Neurologist	YES	N/A	<b>Suspected triggers:</b> Worming treatment (only us Panacea now). Stronghold flea treatment. <b>Medication:</b> Rectal Diazepam. Starting to look at full time medication now. <b>Details:</b> Fits where 6 months apart lasting 4.5 mins but are now a month apart and lasting between 2.5 - 3mins. Eats lots of grass right before a fit. Still intact due to nervousness. Brother letter has sired a litter.	OWNER
31/01/2026		Bob	N/A	N/A	IC - Unregistered	09-Sep-23	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	10 months	YES	Vet blood test, video of seizure.	YES	N/A	<b>Suspected triggers:</b> Large traffic, lorry's, fast cars, vaccine. Has treatment. <b>Medication:</b> Didn't start treating till after 4 seizures. Started on Phenobarbital 30ml, went 3 weeks seizure free. Added on Keppra, went 3 weeks again, then had runs, strange reaction amount of Keppra, taken off it. Tried Fenoin the same, eyes not normal more seizures. Started having cluster seizures so taken off that. Seems ok on Phenobarbital, more settled. Added Keppra back on, only reduced mg 250. Started to have seizures a after taking it, so reducing to stop taking. Goto add on Epilaur to try. Has had 89 seizures since starting them. I have stuck with it, he comes out of seizures a lot better just taking Phenobarbital with Keppra added, half a day then cluster seizures. <b>Details:</b> He had one testical removed that didn't drop, just had that removed and left the other intact. I had him done at 16 months old for that removal. I noticed when he was 18 months the coat of bristles in heart can trigger a seizure I am doing a test for MFRDR1 gene next week. Think he is refractory to meds so ordered CBD oil to try if he is, it's a nightmare he is monitored 24/7. Full seizures laid shaking and unconscious, then gets up sometimes as if nothing has happened. I will persevere. Had collies from a child, never had one with epilepsy. They only had puppy jabs. He's had a bad reaction to all his jabs. 2 months ago Lepto 4, Parvo, Distemper etc., I will never have him jabbed again.	OWNER

31/03/2020		Boston	N/A	N/A	Unregistered - UK	23-Jun-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years 6 months	YES	After initial seizure followed a couple of months later by a focal seizure and clusters epilepsy after MRI eliminated any brain issues	NO	Feb 4th 2020 - aged 5 years 6 months. PTS as diagnosed with idiopathic epilepsy after MRI eliminated any brain issues	<b>Suspected triggers:</b> Stress, over treading and heat would appear to be triggers. Stress from being fed by our other calves, or going to the vet. <b>Medication:</b> Initially given Phenom - no impact. Then moved to Phenobarbital, then added Potassium Bromide. Keppra was given as an emergency protocol. Zapsam did not appear to work. <b>Details:</b> Boston had his first seizure on 4th Dec 2017. From then until he died on Feb 4th 2020 - he had approximately 80+ seizures lasting on average 60 seconds with some as cluster seizures. When he first started using it was shorter and he responded relatively quickly, he never lost bladder control when he seized. The critical turning point was in September 2018 when he went into focal seizure mode and had to go to ICU. This followed another ICU episode in December 2018 where we thought we would lose him. The neurologist worked with us to find the right medication level. There were times we pushed back on the suggested medication levels and discussed it with the neurologist. I think it is important that owners who know their dogs best and have to manage the dog every day confident to add that happens with us. On hindsight we saw three issues: (1) the length of time it takes a medication level to work through and to assess impact means it is several weeks from each medication change before you see if it has had any impact in controlling the seizures; (2) the vets are highly dependent on blood lab results to ascertain the medication levels and in our case, there were blood results that were inaccurate/inconsistent and this unreliable. We queried this and new bloods were taken but each time there was an episode, this delayed the possibility of accurate blood tests and (3) neurologists are focused on controlling the seizures but need to work hand in hand with their experts so any increase in PB should be done only after a check on the state of the liver. It should not be automatic. It is not stated that an enzyme have been able to reverse the liver failure but Boston's PB had been raised after summer 2019. Though the seizures were better controlled, his liver was damaged beyond repair. On the other hand if the PB was tapered down in summer 2019 and only Bromide used (or possibly in tandem with Keppra), would he have succumbed to some grand mal seizure - we will never know. Ultimately, epilepsy is life limiting, that we do realise.	OWNER

28/02/2021		Cloudy	N/A	N/A	Unregistered - UK	28-Aug-16	UK	Dog	Unknown	Unknown	Unknown	Misty	Unknown	Unknown	1 year 7 months	YES		YES	N/A	Suspected triggers: He definitely has epilepsy but the condition could have been triggered, or exacerbated, by the original liver problem. Medication: Closely responds, very successfully to a regimen of KBr (Libramide), Levetiracetam (Keppra) and Phenobarbital (Epiphen) and has almost no fitting, with the occasional "petit mal" seizures. He has very occasional full tonic-clonic seizures when his medication has been compromised e.g. missed dose or after activated charcoal treatment for ingestion of toxins. Details: Has epilepsy and liver shunt. He started fitting regularly at 18 months in February 2018 and responded well to Phenobarbital. Went into status in May, probably due to hepatic encephalopathy. Routine blood analysis showed a liver anomaly and it was found he had a hepatic shunt after scanning. Surgery was carried out in June with 100% success, but the fitting continued. He is still taking regular medication at 4+ years of age with occasional recurrence of fitting especially if medication is compromised, even though his liver is perfectly healthy and functioning. No indication of food relating to seizures but he is now on a hepatic diet due to the shunt.	DATA TRANSFER & UPDATE BY OWNER

28/02/2021		Easterdale's Fleet O'Foot	K134734	N/A	WSD - UK KC Activity Register	07-Jan-10	UK	Dog	Easterdale's Prince Rory	Rock	Kim	Just the Tonic	Robbie	Tess	3 years 9 months	YES	Diagnosed by my vets and confirmed by specialist	NO	Age 8 years 4 months. Fleet was ptt on 30 May 2018 following several hours of continuous fitting	<b>Suspected triggers:</b> None mentioned <b>Medication:</b> Started on Penon December 2015 with Diazepam when needed. Changed to Libromid, with Keppra when needed and Diazepam for immediate treatment of fits. <b>Details:</b> First fit at 3yrs 9 mths at 4am, grand mal. 5 fits over next 2 years, very short, all grand mal, all around 4am. On no medication then. In December 2015 had a severe fit lasting 5 minutes and put on Penon. 3 further fits and dose increased in Aug 2015 as last fit was 6 mins and required Diazepam. Severity seemed to increase but frequency varied from 4 weeks to 9 months. Then fleet's fits sadly increased in frequency and severity and he eventually began to cluster fit. His meds were changed but things continued to decline. He saw a specialist who advised the meds he was on were what he would recommend but to try changing the timing of meds. His fits continued to lengthen and he had several emergency trips to the vet in the middle of the night, when Diazepam did not bring him out. At the end he was fitting during the day as well as at night time and the fits were taking a terrible toll on him. He was ptt in my house following a night of almost continuous cluster fitting. Neutered at 12 months, well before fits started. On cereal free Salmon and Potato mix. Food did not seem to be a factor.	DATA TRANSFER & UPDATE BY OWNER

NO		Passed away 13 months after first seizure (7 years old). Had a seizure and never came round despite giving Diazepam and taking to vets. <b>Suspected triggers:</b> Fell on hill (somersaulted) when on walk on day of 1st seizure. Got back up and walked fine. Had seizure after falling asleep. No particular triggers noted, however was easily excited, particularly around work time. Vet noted possible slight heartbeat fluctuation when examined, but nothing found. <b>Medication:</b> Started on Pexion, increased after 2 months, then given with Phenytoin as well. Diazepam was kept on standby. Medication seemed to work for a bit, then the seizures would be worse. Levetiracetam was kept to be given for a few days if it was needed.	OWNER
31/03/2021		Elian-Vannin Millie	AS0902157	00/332956	BC - Dual Registered UK KC & ISDS	18-May-14	UK	Bitch	Elian-Vannin Kirk (ISDS 00/911443)	Joe	Breeze	Elian-Vannin Mia (ISDS 00/314110)	Spot	Bliss	2 years	YES	Bloods, head scans etc all normal but clinical diagnosis based on the episodes, seemingly brought on by touch, was a rare type of seizure / rage syndrome.	NO	Age 4. Due to the escalating frequency and intensity of the episodes which were very frequent with no pattern and each one was for a longer period of time. Food was not a trigger although to alleviate as much non natural things in her diet as possible, we changed her to a raw diet and although I do not have her seizures, she still very wet on it. Millie was neutered but it made no difference, she was spayed before the onset of the seizures. Due to the severity and type of seizure, Millie had, we could no longer manage her safely. Just to say that Millie would come to us probably feeling unwell for a couple of days or we would touch her that the seizure would happen. She would usually have been asleep beforehand. Never happened at play or with strong touch/rough cuddles only ever gentle strokes, episodes lasted 5 seconds but near the end more like 10 seconds and we just couldn't manage it safely and the most traumatic thing was we could no longer cuddle her as she or we would have wanted (the seizures along with disc degeneration was also ageing her rapidly too), so the heart breaking decision was made to say goodbye. It was truly a traumatic journey for and with her.	DATA TRANSFER & UPDATE BY OWNER 31.03.21

31/10/2025		Evo - Terry	N/A	N/A	Unregistered - UK	03-Sep-22	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	Vets appointment, blood test and full check over. Next day epilepsy was confirmed.	YES	N/A	<b>Suspected triggers:</b> Can't think of any triggers. I noticed it was when he layed down and started to go to sleep. He's had no illness. He has monthly flea and tick tablets and worming every 3 months which the vet said has nothing contained which could cause fits. <b>Medication:</b> He started on meds straight away, he was given Levetiracetam, 3 1/2 tablets 3 times a day and Phenobarbital alongside. See details for more info. <b>Details:</b> He had first fit on August 7th, we kept an eye to see if there was another. He had his next fit on Sat 11th Oct, then continued to fit on the Sunday 12th and night. He had 7 fits in 24 hrs, really very scary. I've had dogs all my life and so far none have had fits. We got an appointment with the vet Monday morning 13th and had a blood test and full check over. We got the results back the next day 14th, confirming epilepsy. He started on meds straight away, he was given Levetiracetam, 3 1/2 tablets 3 times a day and Phenobarbital alongside. He immediately stopped fits and since Tuesday 14th evening hasn't had one, but he's abit off his food. Bless him. He's getting checked tomorrow 18th Oct, and may start weening off the Levetiracetam over the next few days. I'm abit scared he may have a fit again while he comes off it and is left taking Phenobarbital. I love him so much and I can't stand it that this has happened. He was neutered when he was around a year. The frequency of the fits was around every 4 hrs over 48 hrs they lasted 30 seconds to 1 minute. He started after the last few coming round screaming and high pitch barking and very confused for about 5 minutes. This really is a horrible thing to witness you feel so absolutely like you can't do anything.	OWNER
31/08/2022		Evy	N/A	N/A	Non UK Unregistered (Border Collie)	24-Apr-19	NETHERLANDS	Bitch	Maison	Unknown	Unknown	Noa	Unknown	Unknown	2 years 6 months	YES	Epilepsy was diagnosed based on my observations.	YES	N/A	<b>Suspected triggers:</b> Evy suffers from primary epilepsy, no triggers. <b>Medication:</b> 150 mg of Phosoral a day in case of fits in the next 6 weeks Potassium Bromide will be added. During fits we give 10 mg of Diazepam rectally. <b>Details:</b> Evy is spayed. She suffers from clustering epilepsy. Usually her fits start in the morning and she'll have 4-6 fits within the first 1.5 hours. We give Diazepam during the first or second fit. After that it stays calm all day and there is a big chance she has another fit about 12 - 14 hours later. We give another dose of Diazepam when that happens. Fits don't usually last long - 1.5 minutes tops. They follow each other up very quickly so we need to be on top of things immediately. The fit frequency between days is 5 - 7 weeks. We're hoping to bring that up to 12 weeks. Evy comes from an unofficial breeder. This woman just wanted to have a nest of puppies once. There is no family tree available. Both parents are carriers of the SN gene. 2 pups from the nest suffered the illness and died before their first birthday. Evy is a carrier too.	OWNER

Rectal Diazepam also prescribed if fit is bad. <b>Details:</b> He has been castrated and is fully vaccinated. The fits have occurred only 3 times, they are a series of 3-4 intensive fits lasting less than a minute each. He is otherwise affectionate. Ahead of care. He was 18 months old when we took ownership (Feb 22). Previous owners had returned him to breeder. Breeder did not pass on their details to us. Breeder has been contacted since diagnosis and has refused to take him back. We will email you copy of Five generation KC certificate.	OWNER
30/04/2022		Gigha	N/A	N/A	Unregistered - UK	08-Jan-16	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	By taking her to the vet repeatedly and eventually taking her to different vets for alternative options as our first vet advised us to euthanise her. It came after a year of increasingly regular fits during which Gigha was anxious and she had to have driven aggressive behaviour. It took reaching this clinic for her to be diagnosed.	YES	N/A	<b>Suspected triggers:</b> We are unsure of triggers. <b>Medication:</b> Epilphen, her dosage has been changed three times since she was first prescribed. Its changed her life, she is a happy energetic collie now. <b>Details:</b> She still has a fit once a year or so and the build up to a fit is almost noticeable but the Epilphen has made a huge difference. She has her bloods checked regularly at the vets. Fit lengths vary, they are on average 5- mins long.	OWNER
31/03/2024		Ginger	N/A	N/A	Non UK	18-Oct-23	SOUTH AFRICA	Dog	Res	Unknown	Dorothy	Unknown	Unknown	Unknown	1 Year 1 month	NO	N/A	YES	N/A	<b>Suspected triggers:</b> Unsure. Happens when he is asleep. <b>Medication:</b> Phenobarbital 1.5 tabs morning and 1 tab evening. Had a minor seizure 10 days after starting treatment. Had blood tests 2 weeks after starting treatment and levels were 70 (lower end of therapeutic dose). Vet chose to keep treatment as is. 3 days later had 8 seizures over 30 minutes and was rushed to hospital. They have now upped pheno to 2 tabs morning and night and added highest dose of Potassium Bromide. He is in an induced coma as he continues to have seizures when they wake him up (24/03/2024). <b>Details:</b> The seizures first occurred on 8 Feb 2024. While he was awake in the back of the car going to the park. We didn't realise it was a seizure at the time and thought he had caught his collar. It next occurred 21st Feb just 1 seizure lasted about a minute whilst he was asleep around 2am. We were awaiting a vet appointment and he then had 3 seizures from 2:30am to 3am we rushed him to the emergency vet. He was admitted and put on Pheno. Then seizure free for 10 days. Then had 1 minor seizure. Vet did blood 14 days after starting treatment and kept dose as is. 3 days later at 2am he had a major series of seizures of 8 with no recovery in between for around 30 minutes. He was rushed to the vet while in this state and they gave him Valium but he continued to seizure at the hospital. They added Potassium Bromide at max dose and upped Pheno to 2 tabs twice a day. He continued to have seizures and they put him on a popofol drip. When they tried to wake him he had 3 more seizures so he is in an induced coma until the specialists can conduct an MRI tomorrow (24/03/2024). He is neutered.	OWNER
30/11/2022		Gismo	N/A	N/A	Unregistered - UK	22-Nov-21	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	9 months	YES	Gismo had blood tests, MRI scans, urine tests etc to rule out other causes, vet diagnosed Idiopathic Epilepsy.	YES	N/A	<b>Suspected triggers:</b> Not sure. <b>Medication:</b> Gismo is on Phenobarbital medication. Not had any other episodes but only had 2 before medication started. <b>Details:</b> The episodes Gismo had weren't your typical fitting. He was acting very strange almost scared like, covering / hiding away. Shaking, drooling and was like that for a few hours, then it happened again the day after.	OWNER

29/11/2019		Gwynfair You Were Made For Me	Not known	Not known	WSD	22-Feb-05	UK	Dog	Fenom Full 'O' Fun	Summertime Sweep	Majacabus Oso Tricky	Tyemade Magrin May of Gwynfair	Whatknow Rockin Symphony	Gwynfair Catch Me if You Can	1 year 10 months	YES	Vet confirmed as Epilepsy	NO	6 years 10 months. Dog is no longer alive. He went into a cluster fit episode that could not be stopped with medication and it was felt that he had suffered enough and had had his last fit.	<p><b>Suspected triggers:</b> Not noted.</p> <p><b>Medication:</b> He was initially prescribed just Epiphon, but over the next 5 years his medication was gradually increased to try to control his fitting. From his first fit, he didn't have another for 18 months then the frequency increased until roughly every 3 weeks by this time he was on 120mg Epiphon at 8am and 8pm, 300mg Gabapentin at 8am, 2am and 8pm, 500mg Kepra at 8am and 8pm, and 250mg at 2am.</p> <p><b>Details:</b> He was on Autarky at the onset of the fits but as the intensity increased, he was moved to a completely natural diet of chicken and vegetables. Much research was carried out into the ingredients of manufactured dog foods, and it was found that certain things can be a trigger factor to epilepsy so knowing what was in his food was important. He had cluster fits over 2 days on the first occasion and was given medication to try to stop the cluster, it was then 18 months before his next cluster fit. His next fit was then 3 months later, after which the frequency increased from around the age of 4 until the fits were happening every 3ish weeks. It was often a cluster of 3 or 4 fits over a couple of hours, he needed veterinary assistance on 2 occasions where he was anaesthetised to stop the fitting as the episodes had continued over 24 hours or more. NOT anaesthetised as the vet advised against him being operated on because of the risks with his epilepsy.</p>	DATA TRANSFER FROM LYN NORTON - Added 10.09.13

28/02/2022		Harry	N/A	N/A	Non UK Unregistered (Border Collie)	08-May-19	SOUTH AFRICA	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 6 months	YES	After first fit we visited the vet and by eliminating other potential causes it was determined that Harry has idiopathic epilepsy, which was confirmed by subsequent fits	YES	N/A	<p><b>Suspected triggers:</b> It is still early to say as Harry only had his first fit two months ago. I suspect that his anti tick/flea medicine might have contributed (although my other KC has been on it for longer and has no health issues). Another suspected cause is the dam on the farm where we walk every day as his last two fits have been within 24 hours after swimming in/drinking from the dam, so we are now avoiding the dam to see if it makes any difference. Since starting to have fits I have stopped feeding my dog dry food (kibble) and moved him to a raw food diet (it is still early to tell whether this is making any difference).</p> <p><b>Medication:</b> Harry is not on any medication for epilepsy yet, I have an appointment with my vet to discuss our options next week. I do have ampules of Valium, which I carry with me at all times, so I can administer it in case he has a fit.</p> <p><b>Details:</b> Harry was neutered at 13 months. He has had 7 fits to date, the first 5 were roughly 2 weeks apart and the last 2 happened on the same day, about 10 mins apart (although I think this was triggered when he saw me packing, which caused some additional stress). This was 2 weeks ago, he has not had another fit since then.</p>	OWNER

31/05/2020		Jack	N/A	00/355613	IC - ISDS	21-Sep-17	UK	Dog	Fellside Dash (ISDS 00/115780)	Killiebrae Laddie (ISDS 262753)	Killiebrae Jet (ISDS 283073)	Meg (ISDS 00/316242)	Spot (ISDS 218972)	Nell (ISDS 274798)	2 years 1 Month	YES	Vet	YES	N/A	<b>Suspected triggers:</b> Possibly stress. <b>Medication:</b> Epiphen and Libromide. <b>Details:</b> Insect Male. Seizure approx every 2-6weeks. Seizure length average 45seconds. We got Jack when he was 14 months old, he had his first seizure about 1 month after his 2nd birthday (late Oct 2019). I phoned the vet and they gave me some great advice on how to monitor and what to do during a seizure, unfortunately a couple hours later he began to cluster so was rushed off to our emergency vet for sedation. We discussed the options for meds and agreed that we would not medicate at this point. 2 months later he had his next seizure, so an appointment was made to check his bloods again, this time the vet suggested we put him on Epiphen. After a while with only the sporadic minor seizures he began to cluster again (8 in 2hours) he was kept at the vet that day and was started on Libromide and we were given emergency meds for future clusters. Since then Jack has been only having small seizures roughly once every 2 months. We continue to medicate with the Epiphen and Libromide and record any seizures in his diary or on film when we can. Jack is the most loving, happy dog and wants to be friends with everyone he meets. We love Jack dearly and wouldn't be without him.	OWNER

21/08/2019		Jess	N/A	N/A	Unregistered - UK	27-Jun-03	UK	Bitch	Rip (ISDS 230011)	Glen (ISDS 198708)	Fran (ISDS 218958)	Floss (Not registered)	Ben (Not registered)	Jill (ISDS 225588)	2 years	YES	Blood tests and other family members fitting	NO	Died aged 11 in Status Epilepticus	<b>Suspected triggers:</b> No known triggers. Epileptic cousins. <b>Medications:</b> Initially Epiphen then Libromide added and finally Kepra. <b>Details:</b> Spayed before onset. Cluster fits showing signs of brain damage. Jess had refractory epilepsy. Despite increase in doses of Epiphen and addition of Libromide followed by Kepra she continued to have cluster fits. admitted to vets on several occasions to try and stop the clusters. The only time she was fit free was on large doses of Epiphen which eventually caused her liver to have problems metabolising the drug and she started to fall over eventually being unable to walk. At this stage she was referred to a neurologist and put through MRI scan, spinal tap, blood tests etc. The result was that she was being poisoned by the Epiphen which her liver wasn't metabolising. Her dose of Epiphen was reduced and she was put on a liver supplement. With the reduction of Epiphen she went back to cluster fitting every three months till she died 2 years later in status epilepticus.	OWNER

31/03/2021		Jess	N/A	N/A	Unregistered - UK	20-Jun-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	About 18 months	YES	After videos we had taken and being tested at Fitzpatrick's. They started her on medication, which caused her to fit more	YES	N/A	<b>Suspected triggers:</b> Extreme exercise, stress, heat in the summer. <b>Medication:</b> Phosboralbit and Penox which she is being weaned off. Getting ready to start Potassium Bromide once Penox has finished. <b>Details:</b> Jess has been spayed. She is a very anxious dog who is upset by any noise. Her fits are like petit mal at times but also grand mal fits when her nose and bottom jaw, her eyes roll up, then she starts to shake. They can last from between 30secs and 6mins. She also has episodes where she lays in her Dad's arms and flops her head on the sofa and can sleep for up to 30 mins. You can try psycap, scopolin, dilmer, name of a vet and she doesn't move. At the time there, her limbs don't move and when she gets off she has left a small mark on his trousers. The last two fits she has been incontinent and wet the bed. Occasionally she can be aggressive, but normally a very playful girl. She has changed, doesn't like her harness on or collar, seems worried to go to my husband.	OWNER
29/02/2024		Jess	N/A	00/381801	IC - ISDS	06-Apr-21	UK	Bitch	Barook (ISDS 00/551072)	Hybeck Blake (ISDS 06/217335)	Denayn Annie (ISDS 00/329996)	Sanduck Mai (ISDS TBC by owner)	Sanduck Moss (ISDS 00/306799)	Lyn (ISDS 282998)	2 years	YES	Saw Neurologist at Cave Veterinary, Somerset.	NO	Aged 2 years 10 months. Euthanased 17th February 2024 due to refractory epilepsy. She was cluster fitting every few hours. Medication was not stopping it.	<b>Suspected triggers:</b> No clear trigger. The initial start of Jess's epilepsy in October was cluster fits. This started the day after a 4 hour car journey (nothing new, we've travelled lots with Jess from a young age.) That week she'd had her flea, worm and tick treatment but she'd been on the same one for years. We also noticed an air freshener in the car we'd borrowed. Also the first fit was in the morning while playing frisbee. On another occasion Jess had a seizure while playing frisbee, so not sure if that was a trigger, we were to frightened to play frisbee again. <b>Medication:</b> Epilin and Kepra (initially seemed to help. But then had to add in Potassium Bromide which again initially seemed to help. 50 days fit free. But unfortunately none of the meds seemed to be helping and uncontrollable seizures. <b>Details:</b> In the end we had 4 episodes of 5 day long cluster fits - grand mal. The last 2 episodes also involved a couple of hours long post ictal behaviour, walking into things, appearing unable to see. Jess was never aggressive after or during her fits.	OWNER
21/08/2019		Jazz - Jazz	E114355 (activity register)	00/313905	IC - ISDS	03-Apr-11	UK	Dog	Lad (ISDS 00/267484)	Roy (ISDS 245540)	Jan (ISDS 237153)	Tess (ISDS 00/301628)	Ulwyns Nap (ISDS 253871)	Killibrae Sky (ISDS 274792)	2 years 2 months	YES	MRU	YES	N/A	<b>Suspected triggers:</b> Possible glancing adder bite - he had a puncture wound in his nose and swollen face for a week, Frontline 4 days before. <b>Medication:</b> Epilphen, Potassium Bromide, Kepra and Diazepam to try to stop clusters. CBD oil plus herbal products. Everything has worked well initially but then has become less effective. He has just been prescribed Penox to see for a few days after seizures to try to stop the cluster. <b>Details:</b> Jazz is entire. He fathered a litter before his seizures started - his son started having seizures at 15 months and was ptt at under 2 years due to uncontrollable seizures. Jazz' sister started fitting a year after him and she lost her battle in May this year. Jazz always has OMs and always clusters. They have become progressively longer - will often be unconscious for up to 6 mins. We are very fortunate that Jazz has a VNS implant. Langford vet hospital is doing a trial with Bristol Children's Hospital and Jazz is the 8th dog to have the implant in June 2017. I am convinced that he would not still be alive if he hadn't had this. He is very active and 3 years ago started Rally Obedience and is now working at the top 2 levels.	OWNER
22/12/2019		Jilly	N/A	N/A	Unregistered - UK	05-Jan-15	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 6 months	NO	N/A	YES	N/A	<b>Suspected triggers:</b> Totally unknown, just happened one night. Taken to vet after first fit. Then continued monthly, always about 2am. <b>Medication:</b> Vet recommended not going on meds as they didn't last long and were so spread out just monitoring her and if anything changes consulting vet. Have rec'd Diazepam in case she has another. <b>Details:</b> She had one large fit about 6 months ago followed by some smaller ones. Was left with a twitch but vet put her on diazepam for a week and twitch cleared. All her fits are over in a couple of minutes and doesn't seem to be a pattern to them apart from monthly and always about 2am. She has had fits monthly up until 4th of September, but nothing since (paw 02/12/19). She is spayed.	OWNER

21/08/2019		Kingsfarm Maid of Honor	K139324	N/A	BC - UK KC Pedigree	08-Nov-11	UK	Bitch	Tamerrye Celtic Laird	Bellatrix Highlander CDev Udex	Tamerrye The Ferrari	Kingsfarm Dress To Impress	Borderair King Of Swing	Merrymarsh Dress To Kill Of Kingsfarm	5 years 5 months	YES	Vet said it was because she had now had 4 episodes	YES	N/A	<p><b>Suspected triggers:</b> In vets during first one - stress? 2nd one it was a very hot day and had eaten cheese?</p> <p><b>Medication:</b> Epiphen was prescribed 1 tablet twice a day. I also give her Epitaur 500, Milk Thistle (to help Liver on Epiphen) &amp; CBD Oil. She has remained seizure free since.</p> <p><b>Details:</b> The day of her first fit at home it was a very hot day she had also just eaten some cheese (which is now off the menu). Spayed in 2012. Her last fit was the worse much more intense and longer (lasted about 3 minutes) and she took longer to come out of it. In April 2017 Macey had a routine dental examination. In waiting room afterwards I noticed her mouth was twitching and started to foam. The vet took her in side room where she was fitting on the floor. They kept her in for observation for a few hours. Vet thought as she was stressed this was probably the reason. No medication given to me as they said they only medicate when they have had 3. All ok and fit free until June 2018. Around 10am Macey was resting in kitchen and started to fit. No vet appointment until 4pm that day. No tablets given but was told to administer rectal diazepam if she had another. 2 hours after being home she had 2 more - more severe than before - rectal diazepam given. Called emergency vets as I couldn't cope with seeing her like it. They agreed to have her in overnight to observe. Got a call 3 hours later saying she was so stressed and would be better at home.</p>	OWNER
30/11/2025		Kyvan	N/A	N/A	Non UK Unregistered Crossbreed	01-Apr-23	NETHERLANDS	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	11 months	YES	By vet, after blood tests confirmed primary epilepsy.	YES	N/A	<p><b>Suspected triggers:</b> I'm still trying to figure that out.</p> <p><b>Medication:</b> Our vet still wants to work with giving medication because of the possible side effects on his general health. We're carefully monitoring his seizures.</p> <p><b>Details:</b> Kyvan isn't trained. His seizures last usually about 5 minutes all together and are partial. He had 10 seizures vet vet lying on his side, tramping legs, foaming mouth and loss of urine. Sometimes he can go months without having one, sometimes there are 2 week gaps. Kyvan is a rescue from the north of Portugal. We have no history up until we got him at 11 months old, apart from knowing he was tied to the fence of a dogpound there in the middle of the night together with his brother. Just three days after we picked him up he had his first seizure, but he might have had a few before, we'll never know.</p>	OWNER
19/07/2019		Kobi	N/A	N/A	Unregistered - UK	15-Jun-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 8 months	YES	Confirmed by vet	YES	N/A	<p><b>Suspected triggers:</b> Stress and also air pressure (thunder weather), bright lights. As Kobi is deaf and also almost blind he bumps into objects which stresses him. He can't go to vets surgery as stress causes seizures.</p> <p><b>Medication:</b> Vets have tried almost all meds over the last four years. He still has seizures but they are 1-2 a month now. At the moment his meds are: Epiphen, Libromide, Levitracetam and Sodium Valproate. Diazepam for cluster seizures. He has recently been diagnosed with diabetes too so is now on insulin too. We have struggled for four years to get him to this point and tried so many different meds.</p> <p><b>Details:</b> He also had advice from a neurologist who diagnosed metabolic epilepsy. Kobi has blood tests regularly to tweak his meds. He is a blue Merle, totally deaf, almost blind and now diabetic aged 6yrs old. While trying to get the right balance of his meds he was having clusters every other day. As his meds are now he'll have 1-2 seizures which leave him completely exhausted and wobbly for days. His seizures are 1-2 a month at present. Neutered. Rescue dog from Border Collie Trust GB.</p>	OWNER

29/10/2019		Little Ozzie	Died before being able to be registered	N/A	Unregistered - UK	08-Mar-07	UK	Dog	DB CH Whiknow Razimfaz (WSD)	Rockin Rapid	Forever Magic Fantasia	Croftmist Megan (BC)	Tanameru Krimosm	Mainline Mist (BC)	45 days	NO	N/A	NO	46 days old. See Fitting detail for more information	<b>Suspected triggers:</b> The vet suggested that he may have had worms but it was not the case. <b>Medication:</b> No medication for fitting but AB 1 and Anti-inflams as below. <b>Details:</b> At 37 days he became quiet and stopped interacting with his siblings. At 44 days he started seeking out dark places. Taken to the vet and was given antibiotics and anti-inflammatory injection. At 48 days he was again searching for dark places. He was very distressed when travelling back to the vets and fitted badly within minutes of arriving. At 46 days old he began fitting and was taken back to the emergency vet. He resembled a clockwork toy and was very rigid in his mobility. He seemed to have stopped growing. The vet blood tested for a liver-shunt which came back negative. As the vet examined him, Ozzie became very distressed when his head was held and was obviously in a great deal of pain. The vet diagnosed inflammation of the meningeal tissue surrounding the brain. The vet and I agreed that euthanasia was the only option. Two other pups from the litter also fitted at later intervals and both have died. The rest of the litter were registered with my Croftmist affix. Megan was spayed after. The two other dogs from the litter, that fitted, were put to sleep as young dogs due to the fitting. Ozzie was unregistered but the rest of the litter were KC registered.	OWNER/ BREEDER

29/11/2019		Lupitooze Tasmanian Devil - Taz	Not known	N/A	WSD - UK KC Activity Register	03-Mar-09	UK	Dog	Pied Pike (ISDS 254417)	Ben (ISDS 235217)	Bet (ISDS 230544)	OB CH Collewold Candy Girl	WT CH Waggerland Fizz	Forest Sprite Psyche	2 years 10 months	YES	Referred to Animal Health Trust Newmarket for MRI & Spinal Tap (both clear)	NO	6 years 1 month. His liver was grossly enlarged and he could not breathe as he had fluid in his lungs. Extensive organ collapse and brain damage due to drugs and cluster fits. PTS 22.04.15	<b>Suspected triggers:</b> Triggers unknown. <b>Medication:</b> He was on Phenytoin, Lisinamide and another drug I can't remember the name of. Fit free for 8 months until Sept 2014, we struggled and could not get them better than one every 7-10 days. Had to increase his meds several times, this impacted on his body. <b>Details:</b> He had a period of seven months, during the twelve months before he died, when we thought we had him stable and no fits. Then they came back and we just could not get any control at all. At the end he was having constant Petit Mal seizures between the Grand Mal ones, the drugs just didn't work anymore. Also rectal Valium to stop the fits once they started. During his last three months he had some Proboscis. Taz was not neutered. His fits were right from the start, five to eight minutes long and extremely violent. They occurred mostly when he was asleep or resting. Frequently two to four weeks apart but he might have two or three fits at a time. Pied Pike has sired other dogs that have fitted. Unfortunately none of them had started to fit before he was mated to Lulu.	DATA TRANSFER & UPDATE BY OWNER

29/02/2020		Mandy Patrick	N/A	N/A	Unregistered - UK	18-Jun-05	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	By the vet as she went on quickly to have a series of fits stopped only by being given an anaesthetic.	NO	Agp 11. Death was related. Mandy went into a state of conscious shaking and her body shut down and she was unable to move over a period of days.	<p><b>Suspected triggers:</b> All vaccines, flea and tick treatments, loud noises and stress eg: vet to vet, agility class, being left alone.</p> <p><b>Medication:</b> Started on Epiphen, added Ibramide, added Keppra as each drug became less effective. Also had rectal diazepam to bring her out of seizures. Extra Keppra used as preventative before a stressful event and after fitting to prevent recurrence.</p> <p><b>Details:</b> Spayed age one. Mandy had fits, often two in a short space of time, around once a month once we got medication settled. We added more meds as they became more effective each time. To begin with the vet was very worried as we wanted to introduce meds gradually. Several visits to emergency vet. Eight fits after vaccination when she was four. Always fitted five days after flea and tick treatment. Diagnosed as tonic clonic epilepsy in her few months she did not fit until last major episode. A beautiful girl who took it all in her stride and remained gentle and loving and full of life through it all. Major meds over nine years did not impact liver and kidneys which was one of our big concerns.</p>	OWNER
30/06/2022		Mara	N/A	N/A	Unregistered - UK	11-Sep-11	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	10 years	YES	By vets Idiopathic Epilepsy	YES	N/A	<p><b>Suspected triggers:</b> Initially caused by contracting kennel cough.</p> <p><b>Medication:</b> Epiphen and Epilase. Still settling the doses to best levels, meds have reduced grand mal section of seizure but overall length of time for full event is same. A seizure varies from not much to wobbly, to very wobbly. Assumed from meds rather than brain injury.</p> <p><b>Details:</b> Grand mal fits usually 2 mins grand mal then 3 mins recovery, usually brings self out of activity. Medication reduced Grandmal section but whole sequence usually lasts 4 - 5 minutes. Has had 3 sets of cluster seizures since start of Dec 2021, meds increased each time. Spayed.</p>	OWNER

29/02/2020		Marley	N/A	N/A	Unregistered - UK	2011 approx	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	Not known (rescue dog, owned since 5 years old, had fits before being adopted)	YES	Blood tests excluded anything else, vet said most likely idiopathic Epilepsy	YES	N/A	<p><b>Suspected triggers:</b> Triggers unknown, although previous owner mistreated him and was convicted of animal cruelty after kicking Marley repeatedly on numerous occasions. He had a broken tail. Could have had injuries to head maybe?</p> <p><b>Medication:</b> He has had far less fits since starting a raw diet with coconut oil and CBD oil. Once a seizure starts, we give CBD drops immediately and the fits subside quickly and he recovers far better. Before CBD he would have cluster fits and twice had status epilepticus where the seizure continued for nearly an hour. With CBD they last only a minute or two and are very mild.</p> <p><b>Details:</b> Neutered at approx. 4 years old. Very dominant male, pushy with other male dogs. We think Marley is a Welsh collie. He is sable and white, hetero upright and is loose eyed. Contacted the Welsh Sheepdog society who said epilepsy is very rare and practically unknown in registered Welsh Sheepdogs, although common in border collies. They suggested Marley is therefore most likely a Welsh Sheepdog/BC cross, or if he's a pure Welsh, his epilepsy is probably injury related rather than inherited.</p>	OWNER
30/06/2022		Marley	N/A	N/A	Unregistered - UK	28-Aug-15	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	YES	Blood test at vets	YES	N/A	<p><b>Suspected triggers:</b> There were no triggers at first, but we noticed after he had been put on medication he had a fit when he was anxious at the groomers.</p> <p><b>Medication:</b> Marley is on Epiphen tablets. He has been OK apart from the groomers incident so far.</p> <p><b>Details:</b> No more detail provided.</p>	OWNER
29/11/2019		Marshonelle Howlyvidious	Not known	Not known	BC	05-Nov-12	UK	Dog	Rosmarinus The Chocolater	Rosmarinus Jaffa	Rosmarinus Demerara	Marshonelle Izzie	Rosmarinus The Rainmaker	Amazain Grace	1 year 1 month	YES	Vet confirmed Idiopathic Epilepsy. All possible tests done, including an MRI scan and spinal fluid tap	Not known	Not known	<p><b>Suspected triggers:</b> See Details below.</p> <p><b>Medication:</b> 40mg of Pexion twice a day.</p> <p><b>Details:</b> He was flea treated a week before, to which he was stressed at time of doing so and was off colour from that point up to first fit. He was fed on mainly raw with some dry food, had an allergy test done and he is allergic to chicken, duck, wheat and gluten. Changed to pure BARF diet minus the chicken and duck. In himself he became brighter when food was changed, he started to grow again, coat became fuller. His fits have become less frequent but they may coincide with having all possible tests done, including an MRI scan and spinal fluid tap to diagnose epilepsy and being out on the right medication. When they first started he had several in a week, once food changed these decreased and since medication started they have decreased further. Longest between fits has been 31 days.</p>	DATA TRANSFER FROM LYV NORTON Added 30.04.14
19/07/2019		Marshonelle Switch'N On	AP04298501	N/A	BC - UK KC Pedigree	05-Nov-12	UK	Dog	Rosmarinus The Chocolater	Rosmarinus Jaffa	Rosmarinus Demerara	Marshonelle Izzie	Rosmarinus The Rainmaker	Amazain Grace	7 months	YES	Vet confirmed as Idiopathic Epilepsy	NO	Major seizure	<p><b>Suspected triggers:</b> No triggers identified. Time frame was too short to collate information.</p> <p><b>Medication:</b> Pexion 400mg twice daily. One small fit on 28.06.13 whilst asleep on sofa lasting less than a minute, recovered within 10 mins. No further fits until 9th July, when found fitting in the morning. Rectal Diazepam given. Fitted again same day at 3pm, same treatment, but 4 further fits, taken to vet, kept overnight and stabilised. Home on the 10th but fitting again between 11am and 2pm so back to vet and again kept in overnight and sedated, Phenobarbitone and on a drip. Prognosis was poor at this time. Brought home on the 12th July. Pexion 400mg twice daily.</p> <p><b>Details:</b> Recovery seemed unlikely but daily improvements noted - motor function, spatial awareness, vision, recognition. Following 22 days charted phenomenal progress in physical and mental capabilities. By 1st Aug he was at 95% of his previous levels of Obedience training. On 2nd August he had another brief fit at 10pm (similar to his first) with the same outcome. At some time between 3am and 4am on the 4th Aug he suffered a major seizure, rectal diazepam x 3 was administered but to no avail, and he passed away shortly afterwards before the vet arrived. Vet hazarded a guess at major haemorrhage as cause of death. Neutered.</p>	OWNER

29/02/2024	31/05/2025	Mollie	N/A	N/A	Unregistered - UK	01-Dec-16	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	By neurologist through MRI, bloods, lumbar puncture, observation of video evidence.	NO	Age 8 years 5 months after complications arising from uncontrolled clusters and status epilepticus.	<b>Suspected triggers:</b> No known triggers. <b>Medication:</b> Phenobarbital started after neurologist visit. Currently takes 20mg x 2 Levacetamin added at 3 years old. Now on 3 tablet x 3. Libromide introduced at 5 years old. Now on 3/A tablet x 3. She has Diazepam if she clusters. It is effective. Mollie is considered refractory. The drug make her slow and unsteady and she eats and drinks more. We are trying to wean her off (see below) as in the past this has not altered fit frequency but has made her more active and playful. <b>Details:</b> Mollie's fits occur usually around every 6 - 10 days - longest ever gap was 27 days - and can be either focal or generalised. Now, they almost always occur in the night or early from sleep. She does not urinate, defecate or vomit during fits. Fits are quick - 20 seconds at most but recovery is slow - can take up to 1.5hrs to be back to normal and longer lasting if a focal seizure. Mollie was a rescue dog so history is unknown except she came to England from a farm in Ireland. We homed her at 5 months old. She has taken part in 2 RVC trials. The Big Brain Border Collie and RESET. We have recently introduced MCT oil to her raw food diet and B12 was introduced today. In the past we were referred to a holistic vet who tried acupuncture and herbal remedies and worsened her off again. They made Mollie no worse but no better either and she had no fewer or no more fits as a result hence refractory diagnosis. Mollie is spayed. <b>UPDATE ADDED 31/05/2025:</b> I'm sorry to say Mollie died yesterday, 4/5/25.	OWNER Updated 31.05.2025

30/09/2020		Ozy Bear - Bear	N/A	N/A	Unregistered - UK	31-Jan-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 9 months	YES	Neurologist had told us that Bear was one of the most difficult dogs he'd seen to treat at the time. His brain scans showed white areas where brain damage had occurred because of his seizure.	NO	3 years - Passed to bridge 30th May 2017	<b>Data From 31.01.2016:</b> <b>Suspected triggers:</b> We kept a diary since his first fit which was in October 2015 and at first we thought it was a supplement oil we put on his food. We stopped it but found the fits carried on regularly until he clustered and we had to put him on meds. They were 1 week apart within a day each time, then he had 2 in 3 hours. <b>Medication:</b> He started on Epiphen 45mg twice daily. He had blood tests every 3 weeks and after each blood test his dosage was increased by half a tablet each dose. As at the above date he was on 75mg twice daily, he also has Diazepam in case of severe fitting of 5 minutes. <b>Details:</b> Bear's first seizure was at 6.30am, he'd just eaten at 3.30pm the evening before. He fed NZ Natural Diet which is cooked, he has that with Pedigree Cham mixer for large dogs. Most fits are between 4.30am and 6.30am when asleep. Since he started his meds he has not fitted, though after blood tests they have kept increasing his dosage. He has now been 6 weeks fit free. Bear is a very large collie weighing around 34kg. He came from a working farm in Wales as did his brother who is coming up to 3 with no signs of the same. He was neutered at 9 months old and had not fitted until October 2015. <b>UPDATE ADDED 30/09/2020 to:</b> Date of Birth/Registration Type/How epilepsy diagnosed/Is dog alive/Age & Cause of Death. 31/01/2022		Puppichino	N/A	N/A	Non UK Unregistered	22-Oct-15	INDIAN born, export to UK	Dog	Johnny	Unknown	Unknown	Unknown street dog	Unknown	Unknown	1 year	YES	Vet examination and blood tests	YES	N/A	<b>Suspected triggers:</b> Originally triggered by rabies vaccine batch (suspected). His brother and my other (non border collie dog) were also vaccinated but had another batch. <b>Medication:</b> Pexion 400 mg - 1.5 tablets twice daily, Levetiracetam 750 mg - 1 tablet thrice daily, Epiphen 60 mg - 1 tablet twice daily. <b>Details:</b> Puppichino was born in New Delhi, India as a stray dog and was neutered at 9 month old. We relocated him to the UK in 2017 July and he had shown no signs of epilepsy. Puppichino is now 6 years old and has been epileptic since he was a year old. He had only a few attacks each year until December 2020, we didn't put him on medication. But in December 2020 he started having cluster seizures and we initially put on Pexion, he is now on 3 drugs (Pexion, Levet and Epiphen). He had a very severe attack of almost 90 minutes in October 2021 and had to be rushed to an emergency vet. It was triggered when the vet tried reducing his dosage of Levetiracetam. Fortunately since then he has cluster free till last night 3 Jan 2022, then he had a single attack yesterday. This is an improvement from the 6 or so he would have each month.	OWNER

OWNER
31/03/2022		Quickstep NCSB 118012	N/A	N/A	Non UK Registered (Border Collie)	10-Mar-'98	NETHERLANDS	Dog	Maki (NHSB 1824452)	Rex (NHSB Bijl. G-2 1232996)	Berrie (NHSB 1611999)	Donna (NHSB 1956472)	Vic (NHSB 1394952)	Bobby (NHSB 1756166)	3 years	YES	Diagnosed by a vet	NO	Quickstep was pts at the age of 12 1/2 years. He had enough seizure, his body couldn't take anymore.	<b>Suspected triggers:</b> Triggers were stress from other dogs, hormones, full moon and especially super moons. <b>Medication:</b> As there was only PhenoBarbital and Potassium Bromide in those days as far as I know, he was on the max of both. <b>Details:</b> He still had a Grand Mal every month at a full moon at 03:30 at night. The Grand Mal took about 6 - 10 minutes. After his Grand Mal he was screaming for 2 hours and pacing, trying to hide behind anything and after that came 2 hours of walking and pacing before he came to his normal self. And then he slept for 24 hours. It was the same every month. Only just before he was pts he started to have cluster seizures. Then I knew it was enough. Quickstep was an intact dog, thus the hormones were a problem with other dogs. He was bred without any health tests from the parents and got a Dutch pedigree. He was out of Working Sheepdog Lines, only a few generations in the Netherlands. He also got supplements like herbs and the diet was changed from kibble to meat, which helped a lot. As was normal in those days he had his vaccines and deworming on a regular base. Quickstep was pts at the age of 12 1/2 years. He had had enough seizures, his body couldn't take anymore. So it was the only humane thing to do, to give him peace. He had a very active life with walks to the horses and playing with a football and doing lots of things but only with us, no other dogs except the ones he knew before the seizures started.	OWNER

No injuries or changes to diet, not recently had flea or worm treatments. Entire. He was his usual happy, lively self when we left the house, drove to a show and was acting 'odd' when we arrived. He had drool hanging from his mouth and seemed a little vacant. Took him for a walk, he seemed spooked which wasn't his personality, went to put him on lead and he fell to the floor fitting. Lasted approx 8-10 minutes. No help available at show, phoned vets who recommended taking him in, said as it was his first fit would be highly unlikely to have another straight away. Travelled in van with myself, he didn't return to his usual self and started fitting again within minutes. I had a vet on speakerphone, the fits were huge and he was struggling to breathe, followed directions and tried to resuscitate. He very sadly died. Not confirmed as epilepsy as didn't want a postmortem but the vet said it was highly likely due to his physical appearance.	DATA TRANSFER FROM LYN HORTON Added 18.07.14

OWNER
30/09/2021		Rusty	N/A	N/A	Unregistered - UK	01-Apr-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years	NO	N/A	YES	N/A	<b>Suspected triggers:</b> Low blood sugar (not eating often enough). <b>Medication:</b> Chazpam (in case of fits that last longer than 5 minutes). <b>Details:</b> Neutered. Frequency of fits: 1 every year (any time between March and June). Length of fits: 1 min for aura, 1 min during grand mal phase, 10 min afterwards (temporary blindness and unable to walk properly). Vaccinated with yearly boosters. Vet prescribed de-flea and de-worm medication, as standard. Food is pedigree wet jelly (dog does not tolerate dry food well - causes bloating and chronic flatulence). Several pedigree cheese and beef min treats throughout the day and 1 pedigree dentastick per evening. Since identifying the potential trigger no fits have occurred, as the dog is now fed at exact timings, each day.	OWNER
19/07/2019		Ryans Mirk V4072 (VSDWA)	N/A	N/A	Non UK Registered	19-Mar-07	AUSTRALIA	Dog	Princes Dooley V2955	Bralston Don V2203	Princes Zoe N0102	Allandale Gypsy Q3536	Dan (ISDS 220972)	Crowsdale Cindy Sarah Q2789	10 months	YES	All usual testing was undertaken to rule out other causes (not MRI)	NO	Euthanased (17 months) after bad weekend and seizure on the Monday morning - very restless, whiny, regular yelping to settle. Seizures getting worse, developed into cluster seizures preceded by running without purpose including into fences/walls.	<b>Suspected triggers:</b> No triggers identified. <b>Medication:</b> Phenobarb and KBr. Increasing dosages but seizures got worse. <b>Details:</b> Went on elimination diet, then natural diet only (Holistic vet advice). Thyroid panel showed normal range.	OWNER
30/09/2022		Sadie	N/A	N/A	Unregistered - UK	26-Dec-20	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 9 months	NO	Not yet diagnosed, first fit today but vet confident.	YES	N/A	<b>Suspected triggers:</b> Unknown. <b>Medication:</b> None yet. <b>Details:</b> Neutered. Fitted for over a minute. First fit today 19/09/2022.	OWNER
29/11/2019		Sam	N/A	N/A	Unregistered - UK	30-Mar-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	YES	Multiple fits leading to seeing a neurologist. He has had numerous blood tests and an MRI to eliminate tumours etc	YES	N/A	<b>Suspected triggers:</b> Suspected trigger is pollen as he is worse throughout the summer period. He is on a hypoallergenic diet. Fully vaccinated. Up to date on flea and worming. <b>Medication:</b> He started on Pevion which made clusters worse. He moved to Epiphen which was a lot better but still having them often. He has just started on Bromide and after 4 months, we are going to start reducing the Epiphen. <b>Details:</b> He is neutered. He was fitting every 2 weeks but currently 33 days seizure free from starting Bromide. His fits go on for approx 5 mins and they are all grand mal. I have not noticed him have a focal seizure nor does he just topple. If he has a fit, it's always a big one. He starts his fit by turning his head all the way around and basically looks behind him. His eyes go wide and he starts to fit. He always sees and foams at the mouth. Sometimes he bites his tongue ending up in bloody spt being thrashed around.	OWNER
29/11/2019		Sam	Not known	Not known	BC	01-May-07	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years	YES	MRI and Lumbar Puncture both Vet hospital confirmed as Epilepsy	NO	Died May 2013 aged 6 years. He fitted off and on for just over a week in clusters. We arrived home one evening to find that he had died. The vet said it was a grand mal seizure which he would not have known what was going on.	<b>Suspected triggers:</b> See Details below. <b>Medication:</b> Epiphen. <b>Details:</b> Nothing unusual happened that I can think of. I did notice it initially happened after we had been out and we got caught in the rain. Like he had caught a chill, it happened often after a soaking. The vet said it wasn't connected, I'm not so sure. After diagnosis at Bath Vet hospital when he had an MRI and I think a lumbar puncture he was initially given just Epiphen, strength and dose varied, then also given Lobarbamide when fits continued, can't remember strength. The fits did change even though he was on medication. The fits didn't last as long and I could tell when he was about to have one, or if he had had one when he was home alone. Usually when he was sleeping then he would wake, his head would shake he would fall over and his back legs would move as if he were running his front legs would be stiff. Was fed on Bakers complete. A lighter diet was offered after fits although he was usually starving when he came around. He gained weight so we were advised to give him a weight control food, there was no change in fits. He was neutered before the fits began.	DATA TRANSFER FROM LYNN HORTON Added 21.06.14

It happened outside, then again at the same time on the next day while taking her to the car and the following week then same happened. Then was diagnosed as epileptic. To start they were every 21 days and not that intense but the last couple of months they have become more intense and not regularly. The last week she had cluster fits more and more so medication was changed to Peison and weaned off Epiphen but that did not work, she was put back on Epiphen and Peison and so far it is working well. Fed on Babers complete and Cesar. Ectopic.</p>	DATA TRANSFER FROM LYN HORTON Added 12.05.14
28/02/2021		Skye	N/A	N/A	Unregistered - UK	05-Jun-17	UK	Bitch	Scottish Farm dog	Unknown	Unknown	Scottish Farm dog	Unknown	Unknown	3 years 3 months	YES	Several identical seizures. Vet feels as they started around 3 years old, otherwise extremely likely fit bitch, epilepsy likely cause	YES	N/A	<p><b>Suspected triggers:</b> No known triggers at present, still documenting seizures to find any patterns or link.</p> <p><b>Medication:</b> Treated with Phenobarbital twice daily (under duress), initially 60mg, halved to 30mg by me as behaviour badly subdued by dose. All ok at present, hopeful of stopping or reducing meds after spaying and hormonal fluctuations taken out of equation. Using EFT tapping, calming and enjoyable, also Reiki. Very doped, poor soul could barely walk. Have discussed with vet who agrees the treatment shouldn't be worse than the condition!</p> <p><b>Details:</b> First fit at 4 am, jaw chattering woke me, foaming, twitching and urinary incontinence, (having worked with kids/seizures was aware of how scary it looks, and to time it). Arouse 3.5 mins, four long barks and jumped up like nothing happened. Vet did urine test in morning, slightly elevated white count so treated with antibiotic in case of infection. All other fits (5 more) have been identical, only shorter in every case. Differing times, no real common denominator. One thing I am monitoring is we use a calor heater in sunroom topping up heat in autumn/winter. Most recent seizure Skye had spent half a day with me there doing a Zoom course online. It is well ventilated and has a CO alarm, but wonder if she is affected by this? Just grasping at anything I can change to remove meds etc.</p>	OWNER

29/10/2019		Smudge	N/A	N/A	Unregistered - UK	16-Jun-99	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	9 years	NO	N/A	NO	PTS following a significant seizure at 17.5 years. Vet concluded this last seizure has caused brain damage and a high probability of a recurrence within a few days.	<p><b>Suspected triggers:</b> Over activity was definitely suspected as fits generally occurred outside of the home after ball chasing or similar. There was one event after a catch of heads while running for a ball with our other dog.</p> <p><b>Medication:</b> No medication recommended by vet due to infrequency.</p> <p><b>Details:</b> Fits were infrequent, possibly once or twice a year but reduced as his age increased and his activity levels decreased. Although he was 9 when we first realised he was fitting, with hindsight we realised there may have been earlier occasions where we had not recognised the symptoms from around 2 years of age. Registration status not known. He was full Border Collie but adopted from Border Collie Trust at approx. 10 weeks old. DOB added is approximate.</p>	OWNER
29/11/2019		Smudge	Not known	Not known	Collie	19-Oct-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 1 month	YES	Vet confirmed as Epilepsy	Not known	Not known	<p><b>Suspected triggers:</b> Not noted.</p> <p><b>Medication:</b> Epiphen increased to 2 twice daily 60mg. After 6 months given Libromide, which only made him lethargic and not acting like his usual self. Now on Epiphen and Levitracetam which we used to give him now and then before a fit, but not on one every 8 hours.</p> <p><b>Details:</b> Fits started off as around 8 or 9 clusters every 21 days, this increased to 11, his last one being 16 clusters from 2pm to 7 am the next day. Some last 30 to 40 seconds, some 2 or 3. There is usually 15 minutes in between but now a few minutes. Clenches jaw, then jaw wide, outstretched legs, urinates sometimes and a staver from mouth and the smell is awful. Then he will pace, used to pace for 20 minutes and could not sit us. Now he paces and tends to bang into objects, seems to manoeuvre around them a little better. After a fit, he howls at the moon, tries to escape, but now he tends to approach me to cuddle and follow me everywhere I go. You can see in his eyes that he is due to fit, his personality changes. The fits had increased to double the amount, but more often between them. Neutered before fits started. He had been neutered only 4 weeks before. He had trauma to his leg when only 5 months. And we had a collie out when he seized the following week.</p>	DATA TRANSFER FROM LYN HORTON Added 16.07.15

Primary epilepsy	<b>Suspected triggers:</b> No triggers. <b>Details:</b> Everything was tried to save him, even the best clinic couldn't save him. He didn't get out of the fits, he had one more fit for a minute, two weeks before the seizure and steady attack who took two days! Vet and specialist were helpless. Nothing worked, valium, anaesthesia etc.	OWNER
06/09/2023 & 31/01/2024		Stoyard Megamix Stychin - Needle	K0281020	N/A	Collie Cross - UK KC Activity Register	19-Mar-20	UK	Dog	Stockyard Mty Black Jack	Topoka Justa Silver Storm	Origine Deux Jee-Witz (Imp Frs)	Jaybeze Meg (S05 00306773)	SH, B, CH, Eng Nat, CH, Sweep (S05 00293085)	Nan (S05 00325084)	2 years 10 months 20 days	NO	N/A	NO	2 years, 10 months, 20 days. Fits to prevent further suffering. See fitting details for more information.	<b>Suspected triggers:</b> None known. He was raw fed from birth, never treated with any chemicals. <b>Medication:</b> N/A <b>Details:</b> Needle was a perfectly fit and healthy boy up until 00.04 on the 9th February 2023. At 00.05 he had his first fit. He then proceeded to continue to fit throughout the night and into the morning, each one longer and worse than the one before, and each one coming more quickly, culminating with him not coming around. He was given sleep to prevent his little body having to endure anymore seizures. Neutered! <b>UPDATE ADDED 06/09/2023</b> - Request received from owner. Status Epilepticus removed from Cause of Death, submit auto response to description provided in fitting details. <b>UPDATE ADDED 31/01/2024</b> - At the residence of Needle's breeder please see further update: When trying to find a "vaccine" it was found that Needle had put on weight prior to his fitting and photographs of him taken. Four weeks prior to his death, whilst on a forest on holiday in Scotland, seemed to show enlarged pupils. (A veterinary professional that his breeder showed was about to give a suggested diagnosis as to may have been poisoned) His head shape also appeared slightly different to a photograph taken 6 months earlier. He suffered multiple seizures in a hour a half period, each one more severe with less recovery time between. As it was my choice not to have a post-mortem his cause of death can only be surmised and nothing can be proved regarding it, however he had shown no signs of "thiness" prior to his first fit. Hindsight is a wonderful thing. His breeder categorically states that there are no notable issues in his line. Needle was from one of two accidental crossbred litters sired by her dog at the time. None of the other pups from either litter, or the two subsequent litters he has sired, have any known issues.	OWNER Updated 06.09.23 Updated 31.01.24

See Fitting Details for more information	<p><b>Suspected triggers:</b> Exercise, activity, motion, stress, surgery, medications.</p> <p><b>Medication:</b> Keppra, dexamrin, cephalexin, anesthesia, acepromazine.</p> <p><b>Details:</b> Conceived in Wales, born in USA. Daxler was smart, clever breed. DNA Clear for everything via optimal selection wisdom panel. His seizures were violent and lasted 5 to 7 minutes during, and after he would jump frantically, run into things while screaming. We cried him for safety. When not seizing, he was a very happy, playful, social dog with a strong desire to work all the time.</p> <p>We first witnessed a seizure during post op restricted exercise. He had surgery to remove an obstruction which turned out to be a swallowed part of a kang. The doctor in hindsight theorized the kang part was swallowed during a seizure unbeknownst to us at the time. This theory allowed the team to enter the stomach to which I was unable to get to see. This theory said solved the mystery as to how it got into the stomach in the first place. So, during post op, he had his first seizure we knew of. We stopped his pain meds, rushed him to the hospital where he started his journey of multiple tests leaving him with the diagnosis of epilepsy. Daxler was being treated for seizures and undergoing multiple exams, tests, etc for 6 months. On July 16, 2023 he suffered 7 minute long, multiple full seizures before he could get into the hospital. His final seizure occurred upon arrival at the hospital. He was quickly isolated. Through consultation with the vet regarding his potential to have a safe and quality of life, a decision was made to relieve him of his suffering. A necropsy was performed which confirmed an additional complication of a diseased liver which the doctor said was congenital in nature. He determined this to be a separate underlying issue from the epilepsy.</p>	OWNER

Just so devastating to see Tess like this.</p> <p><b>Details:</b> Had a Labrador spaniel ago who fitted every few months but not cluster fits horrendous experience.</p>	OWNER
29/02/2020		Tess	N/A	N/A	Unregistered - UK	02-Feb-11	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	8 years	YES	Consultation with specialist neurologist at Langford Vets in Bristol, who diagnosed idiopathic epilepsy	YES	N/A	<p><b>Suspected triggers:</b> No specific triggers that we know of although we have changed diet to a hypoallergenic one and then various others. She is a 4 year hypoallergenic or better to be exact hypoallergenic breed.</p> <p><b>Medication:</b> Tess was started on a high dose of Phenytoin (Epilex) after her appointment at Langford in March 2013 when she had her seizure and low coordination of her back end for about 4 hours but gradually she started to walk off. The drug was reduced to a maintenance level over 4 few months until she was on 15mg every 12 hours. She still fitted on medication, roughly once every 4-6 weeks. However, she developed incontinence due to increased blood ethanol and excessive drinking, so our vet increased Pexion 200mg every 12 hours and we stopped her off Epiphen gradually over 3 months. Three days after her last Epiphen (December 2015), she had four seizures in 24 hour period previously she never had more than 1 in a trial and was hospitalised overnight. She was started back on the Epiphen initially but on maintenance amount, so is now on the same amount as mentioned previously and hasn't fitted since September 2018.</p> <p><b>Details:</b> This is a spaniel bitch that we returned from the Border Collie Trust at 12/12 already spayed when we got her. There was no medical history or evidence of seizure before we got her. Tess used to sleep downstairs in our previous house. A year after we moved to our current house in 2017, Tess started sleeping upstairs next to me in 2018. She started sneezing in March 2019. She only sneezes in the middle of the night when she is asleep and as far as we know, she is unaware of them and when they are going to happen. They last around 10 secs. She sneezes and salivates excessively which is why we believe the severe head seizures before she started drinking water because we would have felt the wet saliva on her face in the morning (8 days hours to dry). During the seizures her eyes roll, she stops breathing, her head is thrown back and her back is stiff. She paddles with her front legs before lying off and still breathing heavily and then panting before she comes round. She is very disorientated for about 10-15 mins after the seizure but then she is fine and settles up 'normal'. Seizures occurred and we don't seem to have any effect. I wonder if the hypoallergenic diet has made a difference as she has always been food sensitive and needs to eat very high food not eating, including grain free in the morning after waking. She loves the raw diet and her stools are good. She is definitely more happy on the medication.</p>	OWNER

21/08/2019	28/01/2020 & 28/02/2020	Tess O'Broomleew	AH0901331	278780	BC - Dual Registered UK KC & ISDS	14-Aug-05	UK	Bitch	Moss (ISDS 263829)	Mac (ISDS 224692)	Lynwood Nell (ISDS 234979)	Jen (ISDS 267609)	Glen (ISDS 243997)	Nell (ISDS 224113)	2 years 2 months	YES	Blood tests taken at same time as fit affirmed that description of seizures couldn't be anything else	NO	Tess died on Thursday 23rd January 2020 at 14 years old. She was quite peacefully as usual at the time of her death. Her spinal problems had spread considerably and we did not want her to get to a state of distress. Having been warned by the vet who diagnosed her epilepsy that she doubted she would reach the age of two we feel blessed to have had her in our lives for over 14 years.	<p><b>Suspected triggers:</b> Certain paint smells, nervous excitement, illness, once we suspected a vaccine, vet certain it's bank holidays too as she always has a cluster when they are off duty!</p> <p><b>Medication:</b> Currently on Eprineps, Potassium Bromide, Levitracetam and Sulcipap &amp; Valerian also has Gabapentin but that is now amongst drugs prescribed for spinal problems. She has been more stable on the Keppra than ever before. History of drugs tried en route available.</p> <p><b>Details:</b> Spayed 13/3/06. Heard of others from the sire also diagnosed epileptic. Although we have occasional solitary fits they usual come in clusters (largest cluster was 27 over a Christmas holiday). We've kept a medical diary. If Tess didn't have spinal and hip dysplasia problems now I would suspect that she would still be enjoying a reasonably active life. As it is she still wants to play, go for short walks and eat as she nears her 14th birthday. The epilepsy has aged us rather than the dog! I would always advise working in partnership with the vet and insurance company and we have been blessed with all the support we have received.</p> <p><b>UPDATE ADDED 28/02/2020</b> - We regret to report that Tess died on Thursday 23rd January 2020. She was quite peacefully as her spinal problems had spread considerably and we did not want her to get to a state of distress. Having been warned by the vet who diagnosed her epilepsy that she doubted she would reach the age of two we feel blessed to have had her in our lives for over 14 years.</p>	OWNER Updated 28.01.20 Updated 28.02.20

She had cancer of the vulva which had spread to lungs. Euthanased as having difficulty breathing	<b>Suspected triggers:</b> No known suspected triggers. She had grand malx whilst at rest, work (obedience) and from running so no particular trigger. <b>Medication:</b> She was on Phenytoin and regular blood tests from 2003 when diagnosed, until about 2006 when no more fits. Drug free for 3 years. Then started petit malx again and put on low dose of Phenytoin which controlled fits. <b>Details:</b> She then developed cancer. She was treated at approx. 18 months. Did not thrash through fits but went completely rigid and tremored. Lasted about 3-4 minutes, then with cooing came round and had a cold drink to bring her temperature down, then back to normal. Had Diazepam to administer rectally if did not come out of fit but never had to use it. In total probably had about 6 grand malx and several petit malx which were not too noticeable. Thought at first to have heatstroke, then due to raised calcium levels thought to be a problem with parathyroid gland. Believe other puppies sired by Detania Summeram to have developed arthritis had been removed from stud when found.	OWNER

28/02/2022		Trickster of Mischief - Loki	K150380	N/A	Collie Cross - UK KC Activity Register	30-Dec-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	MRI Brain scan and CSF tap	NO	5 years. Medication induced severe pancreatitis.	<b>Suspected triggers:</b> We had no clue as to his triggers. We eliminated certain foods, he still fited so re-introduced them. We didn't think it was food related, although he was raw fed from diagnosis. He was chemically castrated 6 months before fits started. 3 months after chemical castration we had him surgically castrated. We wonder if that had an impact on the start of his seizures, or not. <b>Medication:</b> Initially started on Levetiracetam 250mg TDS. Seizures increased so drug was increased to 500mg. Christmas Day 2017 he suffered 4 seizures within 12 hours, instructed by specialist to load dose him over 5 days and meds increased to 750mg TDS. By June 2018 we had to introduce Pheno. This was increased at least twice. 2019 he started on Potassium Bromide. It made him extremely unstable, we had to use one of the HELP Them up harnesses to help him get up as sometimes he couldn't manage. On a vet visit with one of our other dogs my vet cried when she saw how uncoordinated he was, even though we had told his neurologist. She immediately got on to them and they reduced the drug. He did improve but still had little issues at times, unfortunately I don't know the size or date, even though we had mum. However, I cracked my brains this morning and remembered that we got him from Barn Farm Border Collies in Stafford (or near there) and the chaps name was Ed (Edward). One thing we did do with Loki (our epileptic) was enroll him and his bestie (my wife's boy Darcy) onto the PVC's OASIS study. They went for the day taking part in different trials and having fun and sample taken. This was pre Potassium Bromide. <b>Details:</b> We wondered if weather pressure changes can set seizures off as well, maybe environmental things. We had overhead electricity cables where we live but who knows. Castrated, seizures started 3 months after this.	DATA TRANSFER & UPDATE BY OWNER

Vet said it's probably idiopathic epilepsy.	YES	N/A	<b>Suspected triggers:</b> No suspected triggers. No accidents or illness prior to the fits. When only has had puppy vaccinations and I do not use chemical treatments on her. <b>Medication:</b> Since the fits she has been on ACT and has not had a seizure since. <b>Details:</b> When has been raw fed since a puppy. She had a lap spay after her third session at the age of two. She is a fit healthy dog and has never had any accidents or illness prior to the two fits. When has her first fit on Saturday 5th November 2020 at 6.45am. I heard a knocking downstairs and found her collapsed having a generalised seizure which lasted under one minute. She made paddling movements, drooled/frothed and urinated. She came round quickly, being wobbly for 2-3 minutes. After that she was back to normal with nothing had happened. Her second fit was on Monday 14th December at 2.30am. She had got up in the night wanting to go outside. This is not unusual for her as she often gets up at this time to go toilet. As I opened the patio door she collapsed to the left and started fitting. Exactly the same as the time before. Quick recovery and within a few minutes she ran back upstairs back to bed and went to sleep.	OWNER
29/11/2019		Wydensend Maurice Traveller	Not known	Not known	WSD	09-Dec-90	UK	Dog	Monkfield Minstral JW	SH CH Melodor Flint at Dylebar	SH CH Wetherway Janita of Monkfield (ISDS 123211)	Caristan Charisma	SH CH Caristan Captain (ISDS 160585)	Rossace Joanna of Mobeila	8 months	YES	Vet confirmed as Epilepsy	NO	1 year 7 months. Euthanised in July 1992 when fit frequency increased to less than 1 week between clusters and the drug was affecting his liver. He personally also changed and he lost the ability to remember simple commands.	<b>Suspected triggers:</b> Not noted. <b>Medication:</b> Initially Valium and Phenobarbitone. Then Potassium Bromide and Epilin added after specialist advice. Doses systematically increased which increased the space between fits but did not reduce the intensity when the cluster fits happened. These required large doses of 10mg Valium and Phenobarbitone for 12 hours. IV Dexamethasone was given the following day and subsequently the next 2 days. <b>Details:</b> No changes made to diet. First few were single fits then every fit was a cluster fit. Response to increased medication doses was to increase the time between fits. There were no fits between Feb and June 1992 then the intensity got progressively worse. Neutered on Vets advice, but made no impact on fits.	DATA TRANSFER FROM LYN NORFON Added 11.09.13
