No fits since 7 years old on medication. UPDATE ADDED 04/08/2020 - Andrate of Robate was euthanised on 05/08/2020 for reasons unrelated to epilepsy.	OWNER Updated 31.08.20
29-11-2019		Ansfields Touch Of Clan-Ti	N/A	294032	BC - ISDS	26-Sep-07	UK	Dog	Paddy Gwynon (ISDS 280634)	Glen (ISDS 244809)	Bess (ISDS 242897)	Kelly Gwynon (ISDS 286252)	Lad (ISDS 231344)	Jess (ISDS 244950)	4 years	YES	Vet confirmed as Epilepsy	NO	4 years old. Died after choking on his own vomit	Suspected triggers: None noted. Medication: None noted. Details: The fits started completely out of the blue just as he was approaching his 4th birthday. He had one fit in the early hours of the morning, checks were done at local vets and they couldn't agree what had caused it, a week later another fit followed by his body starting to shut down, laboured breathing and no energy. Taken to Potters Bar vets hospital, kept in for a week, one small fit whilst he was there, they said suspected onset epilepsy, bought him home as they said he might not fit again. He had been home from Potters Bar for 2 weeks with no fits. Then had a major fit in his crate whilst we were out and died after choking on his own vomit. Roughly 8 weeks after his first fit. He was neutered at least two years before the fits started.	DATA TRANSFER FROM LYNN NORTON Added 29.05.14

30-11-2021	31-05-2023	Bailee	N/A	N/A	Unregistered - UK	07-Apr-16	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	By vet after second fit	NO	N/A	Suspected triggers: Reaction to spot on flea treatment very negative - but not quite a fit. I can't identify a particular trigger as fits are now very regular, every five weeks. They seem cumulative rather than a reaction to any external influence, as far as I can see. The first fit came soon after puppy vaccinations, but may be a coincidence. Medication: Libromide 650mg, Epiphen 240mg, Diazepam 10 mg, Hepato support. Details: Heured, Tricelour. Very very active dog with more stamina than in most collies, and very intelligent. Food taste changes dramatically after a fit, will not eat meat and after a seizure vomits from being eating to eating very little. After a fit he is not good in the house and seems depressed, but outside he exercises generally normally. UPDATE 31/05/2023 - Bailee born 2016 died of traumatic seizures on 14 May 2023.	OWNER Updated 31.05.23

31-05-2022		Bailey	N/A	N/A	Unregistered - UK	23-Jan-10	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	5 years	YES	Confirmed at RVC with MRI	YES	N/A	Suspected triggers: No triggers provided. Medication: 1 x 400mg Phenon, 4 x 60mg Soliphen, 2 x 500mg Levitracetam. When we first introduced Phenobarbital (subsequently Epiphen, now Soliphen), he was very wobbly on his feet. Details: Bailey is neutered and was having seizures every seven weeks but we have up'd his medication and currently he has been 11 weeks without one. Normally he has on average three grand mal seizures.	OWNER
31-10-2022		Bailey	N/A	N/A	Unregistered - UK	29-May-17	UK	Dog	Unknown Border Collie	Unknown	Unknown	Unknown	Unknown	Unknown	5 years	YES	Confirmed after 2 seizures within 24 hours. Bloods normal.	YES	N/A	Suspected triggers: No suspected triggers. Medication: Phenobarbital, recently started. Details: Neutered at 7 months old.	OWNER
31-01-2021		Bailey Lyness	N/A	N/A	Unregistered - UK	02-Oct-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Glasgow Vet School and Hospital	YES	N/A	Suspected triggers: Have not been able to confirm a reason so far. Medication: Epiphen 120mg twice daily, Libromide 1.5 tablets a.m. and 1 tablet p.m., Zonergam 100mg twice daily, Kepra 500mg 2 tablets 3 times a day after each cluster fit for 7 days, Orestin 120mg tablets twice daily, 10mg CBD capsule at night. Details: Bailey is neutered and he has fits every 3 to 4 weeks generally although at the moment they are weekly. He has generally 3 cluster fits at a time that last 2 to 3 minutes but yesterday he had 7 fits over a 6 hour period. It is so stressful as it is hard to keep Bailey quiet after the fits as it takes him around an hour to come round and see properly as well as regain his balance. We have bought a child's playpen to keep him in so as he can't get out and hurt himself as the dog pens he was able to escape from. Typically Collie.	OWNER

31-08-2022		Ben	N/A	N/A	Unregistered - UK	29-Dec-19	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 10 months	YES	Cluster fits, went straight onto medication. Weaned him off meds but immediately had seizure. Now on meds.	YES	N/A	Suspected triggers: Heat, over stimulation. Suspect food and flea treatment also triggers. Medication: Epiphen and Keppra. Also just started MCT oil and CBD oil. Details: 1-2 week frequently at the moment.	OWNER
31-12-2023		Beppe	N/A	N/A	Unregistered - UK	17-Feb-23	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 6 months	YES	At vet, by seeing a video of seizure.	YES	N/A	Suspected Triggers: Chicken? Medication: Epiphen and Libromed. Details: First seizure in August. Frequency differs from 2 to 5 weeks. Clusters, usually groups of 7-12, longest lasting 2 minutes, shortest a couple seconds. Castrated.	OWNER
31-12-2023		Bernie	N/A	N/A	Unregistered - UK	14-Sep-21	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	Bernie was diagnosed with epilepsy by specialist neurology vet after having 12 seizures in 24 hours that required IV phenobarbital to control.	YES	N/A	Suspected Triggers: Cat flea and wormer treatment is possible trigger Medication: Bernie was put on 50mg Epiphen, twice daily and went almost one year seizure free. Seizures began again and we tried pulse therapy with Levetiracetam 3 times but every time we stopped his seizures began again so he was put on 500mg Levetiracetam three times daily and MCT oil. After 4 cluster seizures Epiphen has now been increased to 170mg twice daily. Diazepam is used to stop generalised seizures. Details: Focal seizures (catching flies) last around 30 seconds. Generalised seizures lasting over 1 minute we give Diazepam and this stops seizure within another minute or so but they do seem to be becoming worse. He is neutered.	owner
29-11-2019		Bertie	Not known	N/A	Unregistered - UK	14-Feb-11	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 months	YES	Vet confirmed as Epilepsy	Not known	Not known	Suspected triggers: Fits began after being treated with worming tablet Milbemax Medication: None. Details: He has been fed various brands and homemade. No change of food has been given. Approx 2 monthly for 1st year, then 3 to 4 monthly for 2nd year. Has now not fitted for 6 months. So becoming less regular. Neutered, no change in fits.	DATA TRANSFER FROM LYN NORTON Added 23.03.14
31-10-2023		Beverton Kip Ziggy - Ziggy	N/A	00/375950	BC - ISDS	28-Dec-20	UK	Dog	Beverton Mileburne Flash (ISDS 00/366295)	Beverton Butch (ISDS 00/335800)	Beverton Belle (ISDS 00/347923)	Jo (ISDS 00/356609)	Tweeddale Jamie (ISDS 00/332882)	Pippa (ISDS 00/318165)	2 years 3 months	YES	He first had a focal seizure March 2023 then full seizure in August and September 2023. Blood test normal, epilepsy diagnosed by vet.	YES	N/A	Suspected triggers: Not sure if this was a trigger but seems very strange. Ziggy's first vaccinations were the L2 but in March 2023 at 2 years the vets changed to the L4. He had his booster on the 8th March 2023 then a week later had a focal seizure. He went for his second booster the septo two weeks later then had a head shake. Nothing then till August then he had a full seizure on the 16th, he then had blood test and all normal. But then the 10th September 2023 he had 1 seizure, then 3 on the 11th September. We then went to the vets and he was diagnosed with epilepsy. Medication: Neigard each month and annual booster L4 given with above results. Now on Epiphen twice a day 60mg and he's been all clear since. Details: Neutered at 15 months. Focal seizure like fly snapping. Paddling seizures lasted up to 4 mins. I can't be sure but think it was down to the vaccine or Neigard. But I suppose I'll never know. He's doing really well now finger crossed. But I'm still heartbroken for him.	OWNER
19-07-2019		Bewitched Over Pendle - Zara	K136807	N/A	WSD - UK KC Activity Register	25-Dec-10	UK	Bitch	Unknown	Unknown	Unknown	Jess (ISDS no. not known)	Unknown	Unknown	6 years	YES	While in emergency vets, while in epileptic status	NO		6 years 2 months. Went downhill very quickly after another emergency admission to vet on Thursday 9th March 2017, collected her Friday evening seemed her normal self but not long after we arrived home she had another fit, spoke to vet who advised 3 days of Keppra, went rapidly downhill over the weekend to the point Zara seemed like she was in a coma, made the decision on Monday morning 13th March 2017 to PTS my girl any further suffering. Zara was spayed at 12 months. Medication: Sedation at emergency vet for epileptic status on January 5th 2017, then given IV Keppra and IV Phenobarbital. Came home 3 days later and was on Phenobarbital 12 hourly, very quiet and disorientated at first but got better and more her normal self over the following week, told by vet to give Keppra after fits to prevent clusters. Details: Had massive fit lasting 7 minutes. I set timer on my phone when I realised what was happening, this was her first fit to my knowledge, got her to vets within half an hour, seen by vet sent home and was told it was possibly a one off. Booked in for blood tests 2 days later, went into epileptic status same night with a trip to emergency vets, was stabilised and returned home on medication. Small fits occurred every couple of weeks, with 2 lots of clusters, went rapidly downhill after final 2 fits on 10th March 2017, one while still in vets and one at home but never seemed to fully come around from the last. Zara was a local farm bred Collie. I contacted breeder to ask if there was any history of epilepsy within her breeding, wouldn't answer me and then blocked my tel number. Zara was PTS 13th March 2017 to avoid my girl any further suffering. Zara was spayed at 12 months.	OWNER

28-02-2022	31-03-2022	Blessed Borders Sooner or Later - Mia MET.Border Col.159471	N/A	N/A	Non UK Registered (Border Collie)	08-Dec-16	HUNGARY	Bitch	Astra Maveirik (ISDS 00/315184)	Astra Hawk (ISDS 249679)	Astra Kita (ISDS 00/307117)	Blessed Borders Nothing Compares (Hun) (MET.Border Col.3223/13)	Brave Clyde (ISDS 00/299850)	Elite Of Maranis Home (Bel) (MET.Border Col.1113/H/06)	4 years 6 months	YES	She had multiple full-body seizures.	YES	N/A	Suspected triggers: No known triggers, it happened while playing, usually while sleeping. She had another set of seizures 4 months later, no correlation with deworming or other medication. Medication: She is doing well on 45 mg Phenobarbital twice a day. Initial dose was 30 mg, but she started having focal seizures, so we increased it. She seems to be fine on the meds. She is also on Proin 72 mg x 1/day and DGS 1mg pill twice a week. Details: Seizure history - First seizure was 20th July 2021, 2-minute seizure in her sleep. The next day chemistry profile and a CBC test were done, everything was normal. Second seizure was on 10pm on 5th August 2021, she had a 1 minute seizure while playing. Third seizure 3am on 6th August 2021, 2 minute seizure while sleeping. A thorough vet check was done on 6th August 2021, everything was fine. Started her on Phenobarbital. The initial dose was 90 mg x 2/day that was decreased to 45 mg x 2/day two weeks later, and then decreased to 30 mg x2 /day at the beginning of September. Phenobarbital blood level was checked on 5th December 2021, it was 15 µg/ml. Increasing the dosage is under consideration since she is having 1-2 second seizures while playing fetch. She had two more 2 minute seizures in her sleep in January 2022 so meds were increased to 45 mg. Neutered. Ted couldn't walk properly and I couldn't let him run as he was so full of drugs - he didn't really have a connection! It was so dangerous! He stopped playing and between the attacks he only laid around. The last week he had 6 attacks in 4 days, so we had to make the decision to let him go. 2 litter mates also FTS, Breng Tom and Breng Taff.</p>	OWNER

29-11-2019	31/03/2021 & 30/06/2021	Cherikee Dancing Flame	KC0048572	N/A	WSD	06-Dec-96	UK	Bitch	Kai Intrepid (ISDS 195382) TDev	Gen (ISDS 128107)	Beck (ISDS 162199)	Woughstock Watermolph at Cherikee	Mounthill Mischief OW	Woughstock Wydeedeyne OW	2 years	YES	Vet confirmed as Epilepsy	NO	Dog given sleep in May 2000, aged 3.5 years, following cluster fits lasting 48 hours	Details: Fits worsened over a period of time. Breeder of this dog (Josie Blease) is deceased, however Jean Payne, breeder of Woughstocks, has given her blessing to the publication of this information. UPDATE 11/02/2021 - It has been brought to our attention by the owner of Cherikee Rain Dancer (the dog we had named in this entry), that the information does not relate to her dog. Although he is from the same litter, he did not have epilepsy, fits or seizures during his lifetime. We are therefore doing all we can to locate the owner and include the correct registered name of this bitch. UPDATE 30/06/2021 - After carrying out some research we located the owner of this Cherikee bitch and they've sent us an update. Added full registered name of fitting dog, added KC reg no., updated G.Dam ISDS no and updated Dam's registered name. We now believe this entry to be correct. Medication: Jack has Epiphen 1 x 60 mg twice a day and have just started him on Transdome. Details: Vet started Jack on Epiphen did well then had occasional fit, tried higher dose but he was worse so put him back on lower dose. He still has a few fits a year and focal ones. Went from a quiet dog to being very noisy. Not medicated. His fits are a few mins, he takes a while to come round. Last one last year, he could not see and panicked, he took a while to recover.	OWNER
29-10-2019		Choystean Wyken Pippin - Murphy	AS0067402	N/A	BC - UK KC Pedigree	24-Jan-15	UK	Dog	Jacksrofer Silverbrich Over Choystean	SH CH Littlethorn Galaxy	Jacksrofer Greatgen Be My Girl	Sarkam Life Imitation In Choystean	Terannos Final Demand	Sarkam Destiny's Dream	2 years 2 months	YES	Referred to Willows at Solihull who examined & did an MRI scan	YES	N/A	Suspected triggers: No reason for fitting as far as I am aware. Medication: Initially Levetiracetam 3 times a day but as it did not control the fits Epiphen was included twice a day. Details: Full blown fit at lunchtime by my feet. Went on for a minute from which he got up and walked slightly wobbly into the garden. Up until then perfectly healthy, happy young dog. Fed on Millies kibbles. Seizures are now under control. He was castrated at almost 3 yrs old but prior to that he was chemically castrated twice. He is currently well controlled on meds.	OWNER
31-07-2022		Cilla	N/A	N/A	Unregistered - UK	06-Jun-15	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	6 years	YES	The vet told me she likely has epilepsy after she ran tests.	YES	N/A	Suspected triggers: She eats a lot when on walks and I think certain things trigger her. I muzzle her on walks now. Medication: Not on meds. Details: Had two in the same day then went 5 months before she had a single one. Fits don't last long but she's very disoriented after.	OWNER
28-02-2021		Cloudy	N/A	N/A	Unregistered - UK	28-Aug-16	UK	Dog	Unknown	Unknown	Unknown	Misty	Unknown	Unknown	1 year 7 months	YES		YES	N/A	Suspected triggers: He definitely has epilepsy but the condition could have been triggered, or exacerbated, by the original liver problem. Medication: Cloudy responds very successfully to a regimen of KB (Lidormide), Levetiracetam (Keppra) and Phenobarbital (Epiphen) and has almost no fitting, with the occasional 'petit mal' seizures. He has very occasional full tonic-clonic seizures when his medication has been compromised e.g. missed dose or after activated charcoal treatment for ingestion of toxins. Details: Has epilepsy and liver shunt. He started fitting regularly at 18 months in February 2018 and responded well to Phenobarbital. Went into status in May, probably due to hepatic encephalopathy. Routine blood analysis showed a liver anomaly and it was found he had a hepatic shunt after scanning. Surgery was carried out in June with 100% success, but the fitting continued. He is still taking regular medication at 4+ years of age with occasional recurrence of fitting especially if medication is compromised, even though his liver is perfectly healthy and functioning. No indication of food relating to seizures but he is now on a hepatic diet due to the shunt.	DATA TRANSFER & UPDATE BY OWNER
22-12-2019		Clover	N/A	N/A	Unregistered - UK	10-Jun-07	UK	Bitch	Unknown	Unknown	Unknown	Nell	Unknown	Unknown	10 years	YES	Only by tests ruling out other possible causes	YES	N/A	Suspected triggers: Seems to be an association with worming. Last fit the morning after treatment with Milpro. Details: Fits are infrequent. Three or four over a year. ALWAYS within a narrow time slot 7.30am to 8am. Not sure if this is to do with length of time since feeding or hormonal fluctuation. I have disconnected all routine medication. Clover is spayed and in excellent health generally. She has had about 10 fits in total. Approx 2 to 3 mins duration. Her mother had no history of fits though she died relatively young of oral cancer.	OWNER

19-07-2019		Del o'Inquint - Del	Stud book no. 0208CB	175755	BC - Dual Registered UK KC & ISDS	14-Jun-88	UK	Bitch	Craig (ISDS 1213701)	Spot (ISDS 82060)	Jill (ISDS 84277)	Gem (ISDS 123238)	Spot (ISDS 91062)	Shias (ISDS 115444)	3 years	NO	N/A	NO	Death was unrelated to fits. Lived until she was 14 years	Suspected triggers: None provided. Medication: Del was never given any medications as my vet thought they would cause more damage than the fits themselves. Details: Del used to fit every 6 months, 3 fits and then none for next approximately 6 months. This continued until I moved, then she stopped. Full bloods were done annually until towards the end of her life, there were no abnormalities thrown up. I moved when she was approximately 11. Once I moved there were no more fits. Spayed.	OWNER
31-05-2020		Delanor Pinball Wizard - Whiz	AJ03743806	N/A	BC - UK KC Pedigree	22-Jun-08	UK	Dog	AD CH Forbyor Turbo Diesel!	Woodsurrel Red Wine	Tri Fly	Delanor Waggit A Lot	Rosmarinus The Werrymen	Delanor Kirri	5 years	YES	Various consultations and investigations with vet. Blood tests etc for other causes (nothing found). No scan was done.	NO	Who died in status when he was 7 years, 3 months. He started fitting early morning on Sept 19th 2015. He did not come out of the fit as he usually did and we were unable to stop it. After speaking to the emergency vet we managed to carry him to the car. Sadly he died on the way to the vets	Suspected triggers: None known. I spent two years looking for triggers and did wonder if swimming in the sea was a trigger for Whiz (aah ???) but the day he died he hadn't been to the sea for two weeks. Medication: He was on Epiphen 30mg twice a day. This had kept him relatively stable until the last day. Details: Whiz was neutered at 15 months. I do not believe this had any effect as he did not start fitting until he was five. He had cluster fits, usually two or three lasting less than a minute with about an hour between. He only had five groups of fits over an eighteen month period. He was, however, hospitalised overnight in July 2015 when he fitted six times over five hours. The vets gave him rectal valium.	OWNER
31-01-2024		Denwyn Dazle - Dazle	K168385	N/A	Collie Cross - UK KC Activity Register	02-Apr-20	UK	Dog	Ben working Bearded Collie	Bruno working Bearded Collie	Sky working Bearded Collie	Denwyn Brownie (ISDS 274232)	Zac (ISDS 263935)	Mag of Denwyn (ISDS 298148)	1 year	YES	MRI and tests at North West Veterinary specialists. Diagnosed as idiopathic Epilepsy.	NO	Died at 3 years of age. Started to cluster, with grand mal seizures, and despite all his medications, the seizures could not be stopped	Suspected triggers: No triggers. Medication: He was on Epiphen, Potassium Bromide, Keppra and also Diazepam, but he was refractory and the drugs just gave him mobility issues but failed to control his epilepsy. Details: At first his fits were in early hours of the morning but at the end there was no pattern and hardly any seizures free days. Not neutered.	OWNER
31-10-2023		Derek	N/A	N/A	Unregistered - UK	14-Apr-18	UK	Dog	Brodie	Unknown	Unknown	Lass	Unknown	Unknown	5 years	YES	I kept a diary of dates and how Derek behaved, vet diagnosed epilepsy from this	YES	N/A	Suspected triggers: All have happened after late night run around apart from the last one which was first thing in the morning, so possibly exercised? Medication: Derek was prescribed Pexson yesterday 20/02/24, so too early to notice changes. Details: Neutered. He has had 5 fits since 3rd July 2023, all have lasted less than 2 minutes.	OWNER
29-11-2019		Detania Glistening Pride	Not known	Not known	BC	29-Jun-97	UK	Bitch	Detania Cosworth	Detania Singing The Blues	Detania Keira	Detania Faith Moves	Detania Araz (ISDS 162879)	Detania Lady Luckey	4 to 5 years old	Not known	Not known	NO	10 ¹¹ years old. Megan actually contracted Bone Cancer in her shoulder which sadly ended her life.	Suspected triggers: None known. Details: She started having epilepsy at around the age of 4 or 5 I think, with one fit which lasted probably less than a minute. They never actually lasted more than a minute I would guess, just some a long time at the time. They gradually increased until about 18 months - 2 years, months later when she had 5 in one day, the vets then put her on medication - Phenobarb? I believe. This stopped the fits until the dosage needed correcting. Megan had to have regular check ups every 6 months (I think) and the medication did gradually increase. That's about all the information I can give you I'm afraid - hope it helps in some way.	DATA TRANSFER FROM LYNN NORTON Added 25.07.14

CT and Spinal Tap clear.	NO	We were not able to manage Dexter's epilepsy. He had severe fits every single day regardless of all the medications he was getting. We had to relieve him from the suffering.	Suspected triggers: Excitement. Medication: 3x 500mg Keppra, 2x 75mg Pheno, 2x half Paxlon. Thirst, ataxia, behavioural change, drowsiness noticed. Details: Had Suplelorin implant Aug 2021.	OWNER
19-07-2019		Dezaya Black Friday - Ezra	AJW00320007	N/A	BC - UK KC Pedigree	23-Nov-18	UK	Bitch	Blackharts Royal Desire	My Royal Rascal (ISDS 274990)	Just Be Truly Ace	Say Aye To A Killie Tri	Siela Demolition	High Hopes Silva	7 th months	NO	I did not have an autopsy. She died during her first fit. It was a very, very bad strong cluster fit. She never stood a chance	NO	A cluster fit caused her death at 7 th months	Suspected triggers: None known. Medication: N/A Details: Was her first fit. Nothing out of the ordinary occurred. She went in a 6 cycle long cluster. Each fit was very strong and would re-let 1 second after stopping. She only stopped when she died. Her sister fitted at 8 weeks after vaccines, is on medication.	OWNER
29-11-2019		Destle	Not known	N/A	Collie Cross	11-Jun-05	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	Fitting began possibly from 1 year old, but fitting proper began aged 4 years	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: 30mg Epiphen & 15mg Phenobarbital. Details: Fits have become a month apart & the seizures became worse & fits became rigid, loss of bladder control & more erratically active. Spayed.	DATA TRANSFER FROM LYNN NORTON Added 27.02.13
29-02-2020		Diesel	N/A	N/A	Unregistered - UK	27-Dec-18	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 months	YES	He has been diagnosed as having cluster seizures, fairly severe. He was taken to Liverpool for an MRI that ruled out brain tumours.	YES	N/A	Suspected triggers: We haven't been able to work out triggers, he clustered 7-10 times a day for about 8 weeks. During this time we couldn't find no reasons for it. Medication: He was put on low doses of Keppra, he is now on 3 doses a day and seems to have stabilised. Never had to use the emergency drugs. Details: He is intact. Had 7-10 focal seizures a day, not full blown shaking. Spaces out, can't be bled, comes round, is not really aware after 15 seconds.	OWNER
31-07-2022		Dio	N/A	N/A	Non UK Crossbreed	26-Jan-18	CANADA	Dog	Border Collie/ Great Pyreness mix	Unknown	Unknown	Border Collie	Unknown	Unknown	1 year 1 month	YES	Idiopathic epilepsy, through ruling out other causes. No advanced imaging done.	YES	N/A	Suspected triggers: Started having seizure just a week after yearly shots. No known food triggers. Too much activity seems to be a trigger. Medication: Phenobarbital - 3 years, Potassium bromide - 2.5 years, Keppra - 2 years, just started Zonisamide. Details: When fits started they were every 3 weeks. Work up to every 3 days by the second year. Then by the 3rd yr we got them to once every 10-14 days. Just this spring we finally got him to do a one month stretch, followed by a month and a half stretch. Normally has cluster grand mal seizures lasting a few minutes. Normally three fits in 24 hours recovers 1-2 hours after each fit. Last seizures were the 27th of June. 15 grand mal seizures in 2 hours and continued for the next two days until we could get home from out of town to a vet. With emergency care he has regained alertness and awareness but can not sit, walk or stand still. Neutered.	OWNER
21-08-2019		Django	N/A	N/A	Unregistered - UK	15-Feb-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 6 months	YES	Vet	YES	N/A	Suspected triggers: Does not set off by triggers. He is one of the VNG dogs of Langford vet hospital Bristol. Medication: Epiphen, Liramide, Levetiracetam (Keppra), Diazepam, Sello gel, Hepaticare. Details: Neutered. Length between clusters always varies. He is a rescue dog from RSPCA. Spayed so his test results are unknown unfortunately.	OWNER

28-02-2021		Easterdale's Fleet O'Foot	K134734	N/A	WSD - UK KC Activity Register	07-Jan-10	UK	Dog	Easterdale's Prince Rory	Rock	Kim	Just the Tonic	Robbie	Tess	3 years 9 months	YES	Diagnosed by my vets and confirmed by specialist	NO	Age 8 years 4 months. Flew was pgs on 30 May 2018 following several hours of continuous fitting	Suspected triggers: None mentioned Medication: Started on Pexion December 2015 with Diazepam when needed. Changed to Libromide, with Keppra when needed and Diazepam for immediate treatment of fits. Details: First fit at 3yrs 9 mths at 4am, grand mal. 9 fits over next 2 years, very short, all grand mal, all around 4am. On no medication then. In December 2015 a severe fit lasting 5 minutes and put on Pexion. 3 further fits and dose increased in August 2016 as last fit was 6 mins and required Diazepam. Severity seemed to increase but frequency varied from 4 weeks to 9 months. Then fleet's fits sadly increased in frequency and severity and he eventually began to cluster fit. His meds were changed, but things continued to decline. He saw a specialist who advised the meds he was on were what he would recommend but to try changing the timing of meds. His fits continued to lengthen and he had several emergency trips to the vet in the middle of the night, when Diazepam did not bring him out. At the end he was fitting during the day as well as at night-time and the fits were taking a terrible toll on him. He was pgs in my house following a night of almost continuous cluster fitting. Neutered at 12 months, well before fits started. On cereal free Salmon and Potato mix. Fit did not seem to be a factor.	DATA TRANSFER & UPDATE BY OWNER

YES	N/A	Suspected triggers: Only trigger we have found and confirmed is hunger vomiting. Medication: Phenobarbital, but was stopped due to potential damage on kidneys. Details: Seizures are usually between 20-40 seconds, the shorter the seizure the longer the recovery. Our recent seizure was just under 20 seconds and the recovery was around an hour. Not spayed.	OWNER
31-03-2021		Elan-Vannin Millie	A50902157	00/312956	BC - Dual Registered UK KC & ISDS	18-May-14	UK	Bitch	Elan-Vannin Kirk (SDS 00/311443)	Joe	Breeze	Elan-Vannin Mla (SDS 00/314110)	Spot	Bloss	2 years	YES	Bloods, head scans etc all normal but clinical diagnosis based on the episodes seemingly brought on by touch, was one of a rare type of seizure / rage syndrome.	NO	Age 4. Due to the escalating frequency and intensity of the episodes which were very distressing for her and us, we sadly despite trying all we could, had her PTS	Suspected triggers: Millie was a very loving girl who used to lay for hours next to me having cuddles and nuzzle into me so it is all the harder to explain. Every six weeks a sudden explosive episode of rage with no warning. We didn't understand at first but there became a pattern to it and so the 2 year journey of trying to manage her seizures safely began. Before an episode she became increasingly sensitive to light and noise, afterwards she would hide and sleep it off. Medication: Pexion to start then stopped. Followed by a combination of Epaphan and Keppra. Prazo was also tried but made no difference so was stopped. We tried all different types of epilepsy medicine. Details: Frequency was from about every 6 weeks until Christmas 2017 when she started clustering. After the initial settling of the cluster episode the following seizures were more frequent with no pattern and each one was for a longer period of time. Food was not a trigger although to alleviate as much non natural things in her diet as possible, we changed her to a raw diet and although it did not help her seizures, she did very well on it. Millie was neutered but it made no difference, she was spayed before the onset of the seizures. Due to the severity and type of seizures Millie had, we could no longer manage her safely. Just to say that Millie would come to us probably feeling unwell for a cuddle and it was always as we would touch her that the seizure would happen. She would usually have been asleep beforehand. Never happened at play or with strong touch/rough cuddles: only ever gentle strokes, episodes lasted 5 seconds but nearer the end more like 10 seconds and we just couldn't manage her safely and the most traumatic thing was we could no longer cuddle her as she or we would have wanted the seizures along with disc degeneration was also aging her rapidly took, so the heart breaking decision was made to say goodbye. It was truly a traumatic journey for and with her.	DATA TRANSFER & UPDATE BY OWNER 31.03.21

31-08-2022		Evy		N/A	Non UK Unregistered (Border Collie)	24-Apr-19	NETHERLANDS	Bitch	Maison	Unknown	Unknown	Noa	Unknown	Unknown	2 years 6 months	YES	Epilepsy was diagnosed based on my observations.	YES	N/A	Suspected triggers: Evy suffers from primary epilepsy, no triggers. Medication: 150 mg of Phenoral a day in case of fits in the next 6 weeks Potassium Bromide will be added. During fits we give 10 mg of Diazepam rectally. Details: Evy is spayed. She suffers from clustering epilepsy. Usually her fits start in the morning and she'll have 4-6 fits within the first 1.5 hours. We give Diazepam during the first or second fit. After that it stays calm all day and there is a big chance she has another fit about 12 - 14 hours later. We give another dose of Diazepam when that happens. Fits don't usually last long, 1.5 minute tops. They follow each other up very quickly so we need to be on top of things immediately. The current frequency between days is 5 - 7 weeks. We're hoping to bring that up to 12 weeks. Evy comes from an unofficial breeder. This woman just wanted to have a nest of puppies once. There is no family tree available. Both parents are carriers of the SN gene. 2 pups from the nest suffered the illness and died before their first birthday. Evy is a rescue pup.	OWNER

30-09-2022		Fflur Pwd Bach	N/A	N/A	Unregistered - UK	15-Jan-22	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	10 weeks	YES	Via the vet as idiopathic Epilepsy.	YES	N/A	Suspected triggers: She had had her initial vaccinations and worming before we bought her. No triggers but she does the head wobble over ball and also when she is falling asleep. We have not used any chemicals in worming or flea protection. Medication: No medication prescribed as yet as it doesn't bother her but we are monitoring her and keeping constant contact with the vet. Also have a diary. Details: Fflur has just started her first season and she will be spayed to prevent pups in due course. She is presently going through about 8 head twitches a day but I believe she had an actual fit last night as she was incontinent. I have informed the breeder of Fflur's epilepsy diagnosis and asked that he not breed from that line in future. He is a farmer local to me and we are a tight Welsh community so I have also informed the community.	OWNER

YES	N/A	Suspected triggers: Heat, Anxiety Medication: Soliphen 50mg 2x day (increased from 60 mg after last fit. Rectal Diazepam also prescribed if fit is bad. Details: He has been castrated and is fully vaccinated. The fits have occurred only 3 times, they are a series of 3-4 intensive fits lasting less than a minute each. He is otherwise affectionate. Afraid of cars. He was 18 months old when we took ownership (Feb 22). Previous owners had returned him to breeder. Breeder did not pass on their details to us. Breeder has been contacted since diagnosis and has refused to take him back. We will email you copy of five generation KC certificate.	OWNER
30-04-2022		Gigha	N/A	N/A	Unregistered - UK	08-Jan-16	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	By taking her to the vet repeatedly and eventually taking her to different vets for alternative opinions as our first vet advised us to euthanise her. It came after a year of increasingly regular fits during which Gigha was anxious and this led to her driven aggressive behaviour. It took reaching this climax for her to be diagnosed.	YES	N/A	Suspected triggers: We are unsure of triggers. Medication: Epilphen, her dosage has been changed three times since she was first prescribed. Its changed her life, she is a happy energetic collie now. Details: She still has a fit once a year or so and the build up to it is still noticeable but the Epilphen has made a huge difference. She has her bloods checked regularly at the vets. Fit lengths vary, they are on average 5+ mins long.	OWNER
31-03-2024		Ginger	N/A	N/A	Non UK	18-Oct-23	SOUTH AFRICA	Dog	Rex	Unknown	Dorothy	Unknown	Unknown	Unknown	1 Year 1 month	NO	N/A	YES	N/A	Suspected triggers: Unsure. Happens when he is asleep. Medication: Phenobarbital 1.5 tabs morning and 1 tab evening. Had a minor seizure 10 days after starting treatment. Had blood tests 2 weeks after starting treatment and levels were 70 (lower end of therapeutic dose). Vet chose to keep treatment as is. 3 days later had 8 seizures over 30 minutes and was rushed to hospital. They have now upped pheno to 2 tabs morning and night and added higher dose of Potassium Bromide. He is in an induced coma as he continues to have seizures when they wake him up (24/03/2024). Details: The seizure first occurred on 8 Feb 2024. While he was awake in the back of the car going to the park. We didn't realise it was a seizure at the time and thought he had caught his collar. It next occurred 21st Feb just 1 seizure lasted about a minute whilst he was asleep around 2am. We were awaiting a vet appointment and he then had 3 seizures from 2:30am to 3am then rushed him to the emergency vet. He was admitted and put on Pheno. Then seizure free for 10 days. Then had 1 minor seizure. Vet did blood 14 days after starting treatment and kept dose as is. 3 days later at 2am he had a major series of seizures of 8 with no recovery in between for around 30 minutes. He was rushed to the vet while in this state and they gave him Valium but he continued to seizure at the hospital. They added Potassium Bromide at max dose and upped Pheno to 2 tabs twice a day. He continued to have seizures and they put him on a propofol drip. When they tried to wake him he had 3 more seizures so he is in an induced coma until the specialists can conduct an MRI tomorrow (24/03/2024). He is neutered.	OWNER
30-11-2022		Gizmo	N/A	N/A	Unregistered - UK	22-Nov-21	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	9 months	YES	Gizmo had blood tests, MRI scans, urine tests etc to rule out other causes, vet diagnosed Idiopathic Epilepsy.	YES	N/A	Suspected triggers: Not sure. Medication: Gizmo is on Phenobarbital medication. Not had any other episodes but only had 2 before medication started. Details: The episodes Gizmo had weren't your typical fitting. He was acting very strange almost scared like, covering / hiding away. Shaking, drooling and was like that for a few hours, then it happened again the day after.	OWNER
19-07-2019		Glenella Jack - Captain Jack Sparrow	N/A	296035	BC - ISDS	21-Apr-08	UK	Dog	Kilcreen Fox (ISDS 2761619)	INT SUP CH CRAIG (ISDS 249897)	Kilcreen Midge (ISDS 262307)	Nelle (ISDS 283447)	Ben Of Killibrae (ISDS 220939)	Molly (ISDS 268821)	12 months	YES	Sparrow's idiopathic epilepsy was diagnosed following a full work up at the AHT Neumasters, including spinal tap, full U&Es, FBC, CT Scan, Acid bile test	NO	3 years old. Cluster seizure/status epilepticus	Suspected triggers: No triggers. Full investigations completed at AHT - other medical/traumatic causes ruled out. Medication: Tried Phenobarbitone, Potassium Bromide, Keppra, plus several other trial drugs. (No positive changes) except Keppra gave us a 'honeymoon period' - made fit to 5 weeks without seizures but then they were back to heavy clusters again, worsening over the 2 years we had with him. Details: Neutered. Cluster seizures lasting several minutes between weekly - 4 weekly approximately. For 2 yrs until we had to let him go.	OWNER
30-09-2021		Glenne Glen	K164560	N/A	WSD - UK KC Activity Register	17-May-16	UK	Dog	Glen (ISDS 00/131103)	INT SUP & WORLD CH Dewi Tweed (ISDS 278783)	Mag (ISDS 257352)	Gwen (ISDS 00/31402)	INT SUP & WORLD CH Roy (ISDS 266414)	Ben (ISDS 00/294932)	5 years	NO	I am very familiar with epilepsy, as I have previously had animals who had grande mal fits, so have no doubt this is what he has. At this stage I don't want to put him thru the trauma MRI testing etc.	YES	N/A	Suspected triggers: 18.07.21 - 5 days prior to 1st seizure he ate mystery substance at fishing lake. 18.7.21 - Following day very lethargic and not eating or drinking. Emergency vet visit required. General anaesthetic given. Oesophagus, trachea etc massively swollen. Vet prescribed a large dose of the steroid Dexamethasone and follow up Priton to alleviate swelling. Almost immediate improvement, but diarrhoea for 4 days. 22.7.21 - On day 5 after consumption of unknown substance, he had a full grande mal type seizure. 24.7.21 - This was repeated approx the same time the following day at 6:30 am when being let out into garden. A time of excitement. Medication: Immediately after the first seizure I gave a drop of CBD Brothers Silver Edition Indica CBD Oil and another drop that night. A single drop was given the following morning immediately before he went outside, but he had another seizure at approx the same time and place and under the same circumstances. I believe because the Silver Oil had not yet been absorbed. I now give CBD Brothers Silver Edition Indica Oil 1 single drop 3x daily. Organic MCT Oil 1 level teaspoon 3x daily. Epilaur Capsules 1 per day with food. Details: He has several small meals during the day now, instead of just one meal in the evening (as before). He is not on restrictive or raw meat diet. So far he has had no further seizures, but it is obviously very early days. He was neutered 1.5 weeks prior to the first seizure. Both grande mal type fits lasted between 10 and 15 seconds. He was unresponsive, but eyes wide open and glazed. He was paddling and foaming at the mouth. He recovered pretty much back to normal within 2 to 3 minutes. I now understand that there is a history of seizures in his lines, his sister sister started fitting at 2.5 years of age, initially under similar circumstances (excitement), but has continued to fit, both while excited and at times of rest and has needed her veterinary meds increased over time.	OWNER
31-07-2022		Graham	N/A	N/A	Collie Cross Unregistered - UK	25-Sep-20	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	11 months	YES	Discussed with Vet	YES	N/A	Suspected triggers: Not found any possible triggers - vet determined as generalised seizures. Medication: On Epilphen initially and then added Libromex as still having seizures frequently but not severe. Details: Currently seizures are about 7-10 days apart and last about 40 seconds max then recovers quite quickly. As well as having a careful diet he is on MCT oil and gelatin powder and CBD oil to help naturally. Graham is a collie/springer cross but don't know if any of his siblings are affected as was not aware of epilepsy in collies when we bought him. He's neutered.	OWNER
29-11-2019		Grenaby Skeelz Gralh	Not known	Not known	BC	15-Sep-11	UK	Dog	Ludgate Red Laser	Woodsorrel Spectre AW	Firelynx Kumarij at Ludgate	Grenaby Editors Choice	Grenaby Tucker	Nunery Kim At Grenaby (ISDS 231219)	1 year 6 months	YES	Vet confirmed as Epilepsy	Not known	Not known	Medication: Nexon 400mg twice daily. Details: Initially fed on skinners kibbles then once the fitting started, a home prepared diet of brown rice, potatoes and vegetables with raw meat (I try and reduce gluten, corn, soy and casen as per the GARD diet). This seemed to help for a while, with improving gaps between fits until last week, when he had several fits and he became critically ill at the weekend with cluster fitting. Fits have changed in frequency. We had got him up to 17 days between fits, and had wanted to try and manage it naturally (without drugs) but that all changed last week as described above and the treatment was necessary to save his life. After we got him, we heard that the dogs (not the bitchies) in the previous litter had all started to fit. So we opted for an early castration at 5 months. We are very lucky that he is still with us, but it was devastating to see him so poorly. He was in intensive care for 3 days and has been home for 3 days now, improving visibly by the hour. If it can provide you with any additional information, please do not hesitate to shout.	DATA TRANSFER FROM LYNN NOTION ADDED 11.09.13

Scotch (ABC 338096)	4 years 6 months	YES	All tests came back normal. MRI, spinal tap, and bloodwork all normal. The neurologist diagnosed her with idiopathic epilepsy	YES	N/A	<p>Suspected triggers: Unsure of any triggers.</p> <p>Medication: She was just put on Zonisamide 100mg in the am and 50mg in the pm. Details: She has had 4 grand mal seizures at night only. They started in Jan 2020 at 3 months apart, then once they got to a month apart, the neurologist put her on medication. She convulses, foams at mouth, eyes roll back, she loses consciousness and I am not able to snap her out of it. She used to run around the room right before she started seizing, but after doing this twice, I started crating her at night in a soft crate. Her seizures last a little over a minute, and she takes on average 3 minutes before she is completely conscious. She gets monthly chiropractic and acupuncture. I got a wellness check swab with fur sample done and it gave me a list of foods she is sensitive to. I have created her home cooked meals ensuring she only eats foods that she should. I have added MCT oil, B complex vitamins, omega3 and do a monthly liver cleanse.</p>	OWNER
29-11-2019	31-03-2020	Gwynfar Marc My Words	Not known	Not known	BC - UK KC Pedigree	19-Dec-11	UK	Dog	Wildblue It's The Business	AM CH Kybota Wildblue Rhythm	Wildblue Eternal Dream	Trevellis She's A Gem at Gwynfar	Altricia Shadye Blue	Dentelle of Sunlosh Valley	2 years 2 months	YES	Yet confirmed as Epilepsy	NO	3 years 5 months. He had another severe seizure during the night which left him paralysed from the shoulders. We then made the decision that he should be put, 1st Jan 2015	<p>Medication: Initially Phenytoin, after 6 weeks Libromide was added. This combination was satisfactory for a while but then fits resumed, if anything worse than previously, he then had Epiphen and also Diazepam.</p> <p>Details: Neutered after onset of fits. From the outset his fits were severe and caused significant memory loss and required a lot of restraining etc. We had a honeymoon period when we thought that the medication was going to control the seizures but when they resumed each time he had one it was severe and the recuperation period took longer. He had a very severe cluster of fits which effectively wiped his memory and character. He was very close to death but pulled through. We taught him to walk etc again and after 6 weeks he was basically ok. He was a different dog but he liked us and was content in his life.</p> <p>UPDATE LOGS 31.03.2020 - Update to Registration Type.</p>	DATA TRANSFER FROM LYN NORTON Added 25.08.15 UPDATE BY OWNER 31.03.20
29-11-2019		Gwynfar You Were Made For Me	Not known	Not known	WSD	22-Feb-05	UK	Dog	Fenom Full 'O' Fun	Summertime Sweep	Majacbus Oso Tricky	Tymatee Maggie May of Gwynfar	Whitknow Rockin Symphony	Gwynfar Catch Me If You Can	1 year 10 months	YES	Yet confirmed as Epilepsy	NO	6 years 10 months. Dog is no longer alive. He went into a cluster fit episode that could not be stopped with medication and it was felt that he had suffered enough and had his last fit.	<p>Medication: He was initially prescribed just Epiphen, but over the next 5 years his medication was gradually increased to try to control his fitting. From his first fit, he didn't have another for 18 months then the frequency increased until roughly every 2 weeks by this time he was on 120mg Epiphen at 8am and 8pm, 200mg Gabapentin at 8am, 2pm and 8pm, 500mg Keppra at 8am and 8pm, and 250mg at 2pm.</p> <p>Details: He was on Autarky at the onset of the fits but as the intensity increased, he was moved to a completely natural diet of chicken and vegetables. Much research was carried out into the ingredients of manufactured dog foods, and it was found that certain things can be a trigger factor to epilepsy so knowing what was in his food was important. He had cluster fits over 2 days on the first occasion and was given medication to try to stop the cluster, it was then 18 months before his next cluster fit. His next fit was then 3 months later, after which the frequency increased from around the age of 4 until the fits were happening every 10ish weeks. It was often a cluster of 3 or 4 fits over a couple of hours, but he needed veterinary assistance on occasions where he was anaesthetised to stop the fitting as the episodes had continued over 24 hours or more. NOT neutered as the vet advised against him being operated on because of the risks with his epilepsy.</p>	DATA TRANSFER FROM LYN NORTON Added 10.09.13

Now if she gets over excited by going to the seaside or seeing lots of family in one go it results in an episode.</p> <p>Medication: We have been on several different medications over the years but now we are on Epiphen 60mg and Levetiracetam 250mg. Until recently Libromide 325mg was being taken but a bout of pancreatitis hit and the vet believes this drug may have had a part in the problem.</p> <p>Details: Harley was spayed after having a single litter of seven, although one was still born. The first fit was a one off then we went around 18 months with nothing before the cluster fits on 1st Dec 2019. After this it was almost monthly with the odd extended break until August 2021 when we were episode free until March 2022. The March episode was part of the becoming ill with pancreatitis where she was taken into hospital for five nights. Thankfully all on the mend now.</p>	OWNER

One to two minutes fits up to 45 minutes to recover. Normally happen when asleep. Put a flea collar on in May and have wormed three times a year.</p>	OWNER
28-02-2022		Harry	N/A	N/A	Non UK Unregistered (Border Collie)	08-May-19	SOUTH AFRICA	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 6 months	YES	After first fit we visited the vet and by eliminating other potential causes it was determined that Harry has idiopathic epilepsy, which was confirmed by subsequent fits	YES	N/A	<p>Suspected triggers: It is still early to say as Harry only had his first fit two months ago. I suspect that his anti tick/flea medicine might have contributed (although my other BC has been on it for longer and has no health issues). Another suspected cause is the dam on the farm where we walk every day as his last two fits have been within 24 hours after swimming in/drinking from the dam, so we are now avoiding the dam to see if it makes any difference. Since starting to have fits I have stopped feeding my dog dry food (kibble) and moved him to a raw food diet (it is still to early to tell whether this is making any difference).</p> <p>Medication: Harry is not on any medication for epilepsy yet, I have an appointment with my vet to discuss our options next week. I do have ampules of Valium, which I carry with me at all times, so I can administer it in case he has a fit.</p> <p>Details: Harry was neutered at 13 months. He has had 7 fits to date, the first 5 were roughly 2 weeks apart and the last 2 happened on the same day, about 10 mins apart (although I think this was triggered when he saw me packing, which caused some additional stress). This was 2 weeks ago, he has not had another fit since then.</p>	OWNER

30-09-2021	31-10-2021	Jack	N/A	N/A	Unregistered - UK	17-Aug-20	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	11 months	YES	Vet diagnosis. Bloods tested to rule out other causes.	NO	12 months old - severe cluster fits never recovered and had to take heartbreaking decision to give him sleep.	Suspected triggers: No known triggers. Medication: Epiphen, 60mg twice per day Details: Smaller focal seizures progressed to general seizures and cluster seizures. Farnings both BC - Sire BC (SOS 'Fen' - UPDATE ADDED 31/10/2021: I worked closely with the vets but Jack had regular and very severe cluster fits and rarely recovered inbetween. The medication (Epiphen) was unable to make any difference. I do believe that Jack may have had Idiopathic Epilepsy for longer than we knew before diagnosis. Now I have learnt much more about this disease, I think there were earlier signs. I had to take the heartbreaking decision and he was euthanised.	OWNER Updated 31.10.21
31-05-2020		Jack	N/A	00/355613	BC - ISDS	21-Sep-17	UK	Dog	Felldie Dash (ISDS 00/315180)	Killiebrae Ladie (ISDS 262753)	Killiebrae Jet (ISDS 283073)	Meg (ISDS 00/316242)	Spot (ISDS 238972)	Neil (ISDS 274798)	2 years 1 month	YES	Vet	YES	N/A	Suspected triggers: Possibly stress. Medication: Epiphen and Libromide. Details: In tact Male. Seizure approx every 2-6weeks. Seizure length average 45seconds. We got Jack when he was 14 months old, he had his first seizure about 1 month after his 2nd birthday (late Oct 2019), I phoned the vet and they gave me some great advice on how to monitor and what to do during a seizure, unfortunately a couple hours later he began to cluster so we rushed off to our emergency vet for sedation. We discussed the options for meds and agreed that we would not medicate at this point. 5 months later he had his next seizure, so an appointment was made to check his bloods again, this time the vet suggested put him on Epiphen. After a while with only the sporadic minor seizures he began to cluster again (5 in 2hours) he was kept at the vet that day and was started on Libromide and we were given emergency meds for future clusters. Since then Jack has been only having small seizures roughly once every 2 months. We continue to medicate with the Epiphen and Libromide and record any seizures in his diary or on film when we can. Jack is the most loving, happy dog and wants to be friends with everyone he meets. We love Jack dearly and wouldn't be without him.	OWNER
19-07-2019		Jacksrofer Sapphire - Saffie	A02831107	N/A	BC - UK KC Pedigree	27-May-09	UK	Bitch	Bekkis Virtuoso	Grandver Master Copy	Bekkis Rhapsody	Jacksrofer Greatling Charmel	Rosmarinus The Wrenman	Greatling Lettia	4 years 11 months	YES	Blood tests	YES	N/A	Suspected triggers: Excitement, anxiety. Medication: Started on Pexion 100mg twice daily which seemed to work reasonably well for about 12 months then fitting became more regular, after having nine fits in three months I told my vet I wanted to take her off Pexion and try Epiphen. She has been on Epiphen 30mg for four years and has been fit free for that time. Details: Spayed at about 18 months after being told by her breeder that a litter brother was having fits. Saffie has been able to live a full and active life.	OWNER

21-08-2019		Jess	N/A	N/A	Unregistered - UK	27-Jun-03	UK	Bitch	Rip (ISDS 250011)	Glen (ISDS 198708)	Fran (ISDS 219858)	Floss (Not registered)	Ben (Not registered)	Jill (ISDS 225588)	2 years	YES	Blood tests and other family members fitting	NO	Died aged 11 in Status Epilepticus	Suspected triggers: No known triggers. Epileptic cousins. Medications: Initially Epiphen then Libromide added and finally Kepra. Details: Spayed before onset. Cluster fits showing signs of brain damage. Jess had refractory epilepsy. Despite increase in doses of Epiphen and addition of Libromide followed by Kepra she continued to have cluster fits. admitted to vets on several occasions to try and stop the clusters. The only time she was fit free was on large doses of Epiphen which eventually caused her liver to have problems metabolising the drug and she started to fall over eventually being unable to walk. At this stage she was referred to a neurologist and put through MRI scan, spinal tap, blood tests etc. The result was that she was being poisoned by the Epiphen which her liver wasn't metabolising. Her dose of Epiphen was reduced and she was put on a liver supplement. With the reduction of Epiphen she went back to cluster fitting every three months till she died 2 years later in status epilepticus.	OWNER
31-10-2020		Jess	N/A	N/A	Unregistered - UK	10-Mar-14	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	7 to 8 months	YES	Monitoring fits and keeping record of everything that happened	YES	N/A	Suspected triggers: None known. Medication: Procion 600mg a day Details: Rarely happens but occasional cluster fits, longest fit lasted 13 minutes usually last about 4 minutes. Can be months/weeks between fits since being on medication	OWNER
31-03-2021		Jess	N/A	N/A	Unregistered - UK	20-Jun-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	About 18 months	YES	After videos we had taken and being tested at Fitzpatrick's. They started her on medication, which caused her to fit more	YES	N/A	Suspected triggers: Extreme exercise, stress, heat in the summer. Medication: Phenobarbital and Procion which she is being weaned off. Getting ready to start Potassium Bromide once Procion has finished. Details: Jess has been spayed. She is a very anxious dog who is upset by any noise. Her fits are like gets mad at times but also grand mal fits where her nose and bottom jig, her eyes roll up, then she starts to shake. They can last from between 30secs and 5mins. She also has episodes where she lays in her Dad's arms and flops her head on the sofa and can sleep for up to 30 mins. You can say pussycat, squirrel, dinner, name of a visitor and she doesn't move. All the time there, her limbs don't move and when she gets off she has left a small mark on his trousers. The last two fits she has been incontinent and wet the bed. Occasionally she can be aggressive, but normally a very placid girl. She has changed, doesn't like her harness on or collar, seems worried to go to my husband.	OWNER
29-02-2024		Jess	N/A	00/381801	BC - ISDS	06-Apr-21	UK	Bitch	Barook (ISDS 00/312072)	Nylock Blake (ISDS DE/327333)	Delwynn Annie (ISDS 00/29996)	Sanduck Mai (ISDS TBC by owner)	Sanduck Moss (ISDS 00/306759)	Lyn (ISDS 282998)	2 years	YES	Saw Neurologist at Cwae Veterinary, Somerset.	NO	Aged 2 years 10 months. Euthanased 27th February 2024 due to refractory epilepsy. She was cluster fitting every few hours. Medication was not stopping it.	Suspected Triggers: No clear trigger. The initial start of Jess's epilepsy in October was cluster fits. This started the day after a 4 hour car journey (nothing new, we've travelled lots with Jess from a young age.) That week she'd had her flea, worm and tick treatment but she'd been on the same one for years. We also noticed an air freshener in the car we'd borrowed. Also the first fit was in the morning while playing frisbee. On another occasion Jess had a seizure while playing frisbee, so not sure if that was a trigger, we were to lighten up to play frisbee again. Medication: Epilin and Kepra initially seemed to help. But then had to add in Potassium Bromide which again initially seemed to help. 50 days fit free. But unfortunately none of the meds seemed to be helping and uncontrollable seizures. Details: In the end we had 4 episodes of 5 day long cluster fits - grand mal. The last 2 episodes also involved a couple of hours long post ictal behaviour, walking into things, appearing unable to see. Jess was never aggressive after or during her fits.	OWNER
21-08-2019		Jez - Jazz	K141585 (activity register)	00/31905	BC - ISDS	03-Apr-11	UK	Dog	Lad (ISDS 267484)	Roy (ISDS 245540)	Jan (ISDS 237153)	Tess (ISDS 00/301628)	Uwynnarn Nap (ISDS 253871)	Killiebrae Sky (ISDS 274792)	2 years 2 months	YES	MRI	YES	N/A	Suspected triggers: Possible glancing adder bite - he had a puncture wound in his nose and swollen face for 4 weeks, frontally 4 days before. Medication: Epiphen, Potassium Bromide, Kepra and Diazepam to try to stop clusters. CBD oil plus herbal products. Everything has worked well initially but then has become less effective. He has just been prescribed Procion to use for a few days after seizures to try to stop the cluster. Details: Jazz is entire. He fathered a litter before his seizures started - his son started having seizures at 15 months and was pps at under 2 years due to uncontrollable seizures. Jez later started fitting a year after him and she lost her babies in May this year. Jez always has GMs and always clusters. They have become progressively longer - will often be unconscious for up to 6 mins. We are very fortunate that Jez has a VNS implant. Langford vet hospital is doing a trial with Bristol Children's Hospital and Jez is the 4th dog to have the implant in June 2017. I am convinced that he would not still be alive if he hadn't had this. He is very active and 3 years ago started Rally Obedience and is now working at the top 2 levels.	OWNER
22-12-2019		Jilly	N/A	N/A	Unregistered - UK	05-Jan-15	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years 6 months	NO	N/A	YES	N/A	Suspected triggers: Totally unknown, just happened one night. Taken to vet after first fit. Then continued monthly, always about 2am. Medication: Vet recommended not going on meds as they didn't last long and were so great out just monitoring her and if anything changes consulting vet. Have rectal Diazepam in case she has another. Details: She had one large fit about 6 months ago followed by some smaller ones. Was left with a twitch but we put her on diazepam for a week and twitch cleared. All her fits are over in a couple of minutes and doesn't seem to be a pattern to them apart from monthly and always about 2am. She has had fits monthly up until 14th of September, but nothing since (now 02/22/23). She is spayed.	OWNER

21-08-2019		Kingfarm Maid of Honor	K120324	N/A	BC - UK KC Pedigree	08-Nov-11	UK	Bitch	Tamerye Celtic Land	Bellarix Highlander Cdex Udex	Tamerye The Ferrari	Kingfarm Dress To Impress	Borderlair King Of Swing	Merrymash Dress To Kill Of Kingfarm	5 years 5 months	YES	Vet said it was because she had now had 4 episodes	YES	N/A	<p>Suspected triggers: In vets during first one - stress? 2nd one it was a very hot day and had eaten cheese?</p> <p>Medication: Epiphen was prescribed 1 tablet twice a day. I also give her Epitaur 500, Milk Thistle (to help Liver on Epiphen) & CBD Oil. She has remained seizure free since.</p> <p>Details: The day of her first fit at home it was a very hot day she had also just eaten some cheese (which is now off the menu). Spayed in 2012. Her last fit was the worst much more intense and longer (lasted about 3 minutes) and she took longer to come out of it. In April 2022 Macey had a routine dental examination. In waiting room afterwards I noticed her mouth was twitching and started to foam. The vet took her in side room where she was fitting on the floor. They kept her there for observation for a few hours. Vet thought as she was stressed this was probably the reason. He medication given to me as they said they only medicate when they have had 3. All ok and fit free until June 2018. Around 10am Macey was resting in kitchen and started to fit. No vet appointment until 4pm that day. No tablets given but was told to administer rectal diazepam if she had another. 2 hours after being home she had 2 more - more severe than before - rectal diazepam given. Called emergency vets as I couldn't cope with seeing her like it. They agreed to have her in overnight to observe. Got a call 3 hours later saying she was so stressed and would be better at home.</p>	OWNER
19-07-2019		Kobi	N/A	N/A	Unregistered - UK	15-Jun-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 8 months	YES	Confirmed by vet	YES	N/A	<p>Suspected triggers: Stress and also air pressure (thunder weather), bright lights. As Kobi is deaf and also almost blind he bumps into objects which stresses him. He can't go to vets surgery as stress causes seizures.</p> <p>Medication: Vets have tried almost all meds over the last four years. He still has seizures but they are 1-2 a month now. At the moment his meds are: Epiphen, Libromide, Levacetarazol and Sodium Valproate. Diazepam for cluster seizures. He has recently been diagnosed with diabetes too so is now on insulin too. We have struggled for four years to get him to this point and tried so many different meds.</p> <p>Details: Have also had advice from a neurologist who diagnosed textbook Epilepsy. Kobi has blood tests regularly to check his meds. He is a blue Merle, totally deaf, almost blind and now diabetic aged 6yrs old. While trying to get the right balance of his meds he was having clusters every other day. As his meds are now he will have 1-2 seizures which leave him completely exhausted and wobbly for days. His seizures are 1-2 a month at present. Neutered. Rescue dog from Border Collie Trust GB.</p>	OWNER

He had two failed infusions, couldn't stop the seizures	<p>Suspected triggers: None.</p> <p>Medication: He had a VNS implant, was on Epiphen, Pregabalin, Keppra and Zonisamide. KBR made him crazy and then unresponsive, we even had a VNS implant inside him to try help. CBD did nothing.</p> <p>Details: None noted.</p>	OWNER
29-09-2019		Lacey	N/A	N/A	Non UK Unregistered (Border Collie)	10-May-19	SOUTH AFRICA	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	Blood tests MRI scans Diagnosed Idiopathic Epilepsy	YES	N/A	<p>Suspected triggers: Bravecto tick and flea treatment. Light sensitivity. Extreme change of routine.</p> <p>Medication: Phenytoin. This has helped control the seizures and we went 9 months seizure free at a stage. She seemed to develop resistance to it and due to her liver enzyme levels we added Keppra. Valium is used as a rescue medication.</p> <p>Details: Lacey is spayed. Behaviorally she is very active, not just border collie active (we have two) she has endless amounts of energy and it seems as though she rarely switches off. She chases shadows and light reflects everywhere and has them mainly on floors and walls. She also seems very sensitive and reacts to seemingly normal activities she has a barking fit/phantom if you shower, take off your shirt, use square bottles etc. It's as though she doesn't like you doing it and even gets worked up before you begin to do it for example if she sees you take clothes out to shower she starts barking. 2017 May 1 seizure, July 1 seizure, August September, November and October (partial seizures one each month), December 1 seizure. 2018 seizure 2 seizures increased phenobarbital med, April 1 seizure. 2019 February 1 seizure, March 1 seizure, June 1 seizure, July 1 seizure added Keppra. Partial seizure it seems as though a seizure is starting and she comes and asks for help but then there is no seizure only excessive drool or teeth chattering. Lacey's seizures are usually just over a minute and the uric acid during her seizures.</p>	OWNER

29-10-2019		Little Ozie	Died before being able to be registered	N/A	Unregistered - UK	08-Mar-07	UK	Dog	OB CH Whatknow Roommatez (WSD)	Rockin Rapid	Forever Magic Fantasia	Croftmist Megan (BC)	Tanamyns Krimoss	Mainline Mist (BC)	45 days	NO	N/A	NO	46 days old. See Fitting details for more information	<p>Suspected triggers: The vet suggested that he may have had worms but it was not the case.</p> <p>Medication: No medication for fitting but AB's and Anti-inflams as below.</p> <p>Details: At 43 days he became quiet and stopped interacting with his siblings. At 44 days he started seeking out dark places. Taken to the vet and was given antibiotics and anti-inflammatory injection.</p> <p>At 45 days he was again searching for dark places. He was very distressed when traveling back to the vets and fitted badly within minutes of arriving. At 46 days old he began fitting and was taken back to the emergency vet. He resembled a clockwork toy and was very rigid in his mobility. He seemed to have stopped growing. The vet blood tested for a liver-shunt which came back negative. As the vet examined him, Ozie became very distressed when his head was held and was obviously in a great deal of pain. The vet diagnosed inflammation of the meningeal (tissue surrounding the brain). The vet and I agreed that euthanasia was the only option. Two other pups from the litter also fitted at later intervals and both have died. The rest of the litter were registered with my 'Croftmist' alias. Megan was spayed after. The two other dogs from the litter, that fitted, were put to sleep at young ages due to the fitting. Ozie was unregistered but the rest of the litter were KC registered.</p>	OWNER/BREEDER

NO	He died at 5 years 7 months old. Status Epilepticus.	<p>Suspected triggers: Potassium Bromide caused pancreatitis which started all his troubles, we had his seizures very well controlled.</p> <p>Medication: Keppra, Epiphen, Zonisamide (brilliant and we went 6 months fit free on this drug). We stopped Potassium Bromide.</p> <p>Details: Neutered at 16 months old, didn't effect fits. His main prob was the Potassium Bromide causing the pancreatic flares, this was the beginning of all his troubles. He had pancreitis too and had surgery, he only lived to be 5.5 years old. He died on 4th April 2022 due to a lot of seizures that we couldn't stop, he had a huge fit and sur vet tried everything to save him but we had to make the decision because he'd fitted for so long. We believe his can meds stopped working due to a pancreatic flare and infection of the tum (yet again). He'd been very poorly. We miss him a lot.</p>	OWNER

29-11-2019		Luphoom Tazmanian Devil - Taz	Not known	N/A	WSD - UK KC Activity Register	03-Mar-09	UK	Dog	Pied Pike (S05 24417)	Ben (S05 23217)	Bet (S05 23054)	OB CH Callowood Candy Girl	WT CH Waggoner Fizz	Forest Spire Psyche	2 years 10 months	YES	Referred to Animal Health Trust Newmarket for MRI & Spinal Tap (both clear)	NO	6 years 1 month. His liver was grossly enlarged and he could not breathe as he had fluid in his lungs. Extensive organ collapse and brain damage due to drugs and cluster fits. FTS 22.04.15	Medication: Never could find a trigger. First fits 2 weeks apart. He was on Phenobarbital, Libromide and another drug I can't remember the name of. Fit free for 8 months until Sept 2014, we struggled and could not get them better than one every 7-10 days. Had to increase his meds several times, this impacted on his body. Details: he had a period of seven months, during the twelve months before he died, when we thought we had him stable and no fits. Then they came back and we just could not get any control at all. At the end he was having constant Petri Mar seizures between the Grand Mal ones, the drugs just didn't work anymore. Also recall Valium to stop the fits since they started. During his last three months he had some Prednisone. Taz was not neutered. His fits were, right from the start, five to eight minutes long and extremely violent. They occurred mostly when he was asleep or resting. Frequency two to four weeks apart but he might have two or three fits at a time. Pied Pike has sired other dogs that have fitted. Unfortunately none of them had started to fit before he was mated to Lily.	DATA TRANSFER & UPDATE BY OWNER

29-02-2020		Mandy Patrick	N/A	N/A	Unregistered - UK	18-Jun-05	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	By the vet as she went on quickly to have a series of fits stopped only by being given an anaesthetic.	NO	Age 11. Death was related. Mandy went into a state of conscious shaking and her body shut down and she was unable to move over a period of days	Suspected triggers: All vaccines, flea and tick treatments, loud noises and stress eg visit to vet, agility class, being left alone. Medication: Started on Epiphen, added Libromide, added Keppra as each drug became less effective. Also had rectal diazepam to bring her out of seizures. Extra Feppra used as preventative before a stressful event and after fitting to prevent recurrence. Details: Spayed age one. Mandy had fits, often two in a short space of time, around once a month once we got medication settled. We added more meds as they became more frequent each time. To begin with she was very unstable as vet wanted to introduce meds gradually. Several visits to emergency vet. Eight fits after vaccination when she was four. Always fitted five days after flea and tick treatment. Diagnosed as tonic clonic epilepsy. In her last few months she did not fit until last major episode. A beautiful girl who took it all in her stride and remained gentle and loving and full of life through it all. Major meds over nine years did not impact her and indeed which was one of our big concerns.	OWNER
30-06-2022		Mara	N/A	N/A	Unregistered - UK	11-Sep-11	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	10 years	YES	By vets Idiopathic Epilepsy	YES	N/A	Suspected triggers: Epiphen and Epilexin. Still setting the doses to best levels, meds have reduced grand mal section of seizure but overall length of time for full event is same. Ataxia varies from not much to wobbly, to very wobbly. Assumed from meds rather than brain injury. Details: Grand mal fits usually 2 mins grand mal then 3 mins recovery, usually brings self out of activity. Medication reduced Grandmal section but whole sequence usually lasts 4 - 5 minutes. Has had 3 sets of cluster seizures since start of Dec 2021, meds increased each time. Spayed.	OWNER
30-04-2021		Marky	N/A	N/A	Unregistered - UK	27-Jan-15	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 4 months	YES	Blood tests after change of vets	YES	N/A	Medication: Epiphen 45mg x 2 daily. Details: Neutered. Fits last up to 2 mins and about 10 mins recovery. Marky was bought from working farm at 4 weeks old. was not fit to leave the farm and was the smallest.	OWNER
29-02-2020		Marley	N/A	N/A	Unregistered - UK	2011 approx	UK	Dog	Unknown (rescue dog, owned since 5 years old, had fits before being adopted)	Unknown	Unknown	Unknown	Unknown	Unknown	Not known (rescue dog, owned since 5 years old, had fits before being adopted)	YES	Blood tests excluded anything else, vet said most likely idiopathic Epilepsy	YES	N/A	Suspected triggers: Triggers unknown, although previous owner mistreated him and was convicted of animal cruelty after kicking Marley repeatedly on numerous occasions. He had a broken tail. Could have had injuries to head maybe? Medication: He has had for fits since starting a raw diet with coconut oil and CBD oil. Once a seizure starts, we give CBD drops immediately and the fits subside quickly and he recovers far better. Before CBD he would have cluster fits and twice had status epilepticus where the seizure continued for nearly an hour. With CBD they last only a minute or two and are very mild. Details: Neutered at approx. 4 years old. Very dominant male, puppy with other male dogs. We think Marley is a Welsh collie. He is sable and white, herd upright and is loose eyed. Contacted the Welsh Sheepdog society who said epilepsy is very rare and practically unknown in registered Welsh Sheepdogs, although common in border collies. They suggested Marley is therefore most likely a Welsh Sheepdog/BC cross, or if that's a pure Welsh, his epilepsy is probably injury related rather than inherited.	OWNER
30-06-2022		Marley	N/A	N/A	Unregistered - UK	28-Aug-15	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	YES	Blood test at vets	YES	N/A	Suspected triggers: There were no triggers at first, but we noticed after he had been put on medication he had a fit when he was anxious at the groomers. Medication: Marley is on Epiphen tablets. He has been OK apart from the groomers incident so far. Details: No more detail provided.	OWNER
29-11-2019		Marshonelle Howdyfiddus	Not known	Not known	BC	05-Nov-12	UK	Dog	Rosmarinus The Chocolater	Rosmarinus Jaffa	Rosmarinus Demerata	Marshonelle Izzie	Rosmarinus The Rainmaker	Amazin Grace	1 year 1 month	YES	Vet confirmed Idiopathic Epilepsy. All possible tests done, including an MRI scan and spinal fluid tap	Not known	Not known	Medication: 40mg of Pexion twice a day. He was flea treated a week before, to which he was stressed at time of doing so and was off colour from that point up to first fit. Details: He was fed on mainly raw with some dry food, had an allergy test done and he is allergic to chicken, duck, wheat and gluten. Changed to pure BARF diet minus the chicken and duck. In himself he became brighter when food was changed, he started to grow again, coat became fuller. His fits have become less frequent but this may coincide with having all possible test done, including an MRI scan and spinal fluid tap to diagnose epilepsy and being put on the right medication. When they first started he had several in a week, once food changed these decreased and since medication started they have decreased further. Longest between fits has been 31 days. Time frame was too short to collate information. Medication: Pexion 400mg twice daily. One small fit on 28.06.13 whilst asleep on sofa lasting less than a minute, recovered within 10 mins. No further fits until 9th July, when found fitting in the morning. Rectal Diazepam given. Fitted again same day at 3pm, same treatment, but 4 further fits, taken to vet, kept overnight and stabilised. Home on the 10th but fitting again between 11am and 2pm so back to vet and again kept in overnight and sedated. Phenobarbital and on a drip. Prognosis was poor at this time. Brought home on the 13th July, Pexion 400mg twice daily. Details: Recovery seemed unlikely but daily improvements noted - motor function, spatial awareness, vision, recognition. Following 22 days charted phenomenal progress in physical and mental capabilities, by 1st Aug he was at 95% of his previous levels of Obedience training. On 2nd August he had another brief fit at 10pm (similar to his first) with the same outcome. At some time between 2am and 4am on the 4th Aug he suffered a major seizure, rectal diazepam x 3 was administered but to no avail, and he passed away shortly afterwards before the vet arrived. Vet hazarded a guess at major haemorrhage as cause of death. Neutered.	OWNER

30-11-2023		Milo	N/A	N/A	Unregistered - UK	11-Feb-21	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	Through exclusion of other causes for seizure. By the vet.	YES	N/A	Suspected triggers: No known triggers. Medication: CBD, Epilphen 60mg, Keppra 1500mg. Details: The fits are appearing.	OWNER
19-07-2019	31-07-2020	Mojo Back at Robate	Not disclosed	341808	BC - Dual Registered UK KC & ISDS	07-Dec-15	UK	Dog	Gipping Valley Troy	Bob (ISDS 290097)	Bess (ISDS 300896)	Marchup Midge (ISDS 314458)	Roy (ISDS 266416)	Calderdale Sue (ISDS 305475)	2 years	YES	Diagnosed at vets and later RVC	NO	4 years 5 months - status epilepticus	Medication: Epilphen 120mg bid, Keppra for clusters. Details: No fits since Pexion increased slightly to top of therapeutic dose. UPDATE ADDED 31/07/2020 Since November 2019 Mojo was on Phenobarb 150mg twice daily, Potassium Bromide 500mg once daily & 300mg Keppra twice daily. He had Diazepam after every bad fit by injection. Was having worsening fits weekly. He was euthanised in Dec after 400mg diazepam. Suspected triggers: No known triggers. Medication: Phenobarbital started after neurologist visit. Currently takes 30mg x 2. Libromidol added at 3 years old. Now on 1 tablet x 3. Libromidol introduced at 5 years old. Now on 3/4 tablet x 3. She has Diazepam if she clusters. It is effective. Millie is considered refractory. The druggs make her slow and unsteady and she eats and drinks more. We are trying to wear her off (see below) as in the past this has not altered fit frequency but has made her more active and playful. Details: Millie's fits occur usually around every 6 - 10 days - longest ever gap was 27 days - and can be either focal or generalised. Now, they almost always occur in the night directly from sleep. She does not urinate, defecate or vomit during fits. Fits are quick - 20 seconds at most but recovery is slow - can take up to 1.5hrs to be back to normal and longer lasting if a focal seizure. Millie was a rescue dog so history is unknown except she came to England from a farm in Ireland. We homed her at 5 months old. She has taken part in 2 RVC trials - The Big Brains Border Collie and RESET. We have recently introduced NACT to her raw food diet and B12 was introduced today. In the past we were referred to a holistic vet who tried acupuncture and herbal remedies and weaned her off AEDs. They made Millie no worse but no better either and she had no fewer or no more fits as a result hence refractory diagnosis. Millie is spayed.	OWNER Updated 31.07.20
29-02-2024		Mollie	N/A	N/A	Unregistered - UK	01-Dec-16	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	By neurologist through MRI, bloods, lumbar puncture, observation of video evidence.	YES	N/A	Suspected triggers: No known triggers. Medication: Phenobarbital started after neurologist visit. Currently takes 30mg x 2. Libromidol added at 3 years old. Now on 1 tablet x 3. Libromidol introduced at 5 years old. Now on 3/4 tablet x 3. She has Diazepam if she clusters. It is effective. Mollie is considered refractory. The druggs make her slow and unsteady and she eats and drinks more. We are trying to wear her off (see below) as in the past this has not altered fit frequency but has made her more active and playful. Details: Mollie's fits occur usually around every 6 - 10 days - longest ever gap was 27 days - and can be either focal or generalised. Now, they almost always occur in the night directly from sleep. She does not urinate, defecate or vomit during fits. Fits are quick - 20 seconds at most but recovery is slow - can take up to 1.5hrs to be back to normal and longer lasting if a focal seizure. NO	She died on 4th October 2018, aged 7, of liver failure because of Phenobarbital.	Suspected triggers: Her triggers were either food or strong smells such as air fresheners. Sometimes too much excitement. All human food would set her off. (Bar raw veg). Medication: Various over the years. Phenobarbital 60 mg x 2 times a day, Potassium Bromide, Keppra 4 x a day, Diazepam. Plus some others I can't remember. Pheno and Keppra showed the most improvement. Details: Pippa was spayed. Her fits were very severe and without medication she wouldn't have seen the week out. Mostly 2 - 3 mins in length. They would come as clusters when they arrived. Varying frequency but generally a cluster every 2-3 months.	OWNER
29-11-2019	28-12-2020	Podge (aka Lucky Podge)	Not known	Not known	BC	22-Feb-08	UK	Bitch	Cap (ISDS 264204)	Mac (ISDS 244859)	Floss (ISDS 220133)	Clifton Nell	Bill (ISDS 193021)	Tudir Belle (ISDS 203468)	3 years	YES	Vet confirmed as Epilepsy	NO	Aged 5 years 1 week (pts 07/03/2013). Unable to retain adequate levels of VE 812. FITS after 50 Grand Mals in 8 days....too tired to carry on and sadly drug resistant.	Medication: Initially Epiphen, then Keppra, then KBR. Diazepam for clusters. IV hospitalisation three times. Details: First seizure after vigorous exercise. 2nd cluster several days after annual injects. No treatment and worming. Fits occurred for three week period twice yearly in first, end of February then end of September. One seizure a week prior to severe clusters of 15 to 15 fully 50 grand mals (none less than 4mins) in 8 days. Initially stopped after three weeks. If hospitalised, drugs didn't stop them if within the three week period. UPDATE ADDED 28/12/2020: I've just noticed my dog Podge (Lucky Podge) has 'not known' as age of when we lost her on the database. She was 5 yrs 1 week (pts 07.03.2013) week, sadly drug resistant. Still sadly missed.	DATA TRANSFER FROM LYNN NORTON Added 31.03.15 UPDATE FROM OWNER 28.12.20

31-01-2022		Puppichino	N/A	N/A	Non UK Unregistered	22-Oct-15	INDIAN born, export to UK	Dog	Johny	Unknown	Unknown	Unknown street dog	Unknown	Unknown	1 year	YES	Vet examination and blood tests	YES	N/A	Suspected triggers: Originally triggered by rabies vaccine batch (suspected). His brother and my other (non-border collie dog) were also vaccinated but had another batch. Medication: Pexion 400 mg - 1.5 tablets twice daily, Levetiracetam 750 mg - 1 tablet three times daily, Epiphen 60 mg - 1 tablet twice daily. Details: Puppichino was born in New Delhi, India as a stray dog and was neutered at 9 months old. We relocated him to the UK in 2021 July and he had shown no signs of epilepsy. Puppichino is now 6 years old and has been epileptic since he was a year old. He had only a few attacks each year until December 2020, we didn't put him on medication. But in December 2020 he started having cluster seizures and was initially put on Pexion, he is now on 3 drugs (Pexion, Leve and Epiphen). He had a very severe attack of almost 90 minutes in October 2021 and had to be rushed to an emergency vet. It was triggered when the vet tried reducing his dosage of Levetiracetam. Fortunately since then he has cluster free till last night 1 Jan 2022, then he had a single attack yesterday. This is an improvement from the 6 or so he would have each month.	OWNER

Statur Epilepticus. Euthanised	Suspected triggers: None. Medication: Phenobarbital and Potassium Bromide. Details: Started fits at 2 years of age, became increasingly resistant to medications until they became ineffective. Suspected triggers: Triggers were stress from other dogs, hormones, full moon and especially super moons. Medication: As there was only Phenobarbital and Potassium Bromide in those days as far as I know, he was on the max of both. Details: He still had a Grand Mal every month at a full moon at 03:30 at night. The Grand Mal took about 6 - 10 minutes. After his Grand Mal he was screaming for 2 hours and pacing, trying to hide behind anything and after that came 2 hours of walking and panting before he came to his normal self. And then he slept for 24 hours. It was the same every month. Only just before he was pts he started to have cluster seizures. Then I knew it was enough. Quickstep was an instant dog, thus the hormones were a problem with other dogs. He was bred without any health tests from the parents and got a Dutch pedigree. He was out of Working Sheepdog Lines, only a few generations in the Netherlands. He also got supplements like herbs and the food was changed from rabbit to meat which helped a lot. As was normal in those days he had his vaccines and deworming on a regular base. Quickstep was pts at the age of 1 1/2 years. He had had enough seizures, his body couldn't take anymore. So it was the only humane thing to do, to give him peace. He had a very active life with walks to the horses and playing with a football and doing lots of things but only with us, no other dogs except the ones he knew before the seizures started.	OWNER

YES	N/A	Suspected triggers: Head trauma 10 months prior to first fit (running after a ball head first into a bench. Required stitches and teeth removed). Also given Nexgard Spectra 3 months prior to first fit. Medication: Not currently medicated. We have rescue Diazepam which we have used twice and now been prescribed Gabapentin to relax following fit. No preventative medication started. We recently started him on CBD oil. Details: One fit every two - three months. Lasting 3 minutes but prolonged post-ictal period lasting most of the day where he is very distressed. Seem to be caused by stress and vomiting. One fit he was in the shower, the other three were after vomiting which stresses him.	OWNER
29-11-2019		Remajak Somerset Mom	Not known	Not known	BC	11-Jun-13	UK	Dog	Altricia Double Dare To Amadore	Altricia Mister Constant	Altricia Lady Madge	Borderbeau Bilthe Spirit At Remajak	Locheil Travellin' South To Borderbeau IW SDCM	Locheil First To Fimilis At Borderbeau	1 year 4 months	NO	N/A	Not known	Not known	Medication: see below. Details: First fit 28.10.14 - seizure in the afternoon, followed by a slow but full recovery to normal state. Second fit 29.10.14 at 7am. Seen by the vet after each seizure and blood tests undertaken. Vet advised diagnosis of idiopathic Epilepsy at this stage but as yet no MRI or spinal tap has been carried out. He was otherwise fit and well with no further seizures at 2.12.14. Initial course of Diazepam for approximately one week, treated with Epiphen twice daily from day of second fit for four weeks. Bloods have been sent to Epiphen to assess viability of phasing out medication. 24.9.14 castration under general anaesthetic, vet treated with Advantage for possible fleas same week, 1.10.14 first year vaccination, 25.10.14 routine worming with Panacur. He is otherwise fit and healthy. All breeders/owners directly contacted were informed immediately with 3rd/4th owners agreeing to wait for completion of initial four week treatment plan before submitting to database, dam & littermates will never henceforth be bred from. DNA to be submitted in due course. Fed James Wellbeloved Turkey & Rice; no change before or after seizures. Neutered on 28th September, before onset of fits. UPDATE 01.05.15 Bryn suffered a seizure at 10.30pm. Recovery time was quicker than the initial two seizures last October but he lost vision for 15 minutes. 25 minutes after the seizure he took his ball to his owners to ask for a game. At the time of the seizure, his owners report that his Epiphen dose had been reduced gradually to 1/4 tablet each day (as he had suffered no further fits after the initial two) with the plan to take him off meds altogether in another week. However, their vet has now advised that the dosage should be returned to 1/2 tablet each day.	DATA TRANSFER FROM LYV NORTON Added 04.12.14 Updated 01.05.15

(Bloods, Spinal Tap, Imaging etc)	YES	N/A	Suspected triggers: It is Idiopathic Epilepsy, I have not noticed any triggers. Medication: Epilphen, changed August/September 2018 to Libromide 325mg & Levetiracetam 500mg. Details: Marrie is spayed & seizures usually occur early morning & last a few minutes. Medication changed August / Sept 2018 after she was admitted to A&H with liver failure, one of the possible causes could have been a reaction to Epilphen but this was never confirmed. There were 6 puppies in Marries litter, 3 of which (including Marrie) have seizures, one died at approx 12-18 months, the other is still alive.	OWNER
19-07-2019		Rosmak Fortune Seeker - Bilbo Baggins	A02543903	N/A	BC - UK KC Pedigree	16-May-12	UK	Dog	Rosmarinus Gin Cooler	AG CH Forbyfor Turbo Diesel	Rosmarinus Pimms	Rosmarinus Eclipse	Rosmarinus The Werrymen	Rosmarinus Loganberry	3 years	YES	He had several tests carried out, bloods, spinal fluid and other tests. These were to check for any other condition, which he didn't have. So he was diagnosed as having idiopathic epilepsy.	YES	N/A	Suspected triggers: Don't know trigger point. Medication: 325mg Libromide and 75mg Epilphen twice daily. Details: Testicles didn't drop so had operation to find and remove. Has had 21 seizures since Mar 17.	OWNER
29-11-2019		Rosmak Fortune Teller	Not known	Not known	BC	16-May-12	UK	Dog	Rosmarinus Gin Cooler	AG CH Forbyfor Turbo Diesel	Rosmarinus Pimms	Rosmarinus Eclipse	Rosmarinus The Werrymen	Rosmarinus Loganberry	12 months	NO	N/A	NO	See Fitting Details	Details: He had had puppy vaccinations but not old enough to have needed booster yet. No injuries or changes to diet, not recently had flea or worm treatments. Entire. He was his usual happy, lively self when we left the house, drove to a show and was acting 'odd' when we arrived. He had drool hanging from his mouth and seemed a little vacant. Took him for a walk, he seemed spaced which wasn't his personality, went to put him on lead and he fell to the floor fitting. Lasted approx 8-10 minutes. No help available at show, phoned vets who recommended taking him in, said as it was his first fit would be highly unlikely to have another straight away. Travelled in van with myself, he didn't return to his usual self and started fitting again within minutes. I had a vet on speakerphone, the fits were huge and he was struggling to breathe, followed directions and tried to resuscitate. He very sadly died. Not confirmed as epilepsy as didn't want a postmortem but the vet said it was highly likely due to his physical appearance.	DATA TRANSFER FROM LYV NORTON Added 18.07.14

29-11-2019		Sam	N/A	N/A	Unregistered - UK	30-Mar-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	YES	Multiple fits leading to seeing a neurologist. He has had numerous blood tests and an MRI to eliminate tumours etc	YES	N/A	Suspected triggers: Suspected trigger is pollen as he is worse throughout the summer period. He is on a hypoallergenic diet. Fully vaccinated. Up to date on flea and worming. Medication: He started on Pexion which made clusters worse. He moved to Epiphen which was a lot better but still having them often. He has just started on Bromide and after 4 months, we are going to start reducing the Epiphen. Details: He is neutered. He was fitting every 2 weeks but currently 33 days seizure free from starting Bromide. His fits go on for approx 5 mins and they are all grand mal. I have not noticed him have a focal seizure nor does he just jiggle. If he has a fit, it's always a big one. He starts his fit by turning his head all the way around and basically looks behind him. His eyes go wide and he starts to fit. He always pees and foams at the mouth. Sometimes he bites his tongue ending up in bloody spit being strangled around.	OWNER
29-11-2019		Sam	Not known	Not known	BC	01-May-07	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	3 years	YES	MRI and Lumbar Puncture. Both Vet hospital confirmed as Epilepsy	NO		Medication: Epiphen. Details: Nothing unusual happened that I can think of I did notice it initially happened after we had been out and we got caught in the rain. Like he had caught a chill, it happened often after a soaking. The vet said it wasn't connected, I'm not so sure. After diagnosis at Bath Vet hospital where he had an MRI and I think a lumbar puncture he was initially given just Epiphen, strength and dose varied, then also given Loramide when fits continued, can't remember strength. The fits did change even though he was on medication. The fits didn't last as long and I could tell when he was about to have one, or if he had had one when he was home alone. Usually when he was sleeping then he would wake, his head would shake he would fall over and his back legs would move as if he were running his front legs would be stiff. Was fed on Bakers complete. A lighter diet was offered after fits although he was usually starving when he came around. He gained weight so we were advised to give him a weight control food, there was no change in fits. He was neutered before the fits began.	DATA TRANSFER FROM LYNN NORTON Added 21.06.14
31-07-2022		Sasha	N/A	N/A	Unregistered - UK	25-Sep-20	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	Blood tests, repeated seizures with no other known cause. 28-02-2021		Slye	N/A	N/A	Unregistered - UK	05-Jun-17	UK	Bitch	Scottish Farm dog	Unknown	Unknown	Scottish Farm dog	Unknown	Unknown	3 years 3 months	YES	Several identical seizures. Vet feels as they started around 3 years old, otherwise extremely healthy fit bitch, epilepsy likely cause	YES	N/A	<p>Suspected triggers: No known triggers at present, still documenting seizures to find any pattern or link.</p> <p>Medication: Treated with Phenobarbital twice daily (under dress), initially 60mg, halved to 20mg by me as behaviour badly subdued by dose. All OK at present, hopeful of stopping or reducing meds after spaying and hormonal fluctuations taken out of equation. Using EFT taping, calming and enjoyable, also Reiki. Very doped, poor soul could barely walk. Have discussed with vet who agrees the treatment shouldn't be worse than the condition!</p> <p>Details: First fit at 4 am, jaw chattering woke me, foaming, twitching and urinary incontinence, (having worked with kids/seizures was aware of how scary it looks, and to me x). Around 3.5 mins, four long bouts and jumped up like nothing happened. Vet did urine test in morning, slightly elevated white count so treated with antibiotic in case of infection. All other fits (5 more) have been identical, only shorter in every case. Differing times, no real common denominator. One thing I am monitoring is we use a calor heater in sunroom topping up heat in autumn/ winter. Most recent seizure Slye had spent half a day with me there doing a Zoom course online. It is well ventilated and has a CO alarm, but wonder if she is affected by heat? Just grasping at anything I can change to remove meds etc.</p>	OWNER

Vet concluded this last seizure had caused brain damage and a high probability of a recurrence within a few days</p>	OWNER	
29-11-2019		Smudge	Not known	Not known	Collie	19-Oct-13	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year 1 month	YES	Vet confirmed as Epilepsy	Not known	Not known	<p>Suspected triggers: Over activity was definitely suspected as fits generally occurred outside of the house after ball chasing or similar. There was one event after a clash of heads whilst running for a ball with our other dog.</p> <p>Medication: No medication recommended by vet due to infrequency.</p> <p>Details: Fits were infrequent, possibly once or twice a year but reduced as his age increased and his activity levels decreased. Although he was 7 when we first realised he was fitting, with hindsight we realised there may have been earlier occasions where we had not recognised the symptoms from around 2 years of age. Registration status not known. He was full Border Collie but adopted from Border Collie Trust at approx. 10 weeks old. DOB added is approximate.</p> <p>Medication: Epiphen increased to 2 twice daily 50mg. After 4 months given Libromide, which only made him lethargic and not acting like his usual self. Now on Epiphen and Levetiracetam which we used to give him now and then before a fit, but not on one every 8 hours.</p> <p>Details: Fits started off as around 8 or 9 clusters every 21 days, this increased to 11, his last one being 16 clusters from 2pm to 7 am the next day. Some last 30 to 40 seconds, some 2 or 3. There is usually 15 minutes in between but now a few minutes. Clenches jaw, then jaw wide, outstretched legs, urinates sometimes and a slaver from mouth and the smell is awful. Then he will pace, used to pace for 20 minutes and could not see us. Now he paces and tends not to bang into objects, seems to manoeuvre around them a little better. Before a fit, he howls at the moon tries to escape, but now he tends to approach me to cuddle and follow me everywhere I go. You can see in his eyes that he is due to fit, his personality changes. The fits had increased to double the amount, but more often between them. Neutered before fits started. He had been neutered only 4 weeks before. He had trauma to his leg when only 5 months. And we had a collie out when he seized the following week.</p>	DATA TRANSFER FROM LYNN NORTON Added 16.07.15

Sweep (ISDS 00/293083)	Nan (ISDS 00/25084)	2 years 10 months 20 days	NO	N/A	NO	2 years, 10 months, 20 days. Pts to prevent further suffering. See Fitting details for more information.	<p>Suspected triggers: None known. He was raw fed from birth, never treated with any chemical.</p> <p>Medication: N/A.</p> <p>Details: Needle was a perfectly fit and healthy boy up until 00:04 on the 9th February 2023. At 00:05 he had his first fit. He then proceeded to continue to fit throughout the night and into the morning, each one longer and worse than the one before, and each one coming more quickly, culminating with his not coming around. He was given sleep to prevent his little body having to endure anymore seizures. Neutered. UPDATE ADDED 06/09/2023: Request received from owner, Status Epilepticus removed from Cause of Death, admin auto response to description provided in fitting details.</p> <p>UPDATE ADDED 31/01/2024: At the instance of Needle's breeder please see further update. When trying to find a 'reason' it was found that Needle had put on weight prior to his fitting and photographs of him taken, four weeks prior to his death, whilst in a forest on holiday in Scotland, seemed to show enlarged pupils. (A veterinary professional that his breeder showed the photograph to gave a suggested diagnosis as he may have been poisoned!) His head shape also appeared slightly different to a photograph taken 6 months earlier. He suffered multiple seizures in a four & a half hour period, each one more severe with less recovery time between. As it was my choice not to have a postmortem his cause of death can only be surmised and nothing can be proved regarding it, however he had shown no signs of 'lilles' prior to his first fit. Hindsight is a wonderful thing. His breeder categorically states that there are no notable issues in his line. Needle was from one of two accidental crossbreed litters sired by her dog at the time. None of the other pups from either these, or the two subsequent litters he has sired, have any known issues.</p>	OWNER Updated 06.09.23 Updated 31.01.24

Floss (ABC 502518)	Sam (ISDS 234162)	Nel (ISDS 338096)	2 years 3 months	YES	Process of elimination through BW/urinalysis/sonogram/ivap/physical exams	NO	2 years 7 months. See Fitting Details for more information	<p>Suspected triggers: None mentioned.</p> <p>Medication: Wegovy, dexamern, cephalixin, anesthisin, acromoniene.</p> <p>Details: Conceived in Wales, born in USA. Decker was intact, never bred. DNA Clear for everything via optimal selection wisdom panel. His seizures were violent and lasted 5 to 7 minutes during, and after he would pace frantically, run into things while screaming. So, we crated him for safety. When not seizing, he was a very happy, lovable, social dog with a strong desire to work all the time. We first witnessed a seizure during post op restricted exercise. He had surgery to remove an obstruction which turned out to be a swallowed part of a kong. The doctor in hindsight thought the kong part was swallowed during a seizure unbeknownst to us at the time. The seizure allowed the item to enter the stomach to which it was unable to exit do to size. This they said solved the mystery as to how I got into the stomach in the first place. So, during post op, he had the first seizure we knew of. We stopped his pain meds, rushed him to the hospital where he started his journey of multiple tests leaving him with the diagnosis of epilepsy Decker was being treated for seizures and undergoing multiple exams, tests, etc for 4 months. On July 18, 2023 he suffered 7 minute long, multiple full seizures before he could get into the hospital. His final seizure occurred upon arrival at the hospital. He was quickly sedated. Through consultation with the vet regarding his potential to have a safe and quality of life, a decision was made to release him of his suffering. A necropsy was performed which confirmed an additional complication of a diseased liver which the doctor said was congenital in nature. He determined this to be a separate underlying issue from the epilepsy.</p>	OWNER

Cluster fits, see Fitting Details for more information	Suspected triggers: None. Medication: Currently on Pexion, Keppra and Bromide. Epiphen - serious side affects and cannot be used - hospitalised her twice. Details: Neutered. UPDATE ADDED 29/09/19 - Update on Tartan Ticking Time Bomb - devastated to say she was put to sleep on 20th August after cluster fits that went on over 55 hours and nothing could stop them (she was on double dose Keppra, also given in liquid form at start of cluster, Bromide and Pexion). Phenobarb tried again but made her lose her mind and didn't know who she was and had no ability to switch off and stop.	OWNER Updated 29.09.19
29-09-2019		Ted	N/A	N/A	Unregistered - UK	01-Jun-15	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	1 year	YES	By Cambridge University Veterinary Hospital	YES	N/A	Suspected triggers: Initially overheating, exercise (ball chasing). Gets overexcited/Anxious. Now mostly happens at rest. Medication: Acupuncture (I'm an acupuncturist) helps to stop it. COLVIN happy for me to use acupuncture to monitor it. For this last year CBD oil stops it quickly. Details: Although always a nervous collie, wary of some men for no reason, quickly forgetting if they moved or came back in room. Fits started after he was neutered. Something went wrong with operation, he got abscess and took long time to heal. Initially they were 6 weekly, but now can be longer between or gets a lot at once. Just had 3 bad ones in 24 hours. No triggers. Without acupuncture or CBD, fits become very strong, full body tension/haugh/trembling, head banging, drooling. Purchased as an 11 1/2 week old puppy from farm in Swineshead, Boston, Lincolnshire.	OWNER
31-12-2023		Ted	N/A	N/A	Unregistered - UK	18-Nov-18	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	4 years	YES	Bloods at Vets 4 Pets, Candy Valley, Chester	YES	N/A	Suspected Triggers: Suspected oral flea and tick medication 'Bravecto'. Now changed to back of neck 'spot on' treatment. Medication: Not medicated for over 11 months, seizures were 10-12 weeks apart, very short and Ted recovered very quickly. Rectal Diazepam held on standby in case fit or recovery became longer, not had to use yet. When the next 2 fits were 4 weeks apart we decided to medicate. Epiphen 2x 30mg a day. Had 2 month gap initially then 4 weeks and then 2 weeks. Meds changed to Phenyleptin 2 x 20mg because vet stopped using Epiphen. Changed vet and new vet recommended doing new bloods in 3 weeks, to give Phenyleptin time to get in his system. Details: Vet wanted to do MRI £2000 but Ted not insured and I don't have the money. If epilepsy was not a known condition in BC's 1 I would have been more concerned. Fits less than 1 minute, recovery used to be very quick but is taking slightly longer now. Identified coughing usually signals a seizure and vomits before fitting. Neutered. He was put on grain free food as a youngster as he was very hyper and whites of eyes were red at times.	OWNER

Suspected triggers: No idea other than routine booster vaccine given 3 weeks previously. Medication: Tess was in vet hospital for 2 days to try to stabilise. Just so devastating to see Tess like this. Details: Had a Labrador's years ago who fitted every few months but not cluster fits like this. The poor dog didn't know where she was, who we were, couldn't walk - horrendous experience.	OWNER
29-02-2020		Tess	N/A	N/A	Unregistered - UK	02-Feb-11	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	8 years	YES	Consultation with specialist neurologist at Langford Vets in Bristol, who diagnosed Idiopathic Epilepsy	YES	N/A	Suspected triggers: No specific triggers that we know of although we have changed diet to a hypoallergenic one for seizures control. She is on 200mg Phenytoin by 400mg Phenobarbital med. Medication: Tess was started on a high dose of Phenytoin (Diphen) after her appointment at Langford in March 2013 which made her frenzy and her condition of her back for about a month but gradually side effects wore off. The dosage was reduced to a maintenance level over a few months until she was on 20mg every 12 hours. She still fitted on medication, roughly once every 4-6 weeks, however, she developed resistance due to increased front (bite) effect and excessive drooling, so we re-introduced Pexion 200mg every 12 hours and we seemed to get off Epiphen gradually over 3 months. Three days after her last Epiphen (September 2018), she had four seizures in a 24 hour period (previously only ever had one fit at a time) and was hospitalised overnight. She was started back on the Epiphen (started back on maintenance amount, so it was on the same amounts as mentioned previously and hasn't fitted since September 2018). Details: Tess is a saintly bitch that we rescued from the border Collie Trust in 2012 (already neutered when we got her). There was no medical history or evidence of seizures before we got her. Tess used to sleep downstairs in the previous house. 4 years after we moved to our current house, Tess started sleeping upstairs next to me in 2012. She started settling in March 2019. She only seizures in the middle of the night when she is asleep and as we are alone, she is unaware of them and when they are going to happen. They last around 30 mins. She wets and subsides excessively which is why we believe the seizure had occurred before she started sleeping upstairs because we would have felt the she was on her back in the morning (it takes hours to dry). During the seizures, her eyes roll, she stops breathing, her head is tilted back and body is stiff. She paddles with her front feet before going stiff and breathing heavily and then gasping before she comes round. She is very disorientated for about 30-15mins, and then goes back to sleep and wakes up 'normal'. I remember exactly and stress doesn't seem to have any effect. I wonder if this hypoallergenic diet has made a difference as she has always been food sensitive and used to be very busy with food just eating, turning up food in the morning after waking. She loves the raw diet and her stool	OWNER

21-08-2019	28/01/2020 & 28/02/2020	Tess O'Broomielaw	AH0903131	278780	BC - Dual Registered UK KC & ISDS	14-Aug-05	UK	Bitch	Mois (SDS 263829)	Mac (SDS 224692)	Lynwood Nell (SDS 234979)	Jan (SDS 267609)	Glen (SDS 243997)	Neil (SDS 225131)	2 years 2 months	YES	Blood tests taken at same time as vet affirmed that description of seizures couldn't be anything else	NO	Tess died on Thursday 23rd January 2020 at 14 years old. She was pts quite peacefully as her spinal problems had spread considerably and we did not want her to get to a state of distress.	Suspected triggers: Certain paint smells, nervous excitement, illness, once we suspected a vaccine, vet certain it's bank holidays too as she always has a cluster when they are off duty!! Medication: Currently on Epilepsax, Potassium Bromide, Levamisole and Scalflop & Valerian also has Gabapentin but that is now amongst drugs prescribed for spinal problems. She has been more stable on the Keppra than ever before. History of drug trials en route available. Details: Spayed 13/7/06. Heard of others from the sire also diagnosed epileptic. Although we have occasional solitary fits they usually come in clusters (largest cluster was 27 over a Christmas holiday). We've kept a medical diary. If Tess didn't have spinal and hip dysplasia problems now I would suspect that the would still be enjoying a reasonably active life. As it is she still wants to play, go for short walks and eat as she nears her 14th birthday. The epilepsy has aged us rather than the dog! I would always advise working in partnership with the vet and insurance company and we have been blessed with all the support we have received. UPDATE ADDED 28/02/2020: We regret to report that Tess died on Thursday 23rd January 2020. She was pts quite peacefully as her spinal problems had spread considerably and we did not want her to get to a state of distress. Having been warned by the vet who diagnosed her epilepsy that he doubted she would reach the age of two we feel blessed to have had her in our lives for over 14 years. Bromide was added to a minimal dosage of Epiphen but did not help. Details: Neutered. Fits controlled by drugs. Started March 2016 with clusters. Controlled now and just has occasional seizure of no more than a minute every few months. Recovers just as quickly.	OWNER
30-04-2021		Tillychance Diamond Geezer	TBA	N/A	BC - UK KC Pedigree	03-Nov-16	UK	Dog	Whiterose Dodger (SDS 311985)	Hemp (SDS 336075)	Bonnie (SDS 322506)	Mercanti Diamond Dancer with Tillychance	Canes Sacre Bleu	Cranberry Hawana Nights of Mercanti	1 year 11 months	NO	Now diagnosed as cobalamin deficiency and will be treated with B12 injections	N/A	N/A	Suspected triggers: Boss is a very intense fly ball and obedience dog. In all occasions Boss has been actively running. Bile acids were considered high by the vet as well as being dehydrated. Vet school decided the figures were not that high. I can only assume the trigger is excitement and running. He was also constipated each time. Medication: Started with Phenols-TIL (phenobarbitals) 50mg tablets 2 x daily. Diazepam rectal tubes for emergencies. 7 June 2019 he changed to Epiphen as they stopped making the drug he was on. 8 July 2020 he was neutered with no issues. Now diagnosed as cobalamin deficiency and will be treated with B12 injections. Details: 4 seizures between October 2018 and January 2019. Mostly weeks apart except for the last 2 which were 2 in 1 week. Saw vet but had to watch bone content as very constipated. Had been on Nutriment but changed to the Just raw range. They carried out a physical and neurological examination and exhaustive diagnostic procedures including an MRI brain scan and Cerebral Spinal Fluids. Idiopathic Epilepsy was diagnosed.	YES	N/A	Suspected triggers: Stress, anxiety and over excited. Details: Has had 5 fits each lasting 1-2 mins, all after being left and over excited when he returned and then a 6th during the night when new puppy wasn't settled. Medication: Bazil received a loading dose of Potassium Bromide while hospitalised, he is now on Soliphen 0.5mg three quarters of a tablet every 12 hours and Lormetazepam 125mg one tablet every 12 hours with a full meal. UPDATE ADDED 28/01/2020: Update on Tonlynor River - Bazil has now been diagnosed with Idiopathic Epilepsy and started above medication.	OWNER Updated 28.01.20
31-08-2020		Tosari Khamisn Kara - Kara	Y1076402101	N/A	BC - UK KC Pedigree	01-Mar-98	UK	Bitch	Detania Summersam of Tosari	SH CH Caristan Chumpers JW	Detania Pati	Tosari Fleurie	SH CH Detania Magnum	Tosari She's a Cracker	Approx. 3 years	YES	MRI scan and Lumbar Puncture at AH Newmarket	NO	Died 12/01/20 aged 11 years 10 months. She had cancer of the vulva which had spread to lungs. Euthanised as having difficulty breathing	Suspected triggers: No known suspected triggers. She had grand mals whilst at rest, work (Obedience) and from running on no particular trigger. Medication: She was on Phenobarbitone and regular blood tests from 2001 when diagnosed, until about 2006 when no more fits. Drug free for 3 years. Then started petit mals again and put on low dose of Phenobarbitone which controlled fits. Details: She then developed cancer. She was spayed at approx. 18 months. Did not thrash through fits but went completely rigid and tremored. Lasted about 3-4 minutes, then with cooing came round and had a cold drink to bring her temperature down, then back to normal. Had Diazepam to administer rectally if did not come out of fits but never had to use it. In total probably had about 6 grand mals and several petit mals which were not too noticeable. Thought at first to have heatstroke, then due to raised calcium levels thought to be a problem with parathyroid gland. Believe other puppies sired by Detania Summersam to have idiopathic epilepsy but had retired from stud when I was Medication: Epiphen 6mg twice daily. First prescribed 09.11.14	OWNER

28-02-2022		Trickster of Mischief - Loki	K150380	N/A	Collie Cross - UK KC Activity Register	30-Dec-14	UK	Dog	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	2 years	YES	MRI Brain scan and CSF tap	NO	5 years. Medication induced severe pancreatitis.	Suspected triggers: We had no idea due to his triggers. We eliminated certain foods, he still fitted so we introduced them. We didn't think it was food related, although the way he was raw fed from diagnosis. He was chemically castrated 6 months before fits started, 3 months after chemical implant we had him surgically castrated. We wonder if that had an impact on the start of his seizures or not. Medication: Initially started on Levetiracetam 250mg TDS. Seizures increased so drug was increased to 500mg. Christmas Day 2017 he suffered 4 seizures within 12 hours, instructed by specialist to load dose him over 5 days and meds increased to 750mg TDS. By June 2018 we had to introduce Pheno, this was increased at least twice. 2019 he started on Potassium Bromide. It made him extremely unstable, we had to use one of the Help Them Up Harnesses to help him get up as sometimes he couldn't manage. On a vet visit with one of our other dogs, my vet cried when she saw how uncoordinated he was, even though we had told his neurologist. She immediately got on to them and they reduced the drug. He did improve but still had little issues at times. Unfortunately I don't know the sire or dams, even though we met mum. However, I wracked my brains this morning and remembered that we got him from Barn Farm Border Collies in Stafford (or near there) and the chaps name was Ed (Edward). One thing we did do with Loki (our epileptic) was enroll him and his mate (my wife's Darcy) onto the RVC's IDEAS study. They went for the day taking part in different trials and having fur and stool samples taken. That was pre Potassium Bromide. Details: We wondered if weather pressure changes can set seizures off as well, maybe environmental things. We have overhead electricity cables where we live but who knows, castrated, seizures started 3 months after this.	DATA TRANSFER & UPDATE BY OWNER

The fits are very mild and she is at this time being treated holistically. Details: Her first fit was on a hot day when the dogs were out running and we thought that might have triggered it, however after her second one we took her to a vet to have it confirmed where several tests were done. She continues to fit regularly on average one to two times a month. Originally fed on Diamond High Energy at the onset but it was recommended that we place her in a less physical home so that her protein and fat content could be lowered. She is now in a pet home on an adult formula by Diamond. The fits are more frequent now but also more mild. Spayed.	DATA TRANSFER FROM LYNN NORTON Added 14.10.14
21-08-2019		Willow	N/A	N/A	Unregistered - UK	05-Jul-18	UK	Bitch	Unknown	Unknown	Unknown	Unknown	Unknown	Unknown	14 weeks	YES	By a brain scan. They couldn't find any problems with her brain. So the conclusion was idiopathic Epilepsy.	YES	N/A	Suspected triggers: No triggers known. Tends to have seizures only when sleeping. Medication: Started at 45mg of epilphen twice a day. Now currently on 60mg twice a day. Diazepam rectal tubes are given during or just after a seizure to help calm her down. Levetiracetam 500mg tablets are given to break up any clusters. 1 tablet after 2nd seizure and half a tablet every 8 hours until 48 hours after 2nd seizure. Since starting on 60mg of epilphen twice a day, Willow went 20 weeks without having a seizure. Before that she was having them every few weeks. Details: I had Willow from a local rescue centre when she was 10 weeks old. I have no background information of her at all. Willow has always been clumsy. She's not your typical bright intelligent border collie. She tends to trip over her own feet, bump into things etc. At first I thought maybe it was just because she was a puppy getting used to her new surroundings but as she was getting older she was still the same. At 14 weeks she had a massive cluster where she had before I even got her to the vets. They had to put her under anaesthetic 4 times to bring her over to the cluster. I don't know if this affected her brain but sometimes she's very uncoordinated.	OWNER

Medication: Phenobarbitone 60mg x 2 daily controlled fits from 6 weeks to around 3 a year. Details: At 6 years I took him to see holistic vet Christopher Day and gave a very detailed diary of events. He had fitted every 6 weeks prior to meds and now fitted around 3 times a year. He prescribed a homeopathic remedy which I gave daily. At 8 years I dared to start to reduce the pheno as had not fitted since visit to Mr Day. I reduced over 6 months to 0 pheno and Try never fitted again.	OWNER
30-04-2021		When You Have It Flunt It - Wren	K158363	N/A	WSD - UK KC Activity Register	21-Oct-16	UK	Bitch	Klamingoes Old King Cole	Klamingoes Thats Dax's Tri	Detania Golden Girl	Stella	Cookvale Dark Stranger	Lucy	4 years 2 months	YES	Had blood tests after the second fit. Vet said it's probably 'Idiopathic Epilepsy'.	YES	N/A	Suspected triggers: No suspected triggers. No accidents or illness prior to the fits. When only had puppy vaccinations and I do not use chemical treatments on her. Medication: Since the fits she has been on MCT oil and has not had a seizure since. Details: Wren has been raw fed since a puppy. She had a tap spay after her third season at the age of two. She is a fit healthy dog and has never had any accidents or illness prior to the two fits. Wren had her first fit on Saturday 5th December 2020 at 6:45am. I heard a knocking downstairs and I found her collapsed having a generalised seizure which lasted under one minute. She made paddling movements, drooled/fothed and urinated. She came round quickly, being wobbly for 2-3 minutes. After that she was back to normal like nothing had happened. Her second fit was on Monday 14th December at 2:30am. She had got up in the night wanting to go outside. This is not unusual for her as she often gets up at this time to go toilet. As I opened the patio door she collapsed to the left and started fitting. Exactly the same as the time before. Quick recovery and within a few minutes she ran back upstairs back to bed and went to sleep.	OWNER
29-11-2019		Wyndesed Maurice Traveller	Not known	Not known	WSD	03-Dec-90	UK	Dog	Monkfield Minstral Jw	SH CH Melodior Flint at Dykebar	SH CH Whenway Janita of Monkfield (SDS 123211)	Caristan Charisma	SH CH Caristan Captain (SDS 160585)	Rossaree Joanna of Mobella	8 months	YES	Vet confirmed as Epilepsy	NO	1 year 7 months. Euthanised in July 1992 when fit frequency increased to less than 1 week between clusters and the dogs were affecting his liver. His personality also changed and he lost the ability to remember simple commands	Medication: Initially Valium and Phenobarbitone. Then Potassium Bromide and Epilin added after specialist advice. Doses systematically increased which increased the space between fits but did not reduce the intensity when the cluster fits happened. These required large doses of IV Valium and Phenobarbitone for 12 hours. IV dexmethasone was given the following day and subcutaneously the next 2 days. Details: No changes made to diet. First few were single fits then every fit was a cluster fit. Response to increased medication doses was to increase the time between fits. There were no fits between Feb and June 1992 then the intensity got progressively worse. Neutered on Vets advice, but made no impact on fits.	DATA TRANSFER FROM LYNN NORTON Added 11.09.13
